Q. Well, will you tell us whose prices those were?

A. Those prices were obtained from those constituent companies that we took in at the time of the formation of the National Lead Company.

Q. In other words, they were predecessor companies of the National Lead Company?

A. I gave them in my testimony.

Q. Were they predecessor companies of the Na-
3928 tional Lead Company?

A. That's right.

Q. Out of which National was formed?

A. That's right.

Q. Well now, did they quote prices together as a unit in that period or did each company have different price lists?

A. I don't know, sir. The records will speak for themselves.

Q. Well, I am asking you now what this exhibit purports to show.

A. This exhibit shows the selling schedule or the policy of those companies—

Q. Well—

A. —by the National Lead Company.

Q. Does that represent the policy of all of them or of a particular one of them?

A. Well, they were taken from the particular ones shown in the book there.

Q. Well now, as I understand your testimony, you don't recall whether that was from a particular one or from the common quotations of the constituent companies.

A. I hadn't looked at those books since I made this chart up some 12 or 14 years ago.

Q. This purports to show, then, every change in a discount or selling practice as reflected in the price cards, from this beginning date up to the present time, is that correct?

A. As far as I could ascertain from the records.

3929 Q. Did I understand you to say you made this up 12 or 14 years ago, Mr. McNair?

A. About that time, yes.

Q. Mr. McNair, you didn't indicate on this exhibit anything about how freight was handled at various times?

A. No, sir.

Q. The charges to customers?

A. No, sir.

Mr. Wright: Off the record.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record.

Mr. Wright: I am willing to withhold objection if these matters can be admitted subject to reasonable opportunity of examining the basic data, and the right next week in New York, if I require it, to recall this witness for further cross-examination on the basis of the basic data.

Mr. Ewing: Yes.

Trial Examiner Norwood: If agreed to, the exhibit is received in evidence so condtioned.

(The paper referred to, heretofore marked for identification RESPONDENTS' EXHIBIT 158, was received in evidence.)

Trial Examiner Norwood: The prices that are named on that exhibit, are they fo.b. prices or what?

The Witness: Well, I think—

3930 Trial Examiner Norwood: Delivered prices?

The Witness: I think, your Honor, they are all delivered prices. To 37 years of my knowledge, all those prices have been delivered.

Trial Examiner Norwood: All delivered prices?

The Witness: And I imagine the same thing existed years before that.

Mr. Ewing: I take it that subject to the suggestion made by Mr. Wright, the exhibit will be reecived.

Trial Examiner Norwood: Yes, it has been received. Proceed.

Direct Examination (Continued.)

Q. Mr. McNair, I call your attention to the fact that in Respondents' Exhibit 158 at times reference is made to white lead in oil and at times reference is made simply to white lead. Does the information contained in the exhibit relate entirely to white lead in oil?

A. Yes, sir.

Q. So that whenever a reference is made solely to white lead, that means white lead in oil as far as that paper is concerned?

A. White lead in oil.

Q. Now, I ask you to look at the lefthand column on the exhibit, and in particular the entry dated December 13, 1880, and the next entry dated January 21, 1884, in each of which the word "rebate" or "rebates" appears, and
3931 ask you to tell us what those words "rebate" or "rebates" mean.

Mr. Wright: Your Honor, I am going to object to that question in its present form. This is a question of a witness as to what a word may or may not have meant in 1877 or 1180, which is obviously beyond his knowledge or experience.

Mr. Ewing: Oh, I will amend the question by adding "if you know."

Trial Examiner Norwood: He may tell us what he understands in the light of his knowledge of the affairs of these companies, or what he understands the term "rebate" to mean.

The Witness: If the counselor will refer to the second column, the period of April 26, 1918, he will see that at that particular time the ¼ cent rebate was discontinued.

Having been with the company at that time, I am well aware of the fact of what the word "rebate" means.

It simply means that at the end of the year, if the customer had bought a certain quantity of white lead, he was entitled to a rebate of so much per pound on his yearly purchases.

By Mr. Ewing:

Q. So that was not a current discount, as you might say, but it was based upon the total purchases of the particular year by a particular customer?

A. That is correct.

3932 Q. Now, I call your attention to the second column from the left and to the entries under the date April 26, 1918, and in particular to those relating to 2,000 pounds, 5 ton, and car lots, and ask you to tell us what the discount shown on the exhibit means.

A. The customer buying in 500 pound lots for delivery at one time received a 10 per cent discount from the list price; 2,000 pound lots for delivery at one time, 10 and 2½ per cent; 5 ton lots, 10 and 5 per cent; and carload lots, 10 and 6 per cent.

Q. Well now, when you say that in case of carload lots it was 10 and 6 per cent, is the 10 per cent a discount from list price?

A. The list price. The discounts are taken off the list price, 10 per cent off, and then 6 per cent off of that.

Q. And when you say 6 per cent of that, what figure do you have in mind?

A. The list price.

Q. Six per cent of list or 6 per cent of list less 10 per cent?

A. No, if the list price—let's see if it is shown here. The list price at the time in question was $12.50 per hundred pounds. You would take 10 per cent off of that, and then, in the case of carload lots, an additional 6 per cent.

Q. Off—

A. Off of the list price.

Q. Off list price?

A. The list price, yes.

3933 Q. Now, in that same second column, I direct your attention to the last entry under date of November 18, 1920, and ask you to explain the discounts shown there.

A. Well, the same explanation would apply to that as it does against the others.

Q. The only difference being the amount of discount shown?

A. The difference in discounts, that is all.

Q. And you show those differences in the discount as a variation in the selling policy?

A. Selling schedule, that's right.

Q. Now, I ask you to look at the first entry in the third column under the date of April 24, 1930, and ask you to explain the discounts shown there.

A. That was the same with the different schedule of discounts allowed.

Q. Now, in that same column, if you will look under the various headings, you will find references to painters, dealers, and agents, and the references to painters and dealers in that column are the first to appear on that document. In other words, they did not appear in either the first or second columns.

A. You have reference to the bracket March 1, 1935?

Q. Yes, and the subsequent one marked January 1, 1937. Will you tell us what those classifications meant as far as the Atlantic Branch was concerned.

A. Those were the schedule of prices at which
3934 our agents were authorized to sell at, the suggested
retail price to painters and dealers.

Q. Now, did the Atlantic Branch at that time sell so-called painters and dealers direct?

A. No, sir.

Q. And at that time the Atlantic Branch was operating on the agency or consignment plan which, if I recall your testimony correctly, first started in the first part of 1932, or the latter part, rather.

A. Demember 30, 1932, I think it was.

Q. Now, with respect to that same entry, there is a heading "Agents" and I see there that there are three classifications. Will you explain these three classifications.

A. The A classification were those distributors that bought in very large volumes.

Q. When you say "bought" you mean prior to the agency, is that correct?

A. Prior to the agency. Then, when we established the agency price, of course they were our distributors and those were the distributors of our products that ordered—that we delivered to them large tonnages of white lead.

The B classification is a distributor that got a lesser quantity and the C classification was the smallest agent.

Q. Now, as far as you know, did any other branch of National Lead Company similarly classify its agents?

3935 A. Yes, sir.

Q. After January 1, 1937—and I believe you will find an entry of that date relating to "Agents all"—did Atlantic Branch classify agents?

A. After that date, sir?

Q. Yes.

A. No, sir, they were all put on the same basis.

Q. Now, I direct your attention to the last two entries in that column, relating to the first and second advances of March 1, 1937, both of which refer to discounts to the trade, and ask you to tell us what in that exhibit you mean by the trade.

A. In that particular case the trade would be the painters, property owners, or any consumer that would buy in those quantities.

Q. Now, I refer you to the last two entries in the third column in which you will note in each case there is a reference to list, and these appear to be the first entries in that exhibit relating to list, and I ask you to tell us what you meant by list.

A. What column is that, counselor?

Q. The last two in the third column.

A. March 1, 1937?

Q. In each you will see there is a reference to list, with a price.

3936 A. That is the list price for white lead in oil.

Q. When you say list price, tell us what you mean. To whom is that price charged?

A. Well, the list price as such was subject to a discount if the dealer or painter bought in certain specified quantities as shown here.

Q. Well, who paid the list price, if anyone?

A. Yes, I would say so. A property owner, a casual purchaser of white lead, would pay the list price.

Trial Examiner Norwood: The consumer would pay that, is that right?

The Witness: A consumer, a property owner.

Trial Examiner Norwood: Would pay that to the retailer?

The Witness: That's right.

By Mr. Ewing:

Q. That is the price I would pay if I went in any store?

A. That's right.

Trial Examiner Norwood: Then this product is sold to distributors and dealers at a certain discount from list, is that right?

The Witness: Not at the present time, sir. We have a flat price.

Trial Examiner Norwood: You mean when those entries were made?

3937 The Witness: That's right.

Trial Examiner Norwood: The entries that you were just speaking of?

The Witness: Yes. I would like to correct that, your Honor. At that particular time that we are referring to, we had agents at that time and they were distributors for the National Lead Company, but when the agency plan of selling was discontinued, then they bought at an established price.

By Mr. Ewing:

Q. Now, if you will look at that exhibit you will see that at times price is expressed in terms of cents, and at times price is expressed in terms of dollars. When it is expressed in terms of cents, to what weight does it refer?

A. Per hundred pounds.

Q. Cents?

A. Cents per pound.

Q. Cents per pound.

A. In the case of dollars, dollars per hundred pounds.

Q. In the first and second columns, and in the third column prior to those first two entries in which "list" appears, you will find various references to a white lead price as distinguished from a quantity price or a discount. Will you tell us whether those references to price are list price references.

A. If I understand you correctly, where it shows—say, on November 18, 1920, there is shown on here "White
3938 lead—14¼ cents a pound."

Q. That's right.

A. That is a list price.

Q. So that although the word "list" first appears at the end of the third column, prices theretofore appearing in the third column and in the first two columns are in effect list prices?

A. That is correct.

Q. Now, I direct your attention to the entry in the fifth column under date of June 7, 1946 and I ask you whether on that date National Lead Company, in distributing and selling white lead in oil, was operating on the so-called agency or consignment plan.

A. No, sir.

Q. Now, I call your attention to the fact that in that entry under the date of June 7, 1946 and in every entry on your exhibit thereafter, there is a reference to "list," "painters," "dealers," and "distributors."

Will you tell us what outfit you classified as distributors as distinguished from dealers and painters?

A. Those are the accounts that we sell direct.

Q. Do you sell the so-called dealer and painter accounts direct?

A. No, sir.

Q. And when you—when I say "you" I am referring to the Atlantic Branch, as I suppose you assume.

3939 A. I assume so, yes, sir.

Q. And the Atlantic Branch does not sell list direct, is that correct?

A. You mean at the list price?

Q. Yes.

A. No, sir.

Q. What is the significance of the listing in that exhibit of what will appear to be prices to list, painters, and dealers?

A. Those are the suggested resale prices that we recommend to our distributors to sell that particular class of trade.

Q. And did you make similar recommendations to your agents during the time the agency plan was in effect?

A. Yes, sir.

Mr. Ewing: I have no further direct examination.

Trial Examiner Norwood: Cross-examine.

Mr. Wright: Off the record.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: We will take a five-minute recess.

(A short recess was taken.)

Trial Examiner Norwood: Now, will you make a little statement for the record?

Mr. Ewing: Yes, sir. I respectfully request that the
hearing be adjourned until tomorrow morning at
3940 10:00 o'clock for the purpose of permitting counsel
to consult with counsel for the Commission with respect to a stipulation which we hope that we will be able to agree upon and enter into that will save a substantial amount of time as compared with the other method of introducing the same proof.

Trial Examiner Norwood: Is that agreeable to you, Mr. Wright?

Mr. Wright: Yes.

Trial Examiner Norwood: Recessed until 10:00 a.m. tomorrow morning when we will reconvene in Room 388.

(Whereupon, at 12:00 o'clock noon, November 6, 1947, the hearing in the above-entitled matter was adjourned, to reconvene at 10:00 o'clock a.m. November 7, 1947 in Room 388, Federal Trade Commission, Washington, D. C.)

3941 Hearing Room 388,
Federal Trade Commission,
Washington, D. C.,
November 7, 1947.

Met, pursuant to adjournment, at 10:00 a.m.

Before:

J. W. Norwood, Trial Examiner.

Appearances:

Joseph S. Wright, Attorney for the Federal Trade Commission.

E. Z. DuBose and James D. Ewing, Attorneys for the Respondent National Lead Company. (120 Broadway, New York.)

3942 Edmund T. Wood, Attorney for the Respondents Eagle-Picher Lead Company and Eagle-Picher Sales Company. (American Building, Cincinnati, Ohio.)

Henry E. Gardiner, Attorney for the Respondents Anaconda Copper Mining Company and International Smelting & Refining Company. (120 Broadway, New York, New York.)

James T. Welch, Attorney for the Respondent The Sherwin-Williams Company. (815 15th Street, N. W., Washington, D. C.)

3943

PROCEEDINGS

Trial Examiner Norwood: The hearing will come to order.

Pursuant to adjournment, the hearing on Docket 5253 is now reconvened in Room 388, Office of the Federal Trade Commission, Washington, D. C., at 10:00 o'clock a.m. on the 7th day of November, 1947.

Please note the appearances.

Will Mr. McNair resume the stand?

Mr. Ewing: Yes.

Trial Examiner Norwood: Do you wish to cross-examine him, Mr. Wright?

Mr. Wright: Yes.

Trial Examiner Norwood: Proceed.

JOHN GORDON CRAWFORD McNAIR was thereupon recalled as a witness for the respondent National Lead Company, and, having been previously duly sworn, testified as follows:

Cross-Examination by Mr. Wright.

Q. As I understand it, Mr. McNair, this exhibit, Respondent's Exhibit No. 158, was made up from the basic data contained in these four large scrapbooks which have been submitted, is that correct?

A. That is correct.

3944 Q. Does it reflect all the changes in pricing policy and discount policy which appear in these volumes?

A. No, sir, it does not. It only reflects those changes in the selling schedules.

Q. What do you mean by selling schedules? Do you mean the discounts off of list?

A. The various selling schedules.

Q. It doesn't necessarily reflect, then, changes in the method of handling freight charges, differentials?

A. No, sir, nothing to do with freight whatsoever; nothing to do with freight.

Mr. Wright: Off the record.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record. Proceed.

By Mr. Wright:

Q. Mr. McNair, I call your attention to a statement, in the earliest of these books, of delivery and equalization points of the Atlantic White Lead and Linseed Oil Company, dated May 10, 1889, which states that, "Until further notice we will allow freight on Atlantic lead to, and equalize freight with the following points * * *" and then lists Birmingham, Mobile, and Montgomery, Alabama, Washington, D. C., Jacksonville, Florida, Atlanta, Georgia, Augusta, Georgia, Macon and Savannah, Georgia, New
Orleans, Baltimore, Charleston, South Carolina,
3945 Richmond, Virginia, Norfolk, Virginia, Wheeling,
West Virginia, Austin and Dallas, Texas, Fort Worth, Houston, San Antonio and Waco, Texas, and also a list of some 34 or 35 points in New York, 11 points in New Jersey, and 3 points in Pennsylvania.

You were with the Atlantic Branch and with the National Lead Company, I believe you stated, since approximately 1910, is that correct?

A. That is correct.

Q. How do the practices with which you were familiar at that time when you first came with the National Lead Company, with regard to freight equalization and delivery, compare with those that I have called your attention to as being in effect in May 1889?

A. Well, we had equalization points and delivery points at the time I came to the company.

Q. Similar points as are set out in that exhibit of 1889?

A. That's right. Whether or not they are identical with those I don't know, but some of them are.

Q. Now, I direct your attention to a document which appears in this earliest book here, which appears to be a notice to the trade on prices of these various lead pigments by the National Lead Company, the Atlantic Branch, in January 1894, January 1, 1894, and the statement, "F.o.b. at New York; freight—all prepayment of or allowance for freight on lead is discontinued."

Now, that practice as set forth in that exhibit did
3946 not obtain when you first came with the company, did it?

A. No, sir, it did not, to my knowledge.

Q. Now, I call your attention to the fact that in the second oldest of these volumes, pages 140 and 141, there are price cards of the Atlantic Branch on white lead and oxides, February 21, 1924, which quote white lead, dry and in oil, in 100-pound kegs, at 14¾ cents per pound, and the Dutch Boy Red Lead in Oil at 16¼; and also to a card appearing in the same place, under date of February 22, 1924, by the National Lead Company of California, San Francisco, which quotes Dutch Boy White Lead Dry or in Oil, in less than 500-pound lots, at 14¼ cents per pound, and Red Lead in Oil in less than 500-pound lots at 15¾ cents per pound.

That would indicate that there was a half-cent differential on the Pacific Coast below the prices in the Atlantic Branch. Do you know anything about that situation that applied at that time?

A. No, sir, I do not.

Q. But the cards do indicate that to be the case?

A. It would indicate that, yes.

Q. I call your attention to the material appearing on page 14 of the book which contains the pricing from the latter part of 1931 on, to the quotations appearing in the card dated December 28, 1931 on lead pigments and oxide
of the National Lead Company, Atlantic Branch, and
3947 the fact that there does not appear to be any quantity
discount appearing on dry white, the basic carbonate,
and basic sulphate as it appears in that quotation.
Is that correct?

A. You will have to repeat the question.

Q. That card of December 28 and the preceding card of December 14, appearing on the same page, do not indicate that there was any quantity discount applicable to the white pigments, dry, the basic carbonate, and the basic sulphate?

A. No, it would not indicate that.

Q. Was there such a quantity discount previous to that period of time, do you recall?

A. I couldn't recall now without referring to the records.

Q. I call your attention to what appears to be the next card in sequence on the white pigments, dry, carbonate, and basic sulphate, dated December 14, 1933, effective January 1, 1934. I call your attention to the statement there, "Less one-fourth cent per pound for 20 tons in one shipment."

It has been a policy to grant that one-fourth cent per pound for 20 tons in one shipment since approximately that time, has it not?

A. Well, it was at that time, and if it was granted it would be shown on subsequent price cards.

Q. Do you know whether such discounts were granted previous to that time?

3948 A. I couldn't say without referring to the records.

Q. What records would you want to refer to?

A. The price cards.

Q. These records here?

A. That's right.

Q. Well, would you refer to these records, then, and give us an answer to that.

A. How far back do you want to go?

Q. Well, as far back as you will need to go to determine where that thing was initiated.

A. I will have to keep going back until I find it.

Mr. Wright: Off the record.

(Discussion off the record.)

By Mr. Wright:

Q. All right.

A. I judge from this card dated December 28, 1931 that we didn't allow any quantity discount on quantity purchases at that time.

Q. I show you similar cards appearing back prior to that time, dated 1930.

A. There was apparently no quantity discount in effect at that time.

Referring to the card dated November 7, 1929, there is nothing to indicate thereon that we had a quantity discount at that time.

3949 Q. Wouldn't that indicate to you that that—

A. Well, the reason I wouldn't be able to answer that question, sir, unless I went all through the records,~~—is~~ because if you will note from this chart shown on Exhibit 158, we have adopted a certain selling policy, then we have discontinued it, and later on we have picked it up again, and I couldn't definitely say that the quantity discount on oxides would establish the date indicated here, whatever the date is.

Q. Dry white we were speaking of, rather than oxide.

A. Well, dry white lead. But where it was shown on the card that in 20-ton lots we allowed a ¼ cent rebate—

Q. Well, did you allow such a discount, it would appear on the card?

A. It would appear on the card. But the point I am trying to bring out is that we may have discontinued it at one time, or, going back all over the records, we may have given it an earlier date and then dropped it and taken it up again. I wouldn't know without going all through the records.

Q. Will you bear with me just a moment and we will go back a little farther than 1929 and you can look at these dry white cards then.

A. In the card effective July 10, 1929, there is no indication that we gave it at that time.

Effective November 20, 1928, it wouldn't indicate on the card that we gave it at that time.

3950 The card issued under date of September 9, 1927—there is no indication it was extended at that time.

On the card issued under date of March 2, 1923 there is no evidence that we gave a rebate, at that time, on quantity. On this particular card in question, there is a notation hereon which seems to be different from some of the others, that on dry pigment in kegs and barrels in quantities of one ton or more—

Q. Presumably there was a higher price on quantities of less than a ton in that instance there.

Now, you have examined these cards which had both the oxides and the white lead on them in prior years, back to 1923. I call your attention now to the price list dated May 28, 1935 for oxides and the expression on there, "Less ½ cent per pound for 5 tons in one shipment." From your examination of those previous cards, would that appear to be a new practice at that time?

A. I would assume so.

Q. Now, I also call your attention to the fact that there are two cards under that same date, one blue, and one yellow, both Atlantic Branch cards, and that the yellow card quotes prices which are ¼ cent higher correspondingly than the blue card. What is the significance of that, do you recall?

A. I wouldn't know, because I was not tied up in the oxide end of our business.

3951 Q. Well now, I show you corresponding blue and yellow cards of the Atlantic Branch under date of June 29, 1934, where the yellow card, which quotes prices ¼ cent higher than the others, is said to apply to Florida and Georgia.

A. I thought that might apply to Florida and Georgia. What is the question you want me to answer on this?

Q. I called your attention to those two cards. Does that appear to be a change in practice from what had previously obtained on the method of quoting on these oxides?

A. Well, this indicates that Florida and Georgia territories—there is a differential there of ¼ cent a pound over the New York area.

Q. Presumably that might explain the yellow card, ¼ cent higher, under date of May 28, 1934.

A. I would judge that, but it seems to be that Florida should be on there, but maybe the card was significant of the fact that it was a southern price card.

Q. I see.

A. I think that would be the answer.

Q. Now, calling your attention to Exhibit 158 again, here in this third column, under this card of March 1, 1935 which sets up three classes of agents, A, B, and C, with an apparent 15 cents per hundred differential between the three classes, will you point out where you obtained that information out of this basic data, Mr. McNair.

3952 A. Well, that information is not contained in here, except it may be in letter form.

Q. Now, I direct your attention to the agents' selling schedule appearing on page 51 of the third volume here, dated March 1, 1935, and to the other price lists which appear as of that date in the same place.

Is there any place in here where that differential between types of agents appears?

A. No, it doesn't appear on there. These agent prices here are a compensation which we paid to our agents for the distributing of our white lead, and it may have been given to them in a special—

Q. I call your attention to the document appearing on page 50, effective March 1, 1935, "Revision of first paragraph, Section 7, appointment of selling agency," which is a form for setting the price or agent's compensation there to your consignment agents.

A. There must be the notice that we informed the agent of his compensation. This must have been filled in here.

Q. But those actual figures that appear in there on that differential are not out of this basic data, are they?

A. I don't know whether it is shown somewhere else in here or not.

Q. Well, would you glance through it in that period of time and see if you can find it.

3953 A. I assume, counselor, that you looked all through here for that information, and if you say you couldn't find it, I will accept it as such.

Q. I would rather, since you prepared the document from this, have you satisfy yourself as to where it is, if you can find it there.

A. Understand, when this document was made up, it was made up with the idea to show the various changes in methods of selling white lead, and why it was made up, because I had the contention that there is nothing new under the sun. I showed in the record where we established a certain policy back 30 or 40 or 50 years ago, and the cycle has repeated itself, where we went back to the same policy.

Q. Yes. What I am trying specifically to find out is this: Somewhere you got those figures, $8.15, $8.30, and $8.45 which appear opposite the A, B, and C under that agent thing there.

A. Well, those figures were the actual basis of compensation that we were allowing our distributors.

Q. But that doesn't appear anywhere in these?

A. If you have looked for it and couldn't find it, I would say no, it is not in here.

Q. I have looked for it, and I haven't been able to find it. Well, what was the basis of your putting that in the exhibit, Mr. McNair?

A. Just to show what the selling policy was at that time.

3954 Q. Well now, what document did you get that out of?

A. Documents from our sales records out in the office.

Q. Can you produce those—

A. Sure.

Q. —and show that on that date and from that date until the date of the next card, January 1, 1937, that was the continuing policy of the company?

A. I am quite sure I can, yes.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: Proceed.

By Mr. Wright:

Q. Now, Mr. McNair, I call your attention to the document appearing here, the agent's selling schedule effective March 1, 1953, on page 51, and also to the March 1, 1935 entry under Respondent's Exhibit 158, to the classification, "Painters: Less than 500 pounds, ½ cent less than list price; 500-pound lots, one delivery, 1 cent less than list price; and 1,000-pound lots, one delivery, 1½ cents less than list price."

This was what the agent was required to sell your white lead in oil for, is it not?

A. That is right.

Q. Now, you also sold to him for his own account other keg products containing dry white lead, litharge, red lead in oil, and dry red lead, did you not?

3955 A. I assume so. We did not consign red lead or litharge or dry white lead to those.

Q. They were sold outright to the dealer?

A. They were purchased by him outright and he sold that at any price he wanted to.

Q. You did suggest, however, a list price and a painter price to him?

A. I would have to look at the card at that date to see whether we did or not. I doubt it on litharge or dry white lead, because it is the normal practice for a paint store to buy a 100-pound keg, stick it under the counter, and dish it out in bags or some other container when a customer wants to buy a small quantity.

Q. Well, I now direct your attention to the Form 1-B price list for agents, January 1, 1937, Dutch Boy—no, I withdraw it.

Now, in making up the quantities that appear in this designation under March 1, 1935, and which also appear in this agents' selling schedule here, were those quantities white lead in oil only?

A. Yes, that pertains to white lead in oil.

Q. In other words, to make a 1,000-pound lot in one delivery, it would have to be white lead in oil only?

A. That's right.

Q. Well now, I direct your attention here to a 3956 letter which appears under date of December 22, 1936, on page 72, signed by Mr. McNair, Assistant Manager, to Dutch Boy White Lead Selling Agents, and to the following statement:

"We refer to Item 4 relative to Price Card 1-B, covering Dutch Boy White Lead, Dry Red Lead, Litharge, and Red Lead In Oil. Formerly, we allowed our agents to include these products with Dutch Boy White Lead In Oil to make a total of 500 or 1,000 pounds and allow the quantity prices that applied to the quantities mentioned.

"This is to be discontinued after December 31, 1936. The 500 and 1,000 pound prices on and after January 1, 1937 will apply to Dutch Boy White Lead In Oil only. Dry white lead, dry red lead, litharge, and red lead in oil should not be included to make up orders for 500 or 1,000 pounds.

"If this is not perfectly clear, please get in touch with us at once."

Does that refresh your recollection about that situation any as it applied prior to January 1, 1937?

A. Prior to January 1, 1937? I would assume from this letter that on and after that date the practice was discontinued.

Q. But prior to that date it did exist and they could make up their quantities as appearing in price lists?

A. They were made up in true.

Q. Well, this is the genuine document, is it not? Is that not your signature?

3957 A. Well, that is a replica of my signature.

Q. You have no reason for questioning the genuineness of that document or the accuracy of what is stated in it?

A. Not at all; not at all.

Trial Examiner Norwood: That document is not in evidence; you are merely using it to refresh his memory?

Mr. Wright: Well, may we go off the record a moment about this?

Trial Examiner Norwood: Yes. Off the record.

(Discussion off the record.)

Trial Examiner Norwood: Go ahead.

By Mr. Wright:

Q. Now, Mr. McNair, all of these prices that appear in Respondent's Exhibit 158 are prices to the trade and to dealers and so forth? There are no Government prices included in it?

A. No, sir.

Q. I direct your attention to the letter on the letterhead of the National Lead Company, Atlantic Branch, effective February 27, 1939, addressed to Dutch Boy White Lead Selling Agents and stating as follows:

"We are pleased to give you the following instructions relative to Government quotations. The prices you will quote for Dutch Boy White Lead In Oil are:

"On Bids Where Cash Discount Is To Be Shown, quote—

"Per Hundred pounds:

3958 "100-pound kegs—$10.25 less 2 per cent
"50-pound kegs—$10.50 less 2 per cent
"25-pound kegs—$10.75 less 2 per cent
"12½-pound kegs—$11.00 less 2 per cent.

"Where Your Bid Is To Be Net Cash, quote—

"Per Hundred Pounds:

"100-pound kegs—$10.045 net cash
"50-pound kegs—$10.29 net cash

"25-pound kegs—$10.535 net cash

"12½-pound kegs—$10.78 net cash.

"No further discounts of any kind are allowed. The above prices will apply to all Government bids regardless of quantity.

"By Government quotations or bids, we mean the Federal Government departments, State departments, Counties, Municipalities, or, in short, any sale that will be paid for with Government funds.

"All our agents will be governed by the above schedule and as it is our desire to have no misunderstanding, we wish you to get in touch with us if these instructions are not perfectly clear."

Do you recall the circumstances of sending out that letter?

A. Yes, sure.

Q. What led to that letter, can you tell us?

A: These agents of ours, representing the National Lead Company in selling our products, had to be 3959 guided as to what our policy was in selling Government departments that they would normally sell to. It is usually all in small lots. Big bids on Government, we handled direct ourselves.

Mr. Wright: I have no further cross-examination.

Mr. Ewing: No further examination.

Trial Examiner Norwood: Well, were those terms copied by either of the competitors?

The Witness: Not to my knowledge.

Trial Examiner Norwood: That policy with respect to Government bids?

The Witness: I wouldn't say so.

Trial Examiner Norwood: Thank you, Mr. McNair.

(Witness excused.)

Mr. DuBose: May we have a two-minute recess?

Trial Examiner Norwood: You may have a five-minute recess.

(A short recess was taken.)

Trial Examiner Norwood: Call your witness.

Mr. Ewing: Mr. McCarthy.

Trial Examiner Norwood: Mr. McCarthy, you have been sworn in this case, haven't you?

Mr. McCarthy: Yes.

F. K. McCARTHY was thereupon recalled as a witness for the respondent National Lead Company, and, 3960 having been previously duly sworn, testified as follows:

Trial Examiner Norwood: Will you give us your initials, Mr. McCarthy.

The Witness: F. K. McCarthy.

Direct Examination by Mr. Ewing.

Q. Will you tell us, if you recall, Mr. McCarthy, when Mr. Harold Rowe first was made a member of the Board of Directors of the National Lead Company.

A. It was April, '38 or '39, thereabouts.

Mr. Ewing: I ask that this paper be marked as Respondent's Exhibit 211 for identification.

(The paper referred to was marked Respondent's Exhibit 211 for identification.)

By Mr. Ewing:

Q. I show you this paper that has just been marked Respondent's Exhibit 211 for identification and ask you if you will read it and tell us whether it refreshes your recollection as to the date of Mr. Rowe's election to the Board of Directors.

A. It is a company news letter dated April 22, 1938, under the head of Board of Directors and Executive Committee.

Trial Examiner Norwood: Don't tell us what the paper is. Just tell us whether it refreshes your recollection.

The Witness: Yes, sir.

By Mr. Ewing:

3961 Q. Will you again give us the date upon which Mr. Rowe was first elected to the Board.

A. April 22, 1938.

Q. Now I show you the document which has been marked as Commission's Exhibit 615-A, 615-B, 615-C, and 615-D and ask you to read it over to yourself.

A. Yes, sir.

Q. That exhibit purports to set forth a price schedule as of April 26, 1941, which shows prices for railroad, steamship, Government, State, and Municipal subdivisions, does it not?

A. Yes, sir.

Q. To whom was that exhibit issued in the National Lead Company?

A. The several branch managers.

Q. Were those price schedules in that exhibit, or similar schedules, ever published in the sense that they were published to the trade at large?

A. No, sir, those were for instruction of our branch officials, to guide them in quoting to these classes of trade.

Q. Then they are not, if I understand you correctly, similar to your price cards that were published to the trade?

A. Oh, no.

Q. National Lead sells some of the lead pigments in one-pound and five-pound cans, does it not?

A. Yes, sir.

3962 Q. Will you tell us what pigments are sold in those quantities.

A. Heavy paste white lead for the plumbing trade primarily is packed in one-pound and five-pound tins, which have to be shipped in cartons, and the large users of that were mill supply jobbers, wholesale hardware houses, and so forth, who distributed it then to retail channels for use by plumbers and people who used it for a calking compound and things of that nature.

Q. As compared with your other can or keg products, what differential in pricing is there with respect to the one-pound and the five-pound cans?

A. Because of package costs and nuisance and so forth, there was a substantial premium in the little one-pound cans over the 100-pound keg.

Q. In other words, you charged more for the one-pound can, relatively speaking, than you did for the keg of 100 pounds?

A. That is right.

Q. Now, you are familiar, are you not, with the sale by National Lead Company of dry white lead?

A. Yes, sir.

Q. What percentage of National's sale of dry white lead was represented, say in 1941, by sales in quantities of less than 500 pounds?

A. Possibly 2 per cent, but I would imagine much
3963 less than 2 per cent.

Q. Now, I show you, Mr. McCarthy, the bound volume consisting of sheets which are in evidence as Commission's Exhibit 752-A to 752-Z-144, and ask you to look at it and tell us whether you have ever seen that before.

A. Yes, sir.

Mr. Wright: If it will save time, I will stipulate that Mr. McCarthy assisted in the preparation and gathering of basic data on that matter.

Mr. Ewing: I appreciate your suggestion, but I am not going to be long.

By Mr. Ewing:

Q. Mr. Wright has just said that he would stipulate that you participated in the gathering of the data from which those tabulations were prepared by the Commission's representatives. In that connection, I ask you whether you, yourself, went over the invoices, which were collected by National from its various branches, involving the sale of white lead in oil to various customers during the periods indicated on that exhibit.

A. Each invoice?

Q. Well, substantially.

A. There were 55 pounds of them.

Q. Well, what would you say, roughly, was the extent to which you examined the invoices?

A. Well, as they came in, in response to the Com-
3964 mission's request, we classified them by geographical
source and classification of trade, in order to speed up the work and cooperate with the Commission's investigators who were assigned to this task.

Q. And did you do that yourself?

A. Yes, sir.

Q. Now, what classification, for example, did you put the invoices in as you prepared them?

A. Obviously, agents accounted for the bulk of them. Then we had industrial accounts, railroads, manufacturers who would buy dry products. They accounted for practically all of the invoices.

Q. Now, when you classified these invoices that you went over, you did that prior to the submission of the invoices to the Commission's representatives, is that correct?

A. Yes, sir.

Q. When you classified them, did you do that work in accordance with National's policy with respect to trade classifications?

A. Definitely.

Q. Will you tell us whether, when, for example, you classified manufacturers—what was the principal consideration involved in that classification?

A. It would be the identity of the customer.

Q. Would the use to which he put the product
3965 have any bearing on it?

A. Yes, naturally.

Q. What can you tell us with respect to National's policy in classifying trade from the standpoint of competition as between classes?

A. Well, it has always been a very definite policy to treat each classification in a similar fashion, that is, to avoid discrimination or a conflict.

An agent, for example, had a certain basis. A paint grinder buying raw material for his own use would be on a different basis. An industrial account, buying our products for maintenance and not for resale would be in still a third category, and governmental or wholly tax-supported institutions, of course, were not conceivably in competition with any of these other classifications and they had a separate basis.

Q. Is it fair to say that to the extent that it was possible, you endeavored to include in each classification people who were similarly situated, and not to include some customer who was actually subject to a different classification?

A. That is right.

Q. And it was on that basis, was it, that you, yourself, to the extent that you did so, classified the invoices which formed the basis for this tabulation represented by Commission's Exhibit 752, and so forth?

A. The invoices were self evident.

3966 Q. Now, I take it from what you have testified to before that you were familiar, generally, with the sale by National of white lead in oil.

A. Yes, sir.

Q. Are you familiar with the sale by National of white lead in oil in the so-called par territory?

A. Definitely.

Q. What percent, would you say, of National's total white lead in oil business is represented by sales in par territory?

A. Over a period I would say the average was 75 to 80 per cent.

Mr. Ewing: No further direct examination.

Trial Examiner Norwood: Cross-examination.

Cross-Examination by Mr. Wright.

Q. Mr. McCarthy, in connection with the classification of customers that you were referring to on direct, in the preparation of this tabulation did you seek to determine into which of your various classifications the customers listed in this tabulation fell?

A. Yes.

Q. How did you seek to determine that?

A. By the face of the invoice; the identity, the firm name, the type of material, the size of the package.

Q. Did you also obtain from the branch offices in
3967 each case a list of the customers with whom business
had been conducted over the period of time represented here, and with the designation of the class into which each of those customers fell?

A. I think that information was secured, too.

Mr. Wright: I would like to ask that these papers be identified as Commission's Exhibit 859-A, 859-B, 859-C, 859-D, and 859-E.

(The paper referred to was marked Commission's Exhibit 859-A through 859-E for identification.)

Mr. Wright: And I would like to ask that this document be marked as Commission's Exhibit 860-A, B, C, D, E, F, G, and H.

(The paper referred to was marked Commission's Exhibit 860-A through 860-H for identification.)

By Mr. Wright:

Q. Now, I hand you herewith the documents marked Commission's Exhibits 859 and 860 with sub-numbers, and ask you to examine them.

A. Yes.

Q. Do you recall those letters, or those documents, rather, Mr. McCarthy?

A. Yes, sir.

Q. What are they?

A. As I recall, Mr. Wright, the Commission asked for specific information from a list of a great many dif-
3968 ferent cities and towns and different parts of the country for specific periods, and my office then asked the branches to supply, from their records, invoices covering transactions during these periods and at these places, where they were available.

Q. Well now, was that request made and this information submitted during the course of the conversations about and the preparation of Commission's Exhibit 752-A and sub-numbers?

A. As I remember, yes, sir.

Q. And the information was gotten in connection with the transactions that were recorded in that document?

A. That is correct.

Q. Now, do those documents purport to list the classifications of the different types of accounts, as between manufacturer, industrial, agent, dealer, of those accounts listed there?

A. They do.

Q. Are those accounts which are sold by the National Lead Company?

A. Yes, sir.

Mr. Wright: I offer Commission Exhibit 859-A through 859-E, and Commission Exhibit 860-A through 860-H in evidence.

Trial Examiner Norwood: Any objection?

Mr. Ewing: I have no objection as far as the documents are concerned, but I don't know what they add, exactly, to the record, except ten or twelve more pieces of paper.

3969 Trial Examiner Norwood: How do they tie in with this big exhibit?

Mr. Wright: Well, may I ask the witness one more question about the exhibits, which isn't strictly identification?

Trial Examiner Norwood: Go ahead.

Mr. Wright: Well, no, I won't need to do that. It has already been answered.

Well, these exhibits show by the legend, which appears on 859—and the legend is explained on 860-H, which classifies each of these accounts as a dealer, a painter, an industrial, an agent, or railroad—what they are. There has been testimony here that the National Lead Company didn't sell direct to dealers, that they confined their sales only to agents, and it was brought out in direct examination of this witness that the customers, in so far as possible, who were competitive were kept in the same class.

Now, it is my opinion that this is direct evidence on that issue since it sets out, on the basis of the respondent's own figures, what the situation was.

Mr. Ewing: My point is: Doesn't it all appear already in this other big exhibit, where there is each heading? There is the heading "Agents" and then the number of names appearing, and then "Dealers," and a number of names, and then "Industrials," and so on.

3970 Mr. Wright: Well, in order to get the information out of this big exhibit on the classification of customers, it is necessary to go through over 200 pages, and I am not sure it is as complete in the basic exhibit as it is in these few sheets which set the thing up.

There was already admitted into evidence a similar document relating to the Cincinnati Branch, in view of this witness' previous testimony that in that branch they did not sell to dealers.

Trial Examiner Norwood: Has the witness explained to us what those red pencil marks are on 859?

Mr. Wright: The witness was asked on direct if these purported to distinguish between the various classes of customers in those categories. Now, the documents themselves explain what those marks mean. There is a legend showing what a "A" means and what "D" means and what "P" means and what "I" means.

Trial Examiner Norwood: Is there any objection to the exhibits?

Mr. Ewing: No.

Trial Examiner Norwood: Received as marked; Commission's Exhibits 859-A through 859-E, and 860-A through 860-H.

(The papers referred to, heretofore marked for identi-
fication COMMISSION'S EXHIBIT 859-A through
3971 859-E and COMMISSION'S EXHIBIT 860-A
through 860-H, were received in evidence.)

Mr. DuBose: Off the record.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Mr. Wright: By agreement of counsel, I will undertake to get photostatic copies of these last two exhibits made and to furnish the originals to the reporter as soon as the photostats have been completed.

Trial Examiner Norwood: That may be done. Then you will have the photostats for them at our New York hearing next week. Is that what they want done?

Mr. Wright: I can probably have photostats I can put in the mail for them today.

I have no further cross-examination.

Mr. Ewing: I have no redirect.

Trial Examiner Norwood: Thank you, Mr. McCarthy.

(Witness excused.)

Trial Examiner Norwood: Call your next witness.

Mr. Ewing: Now, your Honor, our next order of business is something that we are agreed on in principle, I think but we haven't actually formulated the exact phraseology, and that is, we had proposed to offer testimony at this time with respect to certain bids made by the various respondents in response to Government business. Mr. Wright and I and others have talked about 3972 it, and he has in his possession records that are, we'll say, more authentic than some of the sources that we were going to rely on, as I understand it.

It will save a great deal of time and trouble if we can agree to have these bids go in. He wants some; we want some; we are not going to argue with each other as to what goes in and what doesn't go in, as I understand it.

Mr. Wright: Well, as I understood it, we were going to, rather than put in a mass of documents and get into something which would delay this thing by requiring a lot more evidence and testimony, agree on a statement as to contentions of each of us as to aspects of this bidding problem, which would largely dispose of the thing on a restatement of facts.

Mr. Ewing: It would be, in a sense, a statement of fact, with neither of us drawing inferences.

Mr. Wright: And with a reasonable number of specific instances set out for illustrative purposes.

Mr. Ewing: Right. Now, actually I don't know how much of a job that is, but I should think we could get together and do that this afternoon.

Mr. Wright: It is perfectly agreeable.

Trial Examiner Norwood: Will you have any further testimony?

Mr. Ewing: No further testimony. So my suggestion would be that we adjourn, and we resume—at what time would you think?

3973 Mr. Wright: Whatever time suits you. We can meet you in this room. It is probably the most satisfactory place, and we can do that.

Mr. Ewing: Yes.

Mr. Wright: May we go off the record?

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Mr. Wright: I think that 3:00 o'clock will be all right.

Trial Examiner Norwood: Then we will recess now until 3:00 o'clock this afternoon.

(Whereupon, at 11:55 o'clock a.m., a recess was taken until 3:00 o'clock p.m., this day.)

3974 Afternoon Session.

Trial Examiner Norwood: The hearing reconvened at 3 o'clock, and discussion was had, and it was finally requested by counsel and approved by the Examiner that the hearing recess to reconvene in the City of New York in the Bar Association Building at 42 West 44th Street, in Room 10, at 10 o'clock a.m. on the 12th day of November 1947.

(Whereupon, at 4:05 o'clock p.m., November 7, 1947, the hearing in the above-entitled matter was adjourned, to reconvene at 10 o'clock a.m., November 12, 1947, in Room 10, Bar Association Building, 42 West 44th Street, New York, New York.)

3975

Trial Room No. 10,
Bar Association Building,
42 West 44th Street,
New York, N. Y.,
Wednesday, November 12,
1947.

Met, pursuant to adjournment, at 10:00 a.m.

Before:

John W. Norwood, Trial Examiner.

Appearances:

Joseph S. Wright, Esq., appearing for the Federal Trade Commission.

Edmund P. Wood, Esq., 2801 Carew Tower, Cincinnati, Ohio, appearing for Eagle-Picher Lead Company and Eagle-Picher Sales Company:

Robert H. Ecker, Esq., and
Henry E. Gardiner, Esq., (Chadbourne, Wallace, Parke & Whiteside, 25 Broadway, New York, N. Y.), appearing for Anaconda Copper Mining Company and International Smelting & Refining Company.

James D. Ewing, Esq., and
E. Z. DuBose, Esq., (Alexander & Green, 120 Broadway, New York, N. Y.), appearing for the National Lead Company.

J. T. Welch, Esq., (Davies, Richberg, Beebe, Busick & Richardson, 815 Fifteenth Street, Northwest, Washington, D. C.), appearing for Sherwin Williams Company.

3976 Roger Hines, Esq., (165 Broadway, New York, N. Y.), appearing for The Glidden Company.

3977

Proceedings.

Trial Examiner Norwood: The hearing will come to order.

Pursuant to adjournment in Washington on November 7th the hearing in Docket 5253 is now reconvened at 10:00 o'clock a.m. on the 12th day of November, 1947, in Room

10, Bar Association Building, 42 West 44th Street, New York, New York.

The reporter will please enter the appearance in the usual manner.

Call your first witness.

Mr. DuBose: Mr. Baum.

Trial Examiner Norwood: Yes, sir, Mr. Baum.

Mr. DuBose: Mr. Baum being recalled.

EDWARD L. BAUM was thereupon recalled as a witness for the respondents, and having been previously duly sworn testified further as follows:

Direct Examination (Continued).

Trial Examiner Norwood: Give us your full name, Mr. Baum.

The Witness: Edward L. Baum.

Trial Examiner Norwood: Mr. Baum, you have been sworn in this case?

The Witness: Yes, sir.

Trial Examiner Norwood: Take a seat.

3978 By Mr. DuBose:

Q. Mr. Baum, you testified on behalf of the respondent, National Lead, at the hearing here in New York last June 19th, I believe, and at that time you gave the following testimony at pages 3249 and 3250 of the official transcript:

"Question. Would that include shipments to the DuPont Company?

"Answer. No.

"Question. Under a contract?

"Answer. It would not include the shipments to the DuPont Company because that is an inter-branch billing proposition."

In that connection, Mr. Baum, I believe you were talking about your tabulations of white lead in oil sales by the Atlantic branch of the National Lead Company for the year 1941, is that correct?

A. Yes, sir.

Q. And in that testimony you stated that your tabulation did not include shipments to the DuPont Company because of that stated reason; is that correct

A. Yes, sir.

Q. Now, when you used the words to the effect that shipments to the DuPont Company were not included in your tabulation because that is an inter-branch billing proposition, what did you mean?

3979 A. I meant that for accounting purposes the Atlantic branch billed all transactions covering shipments to the DuPont Company as they billed them to our General Office, who in turn billed the DuPont Company. In other words—

Q. (Interposing.) In other words, if the Atlantic branch at any time billed any part, any part of a contract, for white lead in oil for the DuPont Company it would bill the Atlantic branch, which in turn would handle the billing to the DuPont Company, is that correct?

A. No; it would bill the General Office.

Q. It would bill the General Office; is that correct?

A. That is correct.

Q. Who in turn would bill the DuPont Company?

A. Who in turn would bill the DuPont Company, that is right.

Trial Examiner Norwood: Proceed.

By Mr. DuBose:

Q. Mr. Baum, you also testified that your tabulations showing sales of white lead in oil by the Atlantic branch for 1941 in the par territory have included shipments to foreign customers, is that correct?

A. Yes, sir.

Q. Now, have you in the interim at my request checked the sales records of the Atlantic branch for 1941 in an endeavor to discover the number of pounds sold by the Atlantic branch for 1941 to foreign customers?

3980 A. Yes, sir, I have.

Q. Have you those figures with you?

A. Yes, sir.

Q. Do you recall them offhand?

A. Not exactly. I didn't attempt to memorize it, but I could.

Q. Would you refresh your recollection with whatever you have with you?

A. I can do that, yes, sir.

Trial Examiner Norwood: What was the last question?

(The pending question and answer were thereupon read.)

Mr. DuBose: We are trying to show the pounds in the foreign shipments of white lead in oils by the Atlantic branch in 1941 which was included in the par territory variation.

Mr. Wright: Are you attempting to vary the terms of the exhibit?

Mr. DuBose: No. This is included. Of that total so much was shipped foreign shipment.

Trial Examiner Norwood: Very well.

Mr. DuBose: Let me ask you that because of the total you gave for foreign territory. There is a total which total included foreign shipments?

The Witness: Yes, that is correct.

By Mr. DuBose:

Q. That is the total for 1941?

3981 Mr. Wright: Do I understand the witness is refreshing his recollection from a document or reading from a document?

Mr. DuBose: He is refreshing his recollection from a document that he is reading.

The Witness: Shall I say something?

By Mr. DuBose:

Q. No; just refresh your recollection and give us the pounds.

Mr. Wright: I object to that, Your Honor.

Trial Examiner Norwood: If he investigated and has these figures I think he may read them off from these figures if he made them himself. Did you?

The Witness: These figures were prepared under my supervision on the I. B. M. tabulator, and this is the original run-off that was made at the conclusion of 1941 for statistical purposes.

Trial Examiner Norwood: Did you verify that? Did you check it?

The Witness: Yes, sir.

By Mr. DuBose:

Q. These are original records you say Mr. Baum?

A. This is the original tabulation as part of our regular routine of preparing reports of foreign sales, and this is the tabulation that came off the machine immediately after the close of the year 1941.

Q. When you say "this" you are referring to 3982 the record you hold in your hand?

A. This paper (indicating).

Trial Examiner Norwood: He may refer to that in giving his testimony about these figures. He is not supposed to carry those in his mind, all that column of figures. He has testified to the correctness of them.

Can you?

The Witness: I can't, sir.

By Mr. DuBose:

Q. Will you then give us the total number of pounds of foreign shipments for the Atlantic branch of white lead in oil for the year 1941?

A. The shipments of white lead in oil by the Atlantic branch in the year 1941 exported or foreign shipments I would say was 705,934 pounds.

Q. 934?

A. Yes.

Trial Examiner Norwood: Yes, 934.

By Mr. DuBose:

Q. Now, Mr. Baum, I show you a photostatic copy of Respondents' Exhibit 170-A, and opposite the word "par" in the second column from the left under the general heading "Heavy and Soft Paste White Lead," and the subheading "Total Pounds Sold," are the figures 19,652,155. Is that figure of 705,934 pounds which you have just given us as constituting the foreign shipments 3983 of white lead in oil by the Atlantic Branch for 1941 included in that figure of 19,652,155?

A. It is.

Mr. Wright: Off the record.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: Proceed.

By Mr. DuBose:

Q. Now, will you tell us, Mr. Baum, how freight was handled on these foreign shipments in 1941 which totaled 709,934?

A. Well, the terms on all foreign shipments are f.a.s. New York.

Q. When you say "f.a.s." what do you mean?

A. Freight alongside steamer.

Q. Now, you say the terms are that. Were they that in 1941?

A. Yes, sir.

Q. And by that do you mean that the National Lead Company, Atlantic branch, would deliver foreign shipments to the pier ready to be placed aboard a ship, is that correct?

A. That is what is done, yes, sir.

Q. From there who paid the freight and other fees?

A. The customer pays from there on.

Q. Now, at the hearing on June 19th of this year you also testified that your tabulation, Respondent's Exhibit 170-A did not include shipments in containers carrying larger than 100 pounds, is that correct? 3984

A. Yes, sir.

Q. What shipments were made by the Atlantic branch of National Lead in 1941 in larger containers?

A. Well, we ship what is called grinders' white lead in oil to paint grinders and ink manufacturers. And my statistics, or, rather, the statistics referred to, do not include such tonnage, because it is our accounting practice to consider that as the sales for statistical purposes of another department.

Trial Examiner Norwood: What sort of a container does that go in, a car?

The Witness: They go in, usually, casks and drums larger than 100 pounds. They are not sold to the trade, and for that reason we have never included grinders' lead in oil in our white lead in oil sales.

Trial Examiner Norwood: Thank you.

By Mr. DuBose:

Q. Now, Mr. Baum, since you last testified have you at my request checked the statements of grinders' white lead by the Atlantic branch for the year 1941?

A. I have.

Q. And have you records with you that show what those shipments were?

A. I have.

Q. Where did those shipments take place as with respect to par or three-eighths territory?

3985 A. All deliveries of grinders' lead in oil where shipped to consignees located within the par zone.

Q. Within the par zone?

A. Yes.

Q. And as you have stated those purchases were paint manufacturers or other manufacturers?

A. Yes.

Q. Will you tell us from whatever records you have in your possession what the total number of pounds of grinders' white lead shipments by the Atlantic branch in the year 1941 amounted to?

A. May I refer to this memorandum I have?

Trial Examiner Norwood: Yes.

By Mr. DuBose:

Q. Will you refer to that memorandum?

A. Yes.

Trial Examiner Norwood: That is the same memorandum you had a while ago?

The Witness: No, sir, this is a different one.

Trial Examiner Norwood: Was that made in the same way?

The Witness: No, this was not made in the same way.

By Mr. DuBose:

Q. Will you tell us how that memorandum you have just referred to was made, the new memorandum?

3986 A. The new memorandum I have here was taken by further tabulation, run off from the I. B. M. sheets about the same time the export sales were made, and I copied these figures in that tabulation referred to.

Mr. Wright: At what time was that, Mr. Baum?

The Witness: At what time I took this off?

Mr. Wright: When was that made up, the record from which you took it?

The Witness: The record from which these figures were taken was made up I would say within 60 days after December 1, 1941. That is the period during which we run off a lot of annual balances, tabulations and reports for various departments which they require to show the result of the year's business.

Trial Examiner Norwood: Now, do you not think that those two documents should be marked for identification?

Mr. DuBose: Why, I would be glad to.

Mr. Wright: Off the record.

Trial Examiner Norwood: This is off the record.

(Discussion off the record.)

Trial Examiner Norwood: Go ahead.

Mr. DuBose: He can identify them in case it becomes necessary.

By Mr. DuBose:

Let me ask you one more question, Mr. Baum.

3987 The record which you have now, which you made up from other records, was that record prepared by you or under your supervision, this particular memorandum?

A. The original record was prepared under my supervision.

Q. How about this record?

A. I actually copied this from that record.

Q. And the original records are in the Atlantic branch?

A. They are there for inspection.

Q. They are there for inspection?

A. Yes.

Q. Will you now give us the total number of pounds of grinders' white lead sold by the Atlantic branch in 1941?

A. The total pounds in grinders' white lead in oil shipped during the year 1941 was 1,572,303 pounds net.

Q. What was the total of freight and cartage applicable to those shipments?

A. The total freight and cartage applicable to those shipments was $4,295.40.

Q. And mathematically what does that work out to per hundred pounds?

A. That reduces it to .2732 per hundred pounds.

Q. In other words, 27.3 cents per hundred pounds?

A. That is right.

Q. And as you have stated, I believe, all of this grinders' white lead was shipped in par territory?

3988 A. That is right.

Mr. DuBose: No further questions.

Trial Examiner Norwood: Cross-examine.

Mr. DuBose: Would you like a short recess?

Mr. Wright: I would like a recess. I would like to examine the documents from which the witness has been refreshing his recollection.

Trial Examiner Norwood: I think it is hardly time for a recess. Let us pause until you read it. We will recess in about thirty minutes.

(After a brief interval.)

Trial Examiner Norwood: Proceed.

Cross-Examination by Mr. Wright.

Q. Mr. Baum, you spoke of the DuPont shipments being billed through the Central Office. Were there any other similar contractual relationships whereby the Atlantic branch supplies white lead in oil under private label?

A. Not to my recollection in the year 1941, during the year 1941.

Q. So that there would be no similar situation such as that?

A. No. I feel quite sure there were not.

Q. Included in this thing?

A. My answer would be no.

Q. Now, the grinders' white lead in oil, what was
3989 that product exactly? Is that white lead in oil of
similar consistency and quality as white lead in oil which is sold under Dutch Boy label?

A. It is, I would say, similar in all respects except that it contains a great deal more linseed oil.

Q. Well, is it thinner in consistency? In other words, does it contain more oil than the soft paste?

A. Yes, sir, containing more vehicle, that is, linseed oil, it becomes thinner in consistency.

Q. How is that product sold as far as territorial differentials? Does that take the same territorial differentials as the white lead in oil in their smaller kegs?

A. I don't believe I can testify as to price differentials. I am not in the sales department.

Q. Do you know?

A. I don't know positively.

Q. Now, this figure of grinders' lead in oil of 1,572,303 pounds shipments, to how many customers does that represent in America?

A. That represents shipments by the Atlantic branch to four different customers.

Q. What was the average price of that product?

A. The average price was $7.92 per hundredweight.

Q. Where were those customers located?

A. The customers were all located in what is
3990 termed "par" territory; in New York City, Jersey
City, and Providence, Rhode Island.

Mr. Wright: No further examination.

Mr. DuBose: No further examination.

Trial Examiner Norwood: Thank you, Mr. Baum.

(Witness excused.)

Trial Examiner Norwood: Call your next witness.

Mr. DuBose: Mr. Tibbets.

ALBERT B. TIBBETS was thereupon recalled as a witness for the respondents, and having been previously duly sworn, testified further as follows:

Direct Examination (Continued.)

Trial Examiner Norwood: Mr. Tibbets, you have been sworn in this case heretofore?

The Witness: Yes, sir.

Trial Examiner Norwood: Give your name and address.

The Witness: Albert B. Tibbets, National Lead Company, 111 Broadway, New York.

Trial Examiner Norwood: Proceed.

By Mr. DuBose:

Q. Mr. Tibbets, I believe you testified in Washington on June 10th of this year?

A. Yes, sir.

Q. And at that time, as the record shows, through
3991 you were introduced in evidence Respondents' Exhibits 150-A and B, 151-A and B, and 152, upon the condition that the underlying data be furnished to the Commission or to its counsel; 150-A and B being, as you then identified them, a report gotten up in 1943 by the Home Office, showing the sales of white lead in oil by branches by States and giving a tonnage of each branch per State. Since that time have you communicated with the branches of the National Lead Company, other than the Pacific Coast branch, and obtained a report from them respecting these figures which were originally obtained in 1943?

A. Yes, sir.

Mr. DuBose: I ask that these records be marked.

Trial Examiner Norwood: Begin with Respondents' Exhibit 212.

Mr. DuBose: Respondents' Exhibit 212-A and sub-letters respectively for identification.

(The papers referred to were marked Respondents' Exhibits 212-A, 212-B, 212-C, 212-D, 212-E, 212-F, 212-G, 212-H, 212-I, 212-J, 212-K, 212-L, 212-M, 212-N, 212-O, 212-P, 212-Q, 212-R, 212-S, 212-T, 212-U, 212-V, 212-W, 212-X, 212-Y, 212-Z, 212-Z-1, and 212-Z-2, for identification.)

Trial Examiner Norwood: What have you marked?

(Discussion off the record.)

Trial Examiner Norwood: Proceed.

3992 Mr. DuBose: Pursuant to agreement with counsel for the Commission at this time, in lieu of testimony on the subject, I will make the statement that Mr. Tibbets since last testifying wrote to the branches which checked their records, the branches, and sent back here the original report which they checked with their records, or rechecked their records, and made a new report on the white lead tonnage sold by each branch, excluding the Pacific Coast, each branch shown on Respondents' Exhibit 150-A and B, and in all respects the figures coincided with a new check, with the exception of the Boston branch, which on a recheck of our 1942 sales records discovered that the figures appearing on Respondents' Exhibit 150-A should read for Maine 204 tons, for New Hampshire 105 tons, Massachusetts 1613 tons, instead of the figures there indicated.

When I said "there" I am referring to Respondents' Exhibit 150-A.

And I should also like to make the statement that the underlying records are in the possession of the branches and are available for inspection by the Commission at any time.

Mr. Wright: I am willing to agree with counsel's statement that Mr. Tibbets, if called, would have testified that he had such checks made of the branch records, and
that with the variations which have been pointed
3993 out the figures in Respondents' Exhibit 150-A and B
were correct from their records.

Trial Examiner Norwood: Very well.

By Mr. DuBose:

Q. Mr. Tibbets, at the hearings in June in Washington when you identified Respondents' Exhibit 153, which was introduced in evidence, you stated that these figures were in the Home Office books.

I show you a copy of Respondents' Exhibit 153, and

I ask you whether since that time, at my request, you have checked the actual record which contained those figures?

A. Yes, sir.

Q. Will you tell us what that record is?

A. It is a loose-leaf holder with the years showing the tonnage figures from each branch.

Q. And where is that record physically located?

A. In the accounting department in the General Office.

Q. At 111 Broadway, New York?

A. At 111 Broadway, New York.

Q. And is that book available for inspection?

A. Yes, sir.

Q. By the Commission or its counsel at any time?

A. Yes, sir.

Trial Examiner Norwood: Let me see that.

(Document handed to the Trial Examiner.)

3994 Trial Examiner Norwood: Thank you.

By Mr. DuBose:

Q. Now, Mr. Tibbets, I show you Respondents' Exhibit 154-A to 154-I for identification, which you started to identify last June in Washington, and do you recognize that document as the one that you testified to about in the June hearings?

A. Yes, sir.

Q. Now, since the hearing last June have you rechecked all of the figures and dates shown on Respondents' Exhibit 154-A to 154-I for identification?

A. Yes, sir.

Q. And did you find some errors?

A. Yes, sir.

Q. Will you give us whatever corrections you wish to have noted on this exhibit?

Trial Examiner Norwood: What exhibit is that now?

Mr. DuBose: 154-A to 154-I for identification.

The Witness: On page 7.

Mr. DuBose: When you say "7" you are referring to Respondents' Exhibit 154-G for identification?

The Witness: Yes, sir.

Mr. DuBose: All right, sir.

The Witness: The paste red lead price should be $12 instead of $14.

Mr. DuBose: All right. Will you continue?

3995 The Witness: On page 8—wait a minute. Yes, page 8.

By Mr. DuBose:

Q. When you say, "page 8," you are referring to 154-H for identification?

A. Yes, sir.

Q. All right, sir.

A. The paste red lead price for January 1 and March 1, 1937, should be struck out. There were no retail prices issued for those two dates.

Q. All right. Is there any other on that same page?

A. And the date of paste red lead price should be September 15 instead of September 13, 1937.

Q. Do you mean the paste red lead price of $13.75 which appears opposite September 13th actually went into effect September 13th?

A. That is right.

Q. Are there any other corrections?

A. Not to my knowledge.

Q. Now, Mr. Tibbets, have you with you all of the underlying data which show all of the prices reflected on this Exhibit 154-A to 154-I for identification?

A. Yes, sir.

Q. And will you produce those?

A. There is one of them, pig lead prices, ~~and~~
3996 white lead, and oxide price cards.

Q. Now, Mr. Tibbets, I show you Respondents' Exhibit 154-A to 154-I for identification, and ask you whether you can tell us what the pig lead prices that appear thereon are?

A. Common.

Q. Common pig lead prices?

A. Common pig lead prices.

Q. And from what source did you obtain these?

A. From a record in the Atlantic branch that was kept of every change of pig lead prices.

Q. Now, I ask you to look at the paste white lead prices and I now ask you to tell us what those prices were.

A. That was list prices or resale prices.

Q. And how about paste red lead?

A. That is the same per hundred pounds.

Q. Per hundred pounds?

A. Per hundred pound keg.

Q. Now, on all the others, namely, dry white lead, lead sulphate, dry red lead and litharge, will you tell us what those prices are, or for what quantities those prices are?

A. Per hundred on a barrel price basis.

Q. And a barrel is either five or six hundred pounds?

A. Around five or six hundred pounds.

Mr. Wright: No further questions.

Trial Examiner Norwood: Off the record a minute.

3997 (Discussion off the record.)

Mr. DuBose: I would like to state this on the record: That I am deferring offering Respondents' Exhibit 154-A to 154-I, inclusive, for identification, subject to Mr. Wright's preliminary cross-examination.

Trial Examiner Norwood: We will take a 5-minute recess.

(Thereupon a short recess was taken.)

Cross-Examination (Continued)

By Mr. Wright:

Q. Mr. Tibbets, do you know where the Atlantic branch got the figures purported to be shown in these documents here?

A. Yes.

Q. On pig lead prices?

A. Yes, the Metal Purchasing Department.

Q. In other words, they were supplied to them by another division of the National Lead Company?

A. Yes, sir.

Q. Do you know where the Metal Purchasing Department got it?

A. Yes. They would get a phone call from either A. S. & R. on St. Joe Lead as to the price change, and then they would send out notices to branches of the price changes in pig lead.

Q. Now, you say they would do that. Do you know that?

A. They do.

3998 Q. Do you know of your own knowledge that that is the source of the information contained in this list?

A. Yes, sir, to the best of my knowledge, yes.

Q. Now, just what is your knowledge?

A. Well, they keep the same record in their office, which is open to your examination, showing the same information.

Q. Did you check the figures back of this list that was in the Atlantic branch?

A. No, sir.

Q. Now, getting to these price cards on various products here, these are all quotations of the Atlantic branch, are they?

A. Well, I don't recall. I know they are all par price lists. There may be other branches in there. I was interested in getting the par prices.

Q. Where did you get these cards?

A. I got them mostly from the office or files of Harold Rowe.

~~Q. Do you~~ know that is a complete set of all price changes that are covered in that period of time?

A. Yes, sir.

Q. How could you check them?

A. I checked them against the list and against the list I have there on the exhibit.

Q. Well, what I am getting at is how could you
3999 check these cards as being all that there were, the
complete set?

A. That hasn't every price change that was kept there. They kept them all from 1921 on.

Q. Do these cards show a succession from one year list to another?

A. Yes, sir.

Q. On the face of them?

A. That is right.

Mr. Wright: I have no further preliminary cross.

Mr. DuBose: I at this time should like to offer in evidence Respondents' Exhibit 154-A to 154-I for identification.

Mr. Wright: I have no objection.

Trial Examiner Norwood: I will ask you to indicate on there the corrections which this witness has made in the testimony just given. It may be entered with a pen, or in any way.

Redirect Examination by Mr. DuBose.

Q. Mr. Tibbets, will you use your pen and make those corrections which you spoke of, and then we can go off the record?

Trial Examiner Norwood: Yes; off the record.

(Discussion off the record.)

Trial Examiner Norwood: The exhibit is received in evidence.

4000 (The papers referred to, heretofore marked for identification RESPONDENTS' EXHIBIT 154-A, 154-B, 154-C, 154-D, 154-E, 154-F, 154-G, 154-H, and 154-I, were received in evidence.)

Mr. Wright: Off the record.

(Discussion off the record.)

Mr. DuBose: No further direct examination.

Cross-Examination (Continued) by Mr. Wright.

Q. Going back to Respondents' Exhibit 153, do you know what classes of business in white lead paste are included in the figures which appear on that exhibit?

A. Well, you mean whether it is trade or Government business, and so forth, included in those?

Q. Yes.

A. The total white lead business done by our branch of paste lead I couldn't tell you.

Q. Would that include shipments?

A. I couldn't tell you; I can't answer exactly what is included in those figures.

Q. Would the Atlantic Branch, for instance, include your shipments to DuPont under your contractual relationship with that company?

A. No, they wouldn't go in there; I am sure of that.

Q. Did you check this to know exactly what did go in?

4001 A. No, but those are figures on trade sales.

Q. Those are trade sales?

A. I would say this: that having had that done by the Accounting Department and out of our records which I saw I am not in a position to tell you exactly what is in those figures.

Q. You would not know what the figures from branches are in there?

A. I couldn't tell you that.

Q. Or whether grinders' white lead would be in there?

A. There wouldn't be. I can tell you that definitely.

Q. Do you know grinders' lead is not in there?

A. I know that, yes.

Mr. Wright: Thank you, Mr. Tibbets.

Redirect Examination (Continued) by Mr. DuBose.

Q. You said according to your best knowledge this included trade sales; is that correct?

A. Trade sales, yes.

Q. That would include ordinary purchases of white lead in oil either for resale or for use by painters and others; is that correct?

A. That is right.

Mr. DuBose: No further questions.

4002 *Recross Examination by Mr. Wright.*

Q. The fact remains, however, Mr. Tibbets, that you do not know of your knowledge exactly what is in those figures?

A. Having made a careful check of that, no, I don't believe I could say so.

Mr. Wright: Nothing further.

Redirect Examination (Continued) by Mr. DuBose.

Q. Let me ask you whether the book from which this material was obtained relates to branch percentages of Company white lead paste sales?

A. That is right.

Mr. DuBose: All right; that is all.

Trial Examiner Norwood: Thank you, Mr. Tibbets.

(Witness excused.)

Trial Examiner Norwood: Call your next witness.

Mr. DuBose: I was just going to give these (indicating documents) back to him.

By agreement of counsel the exhibits which heretofore were marked Respondents' Exhibit 212-A to Z-2 for identification shall deemed withdrawn and the number may be used again in another exhibit.

Trial Examiner Norwood: Wait a minute. I do not think there is any necessity for that. There is already testimony in the record about it, and the reporter is bound
4003 under his contract to list that number so that you can
turn back and see just what happened.

Mr. DuBose: All right, sir.

Trial Examiner Norwood: With respect to the exhibits that were numbered that way.

Mr. DuBose: May I say this, then: they are still in our custody?

Trial Examiner Norwood: They are still in your custody, yes.

Mr. DuBose: They are still in our custody, and there was no necessity we found for offering them because of the agreement that counsel for the Commission made with me.

Trial Examiner Norwood: Yes, that is all clear, but the record will stand to show just what happened with respect to that number.

Call your next witness.

Mr. DuBose: Mr. Higgins.

J. R. HIGGINS was thereupon recalled as a witness for the respondents, and having been previously duly sworn, testified further as follows:

Direct Examination.

Trial Examiner Norwood: State your full name and address, Mr. Higgins.

The Witness: J. R. Higgins, St. Louis, Missouri.

4004 Trial Examiner Norwood: Mr. Higgins has been sworn. You may take the stand.

Proceed.

Mr. DuBose: I ask that these documents be marked Respondents' Exhibit 213-A and succeeding letters for identification.

(The papers referred to were marked Respondents' Exhibit 213-A, 213-B, 213-C, 213-D, 213-E, 213-F, 213-G, 213-H, 213-I, 213-J, 213-K, 213-L, 213-M, 213-N, 213-O, 213-P, and 213-Q, for identification.)

By Mr. DuBose:

Q. Mr. Higgins, do you recall in Washington last June 12th identifying the documents which have been marked Respondents' Exhibit 160-A through Respondents' Exhibit 160-R for identification, which are listed in the index to the minutes for June 12th, and which constituted a study made under your direction of sales by the St. Louis branch of the National Lead Company for the year 1941 covering white lead in oil, or heavy and soft paste white lead, dry white lead, oxides in car lots and oxides in less than car lots? Have you since those hearings rechecked all of the figures and rates and so on shown with respect to heavy and soft paste white lead sales by the St. Louis branch of the National Lead Company for 1941?

A. We have rechecked all our records.

4005 Q. And did you have a complete new set of corrected figures typed up in your office at St. Louis?

A. That is correct.

Q. I show you Respondents' Exhibit 213-A through Q for identification, and I will ask you whether those are the corrected figures and rates for white lead in oil sales by the St. Louis branch of the National Lead Company for the year 1941?

A. Those are the corrected figures.

Q. Now, you explained in some detail at the last hearing on June 12th how these figures were arrived at, is that correct?

A. Yes, on the original testimony that is correct.

Q. On the original proposed exhibit?

A. That is right.

Q. Were these figures and rates in Respondents' Exhibit 213-A to Q for identification similarly prepared as the former exhibit? Were they prepared in the same fashion?

A. They were prepared in the same fashion, but a careful check was made to avoid any errors that may have appeared as the result of an effort on our part to consolidate into eight days the billings for different commodities covering the tonnage freight rate and all the details. That took ten or twelve employees eight days to prepare.

Q. Now, let me ask you this, Mr. Higgins: For the most part of it the figures are the same as those appearing
4006 in Respondents' Exhibit 160-A through R, inclusive, for identification, for the most part?

A. That is correct.

Q. But you did make corrections. What did those corrections generally consist of?

A. The classification of freight rates that were applicable to the shipment, either from St. Louis or from our warehouse points and where the combination of rates were involved.

Q. How about cartage figures? Were they carefully checked?

A. The cartage figures are actual figures which we found were in our Auditing Department, and we made an attempt on our original sheet to fix the estimate of the drayage, and then the actual drayage which came afterwards. There was some confusion in arriving at those figures, although the end figure was identically the same.

Q. And in this new compilation, the Respondents' Exhibit 213-A to Q for identification, wherever you show cartage those are actual cartage figures?

A. That is correct.

Q. And wherever you show rail rates you have in each instance made an honest endeavor to discover the exact applicable rate which would be applicable to these particular towns and to particular pounds there sold, is that correct?

A. That is correct.

4007 Q. And if I were to ask you as to the method by which the figures which appear on Respondents' Exhibit 213-B through Q, inclusive, for identification, would your answer be along the same lines as the answers you gave me on June 12th with respect to the white lead in oil figures which appear on Respondents' Exhibit 160-D through R, inclusive, for identification?

A. That is correct.

Mr. Wright: An objection, Your Honor. Read the question.

Trial Examiner Norwood: Read the question.

(The pending question was thereupon read by the reporter.)

Mr. Wright: That is a highly improper question, Your Honor.

Mr. DuBose: Your Honor, I could take him through—

Trial Examiner Norwood (interposing): Well, it is just to permit him to adopt that previous testimony; that is, to state that these documents were gotten up in the same way and are based on the same data except for these corrections.

Mr. DuBose: I have already asked him the question. He has replied.

Trial Examiner Norwood: Yes.

Mr. DuBose: For the most part these are the same figures, and the new compilation is just a correction in the old compilation.

4008 Trial Examiner Norwood: Yes. I will overrule the objection.

Mr. Wright: As I understand it the question is not a question as to what the witness has testified, but was a question as to what the witness would answer if you asked him, if counsel asked him a question.

Mr. DuBose: I do not see the difference.

Mr. Wright: I see it.

Trial Examiner Norwood: I think that question is clarified. Go ahead.

By Mr. DuBose:

Q. What is your answer, sir?

A. That is correct.

Q. In other words, Respondents' Exhibit 213-B through Q for identification and all the facts and figures appearing thereon were prepared from the same sources and in a similar fashion as were the facts and figures which were on Respondents' Exhibit 160-D to R for identification?

A. That is correct.

Q. And I show you Respondents' Exhibit 213-A for identification and ask you what that purports to be?

A. This report is the 1941 sales of white lead in oil classified under the various zones, total pounds sold under each zone, total freight and cartage for each zone and the final figures, the average freight per hundredweight of each zone.

4009 Q. And those figures which appear on 213-A are a summary of the corrected figures which appear on Respondents' Exhibit 213-B through Q for identification?

A. That is correct.

Q. And to the extent that they represent corrected figures they differ slightly, or to some degree, with the summary you have heretofore identified, which appears on Respondents' Exhibit 164 for identification?

A. That is correct.

Mr. DuBose: I offer in evidence Respondents' Exhibit 213-A to Q, inclusive, for identification.

Mr. Wright: May I ask whether there are to be similar documents similarly related to the other exhibits offered?

Mr. DuBose: This is a similar document to those other exhibits.

Off the record.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: Are you ready to go ahead?

Mr. Wright: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: Back on the record.

Make your statement, Mr. Wright.

Mr. Wright: I would like to request an opportunity of examining these exhibits and the other data which 4010 were previously identified, and to defer preliminary cross-examination on identification of this exhibit until some time tomorrow.

Trial Examiner Norwood: Yes.

Mr. DuBose: That is agreeable with us.

Trial Examiner Norwood: I will defer the ruling until tomorrow, and this witness will come back tomorrow at any time the counsel may require.

Mr. DuBose: I will have some further questions.

Trial Examiner Norwood: And for some further questioning about it.

Have you another witness you can put on?

Mr. DuBose: I have some more questions of this witness.

Trial Examiner Norwood: All right. Go ahead. And that is 213 that is pending.

Mr. DuBose: That is right. I ask that this document be marked Respondents' Exhibit 214 for identification.

(The paper referred to was marked Respondents' Exhibit No. 214 for identification.)

Mr. DuBose: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: Back on the record.

By Mr. DuBose:

Q. Mr. Higgins, I show you Respondents' Exhibit 162-A, B, C, and D, for identification, which you identified 4011 last June 12th in Washington as representing the figures showing dry white lead sales by the St. Louis branch of the National Lead Company for the year 1941 in par and in one-cent territories, and I call your attention particularly to Respondents' Exhibit 162-C for identification, and I ask you whether there have been any corrections made on this document since it was identified on June 12th?

A. Yes.

Q. Now, on 162-C is the figure 1,357,409; is that the corrected total plus cartage figure?

A. That is the corrected figure.

Q. In other words, that is the estimated freight plus the cartage corrected figure?

A. That is correct.

Q. And I ask you whether the next column, under the heading "Less St. Louis, New Orleans, Kansas City, Dallas, Omaha, and St. Paul," whether those figures have been added since this document was identified?

A. That is the correction of the—

Q. (Interposing.) Those have been added? That is all I am asking you.

A. Those have been added.

Q. And I ask you whether or not you and I, working together, did not add the last entry on that page, "Less Kansas City," and so forth?

4012 A. That is correct.

Q. Now, Mr. Higgins, you identified, I believe Respondents' Exhibit 162-A to C, inclusive, as being the dry white lead sales by St. Louis for par territory in 1941, is that correct?

A. That is correct.

Q. And in some instances cartage figures appear of 10 cents a hundred opposite those entries?

A. That is correct.

Q. And I believe you stated that those were at that time estimated cartage per hundredweight?

A. That is correct.

Q. Now, you had formerly had on this sheet cartage for the six points, St. Louis, Kansas City, New Orleans, Dallas, Omaha, and St. Paul, is that correct?

A. That is correct.

Q. And those are actual cartage figures as corrected?

A. That is correct.

Q. Did you find upon recheck that some of the estimated 10-cents per hundredweight cartage figures would be applicable to those six towns? Do you get what I mean? I mean when you rechecked it.

A. Yes, that is correct.

Q. Did you not find that some of the estimated 10-cent cartage were for the various cities for which you added cartage at the end?

4013 A. That is correct.

Q. Then your correction under the heading "Less St. Louis, New Orleans, Kansas City, Dallas, Omaha, and St. Paul," which you have explained that you added were a subtraction of the estimated 10 cents per hundredweight that you had in the body of these sheets, is that correct?

A. That is correct.

Q. And those corrections carried through in every instance except for the shipments to Kansas City, from Kansas City, which carried a cartage of 10 cents, and of which the poundage was 53,400, is that correct?

A. That is correct.

Q. And on checking yesterday with me did you and I discover that error?

A. We did.

Q. And did you see me make the final correction in my handwriting, a correction, "Less Kansas City, 53,400 times 10"?

A. That is correct.

Q. Now, the final figure on that page, Respondents' Exhibit 162-C, which you said you saw me make in my handwriting, is the corrected total freight and cartage for dry white lead, St. Louis branch, 1941, sales in par territory, is that correct?

A. That is correct.

Q. That corrected figure appears in the summary, which is Respondents' Exhibit 214 for identification, is that correct?

4014 A. That is correct.

Q. I show you Respondents' Exhibit 162-D for identification, which you identified as dry white lead sales in the one-quarter territory?

A. That is correct.

Q. And I ask you whether or not any corrections have been made on that?

A. There are no changes there.

Q. Now, Respondents' Exhibit 214 for identification purports to show what?

A. This purports to show 1941 sales of dry white lead.

Q. By the St. Louis branch of National Lead Company, is that correct?

A. St. Louis branch of National Lead Company, that is correct.

Q. And is that paper a summary of the final figures reached and as corrected which appear on Respondents' Exhibit 162-A through D for identification?

A. That is correct.

Mr. DuBose: At this time I should like to offer in evidence Respondents' Exhibit 162-A to D, inclusive, for identification, and Respondents' Exhibit 214 for identification, which has been identified by the summary of those exhibits heretofore identified.

Mr. Wright: Will you tender the witness for 4015 preliminary cross-examination on the identification?

Mr. DuBose: Yes.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: Proceed with your cross-examination.

Mr. Wright: Your Honor, I would like to have the same privilege of examining these documents, as you can tell there is considerable complexity to them, and I have never seen these corrections which have been made on the exhibits since they were first identified.

Trial Examiner Norwood: Counsel may have until tomorrow to examine them, the same as in the case of the other exhibits. I will defer the ruling.

Mr. DuBose: May we go off the record for a moment?

Trial Examiner Norwood: Yes.

(Discussion off the record.)

Trial Examiner Norwood: Back on the record.

Mr. DuBose: Could we go on the record while I make a motion for an adjournment until tomorrow morning?

At this time, Your Honor, I should like to move for an adjournment of these hearings until 10:00 a.m. tomorrow morning at the same place.

Trial Examiner Norwood: Is that agreeable to counsel for the Commission?

4016 Mr. Wright: That is agreeable to me, sir.

Trial Examiner Norwood: Now, as I understand from our off-the-record discussion, this is necessary to allow the Commission's counsel to examine these exhibits, and it is impracticable for respondents to produce any more witnesses today. But I want to ask them then to let us run continuously after I re-convene tomorrow morning, so that we may get through this week.

We are under a great necessity for saving all the time possible. I will ask counsel to co-operate.

We will meet in this room tomorrow morning.

Mr. DuBose: Yes, sir.

Trial Examiner Norwood: Do you want to meet any earlier than 10:00?

Mr. DuBose: I do not think that is practical either, Your Honor.

Trial Examiner Norwood: We will recess until 10:00 o'clock tomorrow morning in this same room.

(Whereupon, at 12:00 o'clock noon, November 12, 1947, the hearing in the above-entitled matter was adjourned until tomorrow, November 13, 1947, at 10:00 o'clock a.m. at the same place.)

4017

Trial Room No. 10,
Bar Association Building,
42 West 44th Street,
New York, N. Y.,
Thursday, November 13, 1947.

Met, pursuant to adjournment, at 10:00 a.m.

Before:

John W. Norwood, Trial Examiner.

Appearances:

Joseph S. Wright, Esq., appearing for the Federal Trade Commission.

Edmund P. Wood, Esq., 2801 Carew Tower, Cincinnati, Ohio, appearing for Eagle-Picher Lead Company and Eagle-Picher Sales Company.

Robert H. Ecker, Esq., and
Henry E. Gardiner, Esq., (Chadbourne, Wallace, Parke & Whiteside, 25 Broadway, New York, N. Y.) appearing for Anaconda Copper Mining Company and International Smelting & Refining Company.

James D. Ewing, Esq., and
E. Z. DuBose, Esq., (Alexander & Green, 120 Broadway, New York, N. Y.), appearing for the National Lead Company.

J. T. Welch, Esq., (Davies, Richberg, Beebe, Busick & Richardson, 815 Fifteenth Street, Northwest, Washington, D. C.), appearing for Sherwin-Williams Company.

4018 Roger Hinds, Esq., (165 Broadway, New York, N. Y.), appearing for The Glidden Company.

P. J. McDowell, Esq., Midland Building, Cleveland, Ohio, appearing for Sherwin Williams Company.

4019

PROCEEDINGS.

Trial Examiner Norwood: The hearing will come to order. Pursuant to adjournment yesterday the hearing in Docket No. 5253 is now reconvened at 10:00 o'clock a. m. on the 13th day of November, 1947, in Room 10, Bar Association Building, 42 West 44th Street, New York, New York.

The reporter will please enter the appearances.
Call your first witness.
Mr. Wright: Mr. Higgins.

J. R. HIGGINS was thereupon recalled as a witness for the respondents and, having been previously duly sworn, testified further as follows:

Trial Examiner Norwood: Will Mr. DuBose ask the questions?
Mr. Wright: No, I will.

Cross-Examination (Continued) by Mr. Wright.

Q. Now, Mr. Higgins, when you testified first, you testified that according to these documents which have been identified as Respondents' Exhibits 162-A and sub numbers, 213-A and sub numbers, 214 and 162-A to D, are all revisions and further boiling down of the information in the first exhibit?

A. Yes, the corrections and errors which were apparent to us in going over the picture.

4020 Q. What was the purpose of making these exhibits up, Mr. Higgins?

A. The new—

Q. The original and the new ones?

A. The purpose was in response to a letter which we had received from our New York office to make up certain figures covering tonnage, cost of freight and cartage and the end figure, which as I recall, was the cost per hundred weight. That briefly was the outline, and which was the final figure which we worked to.

Q. Now, we had extensive cross-examination about various factors and figures that went into these things when you were here in New York the last time. Have you remembered or read that transcript since the time, and are you familiar with the examination then?

A. Yes, sir.

Q. Are the methods and the techniques employed on the new material 213 and sub numbers and 214 the same as the methods which you testified about on your direct and cross-examination?

A. They were identically the same.

Q. Identically the same?

A. Yes.

Q. So if I asked you the same questions on cross-examination about the new material 213 and 214 your answers would be the same?

4021 A. That is correct.

Q. Now, I call your attention to 163-A to D, 163-A to H, 163-G which are pending on an offer in evidence relating to the objections I made: I notice that none of this new material contains anything about objections I had—

Mr. DuBose: Just a moment, I don't recall that there is an offer pending.

Mr. Wright: I beg pardon, I think it has been offered and re-offered.

Mr. Ewing: At this point I will withdraw the offer of those particular exhibits.

Trial Examiner Norwood: Off the record, just a minute.

(Discussion off the record.)

Trial Examiner Norwood: On the record.

Mr. DuBose: Counsel for the Commission has called attention to the fact that at the hearings last June in Washington, and again in the subsequent week of June 18, I believe in New York, counsel for the respondent National Lead offered and re-offered through the witness on the stand the following exhibits then marked for identification, namely, Respondents' Exhibit 160-A through R, inclusive, 161, 162-A through D, 163-A through G and 164. At this time we should like to withdraw our offer of those exhibits to the following extent: We withdraw our offer as to Respondent's Exhibit 160-A through R, inclusive, 161,
4022 162-A through D, 163-A through G, and 164. At this
time we should like to withdraw our offer of those exhibits to the following extent: We withdraw our offer as to Respondent's Exhibits 160-A through R, inclusive, 161, 163-A through G, inclusive, and 164, and our offer now with respect to this freight and tonnage information is restricted to our offer made yesterday, namely, Respondent's Exhibit 213-A through Q for identification, Respondent's Exhibit 214 for identification and Respondent's Exhibit 162-A through D with the corrections to Respondent's Exhibit 162-C which were made since the document was originally identified and about which Mr. Higgins testified yesterday.

Trial Examiner Norwood: The counsel may withdraw them.

By Mr. Wright:

Q. As I understand it, Mr. Higgins, you went back over all of the material that was originally identified since the last hearing; is that correct?

A. I made a very very careful study of the white lead in oil because we found in going through the records that there were errors that were apparent. As I explained yesterday, the first job was done in about eight days' time, ten or twelve people, and involved a year's work.

Q. Did you go over the objection I had to the situation as it showed in there?

4023 A. Nothing more than what covered in the testimony that was sent to me. I didn't go over anything further.

Q. You didn't further check the objection I had to the time of what the situation was?

A. No, sir, I have not made any further check.

Q. Since this last hearing in New York?

A. That's right.

Q. I take it, that the purpose of this 213-A through Q is to show the average freight per hundred weight in zones, to show that their differentials are justified from your point of view, is that not correct?

A. Yes, sir, that is correct.

Q. Now, I call your attention to some matters which appear on this exhibit, 213, Q in the par zone now on white lead in oil, State of Illinois. You show us to Quincy two rates, a truckload of twenty-five cents and less than carload, thirty-five cents?

A. Right.

Q. And your extension on that tonnage, on that poundage of 66,130 is thirty cents a ton?

A. That is correct.

Q. Which is an average between the truckload and less than carload?

A. That is correct.

Q. You do the same in Springfield, you split the 4024 difference between the truck load rate of twenty-seven cents and L. C. L. rate of thirty-one cents and expend it to twenty-seven cents a hundred on 94,000 pounds roughly?

A. Yes.

Q. When you get over on Exhibit 213-D, there is a rate of fifty-three cents which appears to be less than car load rate; is that correct?

A. That is correct.

Q. Yet there was a quantity involved there of 87,121 and ½ pounds. I call your attention to Waterloo on the same exhibit which carries a rate of sixty-three cents which is apparently the less than car load rate?

A. That is correct.

Q. The amount offered is 87,004 and ½ pounds. I call your attention to the fact that in Duluth on Exhib't 213-E you show first a thirty-four cent rate in the St. Paul warehouse and ~~then a~~ forty-cent less than car load rate giving you a total extension then of eighty-seven cents employed in 112,363 pounds. I call your attention to the fact that on 213-H you carry a similar extension of a rate for St. Joseph taking the car load to Kansas City, twenty-nine cents a hundred, less than car load rate from Kansas City to St. Joseph of twenty-five cents or a total extension of fifty-four cents a hundred and that the pounds involved were 82,347 and ½?

A. Yes.

4025 Q. I call your attention to the fact that on 213-L you show, apparently, a less than car load rate from St. Louis to Jackson, Mississippi of eighty-nine cents where there is 63,200 pounds involved?

A. Yes.

Q. Will you explain to me why these par zone shipments, Mr. Higgins, where we have quantities from 66 to 100 thousand pounds involved that you figure that they were shipped on an average between the truck load or car load rate and the less than car load rate, yet when you get into the premium zones in similar quantities you figure it all at the less than car load rate?

Mr. DuBose: Well, I object to that question upon the ground that it does not correctly summarize the figures with respect to the par zone.

Mr. Wright: I will amend the question then to make it on the basis of the figures which I have just called Mr. Higgins's attention to, then.

A. When these figures were prepared, when the tonnages for the towns were prepared, it was not less to one individual. I had two people come in to my office and we sat down and we collectively went over and discussed the various shipments; how they were handled. The corrections that were made are errors that were apparent, possibly an oversight, but in the case of the par zone you speak of

4026 here in Quincy and Springfield, Peoria, we took an average of the rates because we found it was necessary at that time to make less than car load shipments. And in order to arrive at an accurate figure we took the average in those points as near as we could determine the cost of the freight in getting the shipments from St. Louis to those points in the par territory.

Q. Why do you assume there were never any truck loads or car loads shipments involving 1,000 pounds. For instance, from Duluth to St. Paul it was 82,000 pounds, from Kansas City to St. Joe, when you do assume an equal rate between truck loads and less than car loads in places like Quincy and Duluth on smaller quantities?

A. As far as the warehouses are concerned, we make every effort from our own plant to our own warehouse—

Q. Exactly.

A. To the warehouse points, then the local shipments are made from there.

Q. What was the basis of your determining that on that 56,000 pounds to Quincy that half of that went by truck load and that as to the 112,000 pounds to Duluth none of it went by truck load or car load?

A. In the case of Duluth, we accomplished the point by shipping from the warehouse. If we had shipped from St. Louis to Duluth the freight rate would have been much higher.

Q. I am talking about the truck loads which show 4027 shipments of 112,000 pounds from St. Paul to Duluth. How can you assume none of that went by truck load?

A. It may have been—you are speaking of Duluth?

Q. Yes, sir.

A. There was not enough at that time to make shipments directly from St. Louis, either truck loads or so it was shipped out of St. Paul as the material was available.

Q. Weren't the warehouses in your St. Paul territory served by truck to Duluth rather than less than truck loads or less than car loads when it was possible to do so?

A. When the tonnage was much less than that, that would be absolutely correct.

Q. We are talking about 1941. We are talking about a city you shipped 112,000. In that case you say it went less than car loads. In another case in a town which only took

56,000 pounds you say that went half by truck and the other half less than car loads. How do you make that distinction between those particular cities?

A. We know pretty well in the case of our accounts in Peoria who would take truck loads and who would take L. C. L. shipments and we could determine from our shipments those who handle the shipments. I think that is an absolute correct record. This is the best job the combined efforts of all of our people could do in arriving at this.

Q. Since all of the material for St. Joe and all 4028 of the material for Duluth, apparently went out of the Kansas City and St. Paul warehouses, respectively, you would not have records as to that in your central office, would you?

A. We would have the tariffs for 1941.

Q. I am talking now about the records from which you know what went in truck loads, what went in less than truck loads and what went L. C. L.?

A. I would say that there is no one could go back into 1941 with a 100 per cent memory of every shipment, but I will state that to the best of my memory our shipments went the way they are listed, those shipments were handled that way.

Q. That is what I am getting at.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Mr. DuBose: I have just one or two questions here. We re-offer the same exhibits, namely, 213-A through Q, inclusive, for identification, 214 and 162-A to D as corrected.

Mr. Wright: Well, Your Honor, I object to the receipt of this in evidence. I think it is apparent by now the long time we have spent on direct and on cross, both at this hearing and the previous hearings in New York and Washington just what this information is, and I think it has become apparent in those two hearings how unreliable such information can be. It is obvious on the state of the record now how unreliable it can be. I can't question the 4029 figures that appear in there showing the tonnages shipped to each town. I must assume that those are the figures as they appear in the records of the company. I can't at this time question the validity of the rates for the different classifications or the routing which they took, but I do very strongly object to the methods by which these figures have been put together to reach the results which it sought to be shown in 213-A and in 214. It is highly misleading and it has no validity whatsoever. It involves, as has been shown on the examination so far, speculation, purest speculation. Here we have an allocation of business whether to truck loads or to less than car loads. They don't know which one they want, they don't know which way it was shipped so they split the difference, as to certain transactions in the par zone. As to certain transactions in the premium zones that allowed tonnages twice as large as those in the par zone.

The assumption is made they all went less than car loads. The effect of it is to raise the rate in the premium zone, and bring the justification of the raise of rates on an average basis, the validity of which I am certainly not going to accept. I can have no objection to the introduction of a figure of a poundage sold to these towns and the territories, but insofar as exhibits going beyond that point, I must object.

Mr. DuBose: If Your Honor please, Mr. Wright has not objected to tonnage and freight rates. He has
4030 picked out certain isolated instances, and we respectively urge he has a right to urge that objection, but it goes to the weight of the exhibit not to its admissibility. The document has been fully explained, how it was prepared. If it has errors, that is a matter of giving weight to the conclusions reached, but not to the admissibility of the records.

Mr. Wright: First of all, I object to the characterization "isolated instances." Furthermore, on the matter of weight, if this information is not put together in a proper form to reflect actually what was done, there is no question of weight, it is nothing, it can not mean anything. It is just not admissible. If either has weight or it is inadmissible. I say that the information about the manner in which it has been put together, which has been elicited previously and today, show that it is wholly unreliable and should not be admissible for that purpose.

Trial Examiner Norwood: Here are some documents that have some information, in the part of which is recognized as being correct, and information based on estimates and it appears clearly, as to some of them, that they based on estimates, and the witness has told us about that, and counsel may therefore cross-examine him on every item, so that it may appear just how this was made, and I think that the matters which have been urged by Commission's counsel go to the weight of the document.

4031 Mr. Wright: Your Honor, the whole thing boils down to these two papers down here, 214 and 213-A. Let me call your attention as to how these were arrived at. On 213-A there is a listing of accounts sold in the various zones. As I say, while I am not conceding to the correctness of that, still I can't object to this. Column 2 has the total freight and tonnage. How is that arrived at. It was arrived at by multiplying something which has no validity to the end results. That multiplication can have no validity.

Mr. Ewing: The witness testified that he has gone over these matters with his associates and assistants and they know where they do business and with whom they do business. To break it down to isolated instances, as Mr. Wright has done, is to distort what he testified to.

Trial Examiner Norwood: I shall overrule the objection and receive the exhibits. I think those matters go to the weight of the exhibits. Counsel may go into it and show the correctness throughout. I don't think that at any time the receipt of documents in evidence show that the Trial Examiner thinks that every item is true.

(The documents referred to, heretofore marked for identification as RESPONDENTS' EXHIBITS 213-A, 213-B, 213-C, 213-D, 213-E, 213-F, 213-G, 213-H, 213-I, 213-J, 213-K, 213-L, 213-M, 213-N, 213-O, 213-P, 213-Q; 214, 162-A, 162-B, 162-C, 162-D, were received in evidence.)

4032 Mr. DuBose: Now that the preliminary direct and cross have been concluded and the documents have been received, I have some further direct on the documents just admitted in evidence.

Trial Examiner Norwood: Go ahead.

Direct Examination by Mr. DuBose.

Q. Mr. Higgins, I show you Respondents' Exhibit 213-B in evidence, and I call your attention to a shipment from St. Louis to Alton, Illinois, or shipments, rather, for the year 1941 in the total amount of 51,576 pounds, which total poundage is more than one car load; is that correct?

A. That is correct. At that time 20-ton cars.

Q. Twenty-ton cars, that makes it 40,000 pounds?

A. That is correct.

Q. And the applicable rate given there was twenty cents, which I take it is the L. C. L. rate from St. Louis to Alton?

A. That is correct.

Q. I call your attention to another item on the same exhibit relating to par zone shipments for 1941 from St. Louis to Bloomington in the total amount of 52,375 pounds to which was applied the rate of thirty-seven cents. Is that the L. C. L. rate?

A. That is the L. C. L. rate.

Q. I call your attention to the same exhibit on
4033 which appears a shipment from St. Louis to Jacksonville, Illinois in the total poundage of shipment for the year 1941, in the total amount of 47,662 and ½ pounds to which was applied the rate of thirty cents. Is that the L. C. L. rate?

A. That is the L. C. L. rate.

Q. I call your attention again to another shipment in the par zone on the same exhibit from St. Louis to Mattoon, Illinois, which shipment for 1941 totaled 52,049 and ½ to which was applied the rate of thirty-four cents. Is that the L. C. L. rate?

A. That is correct.

Q. Now, Mr. Higgins, you have testified that in determining what rate was applicable you had a round table conversation with other members of the St. Louis branch staff; is that correct?

A. That is correct.

Q. You have the records showing who the customers are?

Mr. Wright: Your Honor, I object to the leading character of these questions.

Mr. DuBose: I will withdraw the last question.

By Mr. DuBose:

Q. Do you have records or does anyone in your office know the identity of the particular customers in these particular towns?

A. We all know the individual customers.

4034 Q. Now, would you know from your experience in the St. Louis branch and from the collective experience of the other members with whom you consult whether or not ordinarily a particular customer is a car load or truck load customer?

Mr. Wright: I object to that question, Your Honor, it was leading, it was putting the words in the witness' mouth, and it called obviously for conclusions, which could only be hearsay.

Trial Examiner Norwood: Read the question.

Mr. Wright: I might say I don't mind so much counsel testifying for the witness in identifying the documents, but I do object to characterizations after they are in the record. I think the witness can be allowed to testify for himself.

Mr. DuBose: It was a direct question, Your Honor.

Trial Examiner Norwood: Read the question.

(Last question read by the reporter.)

Trial Examiner Norwood: I think that contains the answer. Objection sustained.

By Mr. DuBose:

Q. All right, Mr. Higgins, from your experience in the company of twenty years, your experience with the sale of white lead in oil, do you in many instances know the category in which a customer will fall; yes or no?

A. Yes.

4035 Q. Now, what categories do customers fall into?

A. First, L. C. L. shipments. An order comes in to the desk, many orders. The orders are looked over and sorted, the shipment from St. Louis is entered with a notation on it, and sent to the Traffic Department and the shipment is made. If the shipment is from Minnesota, North Dakota or any of the territory adjacent to the branch warehouses, it is automatically sent to the Omaha warehouse or St. Paul warehouse, whichever the case might be, and the order is entered through our Order Department and allocated to that branch warehouse where the shipment is made.

Q. Let me ask you this question, Mr. Higgins: Do you know, ordinarily, in what quantity a particular customer located in a particular town will buy white lead in oil?

A. I think I do.

Q. In your discussions with the other members of the St. Louis staff, when you were estimating whether or not shipments to particular towns were truck loads or car loads or combinations of both, did that element, namely, whether or not—withdraw that.

In your discussions with other members of the St. Louis branch at which you reached the conclusion that as to particular towns there should be an average between truck loads and L. C. L., did your knowledge of whether ordi-

narily a customer located in that particular spot
4036 purchased L. C. L. or other quantities enter into that estimate?

Mr. Wright: Objection.

Mr. DuBose: I don't see why. That is perfectly proper.

Trial Examiner Norwood: What is the ground?

Mr. Wright: It starts off by putting several conclusions and an assumption of fact in the witness' mouth before he can arrive at an answer to the question.

Trial Examiner Norwood: Read the question.

(The question was read by the reporter.)

Trial Examiner Norwood: I think it is in evidence that he did have this consultation and come to that conclusion.

Mr. Wright: Your Honor, I asked the witness what distinction he made on cross-examination and he could not give me a satisfactory answer and counsel is giving him a tailor-made distinction in his question.

Mr. DuBose: I object to that. It is perfectly clear these people knew the customers in particular towns and as a result of that knowledge they decided whether it should be a truck load or car load. I am trying to find out what he knew about the customer which led him to that conclusion.

Mr. Wright: Can't the witness be asked what made him reach that distinction?

Mr. DuBose: All right, I will ask him.

Trial Examiner Norwood: Question withdrawn. Go on.

4037 By Mr. DuBose:

Q. Mr. Higgins, I show you Respondents' Exhibit 213-B, for identification which shows a shipment for 1941 in the par zone from St. Louis to Decatur, Illinois and the total amount of 158,112 and ½ pounds to which was applied the rate of twenty-seven cents, which is an average between truck loads and L. C. L. What considerations were taken into account in arriving at this figure of twenty-seven cents which is the average between truck loads and L. C. L.?

A. I am perfectly acquainted with the customers in Decatur, Illinois. Their business, tonnage that they have handled in previous years and the tonnage they handled in 1941, to the best of my knowledge, the division of the truck load to certain customers and division of L. C. L. where the rate was twenty-two cents for the truck load and thirty-two cents for the L. C. L., gave us the average of 27 cents on 158,112 and ½ pounds, which is in my opinion, the correct rate applicable to that tonnage going to Decatur for the year 1941.

Q. Why is that, in your opinion, a correct estimate?

A. Because some of the customers at Decatur would take shipments from truck loads while there are a number of other customers who would get only L. C. L. shipments.

Q. Now, when you made a similar study with the others in the St. Louis branch, in connection with all these white lead in oil shipments for 1941, and when you deter-
4038 mined what you thought was the applicable rate, did the same consideration enter into your mind and were they taken into account at that conference?

A. That is correct. They came to my desk and we spent hour after hour going over the details and studying each town on that list.

Q. Now, Mr. Higgins, how long have you been connected with the sales of white lead in oil by the St. Louis branch, white lead in oil department?

A. I have been with the National Lead Company 37 years, and to my knowledge, my memory, it was in 1930 when I went into the white lead department.

Q. And since 1930 have you been in close contact with the sales of white lead in oil by the St. Louis branch of the National Lead Company?

A. That is correct.

Q. And when you arrived at the applicable rate, did the applicable rate, which is shown on these exhibits 213-A through Q, inclusive, represent in your opinion the applicable rate based upon your experience and knowledge of the sales by the St. Louis branch of white lead in oil?

Mr. Wright: Objection, same objection.

Trial Examiner Norwood: Sustained. That has the answer in it.

By Mr. DuBose:

4039 Q. Now, Mr. Higgins, when you obtain or receive, rather, from the home office the letter asking for this information, did that letter state for what purpose the information was sought?

A. I do not recall the details. I saw a copy of the letter. It was not addressed to me, but I think I testified previously that I knew what the information was wanted for.

Q. You did know?

A. I think I did.

Mr. DuBose: No further direct.

Cross-Examination by Mr. Wright.

Q. Who are these customers in Decatur?

Mr. DuBose: I object to that on the ground it will disclose confidential trade information.

Trial Examiner Norwood: I don't think so.

Mr. Wright: If he is going to rest on that, I would like to have stricken from the record the exhibits regarding the names in this case.

Trial Examiner Norwood: Objection overruled. Go ahead.

Mr. DuBose: You mean names of customers?

Trial Examiner Norwood: Yes, in 1941.

By Mr. Wright:

Q. What were the names of customers who bought 4040 white lead in oil?

A. Black Hardware Company. Decatur Paint and Varnish Company. Those two accounts are large buyers.

Q. They would customarily be shipped in truck loads?

A. That is correct, sir.

Q. Who are your customers in Duluth, Minnesota?

A. Marshall Wells Hardware Company.

Q. That is a very large concern, isn't it?

A. Very large hardware concern.

Q. I assume this tabulation for your shipments would be less than car loads since that is the way it is set out in the tabulation?

A. What was that?

Q. I was asking you, since it is indicated all shipments to Duluth are less than car load, to St. Paul they were less than car load or less than truck load?

A. That is correct. We had the Kelly Thompson Company and Pierson Paint Company, St. James & Company.

Q. Marshall Wells is wholesale hardware company?

A. That is correct.

Q. How would you estimate its business would compare to Decatur Hardware Company or Black Hardware Company as to relative size in volume?

A. No comparison, Marshall Wells is a big concern covering six or eight states and Black Hardware does 4041 not have as much business and does both jobbing and retail business, covering Illinois and portions of Indiana and some southern territory.

Q. Is it principally a retailing concern?

A. I would say that they did a large jobbing business, because years ago they purchased many, many car loads from us.

Q. Marshall Wells would be many, many times larger as an enterprise?

A. There is no question about that, sir.

Q. Who are your customers in St. Joseph, Missouri in 1941, which I am speaking of?

Mr. DuBose: Your Honor, I was not being facetious before with my objection. Now, there are certain trade secrets and the names of customers certainly should not be divulged on a public record here.

Mr. Wright: This is the first time that this question has come up. We have long tabulations with the names of customers on them.

Trial Examiner Norwood: A reasonable number of questions may be asked to test this witness' knowledge; and this goes to that, and I think he may ask him what the names are to see if he knows who they are.

Mr. Wright: There are already in the record lists of customers in practically every town in the United States during the period of 1941 and there was no objection on
any of the respondents' parts to supplying that infor-
4042 mation. They were very cooperative about it. We
prepared those tabulations, now in evidence, in corroboration with the respondents, you might say.

Trial Examiner Norwood: I think the names of a few of these customers is a sufficient number to test this witness' knowledge and will not prejudice the respondents in any way.

Mr. DuBose: I assumed he was going to offer every town and every state.

Trial Examiner Norwood: I don't think so.

Mr. Wright: I assure counsel I have no intention of doing so.

Trial Examiner Norwood: Objection overruled.

The Witness: St. Joseph, Missouri?

By Mr. Wright:

Q. Yes.

A. Hyatt Hardware Company and there are five or six more concerns with a branch of Cooks warehouses.

Q. Hyatt is a large concern?

A. Yes.

Q. Are they similar to the ones in Decatur?

A. They cover a larger territory.

Q. Covering a larger territory than the ones in Decatur?

A. That's right.

4043 Q. I believe you stated before, Mr. Higgins, none of the information we have here, either as to town or as to cardage or as to freight, contains anything which can not be properly attributed to white lead in oil, in flatting, linseed oil, red lead in oil, no white lead points?

A. That is correct.

Q. Isn't it customary for large warehouses of hardware store to order a variety of mixed shipments, a variety of products, particularly out of the warehouse, and don't orders customarily include other things other than white lead in oil?

A. They take different freight classifications.

Q. Shipped together?

A. Mixed. White lead in oil would take one hundred pounds or more.

Q. Excuse me.

A. White lead in oil would take one hundred pounds or more for the minimum rate to apply.

Trial Examiner Norwood: We will take a brief recess.

(A five-minute recess was taken.)

Trial Examiner Norwood: Proceed.

By Mr. Wright:

Q. On your dry white figures here, Mr. Higgins, Exhibit 162-A through D, I believe the testimony was par is everything east of the Rocky Mountains?

A. That is correct.

4044 Q. Now, are you thoroughly familiar with the warehouse procedure on handling shipments in pool?

A. Pool cars would not be handled in the warehouse, they would be handled from St. Louis.

Q. Do you handle cars from St. Louis?

A. Are you speaking of 1941, sir?

Q. Yes.

A. I do believe there were no pool cars during 1941.

Q. Were there any in the three years prior to 1941?

A. There may have been.

4045 Q. Now, getting back to Decatur, Illinois, I think your comment there on white lead was—no, let's take

Quincy, your poundage on white lead was 66,000 pounds. You are familiar with the customers and trade there in Quincy?

A. Yes, sir.

Q. Approximately how many pounds, altogether, of all products of the National Lead Company sold in Quincy, all the other items like flattening, red lead, mixed paint colors in oil, dry colors, linseed oil, all the other products?

A. We may or may not sell all of those items to one or two major accounts in Quincy. I have it in mind there was one account that had the best turn-over in handling shipments in truckloads. He turned his stock a number of times a year which was good business so therefore I have Quincy fairly well in mind. We may not sell all the products, we would sell him white lead in oil, red lead in oil, dry red lead, he may purchase linseed oil from us, but I think he has linseed oil connections which he purchases elsewhere.

Q. How about flattening oil, dry colors, colors in oil?

A. Colors in oil is a comparatively small item and I believe at that time we were not handling colors in oil, although I am not sure. We took that up later.

Q. How would his total poundage of other products, this customer you are talking about, compare with the poundage of white lead in oil?

4046 A. There would be no comparison at all, sir.

Q. Can you give us an estimate or comparison, it need not be exact, say three times as much white lead in oil as other products, two times as much, about the same amount?

A. I would say his tonnage is 90 per cent lead in oil and 10 per cent the other.

Q. Aren't there towns in which you have accounts whose purchase of a larger percentage of white lead in oil is larger than this particular account?

A. In 1941 we were confined entirely to white lead in oil, red lead in oil, and we did not have the other ramifications of the paint business that some of the other branches may have had, at that time.

Q. You handle quite a bit of linseed oil out at the St. Louis branch?

A. We handle a great deal of linseed oil for manufacturing purposes.

Q. You handle that under the Dutch Boy label?

A. Whenever we have brought in linseed oil in carloads in St. Louis, we have brought them in in five-gallon and one-gallon containers. We have never, at St. Louis, been a factor in the linseed oil business.

Q. You serve the whole trade in the St. Louis branch area Dutch Boy linseed oil, in Dutch Boy containers?

A. We do now.

4047 Q. Who services that area?

A. For instance, Northwest, you have individual customers such as large national concerns, and the major portion of the linseed oil business is taken there. I don't recall that we sold it in cans.

Q. By the National Lead Company?

A. So when we speak of linseed oil, we in St. Louis are confining our major production to the manufacture of white lead in oil and red lead in oil.

Q. How about flattening oil?

A. Flattening oil we do not manufacture. We bring that in in carloads from the East and manufacture where we have a demand.

Q. You receive Dutch Boy flattening oil throughout that area?

A. That is right.

Q. In 1941, approximately how many pounds of that would the St. Louis branch sell, can you give me an idea?

A. Oh, five or six carloads we covered it.

Q. You don't know what the situation is with reference to the other branches as to those products?

A. I am not familiar with that detail.

Q. Now, when you were here last, Mr. Higgins, you stated that these documents which were then offered in evidence had been correct and represented the best that could be done as far as getting these figures, is that correct?

A. I misunderstood the question. Are you speaking of today?

4048 Q. No; when you were here last in New York.

Mr. DuBose: Last June.

By Mr. Wright:

Q. Last June?

A. That is correct.

Q. Since that time you have gone over them and you have found actually there were a lot of discrepancies in those figures?

A. I checked over the white lead in oil and dry products and found errors that should not have been in there.

Q. Do you suppose if you were to do that again now that you might similarly find the same sort of mistakes and errors in computation and allocation of the freight rates to customers?

A. I do not believe so. I think that that record that I brought here represents the best job the St. Louis branch can do, and I think myself it is one hundred per cent correct.

Mr. Wright: No further examination.

Mr. DuBose: No further examination.

Trial Examiner Norwood: Thank you, Mr. Higgins.

(Witness excused.)

Trial Examiner Norwood: Call your next witness.

Mr. DuBose: Mr. Owens.

4049 THOMAS OWENS was thereupon called as a witness for the respondents, and having been first duly sworn, testified as follows:

Direct Examination by Mr. DuBose.

Q. Mr. Owens, will you tell me by whom you are employed?

A. National Lead Company, Executive Office.

Q. In what capacity?

A. Office Manager in the Accounting Department.

Q. Office Manager of the Accounting Department?

A. Yes, sir.

Q. Now, will you tell us when you first came with National Lead and what positions you have had with National Lead since that time?

A. I have been continuously employed by the National Lead Company since June of 1934, first in the position of office boy, then as general accountant, cost accountant, traveling auditor, and finally office manager.

Q. Now, when did you become a traveling auditor, do you recall?

A. Back around 1940.

Q. And when did you become a general cost accountant in the Home Office?

A. About December, 1942.

Q. And when did you assume your present position as office manager, general accounting office, in the Home Office?

4050 A. February 1, 1947.

Q. Now, did you or have you received a degree from a university?

A. Yes, sir, Bachelor of Science in Accounting, New York University.

Q. When did you receive that degree?

A. In June of 1941.

Q. Now, since 1940 you have been generally familiar with the accounting department in the Home Office?

A. Yes, sir.

Mr. DuBose: I ask that these documents, Respondents' Exhibit 215-A and B be marked for identification and these two, 216 for identification and 217.

(The documents referred to were marked Respondents' Exhibits 215-A, 215-B, 216 and 217 for identification.)

By Mr. DuBose:

Q. Mr. Owens, I show you Respondents' Exhibit 215-A and B for identification and I ask you to tell us generally what these figures purport to show, what these documents are, generally?

A. These figures show columnar arrangements of the five white lead manufacturing plants in the National Lead Company, total weight in pounds shipped various cities throughout the United States, car load freight rates, l.c.l. freight rates, customer locations, extensions, and also
4051 car load freight rates from the manufacturing branch to the customer, total cost, l.c.l. freight rates from the manufacturing branch to the customer and extensions.

Q. And to what product does this document relate?

A. Dry white lead.

Trial Examiner Norwood: That is 215 he is talking about?

Mr. DuBose: 215-A and B, dry white lead.

By Mr. DuBose:

Q. Now, in the second column, the second column from the left under the heading "Weight in pounds," are certain figures and there is another column entitled "Customers Allocations." Do these weights include all the customers in that location or only a particular type of customer?

A. These figures apply only to the car load customer in that location.

Q. How did you determine who or what companies were car load customers and from what source did you obtain the weight in pounds?

A. We have records indicating the total shipments of dry white lead to our various customers throughout the United States.

Q. You say we have. Where are those records located, and what do they consist of?

A. 111 Broadway, a loose-leaf book arranged by
4052 states, and cities in these states.

Q. Is that in any particular department?

A. That is in the dry white lead selling department. From those records we were able to determine the car load customers and the l.c.l. customers.

Q. Now, do those records show the names of the customers?

A. Yes.

Q. Now, how do you determine who are the car load customers?

A. From information supplied to us by the dry white lead selling department. They went through the entire records and picked out the car load customers and distinguished them from the l.c.l. customers.

Q. And was it headed the dry white lead department?

A. It was.

Q. And did you sit down with anyone when you were seeking these customers?

A. I did, with the head of the dry white lead department.

Q. And those purport to be all of the car load customers for 1941 for all the branches of the National Lead Company, so far as dry white lead is concerned, for the year 1941?

A. Yes, sir.

Q. Now, the first column on the left is headed "Manufacturing Branch," and underneath that first entry, "Pacific Coast, Melrose, California." What does that mean?

A. The National Lead Company Pacific Coast
4053 Branch operating a plant at Melrose.

Q. Which manufactures dry white lead?

A. Dry white lead at that point.

Q. And do all of the items in the succeeding columns from left to right down to the name "St. Louis" apply to operations by the Melrose California plant?

A. Right.

Q. Now, take the first entry under the column "Weight in Pounds," and extending that over to the right under "Customers Location," "Town of Los Angeles, California," does that weight mean that that amount was sold from 1941 to car load customers in Los Angeles?

A. It does.

Q. The third column is entitled "l.c.l. rate, c.w.t."?

A. That represents the car load freight rate from the manufacturing branch to the selling branch.

Q. What is "c.w.t."?

A. Per hundred pounds.

Q. The fourth column is entitled "Selling branch," and underneath that all the way down there are certain names. What does that refer to?

A. That refers to the fact that the customer is located in the territory of that particular selling branch.

Q. In other words, first you have manufacturing
branches and then the selling branch, which actually
4054 handles the sale; is that correct?

A. Yes.

Q. In the fifth column, under the heading, "Cost", although there are not any entries under Melrose, there are under some of the other branches; will you tell us what that refers to?

A. That cost would have reference to the car load rate from the lead company manufacturing plant to the lead company selling plant, in this instance is the manufacturing branch which is the same as the selling branch. There is no entry in that column.

Q. Now, under the next column—withdrawn. The sixth column is headed, "l.c.l. rates, c.w.t." What does that refer to?

A. That refers to less than car load rate, from the selling branch to the customer.

Q. Now, you have already explained that the customer's location is the location of the car load. Under the eighth column, or rather the eighth column which is entitled, "Cost", and there are certain figures under that; what is that figure, what do those figures in that column represent?

A. Those figures represent the cost of l.c.l. shipments from the selling branch to the customer.

Q. And the next column is under the heading, "Total Cost." What does that total cost represent?

A. That total cost represents the cost of a shipment, car load rates, from the manufacturing branch to the selling branch and the l.c.l. rate from the selling branch to the customer's location. 4055

Q. Now, going over to the right two columns and several spaces above that, there is a heading, "M. F. G. Branch to customer." What does that refer to?

A. That refers to a shipment from the manufacturing branch directly to the customer at a car load rate.

Q. And underneath that are the two separate headings, "c.l. rate, c.w.t." and "total cost." What do they refer to, what do those headings represent?

A. c.l. rate per hundred pounds and the extension of the total weight should be in pounds by the car load freight rate.

Q. In other words, the rate is the car load rate from the manufacturing branch direct to the customer at his location?

A. That is right.

Q. And the total cost would be the car load rate times the number of pounds of dry white lead shipped from the manufacturing branch to the customer?

A. That is correct.

Q. Now, two columns over further is the general heading, "MF Branch to Customer," and underneath that subheading "l.c.l. rate and total cost." Will you tell us what those columns represent?

A. Those columns represent cost of shipping l.c.l. rate from the manufacturing plant directly to customer, and l.c.l. less than one hundred pounds, less than car loading rates applying from the manufacturing plant to the customer's location, plus the total pounds shipped to obtain the total cost. 4056

Q. Mr. Owens, you told us under the second column weight and pounds you obtained those figures from the records of the sales department of dry white lead at 111 Broadway; is that correct?

A. That is correct.

Q. From what source did you obtain the car load and l.c.l. rates?

A. Car load and l.c.l. rates were obtained from the National Lead Company Traffic Department.

Q. Under whose supervision were those rates prepared for you?

A. Mr. Werner, I believe.

Q. Now, are similar figures and shipments and calculations made for the St. Louis, Chicago, Atlantic, Perth Amboy, Philadelphia manufacturing branches of the National Lead contained on Respondents' Exhibit 215-A and B for identification?

A. Yes.

Q. And in each case the particular figures applicable to each manufacturing branch begin with the first entry opposite the name of the particular manufacturing branch?

A. That is correct.

Q. Now, I show you Respondents' Exhibit 215-B,
4057 for identification and the figures opposite the words
"Grand Total"; are they the summary of all other figures which appear on 215-A and B?

A. That is correct.

Q. In those columns?

A. Yes.

Q. So that there you have the grand total of the weight in pounds of dry white lead sold by the National Lead Company in all of its branches for carload customers in 1941; is that correct?

A. That is correct.

Q. And under the fourth column, or rather, the next figure opposite "Grand Total" is the total cost at carload rates shipped from the manufacturing branch to the selling branch; is that correct?

A. That is correct.

Q. Where that occurred?

A. Where that occurred.

Q. Then the next figure is the total cost, is it not, of the l.c.l. rate from the selling branch to the customer location where that occurred?

A. That is correct.

Q. And the next figure is the total cost of the last two items, or a summary of the total of the last two items?

A. That is correct.

4058 Q. Then the next figure opposite "Grand Total"
is the total cost at carload rates on direct shipments from the manufacturing branch to the customer; is that correct?

A. That is correct.

Q. And the final figure opposite "Grand Total" is the total cost on direct shipments from the manufacturing branch to the customer at the l.c.l. rate; is that correct?

A. That is correct.

Q. And down at the bottom of the page, on the left-hand side, opposite the heading or the notation "Manufacturing Branch to Selling Branch to Customer, l.c.l.," are certain figures. Now, the weight in pounds is the same as the grand total; is that correct?

A. That is correct.

Q. And the next figure represents the total cost of carload shipments through the selling branch and l.c.l. branch from the selling branch to the customer; is that correct?

A. That is correct.

Q. And the third figure is the cost per hundredweight; is that correct?

A. That is correct.

Q. Now, the next heading, or the next notation, that is, "Manufacturing Branch to Customer, l.c.l.," with the same total weight in pounds, is that correct?

A. Yes.

4059 Q. And the next figure represents the total cost of shipping that weight direct from the manufacturing branch to the customer and the carload rate?

A. That is correct.

Q. And the third figure represents that breakdown per hundred pounds?

A. Correct.

Q. And the last entry is the manufacturing branch to customer, l.c.l., with the same total weight in pounds; is that correct?

A. Correct.

Q. The next figure represents the cost of shipping that total weight directly from the manufacturing plant to the customer at the l.c.l. rate?

A. Correct.

Q. Now, the third entry is the mathematical cost per hundredweight?

A. Correct.

Q. Now, I show you Respondents' Exhibit 216 for identification, and I ask you generally what that purports to be?

A. On this sheet we have prepared figures for the years 1939, 1940, and 1941, which represent selling and admin-

istration expenditures of the Atlantic branch of the National Lead Company. In addition, we have the number of invoices which this branch processed during the years 1939 to 1941, and we have obtained an average cost per invoice. We have then made a comparison of the
4060 freight cost and invoice cost when the shipment moved directly from the manufacturing plant to the customer in carload quantities, to compare that with the same cost when the shipments moved from the manufacturing branch to the customer in less than carload quantities.

Q. In less than carload quantities in what particular quantities?

A. Carload of 20 tons while l.c.l. are quantities of 5 tons.

Q. What else does it show?

A. We also have a comparison of cost of freight and invoice cost, shipments from a manufacturing plant to a customer in carload quantities of 20 tons as compared to a freight and invoice cost of a manufacturing plant shipping to the selling branch in carload quantities and reshipping to the customer in l.c.l. quantities of five tons.

Q. Now, taking Respondents' Exhibit 216 for identification, the figures under the headings "Mfg. Br. to Customer, C. L.," manufacturing plant to customer, l.c.l., and manufacturing branch to selling branch, c.l., selling branch to customer, l.c.l., together with the representation of manufacturing to customer c.l.w., those were taken and were made up from the results reached on Respondents' Exhibit 215-B; is that correct?

A. That is correct.

Q. In other words, in the three categories that
4061 you have on 215-B, taking the total weight sold figured in the three methods, one carload to selling branch, l.c.l. to customer, second carload on direct shipment from the manufacturing branch to the customer, and the third, l.c.l. cost from the manufacturing branch direct to customer, are all reflected in this calculation which you made on a 20 and 5-ton basis, is that correct, on Exhibit 216?

A. That is correct.

Q. Now, in the middle of the page on the left, under Freight Cost and Invoice Cost, which are the figures showing the comparison between the cost of shipping 20 tons and 5 tons, manufacturing branch to customer, c.l. for 20 tons, manufacturing branch to customer l.c.l. for five tons, underneath that heading on the left is the pencil notation "Per Ton Cost," and the figures under "Manufacturing Branch to Customer," carloads with 20 tons, is the cost per ton of shipping direct from the manufacturing branch to the customer at the carload rate based upon the averages worked out on 215-A and B; is that correct?

A. That is correct.

Q. And the next figure to the right, showing manufacturing branch to customer, l.c.l., for five tons, shows the per ton cost of shipping per ton on an average of those figures in 215-A and B, plus the invoice cost for that particular shipment; is that correct?

A. That is correct.

4062 Q. Over on the right is the difference per ton, or the excess of the l.c.l. shipments for 5 tons per ton over the carload shipments for 20 tons; is that correct?

A. That is correct.

Q. And a similar study is made with respect to the per ton cost freight and invoice, with respect to shipments in a comparison of shipments of 20 tons direct from manufacturing branch to customer at carload rates and l.c.l. 5-ton shipments from manufacturing branch to selling branch at the carload rate and selling branch to customer at the l.c.l. rate; is that correct?

A. That is correct.

Q. Now, you have on Respondents' Exhibit 216 for identification, toward the top of that exhibit, and opposite the notation "Cost per invoice average," certain figures under the headings 1939, 1940, 1941. You have also above that a total figure for administrative expenses for those three years and selling expenses. Will you tell us what Respondents' Exhibit 217 for identification represents?

A. Exhibit 217 represents the total selling and administrative expenses for the Atlantic branch for the years 1939, 1940, and 1941, and the individual expenses account for the making up of the administration and selling expenses.

Q. Does it also show the total number of invoices entered by the Atlantic branch or processed by the At-
4063 lantic branch in those three years?

A. It does.

Q. And what did you take into account in setting up or picking out certain items that went into the total administrative account as well as the items which go under total selling expenses?

A. We have taken all the recognized expenses, administrative and selling, which go into the cost of doing business, taking them from the records of the United Branches for the years '39, '40, and '41.

Q. And you have divided the number of invoices for those particular years, 1939, 1940, and 1941, into the total administrative and selling expenditures to arrive at the cost for individual invoice?

A. That is correct.

Q. And the three figures in the lower right-hand corner of Respondents' Exhibit 217 are the figures showing the invoice cost figured in the manner you have just explained for the three years 1939, 1940, and 1941?

A. That is correct.

Q. That means that on the average, as you have there prepared it, the cost so much to prepare a single invoice, is that what that figure represents?

A. That is correct.

Q. Now, going back to Respondents' Exhibit 216
4064 for identification, toward the upper right-hand corner, opposite the words "Cost per invoice," the same figures which appear, are they not, at the bottom of Respondents' Exhibit 217; is that correct?

A. That is correct.

Q. On the later tabulation on Respondents' Exhibit 216 there is a figure representing invoice cost which is different from any one of the three figures representing cost per invoice under 1939, 1940, and 1941. What is that other figure?

A. We have averaged the invoice cost for the three years which gave us the average cost for the three years of $7.45 per unit.

Q. And that is a simple mathematical average. You added the three invoice costs, the unit cost for 1939, 1940, and 1941, and divided by three; is that correct?

A. Yes.

Q. Going back to Respondents' Exhibit 215-A for identification, Mr. Owens, under the sixth column entitled l.c.l. rate, cwt., are certain figures representing you explained the l.c.l. rate from selling branch to customer's location. Now, under the heading selling branch, will you take for example Cleveland, and the customer's location for that particular shipment is Cleveland, the same town. Now, the figure applicable to that is what, under the l.c.l. rate, cwt.?

A. Five cents per hundred.

Q. What does that mean? Is that the train l.c.l. rate?

4065 A. That is the lowest truck load rate. Throughout these computations we use 5 cents a hundred trucking rate in the same city limits.

Q. And so that where under this particular column the figure .05 is used, what you figured as the lowest truck load rate from the selling branch to the customer's location; is that correct?

A. That is correct.

Q. And the other figures thereunder are the rail l.c.l. rates from selling branch to customer's location; is that correct?

A. That is correct.

Mr. DuBose: May we go off the record a minute?

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Mr. DuBose: Back on the record. At this time I offer in evidence 215-A and B for identification, Respondents' Exhibits 216 for identification, and 217 for identification.

Mr. Wright: Well, Your Honor, I would like to have sufficient time to examine these very complicated documents before cross-examining Mr. Owens on them. I thought that we were reaching the tag-end. I didn't think we would run into an elaborate accounting job as this.

Trial Examiner Norwood: Do you want their records to come back tomorrow?

4066 Mr. Ewing: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: We will recess until 2:00 o'clock. The witness Owens will be back tomorrow morning at 9:00 o'clock.

(Whereupon, at 12:00 o'clock noon a recess was taken until 2:00 o'clock p. m., of the same day.)

4067 Afternoon Session.

2:00 p.m.

Trial Examiner Norwood: The hearing will come to order.

Mr. Wright: What is the Commission's next exhibit number?

Trial Examiner Norwood: 860 is the last I have.

Mr. Wright: I'd like to ask that these be marked as Commission's Exhibits 861-A and sub numbers; and that these be marked Commission's Exhibits 862-A and sub numbers; and that this one be marked Commission's Exhibit 863.

(The documents referred to marked Commission's Exhibits No. 861-A through G; 862-A through O; and 863, for identification.)

Mr. Wright: Your Honor, yesterday there was admitted into evidence Respondents' Exhibit 154-A through F through the witness Tibbets who produced as the basic data from which 154-A to 154-I was compiled a quantity of—

Trial Examiner Norwood: Wait a minute. That was one of the exhibits that wasn't received.

Mr. DuBose: Yes, sir, that was received.

Mr. Wright: That was in evidence after page 4000 according to the transcript.

Trial Examiner Norwood: All right. I just omitted to put it down here.

4068 Mr. Wright: Yes, sir.

Trial Examiner Norwood: Go ahead.

Mr. Wright: The basic data from which that exhibit was compiled was supplied to me by counsel for the National Lead Company, and I would like to ask the counsel for the National Lead Company to stipulate on the record that Commission's Exhibit 861-A through G is a true copy of the price cards on dry white lead, basic lead sulphate from a period beginning on December 30, 1932 running down to May 11, 1942.

Mr. DuBose: I so stipulate.

Mr. Wright: I would like to ask counsel for the National Lead Company to agree that Commission's Exhibit 862-A through O are copies of price cards of the National Lead Company on lead oxides or litharge, dry red lead, and orange mineral running from May 31, 1933 through

January 14, 1942 as supplied in support of Respondents' Exhibit 154 and sub numbers.

Mr. DuBose: I so stipulate.

Mr. Wright: I would like to ask counsel to identify Commission's Exhibit 863 as photostatic copies of various price lists on white lead published by the Atlantic Branch and the Boston branch of the National Lead Company as of March 1, 1937.

Mr. DuBose: I will so stipulate, with the statement that I assume that the handwritten material on one of
4069 these price cards is part of the exhibit.

Mr. Wright: Well, I will say that all of the handwritten material that might appear on all of these things was on them as they were supplied by the National Lead Company, presumably as part of all the exhibits.

Mr. DuBose: Then I so stipulate.

Mr. Wright: Now, I would like to offer Commission's Exhibits 861, 862 and 863 with the various sub numbers in evidence.

Mr. DuBose: No objection.

Trial Examiner Norwood: Received.

(The documents referred to, previously marked for identification, received in evidence as COMMISSION'S EXHIBITS NO. 861-A through G, 862-A through O, and 863.)

Mr. Wright: May we take a short recess?

Mr. DuBose: A three-minute recess?

Trial Examiner Norwood: All right.

(At 2:40 p.m. a brief recess was taken.)

Mr. Welch: Your Honor, we have a short stipulation.

Trial Examiner Norwood: Go ahead.

Mr. Welch: It is hereby stipulated and agreed by and between counsel for the Federal Trade Commission and counsel for Sherwin-Williams that if S. B. Coolidge were recalled as a witness in this proceeding he would testify that the testimony which he gave at a hearing held in
4070 Cleveland, Ohio, on July 25, 1946, and which appears
at pages 1311-1333 of the record and the statement of Sherwin Williams' counsel at pages 1529-1530 of the record did not fully and correctly state the freight policy of the Sherwin Williams Company as to lead products involved in this proceeding, and if he were further questioned as to Sherwin Williams' freight policy for such products his testimony with respect thereto would be the same as the testimony of H. C. Lemke, who testified in this

proceeding on October 16th and 17th, 1947, and he would adopt such testimony in toto as his own.

He would also testify that the lead products sold by Sherwin Williams on the Pacific Coast are purchased by it from W. P. Fuller & Company and from Premier Paint and Color Works, who manufacture such products on the Pacific Coast, and that shipments of such products from Chicago to the Pacific Coast area are made only when such products may be included in isolated car load shipments of paint products to the Pacific Northwest Coast Area.

He would also testify that Sherwin Williams does not manufacture, and for at least 20 years has not manufactured, red lead or litharge for use by battery manufacturing industries.

It is further agreed that for the purposes of this proceeding it shall be considered that S. B. Coolidge has appeared and has testified to the foregoing effect.

4071 Now, it is my understanding that Mr. Wright agrees to that stipulation with a modification—not a modification, but an additional statement which he will want to tender and to which I will agree.

Mr. Wright: I want the record to show that I will so stipulate with the following proviso, that as to the business of the Sherwin Williams Company on the Pacific Coast, that it is agreed by counsel in the proceeding that I may have the right to request a reopening for the purpose of producing evidence or testimony on that point alone and for that limited purpose, within a period of two weeks from today, on proper notice given to all parties. With that provision, I am willing to stipulate and agree as stated by Mr. Welch.

Mr. Welch: And I agree to the provision.

Mr. Wright: I would like further to add that as a part of this, it is understood by counsel that the time within which I have to give notice to counsel of a reopening for the limited purpose stated won't operate to hold up any other phase of the matter, and that for all other intents and purposes the record may be closed prior to that time.

Trial Examiner Norwood: Yes. That is understood.

Mr. Ewing: While we are waiting for those documents, I think I can make a statement now for the record with respect to Mr. Rowe.

4072 Mr. Harold Rowe, a Vice President of National Lead Company, who has heretofore testified in this proceeding as a witness called by the Commission, suffered a stroke on March 24, 1947, and since that date has been confined to his home without the power of speech. Mr. Rowe, had he not been so stricken at that time, which was shortly prior to the time the respondents' case began to go in, would have been called as a witness for the respondent National Lead, but for that reason he cannot be recalled. And it is my understanding that that statement of fact is accepted by counsel for the Commission and that under those circumstances it is unnecessary for me to call Mr. Rowe's physician to so testify.

Trial Examiner Norwood: Yes.

Mr. Wright: I am perfectly agreeable to that statement without any inferences that might arise from it. I am willing to agree that Mr. Rowe is so incapacitated and that he might have been called.

Mr. Wood: I would like to make a statement.

Trial Examiner Norwood: Go ahead.

Mr. Wood: I would like to state for the record that Mr. A. E. Bendelari, who was President of the Eagle-Picher Company approximately during the time of the NRA, and whose name appears on various documents, is still alive but living in retirement outside of Lexington, Kentucky. He has a bad heart condition and does
4073 not have a clear memory of all of the events in question.

I would also like to state that Mr. R. M. Roosevelt, who was a vice president of the Eagle-Picher at that time, has not been connected with the company since 1937 and is now living in Connecticut, but he is totally disabled.

Mr. Wright: I have no objection to counsel's statement.

Trial Examiner Norwood: Any further statements?

Mr. Wright: May we go off the record?

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Mr. Wright: It is stipulated and agreed by and between counsel herein, that, subject to the approval of the Commission, the requirements of Rule 20 (A) and (B) of the Rules of Practice of the Federal Trade Commission to the contrary notwithstanding, motions for reconsideration and reversal of rulings of the trial examiner admitting or excluding testimony or evidence, and appeals to the Commission from such rulings shall be made to the Commission at the time of briefing and arguing the case to the Commission on the merits, and that no party shall be deemed

thereby to have waived any objection or any exception to such ruling or right to urge such objection or exception to the Commission at the time of argument on the merits. It is expressly understood that the purpose of this stipulation is to expedite the determination of this matter
4074 before the trial examiner and the Commission.

As I understand it, all of counsel who are here representing all of the respondents, except the respondent Glidden Company, are in agreement with that, and that we have word that counsel for Glidden is willing to go along with that, and that if he has any objection to it that he will let us know at some time during the hearing tomorrow, and that in the meantime other counsel will contact him for that purpose.

Is that understanding satisfactory to counsel?

Mr. Welch: Off the record.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Mr. Wright: I am also advised that while counsel for the Anaconda and International is not objecting at this time to the stipulation, that he wishes to reserve his final decision on the matter until the hearing tomorrow.

Trial Examiner Norwood: No objection to that statement from counsel present?

Mr. Ewing: None at all.

Mr. Wright: Off the record.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Mr. Wright: I will transmit a copy of the record with this statement to the Commission as soon as I return to Washington, pointing out that it is an agreement
4075 between counsel for the purpose of expediting the
matter, and will request them to notify counsel whether or not the proposed procedure is acceptable.

Mr. DuBose; Off the record.

(Discussion off the record.)

Mr. Welch: Mr. Examiner, I would like to offer in evidence Respondents' Exhibits 201, 202, 203, 204, which have previously been marked for identification. The offer here was delayed pending Mr. Wright's checking the identification, in view of the fact that the documents were originally identified as Commission's Exhibits for identification 554, 555, 556, and 557.

Mr. Wright: May I ask counsel where that ruling was made—off the record.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Mr. Wright: Well, Your Honor, may I request a reservation of the ruling on that application until the first thing in the morning?

Trial Examiner Norwood: Yes.

Mr. Wright: May I have custody of these documents until morning?

Mr. Welch: Yes. I would like to have the following documents marked with the next succeeding respond-
4076 ents' numbers.

Trial Examiner Norwood: 218, is that right, Mr. DuBose?

Mr. DuBose: That is correct.

(The documents referred to were marked Respondents' Exhibits 218, 219, 220, 223, 224, 225, 226 and 227 for identification.)

Mr. Welch: Respondents' Exhibits 218 through 227 for identification are offered in evidence, and I will ask the Examiner to reserve the ruling until tomorrow morning, after Mr. Wright has had an opportunity to examine the documents.

Trial Examiner Norwood: The ruling is reserved.

Mr. Wright: I want to state for the record that I have requested counsel for the National Lead Company to produce original minutes books of the Executive Committee of the Board of Directors of the National Lead Company, and that by agreement I am going to read into the record a portion of those minutes which I understand counsel are willing to stipulate into the record with the same effect as if the secretary of the company were called as a witness and identified same.

Mr. Ewing: That is correct.

Mr. Wright: The minutes of meeting of the Executive Committee held December 7, 1933, Present: Messrs. Beale, Beschorman, Carter, Cornish, Rockwell, Sidford and Thompson. The last paragraph of the minutes of
4077 that meeting is as follows:

"Resolved, that effective January 1, 1934, the price and terms of sale of dry white lead and basic lead sulphate in barrels be and they hereby are established as follows: In 20 ton lots, delivered either by rail in one shipment or by truck within three days in more than one shipment, dry white lead, 6½ cents per pound, basic lead sulphate, 6 cents per pound; in less than 20 ton lots, dry white lead, 6¾ cents per pound, basic lead sulphate, 6¼ cents per pound; terms, 30 days net, with discount of 1 per cent for payment within ten days; all sales to conform to such uniform conditions of sale as may from time to time be established pursuant to Article II of the Supplementary Code of Fair Competition for Lead Pigments Division of Lead Industries Association" and that said minute is signed by M. D. Cole, Secretary.

Trial Examiner Norwood: Is that stipulated in evidence—is that it?

Mr. Ewing: That's right.

Trial Examiner Norwood: Anything further?

Mr. Ewing: No, sir. I move that we adjourn.

Trial Examiner Norwood: Does counsel wish to reconvene at 9:00 or 10:00 tomorrow morning?

Mr. DuBose: At 10:00 o'clock, I think, Your Honor.

Trial Examiner Norwood: Inasmuch as the witness Owens will not be here?

4078 Mr. DuBose: Yes, sir.

Trial Examiner Norwood: If he is expecting to be here, someone should notify him.

Mr. DuBose: I shall see him.

(Whereupon, at 4:00 p.m. the hearing was adjourned to November 14, 1947, at 10:00 a.m.)

4079 Trial Room No. 10,
Bar Association Building,
42 West 44th Street,
New York, N. Y.,
Friday, November 14, 1947.

Met, pursuant to adjournment, at 10:00 a.m.

Before:

John W. Norwood, Trial Examiner.

Appearances:

Joseph S. Wright, Esq., appearing for the Federal Trade Commission.

Edmund P. Wood, Esq., 2801 Carew Tower, Cincinnati, Ohio, appearing for Eagle-Picher Lead Company and Eagle-Picher Sales Company.

Robert H. Ecker, Esq., and
Henry E. Gardiner, Esq., (Chadbourne, Wallace, Parke & Whiteside, 25 Broadway, New York, N. Y.) appearing for Anacanda Copper Mining Company and International Smelting and Refining Company.

James D. Ewing, Esq., and
E. Z. DuBose, Esq., (Alexander & Green, 120 Broadway, New York, N. Y.), appearing for the National Lead Company.

4080 J. T. Welch, Esq., (Davies, Richberg, Beebe, Busick & Richardson, 815 Fifteenth Street, Northwest, Washington, D. C.), appearing for Sherwin Williams Company.

Roger Hinds, Esq., (165 Broadway, New York, N. Y.), appearing for The Glidden Company.

P. J. McDowell, Esq., Midland Building, Cleveland, Ohio, appearing for Sherwin Williams Company.

4081

PROCEEDINGS.

Trial Examiner Norwood: The hearing will come to order.

Pursuant to adjournment on yesterday, the hearing in Docket No. 5253 is reconvened in Room 10, Bar Association Building, at 42 West 44th Street, New York, N. Y., at 10:00 o'clock a.m., on November 14, 1947.

Please enter the appearances. Note that Mr. Worth Vaughan of general counsel for American Smelting and Refining is appearing especially today with us.

Call your witness.

Mr. Ewing: Mr. Brownell.

Whereupon,

FRANCIS HERBERT BROWNELL, a witness called on behalf of the respondent, after having been duly sworn, was examined and testified as follows:

Direct Examination by Mr. Ewing.

Q. Mr. Brownell, you are presently connected with American Smelting & Refining Company?

A. I am.

Q. In what capacity?

A. I am a director of—a director and chairman of the finance committee.

4082 Q. Will you tell us when you first became connected with the American Smelting & Refining Company?

A. Back in 1912, I was then living in Seattle, Washington, and I then became counsel for the American Smelting & Refining Company in some of their western enterprises, and gradually took over the litigation or all of the legal affairs of the plants situate west of the Mississippi River.

Q. Subsequent to that time did you come to New York?

A. Late in 1916 I came to New York and became vice president and general counsel which I remained. In 1919 I was made chairman of the finance committee and began to take over executive functions. And in 1921 I gave up the general counselship entirely and even the name, and became first vice president, the second executive officer of the company. And I remained that until 1941, when Senator Guggenheim died, and I became head of the company until this last election last April, when I was eighty years old, and I retired.

Q. Prior to your retirement, when you say you were the head of the company, was your position chairman of the board?

A. Yes.

Q. Now, Mr. Brownell, we subpoenaed you to attend at this hearing, didn't we?

A. I beg your pardon?

Q. We subpoenaed you to attend this hearing?

A. Yes.

Q. I show you a photostatic copy of a document 4083 which is marked as Commission's Exhibit 93-A, dated February 26, 1906, and ask you whether you are familiar with it?

(Document handed to witness.)

A. Yes, I was at a later date. I was not at all familiar with the origin of the contract, which was before I was connected with the company. In 1921, at the time of its expiration, I had a great deal to do with it and had occasion to go over it very fully.

Q. At the time of its expiration in 1921, that you just referred to, was any attempt made to renew it?

A. Yes.

Q. And did you have anything to do with it at that time?

A. I had charge of that subject.

Q. Did you see anybody in National Lead Company in connection with it?

A. Yes, I saw the head of the company, Judge Cornish.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Mr. Ewing: That is Exhibit 93-A through I.

Trial Examiner Norwood: Just so we have that.

By Mr. Ewing:

Q. Was the contract renewed?

A. It was not.

Q. Was the failure to renew it due to Mr. Cornish?

A. Yes.

4084 Q. Do you know why he would not renew it?

A. For the reasons that he expressed to me at the time.

Q. Will you tell us what they were?

A. Judge Cornish said that necessarily the two companies would have to deal together because we were at the time—we had more lead for sale than any other company in the United States, and on the other hand, they claimed that they were the largest consumer of lead in the United States. He said, "There isn't enough lead to supply the National Lead's demands unless we buy from the A.S.&R.,

and there aren't enough consumers to use all of the A.S.&R. production unless the National Lead takes some of it. Necessarily we have to deal together."

Now, he, Judge Cornish, I should say, saw no reason why there should be the contract. On the other hand, he thought that the contract, while he had no particular criticism of the past contract, was perhaps at times stifling. He said, "We do not want to be"—we, the National Lead—"do not want to be bound by a certain amount from you to some extent, that handicaps our ability to buy perhaps at the lowest price, which is our ultimate objective, and on that account we feel that it is wiser for us not to be bound to take any specific amount."

I say, "We," I am indirect. I am saying to say what Judge Cornish said.

Trial Examiner Norwood: Yes.

4085 Mr. Ewing: Yes, we understand.

I ask that this photostat be marked Respondent's Exhibit 228.

(Document referred to was marked Respondent's Exhibit No. 228 for identification.)

By Mr. Ewing:

Q. I show you this photostat, Mr. Brownell, and ask you whether you executed the original on behalf of the American Smelting & Refining?

A. I did, and I had this photograph taken of it just the other day. That is my signature (indicating) and that is the agreement Judge Cornish and I formally agreed to execute at the conclusion of the contract in 1906.

Mr. Ewing: I offer Respondent's Exhibit 228 in evidence.

Mr. Wright: No objection.

Trial Examiner Norwood: Received as marked.

(RESPONDENT'S EXHIBIT NO. 228, previously marked for identification, was received in evidence.)

By Mr. Ewing:

Q. Since 1921, when the 1906 contract with National Lead terminated, has National Lead continued to purchase pig lead for American Smelting?

A. It has.

Q. Generally on what basis?

4086 A. Generally on what we call our sixty-day contract, also on what we call our average price contract.

The American Smelting & Refining Company will only sell lead to a delivery in the calendar month succeeding the date of the contract, because we must know what our tonnage is coming out of the refineries and what we will have available for delivery.

If National Lead made a contract, for example, on the first day of November, it might extend for delivery to the 31st day of December, but if they made a contract on the 30th day of November, likewise, it would have to expire on the 31st day of December. The delivery cannot exceed 30 days and may go as high as 60 days, depending upon the date of the contract in the calendar month.

The average price contract is a contract that is made for delivery within the same period, but it is not based on a specific price like the individual contract which specifies a given price of the lead. The average price would be the average of the A. S. & R.'s quotation for lead during the month in which the delivery is to be made.

Q. I show you a document which has been marked Commission's Exhibit 113 in evidence and ask you if that is an average contract of the kind that you have referred to?

(Document handed to witness.)

A. Yes, this is the average price contract.

Q. Will you tell us, Mr. Brownell, whether to your
4087 knowledge any official of the National ever attempted to influence American Smelting & Refining in setting its pig lead prices?

A. Yes and no. The National Lead Company's man who has charge of their buying comes to our man who has charge of the selling, and he always tried to get as low a price as he could for his lead—naturally—the usual buyer-seller relationship. So far as any official of the National Lead Company coming to me at any time or to any other officer of the company that I know of to speak of the general price of lead, irrespective of a particular individual contract, no. That has never happened.

Q. That is what I had in mind, the general price of lead.

A. No.

Trial Examiner Norwood: Those were bargaining agreements?

The Witness: I beg your pardon?

Trial Examiner Norwood: They were bargaining agreements?

The Witness: Bargaining agreements on individual contracts.

By Mr. Ewing:

Q. American Smelting & Refining publishes its lead quotations?

A. Yes.

Q. And those quotations are fixed by American Smelting & Refining?

A. Yes.

4088-A Q. And if I understood your prior answer with respect to those quotations, no National official attempted ever to influence any American Smelting official?

A. No.

Q. Will you tell us how American Smelting & Refining establishes its quotations on lead?

A. Most of the lead which the American Smelting & Refining has of United States origin is purchased lead, it is purchased in the form of ore or concentrates from the mines. Perhaps approximately 80 to 90 per cent of our lead originates in that way. Now, each day we publish a quotation on which we buy, and that is the price on which we sell on the same day. So far as it is humanly possible, and it is not of course practically impossible, we try to sell every day what we buy that day.

Trial Examiner Norwood: You don't buy the pig lead in its finished form, do you?

The Witness: No.

Trial Examiner Norwood: In the ore?

The Witness: In the ore and in the concentrates and consolidated concentration of ore that arrives at the smelter in carload lots, as a rule. And then a sample is assayed, and the lead content and the content of other metals, if any, are ascertained, and we pay the miner for the lead as soon as the assays are completed, on the price of the day 4088-B of the arrival or the day of the agreement on assaying, whichever the contract may happen to provide. Now, in the case of lead, it takes approximately 60 days between the time of arrival of the ores and concentrates at a smelter and the time that we have it smelted and the product of the smelter refined and actually available for sale in commercial form. The price may vary during all that time, in that 60 days, and that is why we try to sell every day what we buy that day.

In order to be able to do so, we accumulate or did accumulate and have on hand constantly a source of lead or an amount of lead equal to that which is normally in process for this 60-day period. It is a reservoir, and we try to sell at the outgoing end of that reservoir every day an amount of lead equal to what comes in at the incoming end.

We are in a sort of dual position. We are trustee for the miner, in a sense, in getting the highest price that we can for his lead; on the other hand, we have to properly represent the market. And that is the object of our quotation.

Mr. Ewing: I have no further questions.

Cross-Examination by Mr. Wright.

Q. These two types of contracts that were mentioned, Mr. Brownell, the fixed-price contract—

4089 A. Yes.

Q. —is that the price of the prevailing spot quotation on the date on which the contract is entered into?

A. As a rule, yes. I think uniformly on a specific contract.

Q. By that contract, then, you undertake to supply lead, under the contract, at that spot price during the period it is in force?

A. No. Maybe I don't understand you. There are two types of contracts, the average-price contract, which is for a specific tonnage of lead, a thousand tons, 500 tons, 2,000 tons, whatever it may be, to be delivered during a given month and to be paid for at the average price of lead for the month of the delivery, based on the A.S.&R. quotation for lead for that month; now, the other contract is for, say, 500 tons or 100 tons, as the case may be, at, we will say, 6½ cents, or today, 15 cents per pound. It is the price on the day of the agreement.

Q. That is really a spot transaction?

A. A spot transaction except that the delivery is 30 days in the next succeeding month.

Q. But it could cover the same tonnage, a large tonnage, to be delivered at various times over the succeeding—

A. Yes, that could be done, too.

Q. Now, on this average price in the contract, how is the average price calculated; is that simply an arithmetical division of the quotations during the month? 4090

A. Yes. There are 25 business days. The price of lead on each one of those days that there are in that month

—if there are 25, it would be divided by 25, and that would give the average.

Q. You spoke of the American Smelting & Refining Company being one of the largest sellers of lead. Approximately, Mr. Brownell, in 1941, when you retired, what was the percentage position of the smelting company on its refining capacity in the United States?

A. Well, the largest mine production of lead during this entire period of which we are speaking, since 1921, has been that of St. Joseph Lead Company. That is the biggest individual mine. I imagine the Bunker Hill—I haven't looked it up to be accurate, but my impression would be that the Bunker Hill is about the second mine. The intake of lead of the A. S. & R. is that of almost all the other mines. Not Eagle-Picher; they have their own smelter. Bunker Hill has its smelter. We have smelters, lead smelters, at East Helena, at Selby, which is on San Francisco Bay, at El Paso, Texas; at Leadville, Colorado; at Murray, Utah; and at Federal, which is in East St. Louis, near Alton, I believe within the limits of Alton in Illinois. We have those bed smelters. And their tonnage takes in the tonnage, oh, I presume, of four or five hundred little mines scattered
4091 all around, no one of which amounts to very much.

Now, the total output of the American Smelting & Refining, and this will be confined at the moment to the United States production, and excluding any foreign production, because we handle almost as much foreign, and at times more foreign, production than we do with United States production. The United States production in 1921, I think, our production, total production, was in excess of St. Joe, except very seldom, once in a while, they might exceed us, where a strike had occurred or some incident had occurred to reduce the production of a certain group of large mines.

Today it is in and out. For about, I think, about three or four months St. Joe production is ahead of our production. More of the time our production is ahead of theirs. It is pretty nearly even.

Q. When you add your domestic smelting and refining capacity to your processing of foreign ores and concentrated—

A. We are way up above—we would have, taking our world production—we have smelters in Mexico as well as in the United States, and taking our world production we are the largest producer of lead in the world, individual producer of lead in the world.

Trial Examiner Norwood: Would you estimate the percentage of world lead which American Smelting handles?

The Witness: I would hesitate to make a state-

4092 ment of percentage. I can send you the percentage. I happened, in another connection, to look up our percentage of lead for 1932-1940, not so long ago, but I am a little hazy on the percentages, and I wouldn't dare state the percentages.

By Mr. Wright:

Q. Mr. Brownell, do the so-called lead pigments—now, that would be white lead, both the sulphate and carbonate, red lead, litharge, and the battery oxides, do they account for a substantial portion of the lead consumption in the United States?

A. Yes, they do still. They used to do so much more than at the present time. At the present time, white lead, for example, has been very greatly reduced, largely because during the war the Government restricted the use of white lead.

You see, during the war, from 1942, shortly after some time in the spring or the summer of 1942, as soon as we got going, until some time in the spring of 1946, we had nothing to do about where we sold at all, and for that matter we had nothing to say about the price, in this sense, that there was a ceiling placed on the price. The demand would have paid for double the ceiling very easily, but we all sold at the ceiling, and the Government told us whom to sell to. They issued allocation certificates to National Lead and to the other defendants here, and we had to supply them. We had nothing to say about it.

4093 Q. In the period up to 1941, just prior to the war, wasn't there an increasing consumption, particularly on the battery oxides?

A. Yes.

Q. Due to the development of the automobile industry?

A. Yes, and the internal combustion engine generally.

Mr. Wright: I have no further examination.

Mr. Ewing: Nothing further.

Trial Examiner Norwood: What is your best estimate about the world percentage there during the years you mentioned?

The Witness: Well, of course, the world percentage varies in any given year. I should say that we produced somewhere between 30 and 40 percent of the total world production.

Trial Examiner Norwood: Thank you.

Any further question?

Mr. Ewing: No further questions.

Trial Examiner Norwood: Thank you, Mr. Brownell.

(Witness excused.)

Mr. Ewing: May we have a short recess?

Trial Examiner Norwood: All right; a five-minute recess.

(A short recess was taken.)

Mr. DuBose: Please mark these for identification.

(Documents referred to marked Respondent's Ex-
4094 hibits Nos. 229-305, A to D, for identification.)

Mr. DuBose: Mark these.

Trial Examiner Norwood: All right.

(Documents referred to marked Respondent's Exhibits Nos. 306-A and B, 307-A and B, and 308-A, B, and C, for identification.)

Mr. Wright: Now, that is Commission's Exhibit 864 and 865-A, B, C, D, and E.

Trial Examiner Norwood: All right, A through E.

Mr. Wright: Yes, sir.

(Documents referred to marked Commission's Exhibits Nos. 864 and 865 A through E for identification.)

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Mr. Ewing: With respect to the stipulation read into the record yesterday relating to Rule 20, Mr. Hinds has advised me that that stipulation is satisfactory to him, and I understand that Mr. Gardiner finds it satisfactory to him, so that that is clear.

Trial Examiner Norwood: Mr. Gardiner is present?

Mr. Gardiner: Yes, your Honor.

Off the record.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Mr. Ewing: By agreement among counsel, I now
4095 offer in evidence Respondent's Exhibits 306-A and
B, 307-A and B, 308-A, B, and C, which will be identified more fully in a stipulation which will shortly be read into the record.

Mr. Wright: No objection.

Trial Examiner Norwood: Received.

(Documents referred to, previously marked for identification, were received in evidence as RESPONDENT'S EXHIBITS NOS. 306-A and B, 307-A and B, 308-A, B, and C.)

Mr. Wright: Your Honor, I want to offer in evidence Commission's Exhibits Nos. 864 and 865-A through E, by agreement of counsel, which documents will likewise be further described in the ensuing stipulation.

Trial Examiner Norwood: They are received.

(Documents referred to, previously marked for identification, were received in evidence as COMMISSION'S EXHIBITS NOS. 864 and 865, A through E.)

Mr. Wright: Now, I want to read into the record an agreed statement that has been worked out by counsel as follows:

It is hereby stipulated and agreed that if a representative of the Department of Purchases of the City of Cincinnati were called to testify, he would testify that for the years 1932 to 1944, inclusive, bids were received by that Department for basic carbonate white lead for purchase by the City of Cincinnati as set forth in the document marked as Commission's Exhibit 864.

4096 It is further stipulated and agreed that if a representative from the Milwaukee Board of Purchases were called to testify, he would testify that bids were made to the City of Milwaukee, Wisconsin, for purchases by the City of Milwaukee of white lead in oil as set forth in the document marked as Commission's Exhibit 865-A through E.

It is further stipulated and agreed that if a representative from the United States Treasury Department, United States Navy Department, and the Panama Canal Zone were called to testify, they would testify that during the years 1939, 1940, and 1941 bids were made as set forth in Respondent's Exhibit 306-A and B, 307-A and B, and 308-A, B, and C.

It is further stipulated that, as they may appear in said exhibits, the name Mammolith is a trade name of the Respondent Glidden Company; J. Lucas & Company is owned by the Sherwin Williams Company; the letters E-P, capital letters in quotes refer to Respondent Eagle-Picher Company; the letters S-W, capital letters in quotes, refer to respondent Sherwin Williams Company; that Hammar refers to a brand name of the Respondent Eagle-Picher Company; and that Acme White Lead and Color Works is owned by Respondent Sherwin Williams Company.

The City of Cincinnati, referred to above, is the City of Cincinnati, Ohio.

Now, is it my understanding that all counsel are 4097 agreed on that matter as has been stated?

Mr. Ewing: That is correct.

Mr. Wright: I understand, Mr. Ewing, that you cleared this matter with Mr. Hinds?

Mr. Ewing: I am authorized to represent him on that matter.

Trial Examiner Norwood: Any disagreement on that among counsel?

There are none; proceed.

May we take up this matter of those exhibits on which the ruling was deferred until today, or such of them as counsel are prepared—

Mr. Ewing: That refers to the reserved rulings that were made yesterday—

Trial Examiner Norwood: Are you prepared to take a position on them, 201 through 227?

Mr. Welch: No, sir, it is not inclusive. It is 201 through 204, inclusive.

Trial Examiner Norwood: Yes.

Mr. Welch: And then 218 through 227.

Trial Examiner Norwood: Let's take those.

Mr. Wright: I want to state, your Honor, that all of these papers offered to be copies of documents which were submitted to the Commission under subpoena duces tecum by the National Lead Company in the very 4098 early stages of this proceeding and were given identification numbers at the time to keep the documents which were brought in under that subpoena, the many documents, in order. They obviously have no relevance to any issue in the case. They are, practically all of them, inter-office communications between the main office and the various branches of the National Lead Company about matters of purely internal policy, as to whether a particular freight rate was involved, and billing for the company's transportation of white lead to itself at another town, as I understand the transaction, which can have absolutely nothing to do with the question of price fixing or with the question of discrimination.

Now, the series of exhibits running from 218 through 227 are in that category.

Mr. Welch: Mr. Wright, may I ask you a question. Are you correct in your statement that the billing is from National to National? They are sales by National to Sherwin Williams, as I understand it.

Mr. Wright: Well, I was referring to exhibits 218 through 222.

Mr. Welch: Yes.

Mr. Wright: There are two separate series of papers which refer to whether or not the proper freight rates
in shipping dry white lead to Dallas was the maxi-
4099 mum carload rate of 77 cents a hundred or the mini-
mum rate of 64 cents per hundred and whether or not
there was any claim involved with the Railroad if the wrong rate had been paid. And that is something that has absolutely nothing to do with the case or with any conceivable issue in the case.

Trial Examiner Norwood: They are respondent's Exhibits 201 through 204?

Mr. Wright: Yes, 201 through 204 are inter-branch correspondence between the Chicago branch of the National Lead Company and the Pacific Coast branch of the National Lead Company and the home office.

Trial Examiner Norwood: Yes?

Mr. Wright: Relating in the period—in the first quarter of 1942, at a time when, I might remind your Honor, when we were at war and ceilings had been imposed and normal conditions no longer prevailed in this business, as the record shows, and as to whether or not they were going to sell Sherwin Williams some white lead. There is a spot in here as to what the Sherwin Williams plans might have been as to merchandising.

What relevance does that have? It does not go to any issue in the case.

Trial Examiner Norwood: Does counsel object to the receipt of these documents in evidence?

Mr. Wright: Yes, that was the meaning of my
4100 statement.

Trial Examiner Norwood: I will ask Mr. Welch to take up 201 through 204 and give us his position on it and the purpose for which they are offered. I think he stated that heretofore.

Mr. Welch: I think I have; and I will try to be as brief as possible.

We have been charged with conspiracy. This correspondence shows that Sherwin Williams attempted to obtain some white lead in oil from National and that National had a series of letters between the Chicago branch office and the main office and decided not to sell Sherwin Williams the lead, and gave their reason for it. I would like to state that off the record because I don't think it is fair to put it on the record unless you admit the exhibits.

Trial Examiner Norwood: I will look at the exhibits.

Mr. Wright: I would like to remind your Honor of the date of the correspondence as to whether or not it is pertinent to this matter.

Mr. Welch: Your Honor, I think that a statement of that character by that organization as to what their attitude was toward Sherwin Williams has some weight and some bearing on the question of conspiracy between the two companies, and that is the purpose for which the documents are offered.

Trial Examiner Norwood: It shows their com-
4101 petitive attitude?

Yes, I think that I shall overrule the objection and receive them.

Mr. Welch: 201 to 204 inclusive.

Trial Examiner Norwood: That's right, received, Respondent's Exhibits 201 through 204.

(Documents referred to, previously marked for identification, were received in evidence as RESPONDENT'S EXHIBITS NOS. 201 through 204.)

Mr. Welch: Now, then with respect to Respondent's Exhibits 218 through 227, inclusive, contrary to Mr. Wright's statement, this involves purchases of lead, dry white lead, by Sherwin Williams from National Lead Company and the controversy between the two over the right freight rate and the amount that was to be charged Sherwin Williams in connection therewith.

Mr. Wright: Where does it say that in the exhibits?

Mr. Welch: Right here (indicating).

Now, your Honor, this, as I said before, concerns the discussion between Sherwin Williams and the National Lead on the question of the applicability of a freight rate. As a matter of fact, the wrong freight rate had been applied, and National had paid the right rates, and the Sherwin Williams attempted to get some of the benefits of that, and National, in effect, states, "Nothing doing."

4102 Mr. Wright: I object very strenuously to counsel's characterization of those exhibits into that effect.

Trial Examiner Norwood: Counsel's statements are not evidence.

Mr. Welch: We have been relying on that for some time.

Trial Examiner Norwood: Now, this reflects the attitude of one competitor to another here?

Mr. Wright: No, sir.

Mr. Welch: Your Honor, in that particular situation we were not competitors, Sherwin Williams was buying from National. In that particular instance it was seller and customer relationship, rather than a competitive one, at that level.

Mr. Wright: I assume from the correspondence that the price was a delivered price and that it was shipped freight collect, and for that reason an improper allowance had been made on the invoice for freight.

Mr. Welch: No, there was no allowance at all.

Trial Examiner Norwood: Does it show a more or less hostile attitude or just what?

(Discussion off the record.)

Trial Examiner Norwood: I will sustain the objection to the exhibits 218 through 227.

Mr. Welch: Now, Mr. Wright, I would like for 4103 you to stipulate that on Commission's Exhibits 794-Z-9-Z-12 and 791-B-S, that the rates therein depicted are rail rates and not truck rates. Those are Commission's Exhibits.

Mr. Wright: I have never had this called to my attention before, so I am going to have to take a few minutes.

Mr. Welch: Let me make my proposal and you act on it when you are in Washington.

One other proposal: I propose to stipulate that Commission's Exhibit 791-E erroneously lists a city known as Richmond, Indiana, and that it should be Richmond, Virginia; the City of Richmond, Virginia, appearing on other exhibits under the same basic number, 791.

Mr. Wright: I will be very glad to take those matters up.

Mr. Welch: Mr. Lewis, will you take the stand, please?

Whereupon,

CARL M. LEWIS, called as a witness on behalf of the Respondent, having been duly sworn, was examined and testified as follows:

Direct Examination by Mr. Welch:

Q. Mr. Lewis, by whom are you employed?
A. Sherwin Williams Company.
Q. How long have you been employed by that concern?
4104 A. 28 years.
Q. In what capacity are you now employed?
A. Division sales manager.
Q. In what division?
A. In what is known as the Newark division.
Q. How long have you been division sales manager?
A. In Newark since 1936; and from 1932 to 1936 in Albany, New York.
Q. Is Albany a separate division from Newark?
A. Not at the present time.
Q. From 1932 until 1936 it was a different division.
A. Yes.
Q. Has it been consolidated with the Newark division?
A. Yes, sir.
Q. I show you the original of Sherwin Williams invoices No. 24769, No. 23595, No. 24768, No. 510, No. 521, and No. 509, all of which invoices are further identified on the tabulation now in evidence as Respondent's Exhibit 205-M.

Can you tell me who the purchaser is on each of those invoices?

(Documents handed to witness.)
A. Henry R. Ballinger, Poughkeepsie, New York.
Trial Examiner Norwood: Off the record, just a minute.
(Discussion off the record.)
4105 Trial Examiner Norwood: Proceed on the record.

By Mr. Welch:
Q. Mr. Lewis, will you continue your answer.
A. Henry R. Ballinger, Poughkeepsie, again; Henry R. Ballinger, Poughkeepsie, again; Henry R. Ballinger, Hudson, New York; Henry R. Ballinger, Poughkeepsie; Henry R. Ballinger, Poughkeepsie; again.
Q. Now, Mr. Lewis, are you familiar with the general

freight policy of the Sherwin Williams Company with respect to less-than-carload shipments of lead pigments, such as dry white lead, white lead in oil, dry red led, red lead in oil, and litharge?

A. Yes.

Q. Can you state what that general freight policy has been on less-than-carload shipments?

A. The freight policy would be f.o.b. the factory, or equalization points.

Q. Now, do you use the term "equalization point." as synonymous with shipping point?

A. Yes.

Q. I show you Respondent's Exhibit 198-A through H, inclusive, or—are the cities listed on those exhibits cities that you would call shipping points?

A. Yes, most of them. Some of these I am not familiar with. But we would take them to be—

4106 Q. I am using this exhibit merely as an illustration, not of your particular branch.

A. Yes, these would be shipping points.

Q. And the cities that are listed as shipping points on whatever price cards are issued in your division—

A. That's correct.

Q. —are the points from which shipment would be made?

A. That's correct.

Q. Or from the factory?

A. Yes, sir.

Q. And in either of those circumstances, what would be the freight policy on less-than-carload shipments?

A. Less than carload, the rate would be f.o.b. those shipping points.

Q. The invoices that I have referred to a moment ago, do they conform to that policy or do they differ from it?

A. Well, they differ.

Q. Will you explain why?

A. To meet competition of other lead companies.

Q. Will you explain that in detail, just exactly how that arose and what happened?

A. In the case of Henry R. Ballinger of Poughkeepsie—

Q. Just one moment. May I withdraw that question for a moment.

Are you personally familiar with that account?

4107 A. Yes, sir.

Q. Have you had direct dealings with that particular account yourself?

A. I established that account when I was traveling back territory in 1932.

Q. Now, will you make your explanation as to why?

A. In order to make Mr. Ballinger competitive with the other leading paint dealers in Poughkeepsie, we had to deliver white lead to his store.

Q. Is there any peculiar competitive situation in the paint business presently at Poughkeepsie?

A. Well, nothing different than in any other central community, a town of that size.

Q. In your answer when you said you had to deliver it for competitive reasons, do you mean deliver it free of freight?

A. That's right.

Q. And what was the condition that you met when you opened the account as to following your general policy of charging freight on less-than-carload shipments?

A. Well, you are speaking now in the case of white lead?

Q. This particular account on those particular lead pigments.

A. It was our competition. I was delivering to the key dealers, key paint dealers, in Poughkeepsie, and if Mr. Ballinger was to sell white lead in competition with
4108 these dealers, we had to deliver our white lead to him.

Q. That is, without freight cost?

A. Without freight cost.

Q. Now, I show you Sherwin Williams' invoices No. 43996, No. 44126, No. 44122, No. 44228, No. 44312, all of which invoices are abstracted on the tabulation which is now in evidence as Commission's Exhibit 205-F, and ask you if you can identify the purchaser listed on those invoices?

(Documents handed to witness.)

A. G. P. Barney, Watertown, New York; G. P. Barney, Watertown, New York; G. P. Barney, Watertown, New York; G. P. Barney, Watertown, New York; G. P. Barney.

Q. Are you personally familiar with that account?

A. Yes.

Q. How long have you been familiar with it?

A. Since about 1939 or 1940.

Q. Have you sold the account personally yourself?

A. No, I have not.

Q. Have you called on it personally?

A. I have called on the account.

Q. Do the invoices that I have asked you to examine conform to Sherwin Williams general freight policy for less-than-carload shipments?

A. No, there are exceptions here.

Q. Will you explain why those exceptions were made?

4109 A. For the reason that in Watertown, if Barney is to be in competition with the other large paint dealers in Watertown, we were compelled to allow him freight on white lead.

Q. That is, you make some concession on the freight delivery?

A. That's right.

Q. Do you know what competitive accounts there are in Watertown that he has to compete with?

A. I could name one or two.

Q. What brands do they handle, of lead pigment?

A. National Lead, Eagle-Picher.

Q. Is Watertown a particularly highly competitive city or not?

A. It is a shipping center and very competitive.

Q. Are there other accounts in Poughkeepsie where competitive brands are handled?

A. Yes, sir.

Q. Which one is particularly and primarily?

A. Well, E. V. Grant would be one.

Q. What competitive brands of lead pigments do they handle?

A. That would be National Lead, Eagle-Picher. They are the main ones.

Q. I now show you Sherwin Williams' invoices No. 25714, which is abstracted on Respondent's Exhibit 205-F, which is in evidence, and original invoices No. 10620, 4110 No. 9269, and No. 26649, which are abstracted on Respondent's Exhibit 205-G, and I will ask you if you can identify the purchaser on those invoices?

(Documents handed to witness.)

A. All of these are Putnam Hardware Company, Middletown, New York.

Q. Are you familiar with that account?

A. Yes, sir.

Q. How long have you been familiar with it?

A. I would say since—I may not be correct—but as I recall, since about 1939, 1940.

Q. Have you sold the account yourself?

A. Yes, sir.

Q. Are you familiar with the competitive situation in Middletown, New York?

A. Yes, sir.

Q. Will you state what it is?

A. It is the same as it is in any other trading center such as Poughkeepsie, Watertown, Newburgh.

Q. Are competitive lines aggressive or otherwise in that city?

A. Well, they are aggressive in that city and in all cities.

Q. Which accounts are particularly competitive there that you have to meet?

A. It would be National Lead Company mainly; 4111 Eagle-Picher in some instances.

Q. The last group of exhibits which I showed you as being the Putnam Hardware account at Middletown, New York, do the invoices that I showed you follow or deviate from the Sherwin Williams freight policy?

A. There are exceptions.

Q. And why were the exceptions made?

A. In order to place this account in a competitive condition with other established dealers.

Q. Can you identify the purchaser shown on Sherwin Williams invoice No. 3136, which is abstracted on Respondent's Exhibit 205-F?

A. Mohawk Wallpaper and Paint Company, Utica, New York.

Q. Does that invoice conform in so far as the freight policy is concerned as to Sherwin Williams general policy?

A. No, there is an exception there.

Q. Are you familiar with the account yourself?

A. Yes, sir.

Q. How long have you been familiar with it?

A. Since 1932.

Q. Have you sold the account yourself?

A. Yes, sir.

Q. Will you state why the exception to the general policy is made in selling this account?

A. In order to make that dealer competitive with 4112 the other paint dealers in Utica.

Q. Which are the principal competitive lines there that create this situation?

A. National Lead and Eagle-Picher, possibly others.

Q. Mr. Lewis, are you familiar with the containers, the 100 pound containers, 50 pound containers, 25 pound and 12½ pound containers in which white lead in oil and red lead in oil are sold?

A. Yes, sir.

Q. Are they the same or are they different?

A. They are the same.

Q. Now, if an invoice has no information on it with respect to how freight is to be handled, what is the policy and procedure followed?

A. We always—

Mr. Wright: I object to that, your Honor.

Mr. Welch: He is the division sales manager.

Mr. Wright: He is being asked to give a conclusion as to what it means when there is nothing on an invoice about how freight may be—

Mr. Welch: I said, what was the procedure followed.

Trial Examiner Norwood: He wants to know how they handle the transaction of which this invoice is evidence when the invoice does not have these particulars stated on it. I think he can show those particulars either by
4113 the invoice or by his own testimony.

Mr. Wright: Now, we don't have all of the invoices from which these documents were made in the record, but there has been a variance in policy; some of these invoices show freight prepaid; some of them show freight collect; and some of them don't show anything.

Mr. Welch: That is the only type I am asking him about, that is, the ones that don't show anything.

Mr. Wright: I appreciate that, but—

Trial Examiner Norwood: Just what was the transaction when it is an invoice like that?

Mr. Wright: He is asking about invoices that do not have anything about freight on them, what that means.

Trial Examiner Norwood: You can cross-examine on it. Objection overruled.

By Mr. Welch:

Q. If there is no notation on the invoice as to how the freight charge is to be handled, what procedure is followed?

A. In every instance, to my knowledge, they are f.o.b. the factory or the shipping point.

Mr. Welch: Just one second, your Honor.

That is all, your witness.

Trial Examiner Norwood: You may cross-examine, Mr. Wright.

4114 By Mr. Wright:

Q. When you spoke of carload shipments now, did you mean a railroad carload?

A. We speak of carload shipments as either a railroad car or a truckload, but the majority of them are truck, 20,000 pounds or over.

Q. Is 20,000 pounds a minimum truckload in your branch?

A. Yes, that's correct.

Q. No shipment of less than that quantity is handled as a truckload?

A. Yes, when the original order is not filled completely, then we consider it is not the fault of the customer and we do not penalize him by making him pay freight.

Q. In other words, even though it might only involve an actual shipment of 5 to 10,000 pounds, you don't add freight from the shipping point in that case?

A. That's right.

Q. When you spoke of carload you meant truckload as well as railroad carload?

A. That's right.

Q. Do I understand it to be your policy in the Newark branch to meet the competition where you find it of other sellers of white lead in oil in the method of handling freight charges to the customer; is that the substance of your testimony?

4115 A. Yes, I would say so.

Q. You are in the sales department, you testified I believe?

A. That's right.

Q. Do you make up the invoices in that connection, have anything to do with the making up of the invoices?

A. No, sir.

Q. Who handles that?

A. Our accounting department.

Q. As they process those invoices, they put various stamps and notations on them to indicate the steps that have been taken in shipping and billing the customer, and so forth?

A. That's right.

Q. What then is the basis of your statement that in every instance where nothing appears as to how freight was handled that the thing was shipped with freight added from the shipping point?

A. Well, we usually,—we take the stand that for some reason or other that through probably a clerical error it was left off; usually they always show on an order.

Q. How freight was handled?

A. Yes. We always list it, but where it is left off, then the instructions are to make it f.o.b. the factory, and that is done.

Q. Is that a general office instruction?

A: That is the general rule that we follow, yes, sir.

4116 Q. Now, I show you on Invoice No. 24769, one of those you testified about, that the notation there "Shipped prepaid" is put on with a rubber stamp.

A. Well, this is a truckload order, sir, truckload order, and then that would be delivered shipped to destination. We would prepay the freight on it.

Mr. Wright: No further cross-examination.

Mr. Welch: Just about two or three questions, your Honor.

Trial Examiner Norwood: All right.

Redirect Examination by Mr. Welch.

Q. Mr. Lewis, in cross-examination, I believe, you stated it is your general policy in this division to state, even if it is going to be freight collect to so state on the invoice was that your answer to Mr. Wright?

A. That's correct.

Q. Do you know whether or not that applies in other divisions or only in your own division?

A. Only in my own division.

Q. That is all you know anything about?

A. That's right.

Q. And that rule that that be done in this division is a division rule and not a general executive office rule from Cleveland?

4117 A. I have never seen any. It is just a good business practice, to proceed that way.

Q. And that is the way you operate in this division generally?

A. That's correct.

Q. Now, you testified in answer to another question of Mr. Wright's that you attempted to meet competition; are there a number of cities in which Sherwin Williams has accounts and other companies such as National Lead Company, Glidden Company, and Eagle-Picher, also have accounts, but where you do not have to deviate from your general freight policy in order to continue selling your dealers?

A. Many towns of that nature. We only delivered that where we were forced to make important accounts competitive, particularly in the larger centers.

Q. And that would be approximately—that would be a very small number compared to the cities in which you did not have to make that concession?

A. That's correct.

Mr. Welch: That's all.

Recross-Examination by Mr. Wright.

Q. Will you list the towns where you do not deviate, where you sell any accounts of any particular importance, where you do not deviate from what you stated to
4118 be the general policy of handling freight.

Mr. Welch: Will you read that question, please?

(The question was read by the reporter.)

A. I wouldn't be able to name actual towns, but I do know that in many of the towns where white lead is not an important factor in that merchant's business—by that I mean there are not the number of painting contractors who usually take most of the white lead and create the competitive condition—a small dealer will order 100 pounds or 50 pounds or 25 or 12½, and that will be sold f.o.b. our factory or shipping point.

Q. In other words, that would not include towns where there was any substantial business in white lead in oil?

A. There might be exceptions.

Q. But as a general rule, that general policy then would apply only to the towns where there was a very small white lead in oil business?

A. Not necessarily. For example, we might take on a new account who had been buying his white lead from our competitors and then he would look to us as a source, and if he told us that a competitor was delivering lead, then we would consider an exception in order to be competitive.

Q. Can you estimate for 1941 the percentage of white lead in oil of the total sales in the branch to which freight was added from shipping point?

4119 A. No, sir, I cannot.

Q. Would it be as much as five percent?

A. To which freight was added?

Q. Was added from the shipping point. In other words, excluding all your shipments of truckloads to shipping point, and to factory point, excluding all your split truckload orders where you couldn't deliver a full truckload, and excluding all those towns where you do meet competition as you say, and didn't add freight, what percentage would be the total of shipments to which freight was added, on white lead in oil.

A. I wouldn't be able to estimate that percentagewise. I would say the bulk of our white lead shipments were made to the larger trading centers.

Mr. Wright: No further questions.

Mr. Welch: Just one second, your Honor.

That's all.

Trial Examiner Norwood: Thank you, Mr. Lewis.

(Witness excused.)

Mr. Ewing: I suggest at this point that you call Mr. Warshow.

Mr. Wright: All right.

May we take a five-minute recess?

Trial Examiner Norwood: All right.

(A short recess was taken.)

4120 Mr. Wright: I am calling Mr. Warshow.

Whereupon,

HERMAN T. WARSHOW, was called as a witness on behalf of the Commission, having been duly sworn, was examined and testified as follows:

Mr. Wright: I am stating for the record that I am calling Mr. Warshow for the Commission. It is out of order, but I am trying to save time.

Direct Examination by Mr. Wright:

Q. Mr. Warshow, what is your present business?

A. I am vice president of the National Lead Company, one of the vice presidents.

Q. How long have you been in that capacity?

A. About 10 years.

Q. What was your position prior to that time?

A. Before that I was controller of the company.

Q. For how long a period of time?

A. Since 1921.

Q. Can you give us in general what your duties as controller were?

A. Well, they were the usual duties of the controller. I had charge of all accounting, tax work, renegotiation, the usual duties of a controller.

Q. Did you work closely with the president and 4121 the board of directors in your duties?

A. Yes, I did.

Mr. Warshow, were you well acquainted with Mr. E. J. Cornish?

A. Yes, I was.

Q. What was Mr. Cornish's position with the National Lead Company up until the time of his death?

A. Well, until somewhere in the 30's he was president, and after that he was chairman of the board until his death in 1938.

Q. All during the 20's and 30's he was president?

A. He was president. He didn't become chairman of the board until about somewhere in the early 30's, and he remained chairman of the board until his death in 1938.

Q. Do you recall discussing with Mr. Cornish and the other officers of the National Lead Company in the early 30's the matter of acquiring the Eagle-Picher Company?

A. Well, I don't recall very much about that. That is a long time ago. That would be when?

Q. 1930, 1931.

A. That would be about 17 years ago.

Q. Yes.

A. Well, I don't recall very much about that.

Q. Well, do you recall that there were discussions on that?

A. I read the other gentleman's testimony while
4122 I was waiting, and I refreshed my memory some-
what, but I don't recall very much about it.

Q. Well, do you recall now discussing with Mr. Cornish and the other officers of the company the matter of making an offer to the Eagle-Picher Company of a certain sum for the assets of the company during the early 1930's?

A. No, I don't.

Q. Do you recall attending a meeting in Washington in the Department of Justice with Mr. Cornish to discuss that matter?

A. I don't recall that at the moment. I'd have to look up my files. You see, I didn't know what you were going to require. I haven't made any preparation; I haven't looked up the files, or anything.

Q. Now, the matter of acquiring the Eagle-Picher Company would be a rather important matter, wouldn't it?

A. No, no, I don't think so. We have had a lot more important matters than that in the last fifteen years.

Q. In so far as capital expenditures?

A. Capital expenditures, acquisition of other companies, which involved a whole lot more money than the possible acquisition of Eagle-Picher. I say that with all due respect to the gentleman in front of me. It is a good-size company.

Q. Would you recognize Mr. Cornish's signature?

A. In those days the price of the stock was very low,
it was down to as low as $3 a share and they had
4123 about 900,000 shares, and that would have meant a
total expenditure for the entire company of only
$2,700,000.

Q. Would you recall the National Lead Company, through its president, stated that it was authorized by the board of directors to make an offer of $10,000,000 in May of 1931 to the board of the Eagle-Picher Company for the acquisition of the Eagle-Picher Company?

A. No, I don't recall anything of that kind.

Q. I show you a document and ask you to read it and ask you if it refreshes your recollection.

(Document handed to witness.)

A. All right.

Q. Does that document refresh your recollection about the proposal of the type that I was talking about?

Mr. Wood: Before answering, I would like to just once and for all state my position on the record, just to save my position.

Trial Examiner Norwood: Yes.

Mr. Wood: I therefore move that all of the testimony of this witness relating to whatever intentions National may have had with respect to Eagle-Picher be stricken, and I object to all further questions along that line. My reasons are two in number:

My first reason is that the complaint charges conspiracy between National and Eagle-Picher, and I cannot see
4124 that the monopolistic intentions of National are in any way binding upon Eagle-Picher or that Eagle-Picher is in any way involved.

My second point is this, and that is that anything—that in any case the testimony goes only to whether or not the National Lead Company has violated Section 2 of the Sherman Act, and not Section 1, but Section 2; and there has been no case so far that holds that the Federal Trade Commission has any jurisdiction whatsoever over cases that would be involved in Section 2 of the Sherman Act as distinguished from Section 1.

I won't interrupt again. I wish that objection to apply to all testimony along that line.

Trial Examiner Norwood: Well, don't you think I'd better reserve my ruling on that until after he has completed his testimony?

Mr. Wright: Already we have considerable testimony in the record about the stock holdings of the National Lead Company in Eagle-Picher Company, about the acquisition of various companies by the National Lead Company, and it is all very closely related to the allegations which appear in the complaint. As a matter of fact, I believe this is specifically alleged in the complaint.

Trial Examiner Norwood: Well, I will deny the motion for the time being. You may renew it when he has completed his testimony.

4125 What was the question?

(The question was read by the reporter.)

The Witness: Well, I can't say that I recall this.

By Mr. Wright:

Q. You don't recall the general subject that is covered in that document?

A. No, I don't. I recall the purchase of the stock, but I don't recall any offer as is indicated in this letter for the entire assets of the Eagle-Picher Lead Company.

Q. Can you identify the signature of Mr. E. J. Cornish?

A. It is rather difficult. I am not a handwriting expert. I wouldn't want to do that. I know his signature, yes. I have seen it a great many times. But I think it could be forged easily, and I would not know the difference.

Mr. Wright: May we go off the record for a few minutes?

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Mr. Wright: May we go back to the record?

Trial Examiner Norwood: On the record.

Mr. Wright: No further questions of this witness.

Trial Examiner: Any cross-examination?

Mr. Ewing: None.

Trial Examiner Norwood: The witness is excused.

(Witness excused.)

Mr. Ewing: Off the record.

412[illegible] Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Mr. Ewing: Mr. McCarthy.

Whereupon,

FRED K. McCARTHY, having been called as a witness on behalf of the respondent, previously sworn, testified further as follows:

Trial Examiner Norwood: He has been previously sworn.

Direct Examination by Mr. Ewing.

Q. Mr. McCarthy, I show you a number of documents which have been marked Respondent's Exhibits 229 to 305-D for identification and ask you to tell us what they are.

A. These are copies of telegrams sent by the general office of the National Lead Company in New York to branch managers and others concerned in the company announcing changes in prices of pigments.

Q. Are they all telegrams?

A. In every instance that is a copy of a telegram.

Q. And from whose files are they produced, what office of National?

A. The office of Harold Roe, Vice president of the Company.

Q. When you say they were sent to various people concerned, does that include in some instances, wholly

4127 or partly-owned subsidiaries of National?

A. Yes, except on announcing changes on oxides; Morris P. Kirk and Evans and others would be concerned.

Mr. Ewing: I offer Respondent's Exhibits 229 through 305-D for identification in evidence.

Trial Examiner Norwood: Any objection?

Mr. Wright: I understand by agreement with Mr. Ewing, since I have not had an opportunity of examining this group of documents, that he will supply photostatic copies of them to me, and then I can reserve my objection until examining them some time next week. I will make every effort to hold it down so that we won't have to recall Mr. McCarthy for further examination.

Trial Examiner Norwood: We will consider the offer as pending.

Mr. Ewing: That concludes what we have to offer except for the matter of those exhibits just referred to and for Mr. Owens continued testimony next week; and with respect to that material I have to get up for Mr. Wright, my suggestion would be either Thursday or Friday, whichever is most convenient.

Mr. Wright: Either of those two dates is acceptable to me; whatever counsel finds convenient would be all right.

Before we close here, I want to discuss one matter Mr. Wood and I had pending.

4128-A Trial Examiner Norwood: You suggest that we adjourn until Thursday in Washington; is that it?

Mr. Ewing: Yes, sir.

Off the record.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record.

Mr. Dubose: We don't want Mr. McCarthy any more, do we?

Mr. Wright: No, we don't.

Trial Examiner Norwood: Mr. McCarthy, you are dismissed.

(Witness excused.)

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Mr. Wright: I would like to make a statement for the record that Mr. Wood and I have discussed the means of settling certain points without the necessity of calling one of the officials of the Eagle-Picher Company, Mr. W. R. Dice, down here to testify, and we have agreed on the following statement, which replaces the testimony that Mr. Dice would give if he were called as a witness.

The agreement as to what Mr. Dice would testify if called as a witness is as follows:

4128-B It is hereby stipulated and agreed by and between counsel for the Commission and counsel for the respondent The Eagle-Picher Company and The Eagle-Picher Sales Company that, if W. R. Dice were called as a witness, he would testify:

That he is vice president and comtroller of The Eagle-Picher Company; that he has been connected with the company in various capacities for nineteen years and was executive vice president between 1937 and 1941, at which time Joel M. Bowlby became president of the Eagle-Picher Company; that he is and has been for many years last past familiar with the pricing policy of the company; that between January 1942 and the filing of the complaint herein, substantially all lead pigments were sold at substantially ceiling prices; that prior to January, 1942, and during the time he was executive vice president of the company, the company generally met prices quoted by the National Lead Company on all lead pigments made from pig lead including basic lead carbonate and lead oxides; that during this period the Eagle-Picher Company manufactured certain lead pigments, including blue lead, basic white lead sulphate and basic silicate white lead, directly from available ore concentrates mined by the company's subsidiaries; that the company made these latter products at less cost than it could make products functionally comparable from pig lead; that the prices set by the company on those latter products were determined by the company;

and that the Eagle-Picher Company's sales of basic 4129 white lead carbonate and basic white lead sulphate for the years 1937 through 1944, inclusive, are as follows:

Year	Sales Tonnages Basic White Lead Carbonate	Basic White Lead Sulphate
1937	4,533	7,348
1938	3,356	5,955
1939	3,246	5,315
1940	2,769	4,986
1941	5,163	8,066
1942	3,116	5,820
1943	3,113	3,889
1944	3,666	4,342

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: I want to put on the record here the request to the reporters, that owing to the emergency here and our endeavors to close this case as soon as possible that the reporter is to be requested to prepare these exhibits and send them to Washington as soon as possible. I should like to have them to work with before Thursday, and certainly we want to have them there when counsel meet there, so we would appreciate it if they 4130 would make every possible effort to get these down promptly to Washington.

Mr. Wright: Now, as I understand the state of the record, we have finished all the presentation of evidence and all other matters except for the very limited subjects which were stated to have been pending here, including the subject of my examination of Mr. Warshow, Owens' testimony, and I think there were one or two matters yesterday where I asked for the right to notify you within the next week.

Mr. Ewing: That's right, and this last batch of exhibits that we offered.

Trial Examiner Norwood: I may state then that subject to the condition of some special testimony, that the taking of testimony in this case is closed.

Mr. Welch: No, sir, I don't think it is. You are actually going to take some more.

Mr. Wright: We may take some more Thursday. All I wanted to point out is that we have reached the point where everything is cleaned up except some very limited matters.

Mr. Welch: But we have to keep the record open.

Mr. Wright: And we have to keep the record open for some testimony and for some exhibits.

Trial Examiner Norwood: I will reconsider that and say that we will probably close in Washington on our next hearing.

Mr. Wood: I wish to make it clear on the record
4131 that I do object to any statement offered by Mr. Ewing or otherwise put into the record with respect to the alleged attempt of National Lead Company to buy the Eagle-Picher Company. I will probably not be present in Washington next week, but I wish that objection on the record now to go to the whole subject matter.

Trial Examiner Norwood: Yes. Counsel may have that objection in case this matter is received, and I shall enter your objection.

Anything further?

Mr. Ewing: No, sir.

Trial Examiner Norwood: By request of counsel, in agreement, the hearing is now adjourned to reconvene in Washington, D. C., in the offices of the Federal Trade Commission at ten o'clock a.m. on next Thursday, November 20, 1947.

(Whereupon, at 12:45 p.m. the hearing in the foregoing matter was adjourned until Thursday, November 20, 1947, at ten a.m. in Washington, D. C.)

4132 Room 332
Federal Trade Commission Building
Washington, D. C.
Thursday, November 20, 1947

Met, pursuant to adjournment, at 10:00 a.m.

Before: John W. Norwood, Trial Examiner.

Appearances:

Joseph S. Wright, Esq., appearing for the Federal Trade Commission.

James D. Ewing, Esq., and
E. Z. DuBose, Esq., (Alexander & Green, 120 Broadway, New York, N. Y.) appearing for the National Lead Company.

J. T. Welch, Esq., (Davies, Richberg, Beebe, Busick & Richardson, 815 Fifteenth Street, Northwest, Washington, D. C.) appearing for Sherwin-Williams Company.

4133 PROCEEDINGS.

Trial Examiner Norwood: The hearing will now come to order.

Pursuant to adjournment in New York on November 14th, the hearing in Docket 5253 will now convene in Washington, D. C., in Room 332 of the Federal Trade Commission Office, at 10:00 o'clock a.m., on the 20th day of November, 1947.

Please note the appearances.

Call your witness.

Mr. DuBose: Mr. Owens.

Trial Examiner Norwood: Have you been sworn in this case, Mr. Owens?

Mr. Owens: Yes.

Trial Examiner Norwood: Mr. Owens is recalled for further examination.

THOMAS F. OWENS was thereupon recalled as a witness for the Respondents and, having been previously duly sworn, testified as follows:

Direct Examination by Mr. DuBose.

Q. Mr. Owens, I show you Respondents' Exhibit 215-A, which you identified last week in New York, and I call your attention to the 12th line from the top. Opposite "Weight in Pounds, 40,000, Selling Branch, New Orleans Warehouse," in the fifth column after the heading "Manu-
4134 facturing Branch," under the heading "L.C.L. Rate /Cwt." the figure is 1.05. Is that a correct figure?

A. No, sir, that figure should be 5 cents a hundred.

Q. Now, what does 5 cents a hundred represent there?

A. That is the trucking rate from New Orleans Warehouse to the customer.

Q, Now, I call your attention to the extensions in the columns following the column noted as "Customer's Location." Where the l.c.l. rate figures in that, is it at the rate of 1.05 or 5 cents?

A. The extension in Column 7 has been made at the rate of 5 cents a hundred.

Q. So that the 1.05 there is a typographical error; is that correct?

A. Yes, sir.

Q. Now, I note also, in the next to the last column opposite that same item, the l.c.l. rate 1.05. Is that a mistake, too?

A. No, sir, that is the freight from St. Louis Manufacturing Branch to New Orleans.

Q. In other words, that is the l.c.l. rate per hundred pounds direct from the St. Louis Manufacturing Branch to New Orleans?

A. Correct.

Q. I also call your attention to Respondents' Exhibit 215-A, to the 15th line from the top. Under the head-
4135 ing "Customer's Location" the town's name is spelled M-e-r-i-d-e-n, Mississippi. What should that be?

A. I believe that should be Meridian, Mississippi.

Q. Instead of Meriden, Mississippi?

A. That is correct.

Q. If that anywhere near Laurel, Mississippi, do you know?

A. No, sir, I do not.

Mr. DuBose: At this time, your Honor, I renew my offer of Respondents' Exhibits 215-A and B, 216, and 217 for identification.

Mr. Wright: I would like to request preliminary cross-examination on this, and I would like to state that I would like rather extensive preliminary cross before your Honor rules on these particular exhibits.

Trial Examiner Norwood: You may question him on anything going to the admissibility of the papers, identification.

Voir Dire Examination by Mr. Wright.

Q. Mr. Owens, will you tell us again now how you selected the transactions which appear on 215-A and 215-B.

A. You mean by that, the particular customer locations?

Q. The particular customer locations and the weight of the shipments.

A. From the records which we keep in the New
4136 York office, we know exactly how much dry lead is
shipped to every customer throughout the United States. Therefore, in preparing the schedule we went to that record, and with the assistance of the head of the dry lead sales department, all the carload customers were selected.

Now, there is one exception to that statement, and that is that where the customer was located immediately adjacent to or within the immediate area of our manufacturing plant, those sales do not reflect on this statement.

Q. Those sales were omitted from the statement, in other words?

A. Yes, sir.

Q. Now, I call your attention to the tenth line up from the bottom of 215-A and B. Under "Customer's Location," there appears "St. Louis." The corresponding column for that transaction, "Selling Branch," is "St. Louis." There is an amount in the transaction of 702,000 pounds. The carload rate there is given as 16 cents a hundred. The less-than-carload rate appearing in the next to the last column on that transaction is 46 cents. How did you arrive at that?

A. I don't follow you on that. How did I arrive at what?

Q. At those rates that were applicable from St. Louis to St. Louis, as it appears.

Mr. DuBose: Just a moment. May I object to that question? It shows the manufacturing branch as
4137 Chicago, Mr. Wright.

Mr. Wright: Oh, I will withdraw that.

By Mr. Wright:

Q. Now, you went over the total figures, then, in 1941, of dry white lead, as I take it, and your grand total of pounds sold, over on 215-B in the first column, is 17,821,375 pounds. Now, with the exception of that one transaction from Chicago to St. Louis, all of those tonnages are at points not immediately adjacent to your factories. How does that total that you have entered here, 17,821,375, compare with your total dry white lead sales in that period?

A. It approximates 55 per cent.

Q. In other words, then, 45 per cent of your dry white lead sales were sold in and around the factories and not recorded on these exhibits?

A. Or in less-than-carload quantities.

Q. Well, how much of it is represented in less-than-carload quantities? Can you state that?

A. No, I don't have that figure. The combined figure would approximate 45 per cent.

Q. Well now, to give a complete picture of your transportation costs on all your white lead business during 1941, would it not have been necessary for you to record all of the transactions in this particular commodity, with the freight costs on all of those transactions?

4138 A. No, I don't think it was necessary. I think we have representative figures here.

Q. But this doesn't relate to your whole business of dry white lead. Your total freight cost that you get over here on 215-B is only a freight cost on carload shipments to other points than your factory points. It isn't representative of your whole business.

A. Well, I think you may have two questions in yours. In the first place, the total freight figures which we have here are not the total freight costs incurred during the year 1941.

Q. They are theoretical freight costs based on different types of freight rates, is that correct?

A. Correct. To the extent that we are dealing with actual weights and actual freight rates—

Q. But theoretical extensions in so far as they would represent actual shipping costs incurred.

A. As far as total cost is concerned, yes.

Q. Now, in making up these exhibits, the various rates which appear here, carload, l.c.l., are all rail freight rates, are they not?

A. Correct, with the exception of—

Q. Local cartage.

A. —local cartage.

Q. Right. Now, from your experience with the company, is it not a fact that a considerable portion of
4139 your tonnage of white lead, dry white lead, now,
moves by truck?

A. A good portion of it does move by truck, and in making up these figures I have eliminated the trucking shipments, tried to eliminate the trucking shipments.

Q. To these points?

A. To these points, yes. The trucking shipments are the ones where the customer is located close to the manufacturing point.

Q. Well now, isn't it a fact that a truckload shipment will often take a rate equal to or approximately the same as the rail carload rate?

A. Frankly, I don't know. I stayed away from trucking rates.

Q. Now, in going through these customers, did you ascertain whether they were regularly shipped by rail as against truck?

A. Frankly, I didn't ascertain definitely that all these customers always took in rail shipments. However, when the traffic department was asked for the rates, which they supplied in this instance, they were to give us the rail rates, since in the great majority of cases the railroads would be used for that purpose.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

By Mr. Wright:

Q. Well now, let's look at a typical transaction here,
Zanesville, Ohio, down in about line 22 or 23, where
4140 you show an l.c.l. rail rate from Cincinnati to Zanes-
ville of 38 cents a hundred.

Trial Examiner Norwood: What sheet is that on?

Mr. Wright: On 215-A.

By Mr. Wright:

Q. You don't know, do you, whether or not the Cincinnati warehouse might service Zanesville, Ohio, on dry white by means of truckload shipments rather than l.c.l. rail shipments?

A. No, sir.

Q. I call your attention to the second transaction on 215-A. Palo Alto out of Melrose. That is within a few miles of Melrose, is it not, Palo Alto?

A. I don't know.

Mr. DuBose: You mean as the West goes, Mr. Wright?

Mr. Wright: No, I mean literally. It is common knowledge that Palo Alto is in the San Francisco Bay area, as is Melrose.

Trial Examiner Norwood: Wait a minute. Where is that Palo Alto transaction? Is that on the first sheet?

Mr. DuBose: It is on the second line, your Honor, of Respondents' Exhibit 215-A.

By Mr. Wright:

Q. Mr. Owens, since these are all carload customers, why did you list on this exhibit l.c.l. rates from warehouse to customer, and from manufacturing branch to customer?

4141 A. Why did I?

Q. Yes, sir.

A. It is my understanding that in some instances shipments may move in either way. It may be direct shipment to the selling branch, or the warehouse, carload quantities, and shipments from there to the customer in l.c.l. quantities, or it may be an l.c.l. shipment directly from the manufacturing branch to the customer.

Q. Then these aren't all carload shipments, then? They include l.c.l. shipments?

A. Yes, l.c.l. shipments from the warehouse or selling branch to the customer, or from the manufacturing branch to the customer, but the customers are the carload customers.

Q. Oh, you classify the customers as carload customers, then, rather than taking carload transactions; is that correct?

A. I fail to see the distinction between the two.

Q. Well, now, then as I take your testimony, these are customers who customarily purchase in carloads.

A. Correct.

Q. Who get the carload price.

A. Correct.

Q. But an undetermined amount of this tonnage may be shipped in less-than-carload quantities; is that correct?

A. 1941?

Q. Yes, sir.

4142 A. It is quite possible that part of it may have been shipped in l.c.l. quantities.

Q. Yet you didn't take the other customers, located perhaps in these same areas or in other consuming centers, who customarily purchase in l.c.l. quantities?

A. No, sir.

Q. Now, these end figures ~~that~~ you got by extending these theoretical rates in the three different fashions, then, are theoretical figures in so far as what the actual shipping costs of National Lead Company might have been on this product during 1941?

A. Correct.

Q. Turning now to Respondents' Exhibit 217, will you tell me what the item appearing opposite No. 17 in the first line, under the column 1939, represents?

A. You refer to $141,003.32?

Q. Yes.

A. Account 17 represents the salaries of the individuals working in the accounting department, credit department, as well as some of the salaries of the—it also takes the salary of the manager of the branch.

Q. Just those three categories?

A. No, it takes in any office salary.

Q. All office salary?

A. Yes.

4143 Q. Now, is that of the Atlantic Branch?

A. Only.

Q. Only?

A. Yes.

Q. Now, when you say all office salaries, do you mean now to exclude salesmen's salaries from that?

A. Yes, sir. They are contained in Account 20.

Q. That is the entire branch office expense, then?

A. Right.

Q. As far as salaries are concerned?

A. Yes. All branch salaries would be reflected in the account shown.

Q. Would that include the assistant manager of the branch, the comptroller of the branch?

A. When I say his salary is included in here, the sales manager's salary would show in "Salesmen's Salaries & Expense," but the figures which appear in Exhibit 217 include all the salaries of that particular branch.

Q. That would include the salaries of the branch in so far as they related to the administration of the productive facilities of the Atlantic Branch?

A. Well, the complete administration and selling efforts of the Atlantic Branch.

Q. Covering all their products?

A. All their products.

4144 Q. And all of their activities?

A. Correct.

Q. Then that would include the administrative overhead of the factory operation?

A. If by that question you mean the salaries of plant superintendents and other supervisory employees of the factory, the answer is no.

Q. In other words, this wouldn't include the salaries of people who were actually in the factory?

A. No, sir.

Q. But it would include the salaries of the officials of the branch who supervise the factory operations?

A. Correct.

Q. From the main office?

A. The men who supervise the administrative and selling functions.

Q. Of the—

A. —Atlantic Branch.

Q. That would include all the metallic products?

A. Correct.

Q. All of the oils?

A. Yes.

Q. All of the mixed paints?

A. Yes.

Q. All of the putty, solder, everything that is handled by the Atlantic Branch? 4145

A. Correct.

Q. Now, the same is true, then, of all these other items which appear down here?

A. The same is true of all.

Q. The sales expense is likewise distributed all through the branch?

Mr. DuBose: Mr. Owens, will you answer verbally so that your answer may appear in the record, instead of nodding.

The Witness: Yes. What was the question?

Mr. Wright: Will you read the question.

(The pending question was read by the reporter.)

The Witness: Will you rephrase the question?

Mr. Wright: I will withdraw the question.

By Mr. Wright:

Q. Item No. 20, "Salesmen's Salaries & Expense"—those are sales of all branch products, throughout the branch?

A. That's right.

Q. Now, do you think, as an accounting proposition, that the end total, "Total Administrative & Selling Expense," represents the best accounting procedure actually to determine that item?

A. You are referring to the $565,000?

Q. Yes, sir.

A. Yes, sir, those are actual figures.

4146 Q. There are no items which are improperly included in there or which should, by proper accounting procedures, have been excluded?

A. Under our accounting setup, we feel that all these items of expenses are the ordinary expenses of doing business and properly included in any sort of a financial statement.

Q. Now, getting down to the next line below that, under the heading "Total Regular Number of Invoices Entered," will you tell us how you got that figure?

A. Atlantic Branch maintains a record of every invoice prepared. They keep a daily record of the number of invoices prepared, covering all of their sales. This figure was simply taken from their books for the three years of 1939, 1940, and 1941.

Q. Do you know what things are entered in that record? Now, do you include in that the billings to agents on consignments of white lead in oil?

A. If it represented a charge to the agent, material sold, it is considered here as an invoice.

Q. Well now, as I understand the state of the record, there are two different types of billings to an agent. One is the shipping memorandum, when goods are shipped to him. Another is a monthly report billing him for what he has sold. Now, are both those types of things entered in that invoice?

A. No, sir. Included in this figure is the monthly
4147 statement, as you put it, to the consignee, if there is a
money value involved in the transaction.

Trial Examiner Norwood: A little louder, please.

By Mr. Wright:

Q. But in the case of a shipment, say, of dry white in 100-pound kegs, or red lead in oil, to one of your distributor accounts, those invoices would appear separately from the consignment billing?

A. They would be a separate invoice recorded for that transaction.

Q. Are you familiar with the breakdown, in point of numbers, of that figure of 76,238 regular number of invoices, as between your trade sales items and your industrial sales items, such as dry white lead in 600-pound kegs?

A. No, sir.

Trial Examiner Norwood: Now, I didn't understand clearly what you said. On invoices to the agents for the goods that they have reported sold in the month—do you give them an invoice based on the report, then?

The Witness: Yes, sir. When the material is shipped to the consignee, there is usually a memorandum billing, as we refer to it, issued to him. Then, he reports periodically, usually on a monthly basis, the amount of material which he sells. We then issue to him a bill for material sold. At that time we have an invoice entered.

4148 By Mr. Wright:

Q. Now, Mr. Owens, there may be several memoranda billings to an agent during a month on these products, white lead in oil, yet there will only be one agent's report every month; is that correct?

A. I believe so; yes.

Q. So that figure which you entered here in the 76,000 may not represent anywhere near the total number of memoranda billings reflecting actual shipments to agents?

A. Well, you are assuming that we sell all merchandise on consignment.

Q. I am talking now about the stuff you do sell on consignment, white lead in oil, or did sell during this period.

A. As far as I know, dry white lead was not sold on consignment.

Q. I am talking about white lead in oil, and I assume white lead in oil billings to the agent were included in this total of regular invoices.

A. That is correct.

Q. So that what was included as to your agents on white lead in oil might be a considerably smaller figure than the actual billing memoranda or shipping memoranda covering the shipments to the agents?

A. Well now, you are drawing a distinction between
shipping memoranda and billing memoranda. I have
4149 used "Regular Number of Invoices Entered," and
not attempted to ascertain the number of shipping
memos that have been made.

Q. Well, what I am trying to get at is: Do you know whether use of the shipping memoranda, rather than the billing memoranda, would have increased this figure?

A. Probably would have; would have increased the number of invoice units.

Q. Yes.

A. If you consider them to be an invoice unit—

Q. Yes.

A. —the answer is yes.

Q. Now, is it not true that a good many invoices that might be represented in that figure of 76,000 would include several different products?

Mr. DuBose: Do you mean each invoice, Mr. Wright? Otherwise, I object on the ground the question is ambiguous.

Mr. Wright: Will you read the question, please.

(The pending question was read by the reporter.)

By Mr. Wright:

Q. I will amend the question and say: There are invoices represented in the 76,000 figure which cover more than one product on the same invoice?

A. Yes.

Q. About how many different products are offered in
the trade sales department, do you know, customarily
4150 sold to the paint and hardware dealers?

A. By the Atlantic Branch?

Q. Yes, sir.

A. White lead in oil, linseed oils—

Q. Different types and kinds of linseed oils, is that not true?

A. Right. Various types of white lead; colors in oil, miscellaneous painted products. That would about take care of all the materials sold to a paint store or hardware dealer.

Q. But there probably would be in excess of 20 different items, taking the various grades and kinds of things offered to the trade?

A. Yes, sir.

Q. All or any part of that might appear on a single invoice; is that not true?

A. Correct.

Q. Now, on 216, as I understand it, you lumped together the combined administrative and selling expense of the whole branch and divided it by the number of invoices, and came out with that figure under "Cost per Invoice—Average;" is that correct?

A. That is correct.

Q. Simple arithmetical averages of those figures?

A. Yes, sir.

4151 Q. Do you consider that that has any relation to the actual cost as regards dry white lead sold in 600-pound kegs, the invoice cost or selling expense?

A. The selling expenses are the actual selling expenses, divided by the number of invoices of all products, giving us the average cost per invoice.

Q. Well now, if you divided the number of chairs in the board of directors' room by the combined administrative and selling expenses, that would have, by the same token, given you the cost of each chair in the board of directors' room.

Mr. Ewing: I object to that as purely argumentative.

Mr. Wright: I submit, your Honor, that is perfectly proper cross-examination.

Mr. Ewing: It is the most ridiculous question.

Mr. Wright: I am trying to get out of this witness what that figure $7.42 means.

Trial Examiner Norwood: I think that is merely argument there. Objection sustained.

Mr. Wright: May we have a short recess for a moment, your Honor?

Trial Examiner Norwood: We will take a five minute recess.

(A short recess was taken.)

Trial Examiner Norwood: Proceed.

By Mr. Wright:

Q. Mr. Owens, is it not possible to determine ac-
4152 curately by recognized accounting procedures, the actual administrative and selling expense which can be properly attributed to the product dry white lead in 600-pound kegs in the Atlantic Branch?

A. No, sir, I don't think you can do that and arrive at an answer which you can say is perfectly accurate. There are too many accounting factors which require arbitrary distribution.

Q. Well now, are there not recognized, standard arbitrary distributions of cost as between different products?

A. You mean from an administrative and selling angle?

Q. Yes, sir.

A. I don't know of any methods of distribution. Each company usually arrives at their own which they feel are fair, reasonable.

Q. Well now, as to the product dry white lead, has the National Lead Company not made accounting and cost surveys to determine their administrative and selling expenses, from actual records, on the product dry white lead?

A. No, sir, we couldn't do it, and there is no accounting technique that would enable us to do it.

Trial Examiner Norwood: Would an invoice for dry white lead and lead in oil cost any more if made out by your company than an invoice for other things which they sell?

The Witness: No, sir, there is no reason why one should cost more than the other.

Mr. Wright: Would you read that question and
4153 answer, please.

(The question and answer referred to were read by the reporter.)

By Mr. Wright:

Q. During the period of the Office of Price Administration, didn't the National Lead Company keep what they considered to be accurate cost records as to the various different products which they produced and sold?

A. Manufacturing costs, yes. Selling and administrative expenses are a matter of distribution.

Q. Well, didn't they, during that period, distribute selling and administrative costs as between the various products?

A. Yes.

Q. They did?

A. Yes.

Q. In other words, then, you have kept such records.

A. That is correct.

Q. Which allocate, as to the different products, all of your costs, selling, administrative, production, transportation?

A. Yes.

Q. And overhead; all the various different things.

A. Yes, sir.

Q. So that those records would show exactly what portion of these costs are attributed to each different product?

A. On our basic distribution, yes, sir.

4154 Q. I assume, now, that that basis of distribution would be to take an arbitrary part of the branch salaries and the administrative officers', and allocate that part to that product on the basis, either of the dollar volume sold in relation to the total dollar volume, or some other basis of that sort.

A. Briefly, wherever possible, it would be a direct distribution of the product. In other instances, where you could not distribute directly, it would be on a fair and reasonable arbitrary basis.

Q. Now, do you keep such records in the regular course of business?

A. Yes, we do.

Q. For tax purposes? For other purposes?

A. I don't know for tax purposes, but we do keep those records.

Q. But that is an entirely different type of record than this represented by the combination of three exhibits, 215, 216, and 217?

A. Yes, but for the fact that the total selling and administrative expense as shown on Exhibit 216 would agree with it.

Q. With the combined total of everything?

A. Correct.

Q. Including metallic lead products and linseed oil and mixed paint and those things?

A. Correct.

4155 Q. Do you keep such records by customer classes or trade classes?

A. I don't believe we keep them by customer classes. We keep them by product classes.

Q. Product classes?

A. Yes.

Mr. Wright: No further preliminary cross.

Trial Examiner Norwood: I understand that the exhibit is offered now.

Mr. Wright: Well, it was offered previously.

Mr. DuBose: I just want to ask one or two questions and I will re-offer it.

Trial Examiner Norwood: Yes.

Direct Examination (Continued) by Mr. DuBose.

Q. The figure appearing opposite the words "Cost per Invoice-Avg" on Respondents' Exhibit 216 for identification represents the cost per invoice regardless of the product; is that correct?

A. Correct.

Q. Now, will you tell us, if you know, how an invoice is processed in the Atlantic Branch? What steps do you go through?

A. Upon the receipt of the order, a form is typed up and prepared, which is then routed to the credit department for credit rating. After approval by the credit department, the order will be passed along for entry on 4156 the company records, and notices will be sent to the plants to prepare for shipment. The invoice is then billed after shipment, recorded in the accounts receivable department, turned over to the mailing department for mailing purposes, and then, at this point, the accounting department begins its distribution and the preparation of sales statistics.

Q. So all in all, it goes through seven or eight departments; is that correct?

A. At least.

Mr. DuBose: I now re-offer Respondents' Exhibits 215-A and B, 216, and 217 for identification.

Mr. Wright: I would like to ask two more questions here on this matter now.

Trial Examiner Norwood: All right.

Voir Dire Examination (Continued) by Mr. Wright.

Q. This averages out, then, all of the credit expense on a per invoice basis, whether that credit expense relates to white lead in oil, linseed oil, colors in oil, or mixed paint; is that correct?

A. Are you referring to Account 27?

Q. Yes, sir.

A. Yes, it does.

Q. Based on your experience as an accountant now, and
with the company, would you say that the credit ex-
4157 penses properly allocable to dry white lead in 600-
pound kegs, sold to industrial customers for their
own use, would be as much as the credit expenses properly allocable to trade sales to dealers and others for resale?

A. Frankly, that is a difficult question to answer, but I will do my best on it.

You draw the distinction between industrial sales and trade sales. Now, to begin with, you have a great difference between the quantities involved, but on a proportionate basis, I know of no reason why the loss on one should not be the same as the other.

Q. Well, now, would your expense of investigation, which I assume is a part of your credit expense that appears in here—

A. Yes, sir.

Q. Would that be as much in selling to people buying in five and twenty-ton quantities for their own consumption and use in manufacturing processes as similar credit investigations of small hardware stores and paint dealers?

Mr. DuBose: I object on the grounds that the question is ambiguous. Do you mean, Mr. Wright, per pound or per customer?

Mr. Wright: I am talking about per customer.

Trial Examiner Norwood: Answer the question.

The Witness: Will you read that back?

(The pending question was read by the reporter.)

4158 The Witness: I am still not sure I understand
the question, but as far as an order coming through
and going through the credit department, one for a 600-pound item of dry lead would probably take just as much time and effort as one for 20 tons of dry lead. Is that your question?

By Mr. Wright:

Q. No. I am speaking now of the comparison of the cost per customer of credit investigations of the purchasers of dry white lead in 600-pound barrels in varying quantities, as against the credit investigation of your trade customers, namely your small paint stores and hardware stores who buy white lead in oil and similar products for resale.

A. You see, the problem there is you may well spend more time looking up one individual paint store customer than you would looking up credit rating on a large outfit, and once you have ascertained the credit rating on a large outfit, from that point on it is not necessary to go through that same procedure.

Q. Isn't it true, now, that most large industrial consumers are listed in Dun & Bradstreet and the other reports, with a very good credit rating, so that you, once you have looked at it, don't need to keep referring to it and make investigations of it? Isn't that an accurate statement?

A. That's right.

Q. Now, is that true with your small trade sales customers?

A. Many of those people are also listed in Dun &
4159 Bradstreet. Upon receipt of their first order, we would have to investigate their credit rating. From that point on, our experience would help us out in issuing credit to them.

Q. But with relation to these small customers, wouldn't it be fair to assume that your credit investigation would have to be on a more continuous basis than it would with your large industrial customers?

A. If it is a risky customer, yes; if it is a good small customer, no.

Q. Now, small customers not listed in Dun & Bradstreet —isn't there more expense in making an investigation than there is with your large industrials who are so listed?

A. I understand that many of the small customers are listed in Dun & Bradstreet.

Q. As to those which are not—

A. Then there is additional work required to determine their credit position.

Q. Well, now, on a transaction basis, wouldn't you assume from your experience that your credit losses are probably higher with your small trade sales customers than they are with your large industrial customers?

A. Not necessarily so. While you may have small customers—well, put it this way: Whereas the total credit loss from the small customers may involve more transactions, the net loss may not be any greater than from one of the larger customers.

4160 Q. Well, aren't these figures put up on a transaction basis rather than a customer basis or tonnage basis?

A. These are the total losses.

Q. On a transaction basis, however. They have been figured out on these invoices—

A. They have figured—

Q. —on a transaction basis, rather than a total dollar volume or poundage basis.

A. That's right, on a per unit basis.

Q. So that on a per unit basis, your credit losses will be more with the smaller customers on trade sales than they would be with the larger industrial customers; is that not true?

A. No, I still don't follow you on that. Will you rephrase the question?

Q. Well, I will withdraw the question.

Mr. Wright: I have no further preliminary cross.

Mr. DuBose: The offer is pending, your Honor.

Mr. Wright: May I inquire as to the purpose of the offer here?

Mr. DuBose: Yes, Mr. Wright. It is in the record so far that there is a quarter of a cent differential between carload and less-than-carload shipments of dry white lead, and in these exhibits we have attempted to justify that from the cost accounting standpoint. In so doing, this witness has taken all of the carload customers of the 4161 National Lead Company, except those who were shipped by truck in the immediate vicinity of the manufacturing branch, and has shown what the cost was to ship these carload customers, as they customarily do receive shipments in carload quantities, that is, direct from the manufacturing branch to the customer at the carload rate.

This witness has compared that actual cost with the cost of shipping in two other methods, one of which involves shipment from the manufacturing branch to the local warehouse at a carload rate, and shipments out of the warehouse to the customer at less-than-carload freight rates, or, if it is in the same town, their local trucking rate of 5 cents a hundred, which is certainly a reasonable figure.

The other category, the other comparison, is with that carload rate direct, with a direct less-than-carload shipment, direct from manufacturing branch to customer.

In that way, we believe that this is an accurate and representative picture which shows the actual difference in shipping costs alone, plus invoicing, of shipping these customers in carload quantities; as compared with what it would cost us to ship them in less-than-carload quantities in the two other methods.

Mr. Wright: Your Honor, I want to thank counsel for his statement.

Let us look at these exhibits. Exhibits 215-A and B represent 55 per cent of the total pounds of dry white
4162 lead shipped over the entire country. As the witness has stated, they do not include a substantial tonnage here which is sold in and adjacent to the factory locations of the company.

Now, those factory locations are Philadelphia, Perth Amboy or the Metropolitan New Yorw area, Chicago, St. Louis, and the San Francisco Bay area in California. We know enough about this business to know that all five of those areas are among the most substantial consuming areas for dry white lead in the country. There are figures in the record indicating that in 1941, out of the St. Louis Branch alone, there were 1,381,000 pounds of dry white lead, packed in these containers, sold in St. Louis. We don't know what the corresponding figure would be of the pounds sold in Chicago, the pounds sold in Philadelphia, the pounds sold in the New York area, the San Francisco area. No doubt they are substantial.

They are omitted here. Why are they omitted? Simply because the only transportation costs involved on those transactions would be local cartage, and that would be practically the same whether it was to a carload customer or to a less-than-carload customer. So that the total effect of that would be to materially change the relationship between the figures which appear on here.

Now, let me go on from there. These are not the shipping expenses incurred by the National Lead Company, by this witness' testimony. These are a theoretical extension
4163 of transportation costs on three different bases.

The first basis is l.c.l. from the factory to the customer. That is put in there even though the witness stated that these were to carload customers; so that has no value whatever as reflecting anything that the company did.

Then it is put up on a rail carload shipment directly from the factory to the customer. That may more nearly reflect the facts.

Then it is set up in a third way, showing a carload rate to a selling branch, which may not be the factory branch, with a l.c.l. rate from the selling branch to the factory or to the customer.

Now, we know that in carload quantities, it—or, at least it defies reason to suppose that carload customers are shipped l.c.l. by rail at rates up to $1.27 a hundredweight out of a selling branch warehouse. It was not taken into account that truckload shipments, which may involve quantities as low as 15,000 pounds or 7½ tons, would take a rate materially lower than the less-than-carload rail rate, a rate comparable to the carload rail freight rate on quantities less than a carload. So that the transportation figures, even on a theoretical basis, are further distorted because there is not taken into account the portion of the tonnage which might have moved in truckload.

Now, they are further distorted because all l.c.l.
4164 shipments, or, rather, all shipments to l.c.l. customers, are omitted. Now, some of those l.c.l. customers might have bought carloads. I assume that, since the witness stated that some of these carload customers bought in less-than-carload quantities and that the breakdown was not in carload transactions, but to customers classed as carload or less-than-carload. That further distorts the figures.

Now, what use is made of the figures? Mind you, that 215-A and B relate to every manufacturing branch in the country and that only the last four lines on 215-A and the first six lines on 215-B relate to shipments by the Atlantic Branch. The rest are all outside of that branch territory. Exhibit 217 purports to be the total administrative cost of the Atlantic Branch, including the executives of the branch, all the accounting department, credit department, and so forth, with all the rent, insurance, taxes, pensions, old age benefits, and so forth. The next category is selling expenses, and that is likewise complete as to the branch office.

Now, in that first category of office salaries and office expenses, a portion of that cannot be attributed to the invoice expense and the selling expense of white lead, because the branch manager and the assistant manager in that office are in a supervisory position over the manufacturing operations in the branch, and we know that there are several factories in the branch producing lead
4165 pigments, and there are other factories producing products which are in no way involved in this case by any stretch of the imagination: lead shot, lead pipe, solder, powdered lead, colors in oil, linseed oil, flatting oil, any one of dozens of products which the National Lead Company sells, and which, of course, are sold and handled through this Atlantic Branch.

Now, all that portion of the main office administrative expenses there is tacked on to the selling expenses and overhead on dry white lead, and it can't properly be allocated in that fashion. It relates to production, not only of white lead, but of a host of other products. The whole administrative and selling expense covers every product in the branch, as we have said. How much of it could properly be allocated to dry white lead, I don't know. Apparently this witness doesn't know.

Then, that total figure is divided by what is called a total regular number of invoices. Now, they don't really mean invoices there, because they included in that their so-called billing to agents, which was a final statement they sent the agent at the end of the month on his account. There may have been ten shipments to the agent, twenty shipments, as far as we know, during the month. The effect of including those consignment report billings rather than the actual shipments to those agents is to reduce the total number of regular invoices, and thereby, of course,
4166 to increase this figure $7.42 that appears here, which is arbitrarily said to be the average cost per invoice. Well now, average cost per invoice, as we have seen here, includes the salary of the head of the office relating to production of lead shot, of solder, of any of these other things.

Now, you get over on 216, and here is where all of these exhibits which are related are tied together to form the conclusion for which counsel offers this exhibit. He then compares the three arbitrary figures that he got from 215-A and B, which, as we have seen, have nothing to do with actual transportation charges on dry white lead, and he adds the freight cost on 20 tons and the invoice cost on 20 tons together, and he says that the per ton cost of administering an invoice and selling and shipping to a carload customer of dry white lead is $5.40 a ton.

Then he says that figuring an l.c.l. customer at five tons—now, I don't know where that five tons came from—an l.c.l. customer can buy up to 19 tons, and he is still an l.c.l. customer; he can buy from 600 pounds to 19,000, or 19¾ tons, and he is an l.c.l. customer. That arbitrary figure of five tons was put in there without any explanation of how it was arrived at, and the invoice cost of $7.45 was added, and then the freight cost based on these different arbitrary things was added, so that you get in three different ways the selling cost per ton as between the l.c.l. and the carload.

4167 Well now, the whole thing is spurious because incompatible elements have been combined. This witness testified that the National Lead Company regularly breaks down its expenses, administrative expenses, selling expenses, and freight expenses as to dry white lead, so that presumably on the basis of those allocations, the respondents could have come in here and said, "As to so many pounds of dry white lead that we sold in 1939 or 1940 or 1941, our administrative expenses properly allocable were so many dollars; our transportation expenses so many dollars; our selling expenses so many dollars," and we would have had the most accurate figure that could have been given on what those expenses were. But this material is made evidence of a wholly unreliable kind.

Trial Examiner Norwood: Well now, in other words, the freight figures you have given here cover shipments over the entire country; is that right?

The Witness: Yes, sir.

Mr. Wright: Only a portion, your Honor, of shipments over the entire country, a very carefully selected portion which is selected in a way that will make the figures come out the way the respondents want.

Mr. Ewing: I object to that, selecting them in a way that would make the figures come out the way the respondents want.

Trial Examiner Norwood: Well, counsel may
4168 speak to that. But do the invoices represented by all
that freight—that is, are those invoices included in

this number of invoices you have here on this exhibit, or are you just taking the number of invoices in one particular branch, the Atlantic Branch?

The Witness: Using the Atlantic Branch invoices.

Trial Examiner Norwood: And you are combining them with figures of shipments all over the country that may be covered by a great many other invoices; is that right?

The Witness: Selecting the Atlantic Branch as being representative of the Lead Company.

Mr. DuBose: It is already in evidence, your Honor, that the Atlantic Branch, on trade sales over the years from 1920 to 1941, roughly took care, on trade sales of white lead in oil, of between 25 and 27 per cent of the entire company's business.

Trial Examiner Norwood: Well, if he is adding these expenses here and dividing by the number of invoices, shouldn't this be the number of invoices that cover these shipments which he has tabulated here?

Mr. DuBose: Your Honor, we could do that and it would take us six years.

Mr. Ewing: No, you miss his point. As I understand it, you are referring to those shipments on the two larger sheets.

Trial Examiner Norwood: Yes.

4169 Mr. Ewing: And wanting to know the relationship between them and the invoices shown on 217.

Trial Examiner Norwood: That's right.

Mr. Ewing: Now, the invoices shown on 217 have nothing to do with these shipments of white lead in carload lots all over the country to customers other than metropolitan district customers. The invoice figure, as I understand the witness' testimony, relates to all the business done by the Atlantic Branch alone.

Mr. DuBose: Alone.

Mr. Ewing: And it doesn't relate to all the business represented by the other exhibits.

Trial Examiner Norwood: But added here on 216 and 217 is the freight expense.

Mr. DuBose: That's right.

Mr. Wright: On 216.

Mr. DuBose: As a factor; as one of the factors.

Trial Examiner Norwood: As one of the factors?

Mr. DuBose: That is true.

Trial Examiner Norwood: And it is covered by hundreds or maybe thousands of other invoices that are not counted in this divisor?

Mr. DuBose: That is perfectly true, and, your Honor, this whole argument and your questions and Mr. Wright's
statement are all relevant, perhaps in a brief. They
4170 all go to the weight. There has been no dispute as to
the identification of these figures, as to exactly what they are, as to their accuracy. I presume we can back them up, and if they want to come up to the Atlantic Branch, we will be glad to show them all the figures.

This whole argument goes to the weight. Now, it is relevant on that.

Trial Examiner Norwood: I agree with counsel on that.

Mr. DuBose: And I think now we are just talking about the admissibility.

Mr. Wright: I beg to differ with counsel on that. My objection didn't go to weight; my objection went to competency. Counsel made a proffer of this, presumably as competent evidence—

Mr. DuBose: That's right.

Mr. Wright: —on this subject. Now, will you tell me what relation 76,000 invoices covering everything from shot to lead pipe and white lead in oil and red lead in oil and all their trade sales and their industrials and their agents' billings and everything else, have got to do with the relative cost of selling these customers on 215-A and B, as against the customers who are not listed here, who buy in less-than-carload quantities?

Mr. DuBose: Well, as I say, that goes to the weight.

Mr. Wright: And 216 is solely devoted to the
4171 purpose of bringing all those together and stating,
"This is our relative cost of doing business with these two types of customers," and I submit that it is simply a multiplication and a division of factors which have no relation to each other.

Trial Examiner Norwood: Well, that may be very true, and respondents may introduce a witness here to prove something and his statements may not prove it, but may disprove it, but can I stop him from testifying?

Mr. Wright: Your Honor, I am not suggesting you stop a man from testifying, but I certainly state that a paper such as this 216, which is made up for the purpose of this proceeding to show that the relative cost of doing business between two classes of customers was so much, is inadmissible unless it has some weight and unless the basic data are competent to show what this purports to show.

Trial Examiner Norwood: Well, I think it is very clear what it does show. There are factors here that may be considered, and I am not going to say what it proves or what it disproves now, but I will give it exhaustive study. These papers are gotten up with a great deal of labor, and it appears to me, looking at it, they have made their statements here and it is made very clear what they are. They have answered all these questions, and I couldn't exclude that from some consideration.

Let the counsel show that they are not competent 4172 to show certain things.

Mr. Wright: Your Honor, I wouldn't suppose for a minute that anyone who really examined those would be misled by the conclusion that appears on there, but I dislike having things in the record which require a great deal of technical explanation as to why they are incompetent and why they don't mean what they say they mean.

Trial Examiner Norwood: But this happens to be that kind of a case.

Mr. DuBose: That is exactly it. If we didn't have the Robinson-Patman Act, we wouldn't have this sort of thing.

Trial Examiner Norwood: In another case—I can cite you there the Standard Brands case—the Commission allowed two or three months to have this survey made, and after we finally analyzed it, we found that they based the whole thing on some predetermined percentages, they called it, and it wasn't accepted by them. But it was received in evidence as their story of how this thing was, and the Commission's experts were given two or three months then to figure the thing out and show just why it didn't apply.

Mr. Wright: Your Honor, perhaps I didn't make myself clear as to one portion of this. Now, you will recall that this witness testified under my examination that regular records are kept, which show a proper allocation of all the various different cost factors actually incurred by the company.

4173 Mr. DuBose: Not between carload and less-than-carload customers. He said that.

Mr. Wright: As to this product. Now, in other words, the exact proportion of the selling and administrative expenses of the Atlantic Branch as to dry white lead are in the possession of the company.

Mr. DuBose: Certainly, but not between customers. What we are trying to do here is to show the difference between carload and less-than-carload.

Mr. Wright: Well now, it is a perfectly proper accounting procedure to have brought in the actual costs, which wouldn't have—

Mr. DuBose: Which wouldn't have meant a thing; wouldn't have meant a thing in this case; wouldn't show the difference. Certainly, over-all we have so much per ton—I think it is $4.86 per ton of dry white lead. What does that mean? I am not testifying and I don't want that to be taken as a figure, but it doesn't mean a thing. It means that out of all the tons that we sell, we have a certain expense. It doesn't show the difference between carload and less than carload.

What we had to do, of course, in a sense, was to make an arbitrary selection. Why? Because under the Commission's theory, the Robinson-Patman Act, you have to have a cost accounting justification for your different
4174 prices, and that is exactly why we did it.

Trial Examiner Norwood: I shall overrule the objection and receive the exhibits. These objections that go to the weight can be met by other evidence or argument. I have been very much interested in what has been said on both sides, and it has thrown a great deal of light on this paper, and I think it will lessen my work there, but I don't see how I could exclude it, how I can say that it does prove this thing conclusively, or that it doesn't prove anything at all. I can't say that now.

Respondents' Exhibits 215-A, 215-B, 216, and 217 are now received in evidence.

(The documents referred to, heretofore marked for identification as RESPONDENTS' EXHIBITS 215-A, 215-B, 216, and 217, were received in evidence.)

Mr. DuBose: Off the record.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Mr. DuBose: May we have this marked for identification? I think the next number is 309.

Trial Examiner Norwood: Yes.

(The document referred was marked Respondents' Exhibit 309 for identification.)

4175 Q. Mr. Owens, I show you Respondents' Exhibit 309 for identification, and I ask you to tell us what that purports to be.

A. This is a statement showing the cost of both soft and heavy paste packages in four sizes, 12½'s, 25's, 50's, and 100's; cost per 1,000 packages; cost per package. We then translated the cost into 100 pounds of material packed, that is, the package cost, and then we have the cost per 100 pounds of material packed in 12½'s, 25's, and 50's, the cost in excess of the 100-pound size.

Q. In other words, the last figure on the right under the two general headings, shows the excess of the cost of the package alone, of the 100 pounds of material packed in 12½-pound packages, 25 and 50, over the cost of a single 100-pound container; is that correct?

A. Correct.

Q. And that is for white lead in oil, both heavy paste and soft paste?

A. Correct.

Q. Now, when you say heavy paste, what do you mean?

A. Heavy paste means white lead in oil, 91 per cent carbonate and approximately 9 per cent oil.

Q. And soft paste is what?

A. Soft paste is a white lead paste with approximately 89 per cent carbonate, 9 per cent oil, 2 per cent turpentine.

Q. And I show you these documents and ask you
4176 whether these are invoices covering the package cost
per thousand packages shown on Respondents' Exhibit 309 for identification.

A. Yes, they are.

Mr. DuBose: I offer in evidence Respondents' Exhibit 309 for identification.

Mr. Wright: No objection.

Trial Examiner Norwood: Received.

(The document referred to, heretofore marked for identification RESPONDENTS' EXHIBIT 309, was received in evidence.)

Mr. DuBose: That is all we have of this, I hope our final witness, but Mr. Ewing has a statement.

Trial Examiner Norwood: Have you any cross-examination?

Mr. Wright: I would like to make a brief examination of the witness on several questions.

Trial Examiner Norwood: Yes.

Cross-Examination by Mr. Wright.

Q. Going back to the source of your information on these different customers, I believe you stated that you had a book showing all the carload customers of dry white.

A. A book showing all the customers?

Q. Broken down as to carload and less-than-carload customers.

A. No, sir; it is not broken down into carload customers.

4177 Q. Just carload customers?

A. It is a book containing all the names of all the customers of dry white lead.

Q. How do you know which ones are carload and which ones are less?

A. I believe I put into testimony that it was with the help of the sales manager of the dry lead department. He ascertained who the carload customers are who the l.c.l. customers are.

Q. For this purpose, then, you did distinguish as between those customers?

A. That's right.

Mr. Wright: No further cross.

Trial Examiner Norwood: What would be your estimate of the number of invoices that would be represented by the shipments that are tabulated here and entered on Respondents' Exhibit 215-A and B? You entered here on 217 "Total Regular Number of Invoices" and you have divided that into some totals here which include total freight for the entire country; isn't that right?

The Witness: This represents the entire country.

Trial Examiner Norwood: Yes. Now, what would you say would be the number of invoices which would be involved in the freight which you have entered on these large sheets? The 76,238 for 1939 represents the invoices of the Atlantic Branch?

4178 The Witness: Alone; yes, sir.

Trial Examiner Norwood: Well now, what would be your estimate of the other invoices that were issued with respect to this freight that is entered in here on these large ones?

The Witness: I am afraid I couldn't give you even an estimate of that.

Trial Examiner Norwood: Well, it would be considerably more, would it, or not? A small amount or a large amount?

The Witness: We have the total number of invoices for the Atlantic Branch.

Trial Examiner Norwood: Yes.

The Witness: Now, if we assume that the Atlantic Branch represents 25 per cent of the trade sales of the company, then I would assume that this figure of 76,000 represents approximately 25 per cent of the total number of invoices rendered by the National Lead Company in the year 1939.

Mr. DuBose: '41.

Trial Examiner Norwood: I see.

Mr. Ewing: I would like to direct attention to page 4126 of the transcript where Mr. McCarthy was called last week, where he testified with respect to Respondents' Exhibits 229 to 305-D for identification, that in each and every instance the document was a copy of the telegram. Examination shows that practically every one is a copy of a telegram, but one or two of them are letters or attached memoranda.

4179 Mr. Wright: I am willing to concede that the documents show on their face what they are, and he may have been mistaken as to what they are.

Mr. Ewing: I thought there would be no objection to correcting such a minor error.

Might I substitute for the originals, which we are offering as Respondent's Exhibits 229 to 305-D inclusive, photostatic copies, and offer them as those exhibits?

Mr. Wright: No objection.

Trial Examiner Norwood: Yes, counsel may.

Mr. DuBose: They have been marked on the photostats.

Mr. Wright: No objection to the offer, either.

Trial Examiner Norwood: Those are exhibits that were previously marked?

Mr. DuBose: They were marked last week in New York.

Mr. Ewing. Exhibits 229 to 305-D inclusive.

Mr. DuBose: There are some sub-letters in there. You remember, your Honor, you took those down.

Trial Examiner Norwood: I have a list of them on my docket; 229 to 305-D, correct. Is there any objection?

Mr. DuBose: There is no objection.

Trial Examiner Norwood: They are received in evidence as Respondents' Exhibits 229 to 305-D as sublettered in the case of some of them, and heretofore shown on the record.

4180 (The documents referred to, heretofore marked for identification RESPONDENTS' EXHIBITS 229 thru 233, 234-A and B, 235, 236-A & B, 237-A & B, 238 thru 240, 241-A & B, 242-A thru D, 243-A & B, 244-A thru G, 245, 246-A thru N, 247-A & B, 248 thru 251, 252-A & B, 253 thru 258, 259-A & B, 260-A & B, 261-A & B, 262 thru 270, 271-A & B, 272 thru 286, 287-A and B, 288 thru 291, 292-A & B, 293, 294, 295-A & B, 296 thru 304, 305-A thru D inclusive, were received in evidence.)

Mr. Wright: May we have a short recess?

Trial Examiner Norwood: We will take a five-minute recess.

(A short recess was taken.)

Trial Examiner Norwood: Proceed.

Mr. Wright: I would like to have this marked as Commission's Exhibit 866-A and B.

(The document referred to was marked Commission's Exhibit 866-A and 866-B for identification.)

Mr. Wright: I would like to offer Commission's Exhibit 866-A and B and stipulate at the same time that if witnesses are called by the National Lead Company, they would testify in accordance with the statement that Mr. Ewing is now going to read.

Trial Examiner Norwood: I had better rule on the proffer, first.

Mr. Ewing. There is no question about the fact that that is a copy of a letter that was actually written.

Trial Examiner Norwood: This is the exhibit to which Mr. Wood strenuously objects?

Mr. Ewing: That's right.

Mr. Wright: I might say in that connection, your Honor, I am not contending that the National Lead
4181 Company ever acquired the Eagle-Picher Company. I think it is relevant in this case as to the state of mind of the National Lead Company and its corporation officials at various times during this period, and certainly

this letter indicates that. It goes to one of the issues in the case, about the alleged intent of the National Lead Company to monopolize this business.

Mr. Ewing: As I said, there is no question that this is a copy of a letter actually written. I would object to it on the grounds that it is incompetent, irrelevant, and immaterial, but not on the ground it is not a copy of the letter.

Trial Examiner Norwood: Well now, I will defer the ruling on this until I have studied it very carefully, on account of Mr. Wood's being absent.

Mr. Wright: Well, your Honor, could we take a short recess and you rule on it then, because I have another offer that I am going to make based on this.

Trial Examiner Norwood: Well, I wanted to ask you if you think we will have an afternoon session.

Mr. Ewing: Well, as far as we are concerned, when I read this statement, we are through.

Mr. DuBose: Your Honor, may we say that we would like to join, in so far as National Lead is concerned, with the second objection noted on the record by Mr. Wood,
namely that a violation of Section 2 of the Sherman
4182 Act is not within the jurisdiction of the Federal
Trade Comm[illegible] Section 5.

Mr. Wright: [illegible] go off the record?

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: Back on the record, now.

I have heard discussion on this by counsel, and I have read the letter carefully, and I think that it may be admitted for the sole purpose of showing that National Lead made an offer to purchase Eagle-Picher, and I don't see how this could prejudice Eagle-Picher in any way whatsoever, and I will overrule the objections and receive the exhibit, Commission's Exhibit 866-A and 866-B.

(The document referred to, heretofore marked for identification COMMISSION'S EXHIBIT 866-A and 866-B, was received in evidence.)

Mr. Ewing: With respect to Commission's Exhibit 866-A and B, it is stipulated that if a witness or witnesses from National Lead were called, he would testify with respect to that exhibit as follows:

Early in 1931, Frederick Hertenstein, a vice president of the Eagle-Picher Lead Company, and a member of its board of directors, suggested to Edward J. Cornish, presi-

dent of National Lead Company, that he consider the purchase by National Lead Company of a large block of stock of the Eagle-Picher Lead Company. Thereafter, ne-
4183 gotiation developed into a proposition that National Lead could purchase the physical assets and good will of the Eagle-Picher Lead Company, and on or about March 14, 1931, National Lead requested of the Attorney General of the United States an expression of his attitude with respect to such a proposition. From time to time, National Lead Company supplied the Department of Justice with additional data.

On or about May 8, 1931, the Department of Justice advised Edward J. Cornish that it preferred to express no opinion as to the legality of the proposed transaction. On May 12, 1931, Edward J. Cornish sent Frederick Hertenstein a written proposal addressed to the President and Board of Directors of Eagle-Picher Lead Company, with the request that Hertenstein present it in proper form to the company.

Hertenstein returned the written proposal to Cornish with the advice that neither he nor his associates approved of the proposal as made, and that he would not submit it to the Board of Directors of the Eagle-Picher Lead Company.

A copy of this written proposal was sent to the Department of Justice at the same time that the original was sent to Hertenstein. The original is in the possession, at the present time, of the National Lead Company. The negotiations were never resumed, and no transaction along the line proposed was ever consummated.

Trial Examiner Norwood: Is that agreeable?

4184 Mr. Wright: I am agreeable to stipulating that witnesses, if called on behalf of the National Lead Company, would so testify.

Trial Examiner Norwood: Is there anything further?

Mr. Wright: Yes, your Honor. I would like to have marked for identification Commission's Exhibit 867 and sub-numbers, and Commission's Exhibit 868 and sub-numbers.

(The documents referred to were marked Commission's Exhibit 867-A through 867-L, and Commission's Exhibit 868-A through 868-O for identification.)

Mr. Wright: In the hearing at Cleveland, in connection with the offer of Respondents' Exhibits 199 and 200, which were maps prepared by the traffic department of the Sherwin-Williams Company, showing breaking points of freight rates, or purporting to show breaking points of freight rates as between producing points of white lead and red lead and litharge, there were submitted for convenience of Commission's counsel, computations of the rates, the actual rates in cents per hundredweight at the various points indicated on those maps, together with tariff references, showing the sources of those rates.

I have had the material relating to dry white lead and white lead in oil marked as Commission's Exhibit 867-A to 867-L for identification, and I have had marked as Commission's Exhibit 868-A to 868-O for identification,
4185 the comparable material relating to red lead, red lead
in oil, and litharge. I would like to offer those exhibits by agreement of counsel as thus identified.

Mr. Welch: That's all right.

Mr. Wright: What is the state of the record?

Mr. Welch: I said I agree.

Trial Examiner Norwood: Has other counsel agreed to the exhibits?

Mr. DuBose: Well, as far as National Lead is concerned, we have no way of checking those rates, and subject to correction—

Mr. Wright: May I say that I am not offering those as the rates. I am offering those as a list of the rates and the tariff references which were used by the traffic department of the Sherwin-Williams Company in making up Respondents' Exhibits 199 and 200.

Mr. DuBose: No objection on that score.

Trial Examiner Norwood: They may be received as marked, Commission's Exhibits 867-A through L and 868-A through O.

(The documents referred to, heretofore marked for identification COMMISSION'S EXHIBIT 867-A through 867-L and COMMISSION'S EXHIBIT 868-A through 868-O, were received in evidence.)

Mr. Wright: Your Honor, I would now like to re-
4186 offer Commission's Exhibits 527 and 528.

Mr. DuBose: What are they?

Mr. Wright: May we go off the record?

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Mr. Wright: May I make a statement in connection with my re-offer now?

Trial Examiner Norwood: Yes.

Mr. Wright: These exhibits are photostatic copies of carbon copies of letters addressed by Albert Chatfield, a stock broker in Cincinnati, Ohio, to Messrs. E. J. Cornish and F. M. Carter, Chairman of the Board and President of National Lead Company respectively, under dates of June 15 and July 20, 1935. The exhibits were produced by the National Lead Company under subpoena and were identified by counsel for that company as being "true and correct photostats of document supplied and furnished by National Lead Company" to the Federal Trade Commission, and each of them was further identified as "a letter" addressed to the respective officials of the National Lead Company.

They were first offered in evidence and discussed on pages 585 to 594 of the transcript, were reoffered at pages 679 and 681 of the transcript. They were previously excluded on the ground that they had not been sufficiently connected up.

I would like to call your attention to Commission's 4187 Exhibit 700-B, which is a transcript from the stock transfer agent of the Eagle-Picher Company, showing 44,900 shares of common stock of Eagle-Picher in the name of E. J. Cornish over a period of time from 1932 to 1943.

Mr. DuBose: 1930, it should be.

Mr. Wright: Well, at any rate, that exhibit has the dates correctly.

Respondents' Exhibit 183 is a document prepared by National showing its ownership of Eagle-Picher stock, including dates of purchase and dates of sale.

Mr. Chatfield was called as a witness in this proceeding. Although these documents had not been produced by him, they came from the files of National, and your Honor will note on the upper corner of the letters the legend indicating that they were from the files of Frederick M. Carter, who is the president of the company.

When Mr. Chatfield was examined, he was a reluctant witness. When he was asked about Commission's Exhibit 527 for identification, whether it was a copy of a letter from him to Mr. Cornish, he said:

"Well, it must be. I went in to see Mr. Cornish on several occasions originally, about stock owned with National Lead in view of purchasing, and I may have written this letter in answer to that interest."

When he was asked whether he had received any
4188 letters back from Mr. Cornish in response to any
letters he wrote, he said that he had not, and that communications from Mr. Cornish were:

"Well, just by telephone or he would be out here or something like that."

And when he was asked if he recognized Exhibit 528, he said:

"That is a letter written to Mr. Carter, President of the National Lead Company."

And he was asked, "By whom?" and he said:

"Signed by me. This was a month later."

Trial Examiner Norwood: Chatfield said that?

Mr. Wright: Yes. The Examiner, Mr. Ballinger, said:

"Now let me see if I understand this. Do I understand that you wrote these two letters to Mr. Carter?"

And the witness, Chatfield, said:

"No. One letter was written to Mr. Cornish."

The Examiner said:

"Did you receive a response from that letter?"

The witness said, "No."

Mr. Ballinger said:

"Did you receive a response to the letter to Mr. Carter?"

Mr. Chatfield said:

"No. As I remember, I didn't receive anything.
4189 This Mr. Weatherhead lived in New York City and
he had charge of the whole matter and nothing ever came of it. We couldn't do anything with it, and Mr. Weatherhead, at this time I think he is dead. He has been dead for several years."

The question was then asked: "These letters were in response to communications that you had with Mr. Weatherhead?

"Answer: No, these letters were in response to conversations that I had in New York City with Mr. Carter.

"Question: And they were in response to and pursuant to those conversations, is that correct?

"Answer: Well, I guess so. I don't—this thing has been so long ago that it is very vague in my mind. I have been through so much in the way of securities since this ~~deal that we usually~~ dismiss them when there is nothing to it. The whole thing didn't amount to anything."

Now, on the basis of that testimony, it is a reasonable inference that Mr. Chatfield was engaged in negotiations

involving the securities of the Eagle-Picher Company with Mr. Cornish and Mr. Carter. While he had no clear independent recollection of the details of that business, and while he didn't remember the details of these particular letters, he recognized them as copies of letters that he had sent to these gentlemen relating to subjects that he had had
conversations with them about in person in New York
4190 City, and apparently in Cincinnati.

Now, later on, Mr. Simon, Treasurer of the National Lead Company, was called as a witness for the Respondent. He is the gentleman who identified Respondents' Exhibit 183, which was the record of purchases and sales of that stock. He stated, first of all, that the stock which was held in Mr. Cornish's name was actually stock owned by the National Lead Company, and it was in the possession of the National Lead Company, although not on the transfer of records of the Eagle-Picher Company.

Then he stated that it was an investment and he could point to the profit that was ultimately made in selling that stock. He could only point out one other common stock that had been purchased by the National Lead Company as an investment in similar circumstances, and that was stock of the American Smelting and Refining Company.

Mr. DuBose: Wasn't that preferred stock, Mr. Wright?

Mr. Wright: It may have been preferred stock, the A. S. & R. stock. At any rate, he testified that that was not held in the name of Mr. Cornish and Mr. Carter. That was held in the name of the National Lead Company. He was asked why, and he said, "Well, we thought that would be all right in that situation."

Then he was asked why it was that in Respondents' Ex-
hibit 183 there was a succession of small purchases of
4191 blocks of stock, 100 shares one day, 200 shares an-
other day, 300 shares another day, in successive periods of three days, a week, two weeks, three weeks. The stock was then selling from $3 to $5 a share, so that a block of 100 shares represented a very small amount of money. The stock was not listed on the New York Stock Exchange.

He was asked if there was a standing order, a firm order with brokers in Cincinnati, to pick up that stock. He said no. He said, "We would receive telephone calls, Mr. Cornish or myself, from some broker in Cincinnati."

Mr. DuBose: A. and J. Frank.

Mr. Wright: "Who would say, 'Well, we have 100 shares of Eagle-Picher stock. Would you be interested in purchasing it?'" and presumably they would say, "Yes, we would be interested in purchasing it," and then a week later another call would come in about a similar quantity. Except for three or four purchases, they were all small quantity purchases over a period of time.

Now, we have just received into the record an exhibit which shows that the National Lead Company, immediately prior to the dates on which the purchases of Eagle-Picher stock commenced—

Mr. Ewing: That is incorrect.

Mr. DuBose: I think in August 1930.

Mr. Wright: Well, the bulk of the purchases, I 4192 believe, occurred in a period subsequent to the date of May 12, 1931, and continued on for a period of several years, including the time covered by 527 and 528.

Now, the witness Chatfield, by his testimony, has been established to have been acting for the National Lead Company in some security transaction—

Mr. Ewing: No.

Mr. Wright: —the details of which were hazy in his recollection.

Mr. Ewing: No.

Trial Examiner Norwood: Go ahead.

Mr. Wright: By the very information contained in those exhibits themselves, an agency relationship is established between him and Mr. Cornish or the National Lead Company in the transaction involving Eagle-Picher securities.

Now, it is uncontroverted that those documents were genuine documents, letters, held in the files of Frederick M. Carter, the President of the National Lead Company, and brought in by the National Lead Company. It is uncontroverted that Chatfield had at that time some relationships involving the Eagle-Picher stock with Mr. Cornish and Mr. Carter. We know now that Cornish was buying, in his own name, for National Lead, a considerable quantity of Eagle-Picher stock. We know that in 1931 he had tried to acquire the physical assets of the Eagle-Picher Company.

4193 I submit that these exhibits, which are of unquestioned genuineness, and are of unquestioned relevance, are admissible in this proceeding, and I respectfully reoffer them.

Trial Examiner Norwood: Has counsel any objection to the receipt of these?

Mr. Ewing: It certainly has. In the first place, the witness Chatfield testified, if I am correct in my recollection—and I am quite certain I am—that he tried to work up a deal, and the quotation read by Mr. Wright a few moments ago shows he didn't work up a deal.

There isn't any doubt about what stock we did buy. The record shows that. But there also isn't any doubt about the fact that these letters were written by Chatfield on his own behalf, trying to work up a deal that was not worked up, and that he wasn't our agent or anybody else's agent as far as these respondents were concerned. It was his attempt to work up a deal, and he didn't do it, and what earthly relevance they have—it has all been gone over before. Nothing that has come into the record in any way improves the Commission's counsel's position as far as the offer of these letters.

Trial Examiner Norwood: Hasn't Mr. Chatfield testified since I ruled?

Mr. Ewing: No, sir.

Mr. Wright: Mr. Simon testified, the treasurer. Mr.
Simon testified and brought in a record of these pur-
4194 chases, showing purchases ranging from $800.

Mr. Ewing: Through A. & J. Frank, and not through Chatfield.

Mr. Wright: He said brokers in Cincinnati, and I said, "What brokers?" and he said, "Some of it was A. & J. Frank," but he did not testify that.

Mr. Ewing: Well, you know he didn't buy from Chatfield because Chatfield made no deal.

Trial Examiner Norwood: I said—

Mr. Wright: Well, Mr. Simon was unable to bring in a record to show exactly from whom all those purchases were made.

Mr. Ewing: The man who wrote the letters that you are now offering, who wrote those letters, himself testified he made no deal, so it is perfectly clear that nobody bought any stock through him.

Mr. Wright: I am willing, just as in the other exhibit, to accede to the fact that National never had over the amount of shares which had been testified on there, and that certainly they did not acquire a controlling stock interest.

Mr. Ewing: I don't want any inference that National was going after Chatfield to make a deal, because the evidence is clear that it wasn't, and I strenuously object.

Mr. Wright: Now, you will notice the name of a
4195 gentleman that is mentioned in one of those letters
there is a gentleman whose name has figured in a
recent exhibit here.

Mr. Ewing: He could mention anything he wanted.

Mr. Wright: Mentioned as being the man he talked to in this connection.

Mr. Ewing: What has that got to do with their admissibility?

Mr. Wright: There has already been a relationship established by the Chatfield testimony.

Mr. Ewing: The relationship established is that Chatfield tried to work up a deal.

Mr. DuBose: And nothing came of it.

Mr. Wright: Well now, the letters show on their face the subject of the transaction, and he testified that the letters were written in response to conversations that he had had with Mr. Cornish and Mr. Carter in New York.

Mr. Ewing: He didn't testify that Mr. Cornish or Mr. Carter asked him to write them.

Trial Examiner Norwood: I suppose we will have an after-lunch session here, and I will reserve the ruling on this. I want to review that testimony of Mr. Chatfield's first.

Let's recess until 2:00 o'clock.

(Whereupon, at 12:30 p.m., a recess was taken until 2:00 p.m. this day.)

4196 Afternoon Session.

2:15 p.m.

Trial Examiner Norwood: The hearing will come to order. I have just received an air mail, special delivery letter from Mr. Edmund P. Wood, representing the respondent Eagle-Picher Lead Company, making certain objections, and I shall enter it on the record and give him the benefit of an exception to any rulings that I made this morning or will make respecting the subject-matter of the letter. The letter reads as follows:

"Dear Sir:

"Mr. Ewing has transmitted to me a copy of the statement which he transmitted to Mr. Wright by letter dated November 17, 1947. Mr. Serviss and I have carefully checked the statement in relation to the obtainable information and believe the statement to be a correct and accurate statement. Nevertheless, I object to the introduction of any and all evidence pertaining to the negotiation which failed, on the grounds which I stated upon the Record last Friday in New York. Further, I shall move to have stricken from the Record certain testimony introduced in the early phase of the case pertaining to the same general subject matter.

"The Eagle-Picher Company is operated by its present management and there can be no proper issue in the case which does not pertain to the propriety of present conduct. The proffered evidence should not be received be-
4197 cause it is not pertinent.

"Moreover, the evidence should not be received because it is incompetent. Mr. Hertenstein, who is now dead, was acting primarily on his own behalf as a large stockholder in the Eagle-Picher Lead Company, and his motives back there in 1931 are beyond recall. Certainly the Trial Examiner will take judicial notice of the fact that 1931 was a critical and unusual time in which wealthy men were daily leaping from windows, some literally, some figuratively. Some thought about such things and lost their nerve or changed their minds. It is hard enough to draw proper inferences from events which actually happened, much less from events which did not happen. No useful purpose will be served at this time by attempting to hold a speculative post mortem over an abortive transaction long since consigned to oblivion.

"'Very truly yours,
/s/ Edmund P. Wood.''

I now want to settle the matter of Commission's Exhibits 527 and 528. I have been very much interested in the argument; during the luncheon hour I have gone back and reviewed this matter and reviewed the evidence of Mr. Chatfield.

I am of the opinion that it has been sufficiently connected to receive in evidence and I shall, therefore, receive the exhibits for whatever value they may have.

Off the record now.

4198 (Discussion off the record.)

Trial Examiner Norwood: Commission's Exhibits 527 and 528 are received in evidence.

(The documents referred to, heretofore marked COMMISSION'S EXHIBITS 527 and 528 for identification, were received in evidence.)

Mr. Wright: If your Honor please, we have reached a point now here where, except for one minor point, I do not believe there is anything pending for the record. That point is one which I raised at the time when I entered into a stipulation with Mr. Welch in New York as to what the witness Coolidge would testify if he were called to the stand.

At that time I said there was one point in his testimony which I had some reason to question, and that I wanted an opportunity to rebut an inference that might arise, namely, the statement that if he were called to testify, he would say that all the white lead in oil bought by Sherwin-Williams on the Pacific Coast was purchased from Premier and Fuller except for isolated shipments in carloads.

Mr. Welch and Mr. McDowell have been trying to work out something on this matter which would show exactly what the situation was with reference to the division of purchases by Sherwin-Williams and shipments from their own Chicago plant.

If it cannot be worked out, I want to reserve the right to recall Mr. Coolidge for the limited purpose and only

4199 for the purpose of cross-examining on the basis of that statement, and I am only going to that phase of the matter only.

I understand Mr. Ewing and Mr. Welch are agreeable —off the record.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Mr. Wright: On the record. Therefore, if it is agreeable to your Honor, we can close the taking of testimony today on that one condition. That will make this the conclusion of the taking of testimony, and any further proceeding on that minor point will involve only counsel of Sherwin-Williams, no other counsel except Sherwin-Williams' counsel, and there will be no evidence or testimony admissible except for that limited purpose, and while I hope it may be possible to settle it by an agreed-to statement on that situation by counsel of Sherwin-Williams, it may be necessary for that one witness to appear and testify.

Trial Examiner Norwood: Is that agreeable?

Mr. Ewing. That is correct.

Mr. Wright: And now, subject to that one condition, it appears that we could close the record at this point and take up the matter of further proceeding.

Trial Examiner Norwood: Yes.

Mr. Wright: I might add that, on that point, the matter involving Mr. Coolidge will be concluded one way or
4200 another within the next week or ten days.

Trial Examiner Norwood: Then, on the basis of the statement by counsel, I will now formally close the taking of testimony. If it is necessary, on this one point discussed by counsel, to take testimony on that point, as to that it will be a reopening, which I have a right to make in the meantime; but the taking of testimony is now formally concluded.

Counsel will be allowed until Monday, December 1, 1947, in which to file any arguments, briefs or requests for findings which they may submit to me.

These should be filed with the Secretary and the Trial Examiner will be furnished copies promptly; but if counsel so desire, they may submit whatever informative material by way of briefs or requests for findings—I will call them proposals—they may submit these proposals in part only, if they wish, directing attention to those points as they consider controverted issues, and may submit fuller and more complete proposals for findings and conclusions before the Commission prior to the consideration of their case on the final hearing.

Mr. Ewing: While counsel for the respondent fully appreciate your position in the matter of filing proposed findings and conclusions and your interest in making the suggestions that you have made with respect thereto, we feel that we must take an exception to the ruling re-
4201 quiring the filing by December 1 because of the time situation, and we would like permission to ask the Commission for an extension.

Trial Examiner Norwood: Yes.

Mr. Ewing: And I repeat, we appreciate your position on that, your Honor.

Trial Examiner Norwood: Off the record now.

(Discussion off the record.)

Mr. Wright: On the record. We have no objection to that at all.

Trial Examiner Norwood: Counsel may take the matter up and call me, and whatever date the Commission orders will be the date they will observe in filing their proposals.

Mr. Wright: It is my understanding all counsel will attempt to compose any differences they might have on corrections to be made in the record, and that that will be undertaken just as soon as it is physically possible and at a later date, within a short period of time, any differences that cannot be composed on proper corrections in the record will be submitted to you.

Trial Examiner Norwood: I think you will find that the Rules provide with respect to corrections of the record that those proposed corrections shall be listed in triplicate citing the page and line of each correction and indicating the corrections which they think should be made, and that opposing counsel shall get a copy and one copy is
4202 sent to the Trial Examiner, and they inform each other then as to any objections they may have, and also inform the Trial Examiner.

Mr. Wright: My statement was made on the basis of discussion I have had with counsel in the hope we could eliminate the submission of corrections by six different sets of counsel in the matter.

Trial Examiner Norwood: Yes.

Mr. Wright: And with the hope, if possible, they might agree in advance on corrections so there will only be one list; and any that are controverted or upon which they could not agree will be submitted in accordance with the Rule.

Trial Examiner Norwood: Is that agreeable?

Mr. Ewing: Yes.

Mr. Welch: Off the record.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: It is the rule of the Commission that no corrections be entered physically on the record and that no corrections be allowed except those which involve a change of substance; but I see no harm in approving the entire list of corrections and incorporating them into the record.

After your proposals are in we could set a day for final hearing at which these corrections will be approved and then counsel may argue the case.

4203 One reason that I suggested you put in abbreviated proposals to me and enlarge on them later before the Commission is because I think you will be able to work that out much better after you see the Trial Examiner's report. So, whatever the counsel desire to do about that or whatever the Commission may authorize, I will inform you later.

Off the record.

(Discussion off the record.)

Mr. Wright: On the record. Pursuant to our discussion, your Honor, I make the motion that it be ordered by you that on the day one week following the last day for filing proposed findings and conclusions that we assemble here for the purpose of hearing argument by counsel on both sides as to their contentions.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record. Is that agreeable to counsel?

Mr. Ewing: That is agreeable.

Trial Examiner Norwood: It is understood that corrections in the record be submitted by counsel and settled at the last hearing or prior thereto.

The hearing is adjourned to reconvene as stated in the motion. We will reconvene at ten a.m. on that date in Room 332, Federal Trade Commission Building, Washington, D. C.

4204 (Whereupon, at 2:40 o'clock p.m., November 20, 1947, hearing in the above-entitled matter was adjourned.)

4205 Room 332
Federal Trade Commission Building
Washington, D. C.
Wednesday, January 7, 1948.

Met, pursuant to adjournment and agreement, at 10 a.m.

Before:

John W. Norwood, Trial Examiner.

Appearances:

Joseph S. Wright, Esq., appearing for the Federal Trade Commission.

James D. Ewing, Esq., and E. Z. DuBose, Esq., appearing for the National Lead Company.

J. T. Welch, Esq., appearing for The Sherwin-Williams Company.

Roger Hinds, appearing for The Glidden Company.

Edmund P. Wood and

Richard Serviss, appearing for Eagle-Picher Company.

H. E. Gardiner, Esq., appearing for International Smelting Company and Anaconda Copper Mining Company.

4206 PROCEEDINGS.

Trial Examiner Norwood: The hearing will come to order. Pursuant to adjournment on November 20, 1947, and agreement of counsel, the hearing in Docket 5253 is now reconvened, for the purposes as heretofore stated and agreed on, in Room 332, Offices of the Federal Trade Commission, Washington, D. C., at 10 o'clock a.m. on the 7th day of January 1948. The following counsel appear:

Appearing for the Federal Trade Commission: Joseph S. Wright.

Appearing for the respondents: James D. Ewing; E. Z. DuBose; J. T. Welch; Roger Hinds; Edmund P. Wood; Richard Serviss and H. E. Gardiner.

Off the record.

(Discussion off the record.)

Trial Examiner Norwood: Proceed, Mr. Wright.

Mr. Wright: Your Honor, there was one matter relating to the respondent Sherwin-Williams Company pending from the last hearing. In the interim, counsel for Sherwin-Williams and myself have agreed upon a stipulation of facts which has also been submitted to the other counsel relating to the testimony of Witness Coolidge and to certain designations in Commission's Exhibits 791 and 794 regarding Sherwin-Williams freight rates and invoice transactions, and I would like to have this stipu-
4207 lation read into the record. Is that satisfactory to you, Mr. Welch?

Mr. Welch: That is satisfactory to Sherwin-Williams.

Mr. Wright: The stipulation is as follows:

"It is stipulated and agreed by and between counsel for respondent The Sherwin-Williams Company and counsel supporting the complaint that the stipulation entered into between counsel and appearing in the transcript at pages 4069 and 4070 may be and the same is hereby amended by substituting for the second full paragraph thereof appearing at lines 11 through 18 inclusive of page 4070 of the transcript the following, which would be the testimony of the witness S. B. Coolidge if he were further recalled as a witness in this matter, and that same may be considered to the same extent and effect as if the said S. B. Coolidge had so testified:

"In 1941 Sherwin-Williams sold 637-600 pounds (318 tons) of white lead-in-oil on the Pacific Coast. The records as to the sources from which this white lead was obtained are not now available. Some was purchased from W. P. Fuller Company, some was purchased from Premier Paint & Color Works, both of which concerns have white lead plants located on the Pacific Coast, and a substantial portion was also shipped from Sherwin-Williams' plant in Chicago in mixed carload lots with paint products. Since 1941 the percentage purchased on the Pacific Coast has substantially increased and the portion shipped from
4208 Chicago has decreased correspondingly.

"It is further stipulated and agreed by and between counsel that the designation 'Richmond, Indiana' appearing in Commission's Exhibit 791 should be 'Richmond, Virginia'; and that the freight rates appearing in Commission's Exhibit 794 Z-9 to Z-12 inclusive are rail freight rates."

Trial Examiner Norwood: You may proceed.

Mr. Wright: Your Honor, I have not had an opportunity to go into the proposed findings and conclusions—

Trial Examiner Norwood: Just one minute, please. Are there any corrections to the record to be proposed here?

Mr. Ewing: There are corrections for the record, but in view of the necessity of working in connection with the preparation of the findings, I am frank to say we have not completed ours, and I think Mr. Wright is in the same position.

Mr. Wright: I am in the same position. Sherwin-Williams through counsel has submitted a list to me but I have not had opportunity to go into them.

Mr. Ewing: I don't think there will be anything substantial.

Mr. Wright: There are a number of, for instance, erroneous descriptions of the exhibits in the record which might be important, though most of them are apparent from the context of the record itself. May we go off the record on this discussion?

4209 Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: Proceed now on the record.

Mr. Wright: Your Honor, I must begin by stating that I simply have not had an opportunity to examine in detail all of the proposed findings and conclusions which have been filed by the respondents and the citations thereto. So, I am in the position of stating that I am in disagreement with so many of those findings and conclusions which have been filed which are contrary or inconsistent to those which are contained in the proposed findings and conclusions which I submitted.

Trial Examiner Norwood: I will state now for the record that all counsel will be given the opportunity to submit to me any further proposals or any written replies to the other proposals or citations. The only requirement is that the other side shall be furnished with a copy, and that privilege to all counsel will be extended to January 25. Those proposals or documents may be mailed to me with a statement that they are being furnished to the other counsel as well. You may go ahead.

Mr. Wright: I would like to state in rather general terms the series of contentions that I have here on the basis of the record. First, Count 1: It is my contention

that the lead pigment industry in its origin was one made up of a large number of small producers located all
4210 over the entire face of the country; that beginning
with the organization of the National Lead Company in 1891, which consolidated into one ownership a large number of the previously independent producers and sellers of lead pigments, and continuing on down through with the subsequent acquisitions by the National Lead Company, that through these acquisitions and consolidations the physical organization and make-up of the industry was completely and radically altered, so that finally when the period 1933 was reached, there were relatively a very few remaining producers, and of these producers National was by far the largest and in a dominant position. Up to this point, 1933, however, there were at least some vestiges of the localized marketing methods and pricing practices remaining in the industry from the period in which it was composed of a great many small producers.

In the white lead-in-oil and cake products business there obtained up to 1933 a system of differential and free delivery points which for the purposes of respondents' subsequent activities presented great difficulty in the meeting and matching of prices. As is shown in the list of differential points appearing in Commission's Exhibit 659-C, there were literally hundreds of different towns and cities which were either free delivery or equalization points.

As to the equalization points, in order to quote a delivered price it was necessary for the respondent to make a freight calculation. May I amend that? When selling
4211 at a locality which was not included in this list of
points it was necessary for the respondent in order to quote a delivered price to make a freight rate calculation and to compare the shipping rate to the location of the customer with the freight rate to the equalization point and in the event the former were higher than the latter to add the difference to the delivered price quotation.

In many other respects the industry was characterized by deviation and variations in pricing practices. These variations in practices are brought out clearly in the allusions to them in the minutes of the various divisions of the lead pigment division.

Now, the recollection of the witnesses who were called and questioned regarding practices obtaining prior to 1933 was very vague, and it is only by inference that we can fill in the picture of what those practices were.

Following the passage of the National Industrial Recovery Act and in the summer of 1933, the respondents met together for the ostensible purpose of drafting a supplementary Code of Fair Competition for the lead pigment industry. I believe that every draft of a Code produced at these meetings appears in the record as an exhibit. So, it is possible to determine exactly the matter the respondents were placing in the drafts of their proposed Code of Fair Competition as the result of these lead pigment division meetings.

4212 It is my contention that at these meetings the respondents went far beyond their ostensible aim and purpose of drafting a supplementary code of fair competition, and undertook by agreement and combination completely, to reorganize the prices and pricing practices in the lead pigment industry. In two of the principal items of the conspiracy, the so-called agency plan and the zone system, it is perfectly plain and apparent that it was never the intention of any of the respondents that these matters should be even referred to in any draft of the Code.

Now, as to what was done by the respondents at these meetings as the result of these meetings, the record is clear. The respondents discussed all of their various diversities of practice, and they had a meeting of the minds as the result of these meetings, and they put into practice and operation and into effect the pricing practices which they had agreed were desirable at the meetings.

There has been raised a principal issue by the respondents, that their activity during the period of the National Industrial Recovery Act in 1933 under the Schechter decision in 1935 are not subject to the Federal Trade Commission Act and that they cannot be held accountable for their actions during this period.

Well, now, let us examine this matter of any claims for exemption under the National Industrial Recovery
4213 Act. Section V of the N.I.R.A. contains the following provision:

"While this Title is in effect (or in the case of a license, while Section 4 (a) is in effect) and for sixty days thereafter, any code, agreement, or license approved, prescribed, or issued and in effect under this Title, and any action complying with the provisions thereof during such period, shall be exempt from the provisions of the antitrust laws of the United States."

The leading decision on the matter of exemption for cooperative activity during the Code period is the decision of the Supreme Court in *U. S.* v. *Socony-Vacuum Oil Company, et al.*, 310 U. S. 150. Other cases in which this question has been considered by the courts are *Dietzen Company, et al.*, v. *F.T.C.*, 142 Fed. (2d) 321; and, then, there was the so-called Cement case reported at 157 Fed. (2d).

Trial Examiner Norwood: Which Cement case is that, the last one?

Mr. Wright: The *Cement Institute* v. *Federal Trade Commission*.

Trial Examiner Norwood: Yes.

Mr. Wright: In the Dietzgen case the Court quotes:

"It may be argued that the N.R.A., being unconstitutional, never lefted the restrictions found in either antimonopoly act. In other words, the N.R.A. was ineffective for all purposes. We are convinced that notwith-
4214 standing this fact, the Government was estopped to
prosecute citizens who complied with N.R.A. codes, for violations of either the Sherman Antitrust or the F.T.C. Acts, because the N.R.A. was presumably valid until by judicial pronouncement it was declared to be invalid, and in this case invalidity was not determined until its unconstitutionality was decreed by the Supreme Court."

While in the Socony-Vacuum case the Court had held that there was one way and one way only that exemption from the antitrust laws could be secured for actions during N.R.A. and that was in strict accord with the exemption provisions of the statute, the Seventh Circuit sits up in the statement I have just read a form of constructive estoppal for actions done by the respondents pursuant to or in compliance with a code of fair competition.

All of the trade practice provisions of the Code of Fair Competition for the lead industry are contained in Article VII of that Code, which appears in the record as Commission's Exhibit 809. Section 1 of Article VII prohibits six different types of practices which are, with two possible exceptions, well recognized unfair methods of competition against which the Federal Trade Commission has proceeded in many instances: misbranding, misrepresentation, commercial bribery, inducing breach of contract, and making false and derogatory statements regarding a competitor. The two possible exceptions are the provisions of Article VII, paragraphs (d) and (f), relating to guaran-

tees of the life of service of lead pigments, and cer-
4215 tain forms of loss-leader selling.

Section 3 relates to the filing of monthly reports on production, inventory and shipments.

Now, there is nothing in either section 1 or section 2 which remotely affects the situation involved in this proceeding as far as I can ascertain. Any exemption which the respondents might claim under N.R.A. must be found in section 2 of Article VII, which reads as follows:

"Each member of the industry engaged in the manufacture and sale of lead pigments shall file with the secretary within ten days after the effective date of this Code, a list of the prices at which his products will be sold and a memorandum of any of his conditions of sale at variance with those set forth in schedule A attached and which is made a part hereof. Any change in price or conditions of sale shall be reported to the secretary in such manner as to reach his office within 24 hours after the effective date of such change. Any member making a sale or quotation, which does not conform to the basis he then has on file, shall notify the secretary in detail by letter mailed within 24 hours. The information supplied the secretary shall be reissued immediately to the reporting members."

It will be noted particularly that the code provision in section 2 does not require adherence to the terms and conditions of sale set forth in the three articles of sched-
4216 ule A, and recognizes the right of any producer to
vary these terms and conditions and depart from them to any extent he sees fit, or indeed wholly to disregard them, provided only that he advises the Code Authority to the effect. Thus, the only requirement of section 2 is the filing of prices and a listing of variations from the terms and conditions of sale.

It is perfectly plain from a reading of the minutes of the meetings of the Lead Pigment Division—both the Dry Products Committee and the Oxides Committee—that the respondents were not seeking in those meetings to outline standards of quoting, but they were in fact discussing the advisability of adopting for use and employment by themselves of the methods and terms and conditions of sale which were discussed at those meetings.

Nowhere in the Code, even by the broadest stretch of inference, is there any authority for agreement by the respondents to adopt the various zones and the differentials applicable thereto; to adopt agency contracts; to adopt uniform cash and quantity discounts and container differentials; or to adopt a uniform method of quoting the differentials over pig lead.

Most of these things had no mention in any draft of the Code and those of them that were mentioned were not mandatory on the respondents under the Code. Hence, adoption by the respondents of any of these matters which were discussed and agreed upon at the meetings can-
4217 not be characterized as "an action complying with the provisions thereof"—

Trial-Examiner Norwood: Well, Mr. Wright, are you contending that they were not privileged to discuss every possible subject in a meeting that might be suggested to determine what they were to recommend go into the Code?

Mr. Wright: Well, sir, my point there is that there are appearing in the record drafts of the supplementary code for the lead pigment industry, from the first draft to the final approved Code, which is Commission's Exhibit 809; and that in none of these drafts was there any requirement of adoption of these matters, so that under the literal terms of Section 5, there can be no exemption for agreements reached because they were not agreements in compliance with any provision of the Code.

Now, as to this constructive estoppal that the Court brings up in the Dietzgen case: I am assuming now that the purpose of this constructive estoppal is, as the Court went into more detail about it in its decision in the Cement case, to prevent businessmen from being misled by the Government into coming in and fixing prices on the erroneous assumption that they had an exemption from the antitrust laws, and then have the Government turn around and prosecute them for a violation.

The record in this case is perfectly plain that these respondents were operating under no such illusion that they were invited by the Government to fix the prices.
4218 That is perfectly plain from the exhibits in the record. As a matter of fact, following one of the Lead Pigment Division meetings of the Dry Products Committee on October 27, where the minutes show that the question was discussed of the possibility of adopting the provisions of the supplementary code for the Pigment Division immediately rather than waiting for the approval of the President, the secretary was directed to procure a legal

opinion to ascertain whether this would be in violation of the antitrust laws. There is the first indication that the respondents were aware that they had no blanket exemption under the N.R.A.

Commission's Exhibit 522 is a letter from Mr. Wormser, secretary of the Association. Having carried out his direction in the minutes of October 27, he wrote Mr. Carter, the president of National and the chairman of the Dry Products Committee, as follows:

"I called on Mr. Locke this afternoon to obtain his opinion with respect to the legality of immediately installing a uniform basis of sale for the lead oxides and dry products by agreement among the producers. Mr. Locke read the supplementary code provisions, article II, and also the suggested outlines of the uniform basis for sale. Although he noted that stipulations as to price had been omitted from the outlines"—

May I interrupt my quotation at that point to refer
4219 back to the previous minute, where it was agreed as
stated in the minute that out of deference to the antitrust statute no reference of price would be made in the Code. To continue the quotation:

"He felt that it might be unsafe to have an agreement prior to the approval of our Code as factors other than price in the uniform sales contracts might possibly be picked up by the authorities as having a bearing on price and hence being in restraint of trade. He suggested that the best practical solution for the moment seemed to be the adoption of the uniform basis of sale by one or more of the interested members, which could be followed voluntarily by the others, without agreement on the subject but merely because it was individually to their best interests to do so. I wired you the substance of Mr. Locke's views for no doubt you will wish to discuss the subject further with the other members who now happen to be in Chicago."

Now, there are other exhibits in the record in the form of letters from Mr. Carter to other producers confirming the subject of this correspondence and indicating that it was this procedure that the respondents had in mind.

Getting back to the Code now, it was the testimony of Mr. Wormser, the secretary of the association when he was called on behalf of the respondents, that section 2 of Article
VII of the code, of which Schedule A is a part, was
4220 never effective, and that the respondents had secured

exemptions from this provision of the Code during the whole life of the N.R.A.

Thus, while there were limited Code provisions affecting the marketing of lead pigment, they related only to a basis for filing a price which was never done, as far as the record shows; and the Code provisions, limited as they were, were never made effective. Thus, no action of the respondents during this period could have been in compliance with the Code pursuant to section 5.

All through the minutes of the meetings and the correspondence between the parties, we see an awareness of their duties and responsibilities under the antitrust act. We see them discussing every phase of the marketing of these various lead pigments. As to some of the phases which they discussed the reasons for the suggested changes were made plain.

Mr. Carter of the National Lead Company was very frank in his letter to Mr. Richter, the manager of duPont, when he was discussing a meeting of the white lead-in-oil committee early in August and early in September, that the agreement on the adoption of the agency plan was for the purpose of controlling the price of white lead-in-oil in the hands of the dealers and distributors.

The purpose of the respondents as to agency appears plain also from the minutes of the meeting of August 9 of the white lead-in-oil committee, where it was stated
4221 that adoption of the agency plan would take care of such matters as guarantee of price, spring datings, deviations from terms, and the like. In other words, it was the purpose by the adoption of an agency plan to rectify and control all the previous troublesome deviations and variations which had obtained in the white lead-in-oil business except the matter of zone which, of course, could not be taken care of in the agency plan.

Now, how can it be stated that following the frank discussion which appears in the minutes of the white lead-in-oil committee on August 9 and subsequently, and the statements which appeared in Mr. Maston's letter and Mr. Carter's letter of the discussions of the advisability of putting this agency plan in effect and showing an interchange of information between the respondents as to what they were doing in this matter, followed by a simultaneous announcement on the 15th of November by National and Eagle, the principal producers, putting the thing into effect in a substantially identical form and manner—can it be said that that is independent action?

The same is true of the zone system. Here was a method which admittedly was a very troublesome and cumbersome method of marketing. As Mr. Maston said, you could never be sure as to what points were equalization points, and there was other difficulty that was a matter of common knowledge. Following the frank discussion of the benefits which would flow from common use of this zone
4222 system, overnight the zone system appears.

It is uncontroverted that it went into effect sometime immediately following these discussions by the respondents. Is it reasonable to suppose that there was no meeting of the minds of the respondents in their discussions as to these practices? It is my contention that it is more reasonable to suppose that the respondents in that and in other matters followed the advice which Mr. Wormser got from counsel and which he relayed to Mr. Carter in Commission's Exhibit 522, that there was to be no agreement but that following the discussion the respondents agreed that one company would announce the program and the others would follow. It is beyond argument that that constitutes an agreement under the cases.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: Proceed.

Mr. Wright: While the institution of the agency plan in white lead-in-oil and the various zone plans affecting all of the pigments are two of the outstanding matters on which agreement was reached at the time, and two which are plainly beyond the Code in any way even by inference, since they were not mentioned in any draft of the Code, there are still other matters on which the respondents reached an agreement.

It is significant of the radical changes in marketing
4223 practices which were adopted for dry products, the
statements which appear in the letters of Mr. Harold Rowe to the branch managers of National under dates of May 11 and June 9, 1934, respondent's exhibits Nos. 159-A and subnumbers, wherein—

Trial Examiner Norwood: Now, those terms and conditions and so forth and the matter of pricing in relation to the lead market, weren't they covered by the Code?

Mr. Wright: As to that, your Honor, there appears in

Schedule A which is incorporated by reference into section 2 of Article VII—

Trial Examiner Norwood: Your proposal page 22?

Mr. Wright: Yes, sir. There are three articles in Schedule A. The first article relates to the conditions for sale of lead oxide in lots of less than 20 tons. Now, under "Price" in article 1 of Schedule A appears the provision: "Seller's card or quoted price in effect on date order is received with allowance as follows:

"1. Not more than ½-cent per pound for minimum shipment of 5 tons for one buyer at one time to one destination. * * *

"b. Emergency shipments of smaller quantities may be made at the 5 ton prices only to a customer for whom the seller has a 5 ton order on hand for immediate shipment or 5 tons en route to the same destination."

Also: "No protection against decline in seller's
4224 price may be given."

And then, there follows the customer differential—or rather, the differentials between grades of red lead.

A similar provision appears in article 2 on the carload oxide sales, except it sets out the price shall be determined by adding a differential to the price of common lead in New York, the lead price applying to each order to be specified by the buyer as (1) the A.S.&R. close of market quotation on the day the order is received, or (2) the A.S.&R. quotation at the close of the market on a future date definitely agreed upon by buyer and seller when order is accepted, or (3) an average quotation which could be secured either from the Engineering and Mining Journal or the American Metal Market.

Now, the base price in those two provisions is not touched upon in the Code but every addition to the base price is touched upon. Quantity discounts is specified; exactly what the price quotations that must be used are is specified; and how it must be used is specified.

If you will recall, previous to the adoption of the Code the minutes of the Lead Pigment Division show that out of deference to the statute price will be omitted from the basis of sale. However, now, on May 11, 1934, which is approximately a month before this Code is approved, Harold Rowe, who was the principal representative of the National Lead Company at these discussions and a principal official, wrote to all these branch managers and he sent them

4225 a copy of this Schedule A, which apparently had been approved but not put into effect, and along with it he sent an interpretation of it to tell them what it meant, because some parts of it are necessarily obscure because the essential information is omitted.

Now, you will notice that the portion I read in article 1 of Schedule A on the less than carload quantities said, under "Price," that the price was agreed to be the seller's quoted price in effect; that no protection in decline against the seller's price may be given.

In the interpretation of that particular provision which appears in the attachments to Mr. Rowe's letter of May 11, the following is stated:

"All sellers have agreed to discontinue the old 90 day card price contracts. Firm orders will be accepted for shipment up to 30 days."

And, then, going on further under "Price":

"You will note that no protection against decline may be given. This is a point on which there was a great deal of discussion and it was finally decided to make a definite rule which is intended to mean that the price to apply to any order is that 'in effect on the date the order is received.'"

Now, doesn't that sound—

Trial Examiner Norwood: Pardon me. Those matters were incorporated in the Code, were they not?

4226 Mr. Wright: No, sir, the matters which the—

Trial Examiner Norwood: He was interrupting, wasn't he, the Code?

Mr. Wright: He is interpreting a provision of the Code which is incomplete in and of itself; but, as pointed out to you, this provision of the Code was never made effective. Furthermore, this provision of the Code simply set up a standard of quoting so that a producer who varied from it would only report his variations from the Code. The Code, had it become effective, was not mandatory on any respondent to adopt any of these provisions, but they simply report any variations from it.

Trial Examiner Norwood: As I understand it, part of the Code was agreed upon and thereafter it was ineffective, and in the meantime one of the members put it out on his own motion. Is that right?

Mr. Wright: We are referring now to a document of National?

Trial Examiner Norwood: Yes.

Mr. Wright: But, it is my contention, and I think the record is plain, that what National did all the respondents did.

Trial Examiner Norwood: I just wanted to fit this into the picture. He sent that out prior to adoption, sent out his own interpretation around with it, to his own
4227 people, is that right?

Mr. DuBose: To the branch managers of National Lead Company.

Trial Examiner Norwood: Yes.

Mr. Wright: And I am pointing this out, your Honor, to show what is meant by some of these provisions in article 1, and also to show that these respondents were agreeing to put these things into practice, not agreeing upon a standard of pricing quotations for which the Code provides.

There is a statement that all sellers agreed to discontinue the old 90 day card price contracts; and there is a further statement that "this is a point on which there was a great deal of discussion and then it was finally decided to make a definite rule which is intended to mean that the price to apply to any order is that" and it quotes—" 'in effect on the date the order is received.' "

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: We will take a five-minutes' recess.

(A recess was taken.)

Trial Examiner Norwood: Resume.

Mr. Wright: Now, to continue with the so-called interpretation of Schedule A by Mr. Harold Rowe on May 11, 1934, in both of the interpretations, that of article 1
4228 and of article 2, there is included a description of the zones and territories of differential.

Trial Examiner Norwood: What exhibit is that?

Mr. Wright: Respondent's Exhibit 159-A to -J. I am speaking now specifically about -D, -E of 159.

Nowhere in Schedule A does there appear anything about zones nor does it appear in any other part of the Code. But, interpreting Schedule A on the less than carload red lead and litharge, Mr. Rowe advises as follows:

"In the following States the card prices will be ¼-cent a pound higher than those shown on the card enclosed," and then he lists Southern and Western States, as substantially alleged in the complaint in that regard, with the remark in parentheses that the schedule for states served by Pacific Coast were not yet determined.

Later on, June 9, when he sent his supplemental instructions to the branch managers, he states that since that date, referring to May 11, the zone differentials for oxides in the territory served by the Pacific Coast have been determined and a change has been made in New Mexico, Colorado, Wyoming, Montana, applying to less than carload lots.

Then he goes on to state that on dry white lead there has been also a change from the original 4 cents added to the par price in those four states.

The same is true of the 20 ton lot interpretation.
4229 There the various differentials in certain states as alleged in the complaint are set forth in interpreting that schedule.

Trial Examiner Norwood: Does the schedule say the differentials shall be agreed upon between buyer and seller?

Mr. Wright: No, sir, the final-draft provisions of schedule A on the less than carload oxides and on dry white lead specified prices as being seller's card or quoted price on the carload and the differential was on that.

Mr. DuBose: As agreed upon by buyer and seller.

Mr. Wright: I will stand corrected. In the carload red lead and litharge it is agreed upon by buyer and seller at differential figures.

You will recall that they said, "agreed upon" but was placed in "out of deference to the statute," but in the instructions under date of May 11 Mr. Rowe stated as to these differentials that the differentials that will apply to 20 ton lots will be as follows in par territory: $1.50 for litharge and special negative battery oxide; $1.75 for special positive battery oxide.

You will recall that that is a litharge containing 25 per cent red lead; up to and including 95 per cent it is $2.50 for red lead. In other words, in interpreting article 2 of Schedule A, Mr. Rowe sets forth those differentials.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

4230 Trial Examiner Norwood: On the record. That differential is over common lead? It is over common pig?

Mr. Wright: Over common pig lead, yes, sir.

You will recall, your Honor, the testimony by the dry products representatives of Eagle-Picher and National as to the relationship which has existed between the New York price of pig lead and both the card price on less than 5 ton lot and the differential price on carload lot, where there is an automatic following of the card price; where the pig lead market in New York moved by as much as 25 cents the card price is automatically changed up or down in the same amount, and the carload quotations move up or down correspondingly in multiples of 5 cents cwt.

Trial Examiner Norwood: Read that last statement, please.

(Statement referred to was read by the reporter.)

Mr. Wright: Except as to the position of Sherwin-Williams there is no issue in the record as to the use of the zone system from the time of the discussion of these matters in the Lead Pigment Division and the present date.

There is no question either that it has been general practice of the principal producers of red lead and litharge to follow the terms and conditions of sale as were set forth in Schedule A from that time to the present.

Now, Sherwin-Williams states that it has not em-
4231 ployed the zone system, and relies on the testimony
of the witnesses that it was the company policy to sell on a system of warehouse differential points which resembles in many respects the system which obtained prior to the Code period.

It is my contention that a reading of the record will disclose that what is stated as the company's policy is in fact an exception to it and that the position as stated is analogous to describing a black cat with a white tip on his tail as a white cat except for most of his tail and all of the rest of his body.

It is the Sherwin-Williams Company's general policy to follow a system of warehousing differential points, except where lead pigments are included in what is described as a carload but which is in fact a truckload order of as little as 10,000 pounds; except in sales from its company-owned store; except where there is a considerable volume of business in some town away from one of its so-called shipping points; except where there is competition from the other respondents requiring them to meet the zone system. All of the warehouse and distribution points or shipping points coincide with the zones themselves as employed by Sherwin-Williams.

The following of the zones on red lead and litharge by Sherwin-Williams is set forth on Commission's Exhibit 823 which details the zones in the same fashion as was set forth by the other respondents in their comparable
4232 instructions to branches and announcements to the trade.

Trial Examiner Norwood: Now, is that the first map in your proposals?

Mr. Wright: No, sir. The thing that I am now referring to is the fourth map in the proposal, less than carload red lead and litharge zone map.

Trial Examiner Norwood: And your citation in connection with that is Commission's Exhibit what?—referring to Sherwin-Williams?

Mr. Wright: I am referring to Sherwin-Williams' announcement in that respect in Commission's Exhibit 823-C, -D, -E and -F.

Trial Examiner Norwood: I should like to have references in connection with these four maps.

Mr. Wright: Well, your Honor, in connection with those maps, as stated therein—there are a number of maps in the record, beginning with the earliest one which was submitted by Mr. Maston as chairman of the White Lead-in-Oil Committee and running down to the discussions of the zones and territories as late as 1941 and 1942. From time to time there were some diversities in practice. The maps which appear in my proposed conclusions, the white lead-in-oil cake products zone map is taken from a similar zone map which was offered in evidence by the respondent National as Respondent's Exhibit 147.

The difficulty with the white lead-in-oil zone map
4233 is that there have been from time to time certain minor changes in territory, particularly in cities which were located on or near the borderline of the zones. Substantially, this map is the map which we contend has been used since the time of the Code days, from 1933 to 1934. Glidden has not used a comparable map. Glidden has followed the zone system by describing in detail and literally the territory within each zone — but that is Tweedle-Deeing and Tweedle-Dumming. The use of the map is not the gravamen here, it is the use of the system itself, and however they describe the zone, whether by maps or by geographical areas, it is the same.

Trial Examiner Norwood: The object of my quuestion was to secure these references to each map so that if I should find them correct and wish to use them in my report, I can enter these references to the exhibits and have them photostated right into the face of the map that I use.

Mr. Wright: I wanted to supply your Honor and counsel for the respondents with a list of all citations of various maps and descriptions of territory that appear in the record.

I might say that the only difficulty is as to the white lead-
in-oil map. My contention is that the dry white lead zone
map has been used without change and that the carload
and less than carload red lead and litharge maps
4234 have been used with one change, and I want to state
at this time that the record shows that sometime in
1942—the exact date of which can not be ascertained—

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record.

Mr. Wright: The States of Arkansas and Oklahoma on red lead and litharge, which appear on these maps here as being in the premium zone, were made into the par zone. These maps as they appear in here are an attempt to reflect the situation as it existed from the time the conspiracy was initiated down to 1941 or 1942. I wanted to make that explanation since I do not recall that I covered it particularly in my proposed findings.

But, with that exception on the red lead and litharge maps and with the explanation on the white lead-in-oil map, they are substantially as have been announced.

Now, it is my contention that these practices which were so fully discussed by the respondents at these meetings and which were put in operation immediately following and made effective, have been followed over since in substantial form.

It is not necessary—since I cannot say that they have not been deviated from—it is not necessary to prove this conspiracy so as to show an absolute, 100 per cent, literal compliance. That would be beyond the realm of possibility.

4235 It is my contention that through the zone system
and through the common adoption and common use
of this differential method of quoting over A.S.&R. New
York spot quotations or spot carload quotations and on

average prices on average price contracts, and through the fixed relationship of card price to that same price, that the respondents put into operation in the 1933 to 1934 period a system and a mechanics of price fixing which has been employed by them ever since.

It was not necessary at the expiration of N.R.A. for the respondents here, as with the respondents, for instance, in the Dietzgen case which the Circuit Court discusses in the opinion I have cited before, to make a resolution to continue complying with the practices covered by the Code.

The Code was never effected. The principal parts of the respondents' conspiracy never found their way into the Code and such a resolution would have been surplusage. It has been a system which is self-perpetuating. It is necessary for the respondents only to know one factor as to any product, and they know then exactly what every other respondent is doing. Knowing the price of pig lead as quoted by American Smelting and Refining Company in New York, every respondent knows what the quotation is going to be to any customer in the United States on red lead and litharge; knowing a change in the price quotation in the par zone on white lead-in-oil or dry white lead, each respondent knows exactly what the quotation is going
4236 to be to any customer by any company at any point in the whole United States.

It is a system which has required no cooperative nurturing and fostering in the sense of continual meetings and cooperation over the elements of the system. It has not been necessary. It was put into operation as a self-perpetuating scheme and it has been followed by the respondents ever since that time.

Now, there has been some diversity. Some of the respondents, for instance, have quoted white lead-in-oil at differentials to dealers and distributors below that of the National Lead Company. That was explained by one of the witnesses as being a form of extra compensation to the dealer to enlist his support of a lesser-known brand along with the Dutch Boy brand. In every instance the suggested resale price to consumers and to painters by all of the respondents was identical. That differential as employed on white lead-in-oil never found its way to the consuming public. It took the form of a little bribe to the dealer for handling a lesser-known brand. Eagle-Picher did it with its Hammer brand but it was not necessary to do it with the Eagle brand which was sold at the same price as National.

Trial Examiner Norwood: Well, was it any more than a suggested retail price be maintained on final sales to buyers, and does that reflect this dealer reduction?

4237 Mr. Wright: According to—let me answer that in this way. A great deal of white lead-in-oil sold during this period was sold under consignment contract arrangement, so that the price at which the dealer or agent sold was absolutely fixed and controlled by the respondent. The dealer had no choice. The dealer could not reflect any price difference to the public.

And, the other sales by the respondents, for instance, now, the other sales by the respondents who did not adopt consignment or who used it only for a limited period, were under price cards and announcements and instructions to the dealer to resell the product at the price stated.

Trial Examiner Norwood: Well, were those differentials given to these consignees?

Mr. Wright: Yes, sir, the record shows that. The record shows that the differentials were given to the consignees, and it is a matter of presumption that those agency contracts at least were lived up to and, by the same token, it is a matter of presumption that at least a substantial part of the sales under suggested resale price instructions to the dealers were made in accordance with those price instructions.

There are two other instances of diversities in practice, one of them in the sales particularly by National and Eagle-Picher of red lead and litharge to some very large battery manufacturers, and there are some transac-
4238 tions in the record which show a shrinkage of the
general and normal differential under the price of pig lead.

Trial Examiner Norwood: But, was the shrinkage equal?

Mr. Wright: No. There are some instances in the record where there appear to be genuine competitive prices in the sales to some of the very large battery manufacturers. It is my contention that that is accounted for by what stands uncontroverted in the record, the ability of the very large battery manufacturers to produce their own oxide if the price was not one to suit them.

There is one other point of diversity, and that is in the

Government bid to three federal agencies. Your Honor will recall that in the first meeting—or, earlier, you will recall that in one of the early white lead-in-oil committee meetings, that of August 9, 1933, the respondents took up that matter of bids to government agencies.

The minutes, Commission's Exhibit 501-C, contain the following:

"The question of open quotations on Government and State business was thoroughly discussed. Any plan to eliminate excessively low bids would be helpful to the entire industry."

And, they considered the possibility of apportioning such business; that was discussed. There was a difference of opinion as to methods which might be used, the following being suggested: capacity; last year's government
4239 and state business; average last three years' government and state business; average last ten years' government and state business.

There is nothing further in the minutes on this matter, and there is no further evidence that any such agreement was reached. In their announcements to branches, sales personnel, most of the respondents have outlined exactly the method that should be followed in quoting on government and state business, and that method was strictly in accordance with the system—use of the zone and use of the other various pricing practices which we contend were adopted by agreement.

Trial Examiner Norwood: Were their instructions to their dealers similar with respect to that bidding?

Mr. Wright: There are no instructions to dealers that I recall on bidding on government business, your Honor.

Trial Examiner Norwood: Sherwin-Williams Company issued an instruction about government bidding.

Mr. Wright: I don't recall.

Trial Examiner Norwood: Now, is there anything else in the record like that?

Mr. Wright: Commission's Exhibit 615, I believe it is, is a long document by the National Lead Company dated, I believe, in January 1942.

Mr. DuBose: April 26, 1941.

Mr. Wright: April 26, 1941, and it sets out in detail the methods to be employed in quoting government
4240 agencies and state governments and railroads and others. It is a document which, I understand, was submitted to the branches as an instruction, in type.

There is evidence in the record in the form of bids to the Cities of Cincinnati and Milwaukee showing identical bids which follow out the method and the system employed by the respondents.

Now, assuming that the bids to the Federal agencies were strictly competitive and not the result of any prearrangement and where there is evidence of competition as to those bids, as with these three agencies, still that does not detract from the conspiracy which has been followed out in substantial form in doing business with every other class of customer.

Trial Examiner Norwood: Well, I have some citations here, I think set out in National's proposals showing a table; could you give me the citations of those bids which you say are identical?

Mr. Wright: Yes, sir, Commission's Exhibits 864 and 865.

Mr. DuBose: Those are Milwaukee and—

Mr. Wright: And Cincinnati.

Trial Examiner Norwood: Off the record a minute.

(Discussion off the record.)

Trial Examiner Norwood: Proceed on the record.

Mr. Wright: It is my further contention that the
4241 National Lead Company has assumed a position of
dominance in the industry directly through the practice of acquiring its competitors. While the bulk of such acquisitions were accomplished a great many years ago, there have been several important acquisitions within the period with which we are concerned, and the record shows in uncontroverted form that it was National's intention for a period of years in the early 1930's to acquire control of the respondent Eagle-Picher, the second largest factory in the industry.

The effect of such acquisition by National on the lead pigments industry is obvious. It would leave the National Lead Company in an absolute monopoly position so that there would be no freedom of choice on the part of any other person in the industry.

There was considerable testimony by witnesses representing other respondents as following National, at which time Mr. Sprague, the vice president of Glidden, referred to National's price as the ceiling price in the industry.

Since the means by which National has secured its present position is one of acquisition and abandonment of productive facilities in most instances, I strongly urge a finding to that effect and conclusions in the proposed order against any further acquisitions by National of any of the assets or capital stock of any competitor engaged in the lead-pigment industry either in sale, distribution, or manufacture.

4242 As to discrimination—the system employed by the
respondents is essentially discriminatory. As pointed out in more detail in my proposed findings on pages 33, 34 and 35, the actual sales revenue of the respondents on red lead and litharge is a very narrow one, amounting in the case of litharge in carload quantities to less than two dollars cwt.

Yet, each of them is willing to quote prices and hold himself out to sell at shipping point prices which shrink that net margin by more than 25 per cent. Each of the respondents realizes his largest net sales return from those customers located in his own factory town. For the reciprocal and mutual privilege of being able to sell in the factory and producing areas in which its competitors have a freight advantage, he is willing to maintain a similarly high net sales price in his own freight-advantage territory.

The so-called delivered prices of the respondents are really not prices, they are simply quotations announced in advance of their willingness and intention to sell, conveniently framed in the zone method so that each can be sure to match the similar quotation of the other to any customer located at any point.

It is my contention that price must be considered as the price received at shipping point by the seller and after the deduction of transportation. In a great many instances,
according to the record, that is the actual method of
4243 conducting the transaction, the goods being shipped
freight collect and the buyer taking title at the seller's
shipping point.

In the various drafts of the Code, including the final draft of the Code, the respondents themselves set forth that the delivery is to be made at the seller's shipping point. The so-called zone differential added to the delivered price quotations have the effect or purportedly have the effect of recouping transportation charges but in dealing with distant customers do not reflect the changes and variations in shipping point prices received by the respondents from those customers, as more specifically set forth in the proposed findings and conclusions.

Your Honor will note carefully the testimony of the numerous small-battery manufacturers who were called as witnesses in this proceeding. There is no conflict in the record about the competitive situation which existed in the manufacture and sale of electric storage batteries during the period of the 30's. Witness after witness engaged in the industry testified that it was characterized by extreme price competition. Representatives of the respondents likewise testified from their contact with the battery industry that it is a highly competitive one.

It is composed of more than 200 different manufacturers ranging in size from very large multiple plant producers to small one-man enterprises who produce 50 batteries a day.

4244 A good many of these smaller customers were located in the factory towns of the respondents, in Chicago and in St. Louis. Two of them, I believe, were in Joplin, Missouri. These witnesses testified that companies who were shown in the record to have been sold battery oxide by the respondents located at considerable distances from the producer's plant, they showed that the respondents received a great shrinkage in their net shipping point prices, shipped batteries back into those producing localities where the respondents are located and contributed greatly to the competitive distress of those small manufacturers during the period of the 1930's.

The record shows that the cost of lead pigment used in producing a storage battery amounts to approximately 30 or 33 per cent of the total material cost in such a battery. A normal small battery requires from 10 to 12 ponds of red lead and litharge in the manufacture of the plates in the battery. Thus, a discrimination of a half-cent a pound or 50 cents cwt. against the small manufacturer amounts to 5 cents per battery in his material cost.

These respondents were perfectly willing to ship from St. Louis to Niagara Falls, New York, or to Minneapolis or to other distant points and absorb approximately a half-cent from their carload price in selling to these large battery manufacturers; yet, from a small man to whom a delivery is made in company-owned truck located in
4245 the same city, the highest possible net price is secured.

Now, such a situation as that I have referred to, such discrimination, is inherent in the zone system, which is discrimination for the purpose of and with the effect of enabling the respondents to suppress and eliminate competition between and among themselves; and it is heightened and added to by the gross discrimination apparent in the quantity discounts and the different quantity bases of selling red lead and litharge as between the carload lot and the 5 ton and the less than 5 ton purchasers.

Trial Examiner Norwood: Now, if I understand you, you contend that the differential between the zones hit the small battery man, and you have set out there was a differential of a half-cent for less than 5 tons, or something like that. Now, there were other differentials to be added to that half-cent?

Mr. Wright: Perhaps I am not quite sure what you have in mind. There are really two separate types of discrimination. One is that inherent in the zone system through this method of systematically varying the shipping point prices which operates directly and immediately against the nearby customer and in favor of one more distantly located on a reciprocal basis.

Then, there is also unconnected with the zone system,
the matter of these differentials which were set up by
4246 agreement back in the 1933 and 1934 period, although
I am not contending that the agreement has anything to do with the legality of the less than 5 ton discount, providing in selling to a carload purchaser—in other words, a man who buys a 600 pound barrel of the material is to be sold it at $1.50 differential over the N.S.&R. price in New York; but if a man buys less than that, he buys on the card price.

Now, it is the testimony of witnesses by the respondent that card price is calculated at a difference of $2.50 instead of $1.50 over the price of New York pig lead. Now, those are the two categories, the carload and the less than carload. Now, the less than carload is divided into two categories. Generally speaking, the man that purchases less than 17 600-pound drums will pay one cent per pound, from .8 to 1 cent per pound more, simply because of the quantity he purchases, than the man who buys 65 or more drums; whereas the man who buys from 18 to 64 drums of 600 pounds will pay from .3 to ½-cent per pound more than the 65 or more drum purchaser.

I am contending that each of those is a violation of section 2 as set forth in count 2.

Trial Examiner Norwood: Have you set out any instances that are shown in the record as to these lead battery manufacturers? That is, you contend that selling on the zone price discriminates against these small 4247 manufacturers who were near the source of supply.

Mr. Wright: Yes, sir.

Trial Examiner Norwood: And then you contended that there were certain effects here which amount to practically one cent a pound as against the large manufacturer; have you set out with respect to any particular purchasers what it would all add to by way of a price difference?

Mr. Wright: Yes, sir. That is done to a certain extent at least on page 34 of the suggested findings, although I would like to point out to your Honor that the two things are not necessarily related.

My only point in connecting the two was to show cumulatively what I am maintaining and contend, namely, that the amount of discrimination as to either one is sufficient to injure competition in the storage battery industry in normal times substantially, that the combination of the two—and they can be and are combined since a great many of those small battery manufacturers are located in Chicago, in St. Louis and in other points where the respondents maintain factories, that when you add those two together, the net effect on competition in the battery industry is considerable.

I think the inherent discrimination in the zone method would amount to as much as one-half cent a pound or 5 cents a storage battery, whereas those on the quantity basis amount to as much as one cent a pound or 10 4248 cents on a storage battery; and it was testified to that this matter of from 5 cents to 10 cents in saving of material cost to producers of storage batteries, your Honor will recall, is a very important matter in times of normal competition.

The arbitrary nature of the system is well set out by the situation existing in Dallas, where National operates its own producing plant; in every instance in selling it adds 25 cents per cwt. for delivery to a customer located right in the City of Dallas, and that customer is in competition—being the Vitalit Company—with large manufacturers back in the par zone who are not forced and required to pay that ½-cent per pound zone differential added to the price but as to whom National also shrinks its shipping price by a considerable amount in addition to that.

A similar direct effect on competition, discriminating against a customer located in a producing and factory point of the respondents is well brought out in the testimony of the St. Louis Paint Manufacturers, which your Honor will recall. Some of it is set out in detail on pages 38, 39 and 40 of the suggested findings.

Trial Examiner Norwood: Well, as I recall it now, that evidence, they testified, some of them, that a few cents would not make any difference, and some said 5 cents would make a big difference, and so would 10 cents, and so on.

I just want to know the counsel's contention as to
4249 what the evidence shows as to the amounts of price
difference, as to the price difference against these particular people, whether it amounted to 10 cents or what. I am not sure the record is clear.

Mr. Wright: Well, your Honor, I will say in that respect that there are a large number of invoices of Eagle-Picher Company particularly, showing their sales to customers, manufacturers located in the areas, about which those in St. Louis customers were questioned.

There is evidence in the record showing sales by the National Lead Company to that area and there is evidence showing in practically every case the exact freight rate which was involved.

Now, in every instance the amount of the freight rate from the shipping point is the amount of the discrimination less whatever transportation cost might be shown in the cartage in dealing with the local customer, so that the discrimination follows directly the transportation cost.

Your Honor will note in shipping from St. Louis down to those points in Texas that freight rates in some instances amounted to as much as one dollar per cwt., which would be one cent a pound.

Trial Examiner Norwood: Well, if charged a half-cent more down in Texas, wouldn't that lessen the discrimination by that?

4250 Mr. Wright: Well, it is my contention that if in
that particular instance the local customer were given the benefit of his location in the form of a price which was at or near the price that the respondents were willing to accept from a distant customer, the effect of that would be to give that customer the normal benefit of his location and to remove the discrimination against him by reason of his location.

As I stated earlier, I am not in the position to take up in detail the various suggested findings and conclusions by individual respondents. I appreciate your Honor's offer of more time in which to submit further representations regarding those and I shall undertake to do that as expeditiously as possible.

Trial Examiner Norwood: I think it would be constructive to give us a draft of an order which you think or which you contend should be issued.

Mr. Wright: Your Honor, I will be happy at this time to outline an order, but I fully intended within the next few days to prepare a detailed form of order, draft of order, which I shall be happy to file with you and also make available to other counsel in this matter.

It is my contention that the findings will support the entry of an order to cease and desist which will run against a planned course of action, agreements, conspiracy to use
or maintain or continue the various practices which
4251 are set out in more detail in the proposed findings as
having been agreed upon in the 1933-1934 period and followed by the respondents continuously since that time.

I believe that an order should be entered which will prevent National from securing any interest, directly or indirectly, in the control of the physical assets or properties or capital stock of any concern or enterprise engaged in the sale, manufacture or distribution of lead pigments.

I believe that the record warrants the entry of an order which will require the respondents to cease from systematic price discrimination in the form of shipping point prices as is inherent in the zone system.

I believe also that the record will warrant an order against each of the respondents except as encountered in International which is not engaged in the sale of red lead and litharge against the discriminations inherent in the quantity differential basis of sale of red lead and litharge.

As I say, I am only outlining this at the present time and I should like to submit very shortly a proposed form of order in detailed form and also to submit further representations regarding the findings and conclusions as submitted by the various respondents.

I would like also to have the privilege of urging further citations of evidence in support of the contentions in the
proposed findings and conclusions because I have not
4252 had an opportunity to cite all of the evidence which

appears in the record in support of the various contentions.

At this point I would like to state that there are three errors that I know of now in my statement of proposed findings and conclusions which I should like to correct, if counsel will bear with me.

On page 29 in the next to the last line in the paragraph in the middle of the page, where there is a statement, "including other agencies," running into the next line, the word "government" is to be inserted between "other" and "agencies."

On page 34 in the last line of the first full paragraph after the figure "$.10" insert "per battery."

On page 36 in the paragraph in which the various companies are listed in the center of the page, in the line above the line with the colon, change "arrangements" to "area."

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: We will recess until 2:00.

(Whereupon, at 12:30 p.m., January 7, 1948, a recess was taken to 2 p.m., this date.)

4253 Afternoon Session.

2:20 p.m.

Trial Examiner Norwood: Come to order. Proceed.

Argument by Mr. Gardiner.

Mr. Gardiner: The respondent, the International Smelting and Refining Company, has filed certain proposed findings, conclusions and reasons therefor with your Honor, and has cited in those findings and conclusions portions of the record which it is believed bear out the request that those findings are proper and the conclusions correct.

It does not seem to me that much is to be gained by my repeating the substance of those proposed findings. Your Honor has it, and I do not wish to burden the record at this point with a repetition of the same.

However, I would like to say in substance that the position of the respondent International is that there has been no showing on the part of the Commission, and there is no evidence in the record, of any conspiracy as alleged in the amended complaint, so far as that respondent is concerned.

That would seem to be borne out to a certain extent by the discussion this morning by counsel for the Commission. It was stated on several occasions, and it is contained in the Commission's proposed findings and conclusions, or
rather in counsel for the Commission's proposed
4254 findings and conclusions, that the conspiracy stems
from agreements or conversations and discussions
which took place during the years 1933 and 1934.

A very quick answer to that, so far as the International is concerned, is the fact that the record distinctly shows, without any doubt, that so far as the zone system for the sale of dry white lead was concerned that was not adopted or followed by International until October of 1935, which is a year after the period during which the counsel for the Commission contends that this conspiracy was instituted.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: Go ahead.

Mr. Gardiner: The contention is also that the zone system, so far as lead-in-oil was concerned, stems from the same series of meetings and conferences during 1934 and 1933. There again the record shows, so far as International is concerned, that it did not adopt the zone system so far as the sale of lead-in-oil is concerned until January 1, 1937, a period of three years—at least three years and possibly four years—beyond the time at which the Commission contends or that counsel for the Commission contends this agreement was reached.

Trial Examiner Norwood: That is for white lead-in-oil?

4255 Mr. Gardiner: Yes, your Honor.

Trial Examiner Norwood: Go ahead.

Mr. Gardiner: Now, it seems difficult to—

Trial Examiner Norwood: January?

Mr. Gardiner: January 7, 1937.

I might say at this point, your Honor, that it is my intention, if I have sufficient time, as I have indicated I hope I may have, to point out to your Honor these fallacies of these contentions as far as counsel for the Commission is concerned by citations to the record bearing out my statement that the zone systems were not adopted until those dates.

The position of the respondent International, so far as discrimination is concerned, is that it has sold, during the time in which it was selling the lead pigments which it produced, to the class of customers at the same price and has treated them exactly the same. As to any differential, so far as quantities were concerned, the same differentials were made to the customers of that class.

And, for that reason, it contends that there has been no discrimination so far as the sale of its products are concerned.

The record, of course, shows that International respondent, while engaged in the manufacture and sale of dry
white lead and lead-in-oil from the years 1936 to 1945,
4256 is no longer in that business, has sold its plant where
these materials were produced, and has no intention
of going back into that business—that is, no present intention.

Trial Examiner Norwood: It sold its plant in 1940 something?

Mr. Gardiner: October 1, 1945.

Mr. Ewing: 1946.

Mr. Gardiner: I'm sorry, your Honor, it was October 1, 1946.

The respondent Anaconda has filed its proposed findings and conclusions and reasons in support thereof, and again I see no particular point in going over those except to point out again the position that we have taken all along, that the respondent Anaconda Copper Mining Company has never been in the business of the manufacture or sale of any of the lead pigments covered by this complaint.

Your honor will find in the conclusions in those proposed findings citations to authorities which bear out the generally-acknowledged principle that a parent corporation is not responsible for the acts of its subsidiary merely by the fact that it owns all of the stock and that some of the officers or all of the officers are similar.

Now, I would like to take up a few points in the findings of the Commission which I think are in error, and again
these will be pointed out at a later date if I have the
4257 opportunity to get up a supplemental statement on
that point.

It is my understanding this was an action involving the production and sale of lead pigments. I therefore see very little reason for any proposed finding which reads that

Anaconda is one of the world's largest producers and fabricators of non-ferrous metals, including copper and zinc.

That seems wholly irrelevant. There is no citation to that. I assume it is in the record some place. But as to whether or not the Anaconda respondent produces copper in large quantities does not seem pertinent to this discussion or to the findings of your Honor.

There is a further statement that Anaconda is still engaged in the production of zinc oxide. There is no citation in the record to that point, and there counsel for the Commission may have concluded from the fact that the International Smelting and Refining Company at one time produced zinc oxide that it still does so.

I do not think the record is clear on that point. But, the plant which was sold by International at East Chicago, Indiana on October 1, 1946 was the only property of International where zinc oxide was produced, and that was sold along with the part of the property which produced lead-in-oil and dry white lead. There is no other property of Anaconda which produces zinc oxide.

4258 On page 17 of counsel for the Commission's proposed findings, there is a statement to the effect that "on November 9, 1933, Carter wrote to Paul Sprague of Glidden sending copies to officials of Eagle-Picher, Sherwin-Williams, et cetera, and refers to Commission's Exhibit 523.

Examination of Commission's Exhibit 523 will show that copies were sent to certain named individuals, one of whom was a Mr. F. O. Case. Mr. F. O. Case in 1933, as shown by the record, was an employee of International and was not connected with Anaconda.

Trial Examiner Norwood: Is that a statement in the Commission's proposals?

Mr. Gardiner: Yes, your Honor, on page 17.

Trial Examiner Norwood: Now, where is that statement?

Mr. Gardiner: It is the third paragraph from the top of the page, beginning, "On November 9, 1933 Carter wrote," et cetera.

Trial Examiner Norwood: That should be "International" instead of "Anaconda"?

Mr. Gardiner: Well, the person named there is Mr. Case, and the record shows at the time that he was a sales manager for International.

Trial Examiner Norwood: Very well.

Mr. Gardiner: On the top of page 22 of counsel for the
Commission's proposed findings, it is stated that
4259 National and Eagle-Picher adopted and put into
effect an agency arrangement on November 15, 1933,
following the discussions of the white lead-in-oil committee and the correspondence about it with their competitors.

The paragraph below there reads, "The record indicates that Anaconda adopted the so-called agency arrangement at about the same time and continued thereafter to market approximately 50 per cent of its white lead-in-oil by this means."

I would like to point out, your Honor, that the International's predecessor, Anaconda Lead Products Company, adopted what ~~it has~~ described or what has been described as a consignment arrangement in 1932; that neither the Anaconda Lead Products Company, which preceded International, nor International have ever adopted or sold by an agency arrangement. The record sustains that point amply, and citations will be made to that if the time permits.

Trial Examiner Norwood: All right. Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record.

Mr. Gardiner: So, the position of International is that there is no basis here for a finding of conspiracy or discrimination as far as any of its acts are concerned. That
so far as the respondent Anaconda is concerned, that
4260 it never was in the business. The fact it is the parent
company of International in no way charges it with
the acts of its subsidiary.

In view of that fact we respectfully submit that the complaint should be dismissed so far as those two respondents are concerned.

Argument by Mr. Hinds.

Mr. Hinds: If your Honor please, in behalf of Glidden, a minor correction should be noted on page 6 of our proposed findings, in that in the fifth line of Finding 31 the word "employment" should appear instead of the word "improvement."

Trial Examiner Norwood: Employment?

Mr. Hinds: "Employment" it should be.

Trial Examiner Norwood: Yes.

Mr. Hinds: While we have adopted in so far as applicable the reasons for our findings the same as those suggested by National Lead, we have not, it is true, furnished your Honor with citations to the record or reasons specifically applicable to the additional findings, namely, our Findings No. 2 to 35, which we have submitted in behalf of Glidden.

I shall avail myself of your Honor's kind offer before the 25th to supplement our findings by such reasons and such citations, although I think it is fairly obvious
4261 what our reason is.

We offer only one witness, if you disregard Mr. Burrows whose testimony was principally on quantity differentials in lead oxides, most of which your Honor struck out. Our sole witness was Mr. Sprague, and his testimony is of limited compass, all of which is undisputed.

Our reason for each of our specific proposed findings is that each of them is supported and fairly summarizes the undisputed testimony of Mr. Sprague.

I take it as axiomatic that the materiality of the evidence has been prima facie established by your Honor's admitting it over objection, or without objection. It has been completely undisputed. It can not be rejected as inherently improbable, because I maintain it is not only consistent with probabilities but it is required by inherent probabilities.

So, it seems to me that each of Glidden's proposed findings, if it meets that test—and I think they all do, should almost as a matter of mathematical demonstration be found by your Honor.

Now, Glidden on the conspiracy charge, Count 1, is to a certain extent in a different position from some of the other respondents, particularly with respect to the case in so far as it is based on what was done during the Code or NRA days.

At that time Glidden was not competitive with the 4262 other respondents because, admittedly, it had taken over the Euston white lead products from the Euston Company and the metal refining oxide products from the latter company and was not competitive in price. Its products were not up to the standard nor was the advertising and good will and consumer acceptance up to the standard of other respondents.

The price was correspondingly lower; it wasn't in the same field. So that even if it had entered into an agreement, as to which there is no evidence, as to price, it certainly did not execute any such agreement or did not perform any such agreement, because its prices until considerably after the NRA period were not competitive.

They were very much lower, because it was only after—and it is undisputed—it was only sometime after that period that it was able to get its quality and hence its customer acceptance up to a point where it could compete in price with its competitors, especially National Lead and Eagle-Picher.

Trial Examiner Norwood: You mean by "competing," selling as high as the other companies?

Mr. Hinds: That's right. Its prices were considerably lower. It could not get the prices that the other respondents could, and that is all explained in Mr. Sprague's testimony and summarized, I think fairly, in our proposed findings.

4263 The consignment or so-called agency arrangement was not adopted by Glidden until long after it was adopted by the other respondents, and then only reluctantly, and then only as an optional alternative to its normal method of outright selling, and then only by a form of agreement which differed not only in form but in substance from that of National Lead, and was thereafter abandoned as, in Glidden's case, being unproductive and unprofitable and unsatisfactory.

Trial Examiner Norwood: Glidden did not adopt it until 1939, did it?

Mr. Hinds: It was four years after the others adopted it.

Now, as to conspiracy, the ideal way from the point of of the prosecutor to establish conspiracy would be to have detectives, dictographs, actually hearing the conspirators conspiring, possibly with a motion picture adjunct. That is, of course, not always possible.

I concede that conspiracy may be established by inference from established facts. However, I want to call your Honor's attention to the fact that when you employ the inference method of establishing conspiracy he who has the burden of proof must not only show that the facts are consistent with there having been a conspiracy, but he must exclude any other possible or reasonably probable explanation.

4264 A prosecutor in a criminal case can show that circumstances under which a man met his death were consistent with the fact that he met it at the hands of the defendant. It is not necessary for the defendant even to show that he met it in some other way. He may demand an acquittal by merely showing that the death might well have resulted from someone else's hand.

Now, in our case we go far beyond that. We point out without proof that the facts which are cited as requiring an inference of conspiracy could well have occurred without such causation. That I think would be enough to require a finding against conspiracy—or rather one of no evidence of conspiracy.

But, we have gone far beyond that. We proved by undisputed testimony numerous facts which, any one of which, might have explained these facts which the prosecutor relies on to draw an inference of conspiracy.

The principal fact, I think, that is relied on, as I understand it, by Commission counsel, is the similarity of price, the following by Glidden of pricing, its selling practices, by the other respondents, particularly National Lead.

As to the former it did not occur until sometime after the NRA days. But we must concede—in fact, our own findings proffer the statement—that we did follow the Na-

tional Lead prices approximately and with consid-
4265 erable closeness. Now, can you infer from that fact
that we had an agreement with National Lead or
with anyone else?

I would like to take a simple illustrative case which I think shows in its bare bones the logic of this conspiracy-by-inference theory.

In a certain locality which is both windy and snowy it has been observed that a messenger on bicycle, pursuing his daily route, follows closely behind a moving van which also has the same route. Not only do they find that he does this every day, but when the moving van changes its route around some other blocks you find this messenger still following closely behind the van.

Not only that, but when there is deep snow he actually puts his bicycle right in the rut which is made by the moving van.

Those facts are certainly consistent with the explanation that there was an agreement between the driver of the truck and the messenger that he should follow closely in their track. We inquire of the messenger, we ask him if there was any such agreement, and he says, "No, I never talked to the driver or anyone connected with the moving van."

"Well, how do you explain it?"

He says, "Do I have to explain it? Aren't there many possible explanations other than that we had an agree-
ment? As a matter of fact, I find that I can't suc-
4266 cessfully drive my bicycle in this wind unless I get
behind some big object that is moving in my direc-
tion."

"But we note that when the van slows up you slow up, and when the van goes a little faster you go a little faster. How do you explain that?"

"Well, if I didn't keep up with the van I wouldn't get the place I want to get as fast as I would otherwise get there, and I might get back into a wind of my own. If I tried to get ahead of the van I wouldn't get anywhere. I can't buck the wind alone."

"But you follow right in the very rut of the van."

"Yes. I find that makes much easier going."

Those are all precisely shown by the undisputed testimony of Mr. Sprague.

We could tell in advance what the next move up or down in lead pigments would be. We would tell which way it was going to be, because we had observed by scientific studies that the market for lead pigments follows with a time lag the market for pig lead, and we are not charged with having any influence on the market in pig lead.

We could not tell exactly when there would be a change or the exact amount, but we could tell whether the next change would be up or down.

Now, what caused Glidden's changes in price? Glidden
determined its own changes of price up or down. And
4267 how did it determine it? It determined it by watch-
ing National Lead's price or, to a lesser extent, Eagle-Picher's price. And its price went up or went down with theirs. It was their act. They didn't consult National Lead or Eagle-Picher; they didn't have to, any more than this bicycle messenger consulted the driver of the truck and said, "Please, mister, may I ride in your rut?"

Possibly the driver of the truck did not even know there was a messenger boy following him. More probably, if it happened day after day, he became aware of it. But it was a matter, presumably, of somewhat indifference to him—just as it has been a matter of indifference to National Lead whether Glidden priced itself out of the market by bidding higher or got all the gross profit it could fairly get by not going lower.

Now, I think that sums up the conspiracy charge. And there is judicial support for the fact that you can not fairly infer conspiracy because small producers follow either the prices or the pricing practices of the large producers. They could not have stopped us from following their prices if they wanted to.

Neither this Commission nor any court can order us to bid lower than National Lead or order us to bid higher. They can not order us not to bid exactly the same as National Lead. They can only order us not to agree
4268 with National Lead.

There is not the slightest evidence that we have ever agreed with National Lead or that we have ever consulted with them on prices, even on pricing methods. We consulted with them only as we did so at the earnest insistence of our Government during the Code days, the testimony as to which I will not refer to because others will cover that more fully.

Now, as to the Robinson-Patman Act, the Commission's counsel seems incurably to be obsessed with the idea that while the Robinson-Patman Act permits differentials, if justified by freight differences, that it requires such differentials.

The Robinson-Patman Act does not require any producer to charge different prices to competing customers merely because the cost of freight or any other cost is different. Freight is one of the costs of the producer. There are other costs. The Act cites several of them: selling, cost of production. Freight is merely one of the costs which the seller is confronted with in performing his side of the agreement.

What the buyer does is to pay an agreed sum which is known as the price. What the seller does is to pass title and make delivery of certain specified goods at a time, which is usually implied, sometimes expressed, and at a place which is usually expressed or, if not, it is necessarily implied.

The place of delivery is just as much a part of the
4269 obligation of the seller as the specification of the
goods or the time. How the seller gets his goods to the specified place is one of his headaches. It comes under the heading of cost. He has many other costs—the cost of the raw materials, the labor. Even his lawyers sometimes cost him something!

The Commission selects one of those costs and arbitrarily selects the cost of performing with respect to the place of delivery and says the price is not what the parties say it is for performing this contract, that it isn't what Congress says it is and refuses to say otherwise, that it isn't what the Supreme Court says. Price, we say, is an arithmetical difference by subtracting from what the parties agree is the price one of the costs, and we pick out transportation as the cost which we say is to be deducted in order to ascertain what we say is the price.

Trial Examiner Norwood: Isn't he selling transportation also?

Mr. Hinds: That is one of the things that he agrees to do; he agrees that the goods shall be so-and-so, that the time shall be so-and-so, and however he does it, by camelback or by flight or by carrying it on his back, by steamship, by truck or train, he somehow or other will get those goods at a particular price at a particular time and a particular place.

4270 How he does it is one of his costs. Price is an exact opposite term from cost. You can not analyze a price into different costs.

A man says, "I will sell you a horse and saddle for $150." Five minutes before that he had bought the horse for $125. Neither the Commission nor the United States Supreme Court nor any professor of economics can say that the price of the saddle is $25 and the price of the horse is $125. The price of the horse plus saddle is $150, and nobody except the parties themselves can analyze that into two different prices.

In these cases of Pittsburgh plus, where the parties agreed, stipulated, that there should be two prices, one the price of delivering the goods and the other the price of the goods, then of course the courts and the Commission have to take the price as the parties agree on it.

Here the parties agreed on a delivered price, and it was the same for everybody in a given area.

Now, it isn't a sign of mental deficiency to argue that the law should be otherwise. That argument has been made persistently before Congress, urging that the price under the Robinson-Patman Act be defined not as what the parties agree to but given an artificial definition of that price minus one of the costs—in this case the cost of transportation.

4271 Congress has persistently rejected that. The Supreme Court has repeatedly commented on Congress' refusal so to legislate, and has repeatedly said, as it did in the Corn Products case, "Congress was unwilling to require f.o.b. factory pricing and thus to make all uniform delivered price systems and all basing point systems illegal per se."

And in the Staley case the Supreme Court said, "But it does not follow that respondents may never absorb freight when their factory price plus actual freight is higher than the competitor's price, or that sellers by so doing may not maintain a uniform delivered price at all points of delivery, for in that event there is no discrimination in price."

And again it has said the same thing in a number of different ways. Another place it says—the Seventh Circuit quoting the Supreme Court: "Notwithstanding this Congressional attitude as recognized by the Supreme Court, this court is now urged by the Commission to hold that the system is illegal per se, and to require that cement be sold on an f.o.b. plant basis."

Now, the Act permits differentials provided the sellers can justify these differentials by differences in any one of three costs—manufacture, selling or transportation. It does not require that there be any differentials. It permits them not to have any differentials between two competing buyers, even though their costs may widely
4272 differ. That is something that they are permitted to
do but not required to do.

Now, a further argument showing that price means price—and, if the parties agree on a delivered price, it means a delivered price—is shown by the Act itself, because the Act permits a difference in price, and to the extent that there is a difference in the cost of transportation.

But if price means what our friends say it means, the f.o.b. mill net, this permission to justify differences in it by cost of transportation is mere gibberish. How can there be any difference in cost of transportation in an f.o.b. mill net price?

So, Congress besides having rejected the amendments which would have defined price the way the Commission would like to see it, has by the language of the Act shown what it means—that it couldn't possibly mean anything but the ordinary price, the consideration paid by the purchaser for delivery of goods at a particular time and place.

Trial Examiner Norwood: Couldn't they make different f.o.b. mill prices?

Mr. Hinds: Certainly, if the parties agreed that delivery shall be at the factory or that the price shall be less transportation. That is the price. But we are confronted here, as far as Glidden is concerned, with a situation where
Glidden agrees. Its price cards state that freight is
4273 allowed; in other words, that the price is the same in

any one zone, no matter how far you are from our factory.

When this was addressed to Congress, the tears that were extracted for the forlorn situation of the man near the factory who is deprived of his so-called freight advantage are clearly wiped away by the fact that the man at the remote place may be selling his competitive products right at the door of the factory.

Our friend very well brought out that fact in our behalf, I thought, this morning, and I will now thank him.

He cited a case where a poor manufacturer in Dallas who used lead oxides, competing with his more fortunate brother in New York, has to pay 25 cents more. But he forgot to remind you—and I think I saw the gleam in your Honor's eye that you caught it—that if this man in New York is competing with the man in Dallas he is soaked with the freight in selling his product in Dallas.

This is an argument that I do not think is really relevant before your Honor, because your Honor has to take the law as it is given by Congress. This, however, would be an excellent way where my friend would knock himself out if he were making this argument in Congress, where it should be made.

Trial Examiner Norwood: The point I queried about
this morning was whether or not adding a zone differ-
4274 ential—in other words, if under this system the fur-
ther away you get from the source of supply the
greater the discrimination against the man at home, if you add a half cent zone differential on that doesn't that lessen that long distance discrimination?

Mr. Hinds: It does lessen it.

Trial Examiner Norwood: Just that much? I mean doesn't that minimize it to that extent?

Mr. Hinds: It does lessen it. And I want to be perfectly frank—and whatever concession I make is not to be considered as binding on any of the other respondents—but I think Glidden will freely concede that if our customers in Zone 2, we'll call it, are competing with those in Zone 1, we must show that this differential, taking zone by zone, is no more than compensates us on the average for the additional cost of transportation. I think we have met that proof, and I do not think our opponents dispute that because they argue just the opposite way. They say the discrimination is against the near man and in favor of the far man, and I agree with them on that in so far as these zone differentials are concerned.

I think, if anything, these zone differentials are not enough. They might well be higher. And when my friend is arguing this way, he argues that we are discriminating against the nearby man. Then when he comes to the
4275 zone differentials he says, "Ah, these are not justified. You don't justify these zone differentials. They are more than the cost of transportation."

You can not have it both ways.

Now, I am going to close with one further observation as to the effect that it would have, at least on the Glidden Company and I think on the industry, of a cease and desist order which would refuse differentials on lead oxides as between carload shippers, large buyers, and the small, fly-by-night, bad-credit, little buyers. That would inevitably, in Glidden's case—and the evidence is undisputed from Mr. Sprague and hasn't been stricken out; your Honor held it to be material and legally admissible. We would like to have all of our business the big carload buyers; they do not require the technical service, they do not require continual credit and investigation, they do not require warehousing, they do not require several other things, and they are all enumerated in our findings.

It is a profitable business. It is the "cream" of the business. And we wish we could take and dared to take more. But in view of great competition which we suffer from the big oxide manufacturers themselves, which our friend points to, who will make their own, invert their own if the price justifies it, and from our colossal competitors, we do not dare take on more than a safe fraction of that business.

4276 Mr. Sprague or Mr. Burrows pointed out that once or twice we got a little bit gay and we bit off a big fraction, and then all of a sudden it went out and we were left with a big hole.

Why, then, do we take this unprofitable higher-priced business? It is higher-priced because they do not get the differential. It is unprofitable relatively. Why do we take it? We take it because we acquired both our lead oxide plant and our white lead plant in order to furnish us with our own manufactured raw materials. It is part of Glidden's policy.

We have to sell most of our stuff, and since we do not dare and can not sell all of it to the gilt-edge trade, we have to deal with these small fellows. Some of them were on the witness stand, and your Honor could size them up. We have to sell to these people. And if this Commission's order required us to do away with the differentials, we would have to either stop selling to the little fellows because we could not make a profit at a low price, or we would have to give up the lower-priced, more profitable business.

In other words, such an order would advance monopoly because it would knock one producer out of either the small field or the big field. I say that at the present time it makes for American competitive health that we have this reasonable differential so that we can charge fairly in accordance with the real differentials of these various costs.

4277 Trial Examiner Norwood: What about the five-ton differential? Between five ton and less than five ton?

Mr. Hinds: Well, of course, that is a question of degree, and as this Commission has said in many cases, as long as the producers in good faith draw boundary lines we are not going to condemn those boundary lines because it is not possible to justify each particular instance exactly on that line.

A producer is permitted to make, say, three or four—in our case three—classifications. Nobody in the world, no system of cost accountancy, can infallibly put that line exactly at a given point. All that this Commission asks and all that the law requires is that you draw these lines between quantity classes with some reasonable attempt to meet reality.

Now, the fact that our smallest type is the least profitable, and the middle type is less profitable, and the top classification is the most profitable and most to be preferred, to my mind shows our good faith in making these quantity differentials. We would prefer to sell them all at the lowest price, much prefer to lose the differential and be saved the expense of warehousing and higher costs on trucking and so forth.

Mr. Wright: May we have a recess?

Trial Examiner Norwood: Five minutes' recess.

(Whereupon, a short recess was taken.)

4278 Trial Examiner Norwood: Proceed.

Argument by Mr. Wood.

Mr. Wood: I am going to take up two small points out of order because they more or less follow right along the lines of Mr. Hinds' discussion.

I call attention to the zone maps in the suggested findings of fact for the Commission and to the dry white lead zone map.

Now, we are criticized as violating the Robinson-Patman Act because we sell at the same price in St. Louis as we do in Texas, or vice versa, because we sell at the same price in Texas as we do in St. Louis. That is a violation of the Act according to the Commission.

If you turn the page to the next map you find that we are criticized because we charge more. So, we apparently violate the Act because we do not have a zone or because we do have a zone—either way.

I call your attention to the inconsistency of that position.

On the Robinson-Patman Act itself I agree entirely with Mr. Hinds that the Act intended to leave things as they were as far as prices were concerned in this respect. Part of the goods of the country, as we know, are sold, f.o.b. Automobiles, f.o.b. Detroit. Machine tools, f.o.b. Cincinnati. A great many other things are f.o.b.

4279 On the other hand, there are just as many, if not more, things that are sold on a delivered price basis as a matter of common custom.

As I see it, the Robinson-Patman Act did not intend to change that at all. It intended to leave it just as it was. But it did provide that where there was a difference in cost of delivery that could be taken in account if the seller wished in making the price differential. He did not have to make a price differential, but he could use that as a reason for making a differential if he chose.

I think that is the correct meaning of the Act and that the Act on its face shows that it did not intend to outlaw delivered price selling per se, because otherwise that difference in cost of delivery would make no sense then.

Trial Examiner Norwood: The differences would justify a lower price but not the same price? It that right?

Mr. Wood: The difference in cost would justify a lower price if you wanted to give a lower price, but you do not necessarily have to give a lower price. There is nothing to compel you to give a lower price.

Now, turning to page 7 of the Commission's proposed findings, I call attention to the three paragraphs in the middle of the page in respect to Eagle-Picher. Eagle-Picher does not at the present time operate a lead pigment factory in Cincinnati. It disposed of the property, 4280 and there is nothing in the record to indicate that Eagle-Picher is manufacturing in Cincinnati.

Trial Examiner Norwood: Where is that statement on that page?

Mr. Wood: I think it is—

Trial Examiner Norwood: I see it now—the fourth paragraph.

Mr. Wood: The fourth line down.

Trial Examiner Norwood: The fourth line down in the first full paragraph.

Mr. Wood: I wrote to Mr. Wright about that. The Cincinnati plant is completely out of operation, and Eagle-Picher's only white lead plant is in Chicago now.

Also there is the finding that we added the International Smelting and Refining business to our business. There is nothing in the record to indicate that we got one nickel's worth of the business they used to have. They closed down their plant; we bought the plant. But there is nothing in the record to show that we took any of their business at all, a single customer.

I have commented before in the record on the Commission's attack on Eagle-Picher because National apparently harbored designs to acquire it once. That is a dead issue in the case, because nothing happened. And I do not see where any findings should be made on that score.

4281 Trial Examiner Norwood: Which is that now? That last remark?

Mr. Wood: All of the findings in respect to National's purchase of Eagle-Picher's stock and the offer to buy the business and good will of the company—which, by the way, was never submitted to the company. It was submitted to Mr. Hertenstein who was an officer of the company, but he sent it back refusing to submit it to the board of directors.

The proposed finding of fact of National Lead Company is accurately stated; the proposed finding of fact of the Commission is not accurately stated.

Trial Examiner Norwood: What page is that on?

Mr. Wood: Can you come up with the page there, Joe?

Mr. Wright: That is discussed on page 6 of the proposed findings.

Trial Examiner Norwood: Are there any inaccuracies in that paragraph beginning, "In February 1906 * * *"?

Mr. Wood: Made by National in June 1931 but was not accepted by that company. It was not even submitted to the company. I would not say it is exactly inaccurate, but the innuendo is that it was submitted to the company and the company turned it down, where the fact was that it was submitted to an individual who declined to submit it to the company.

As I say, the proposed finding of the National Lead
4282 Company is accurately worded.

Trial Examiner Norwood: Well, how would that affect Eagle-Picher anyway?

Mr. Wood: That is what I would like to know. That is the point I was coming to—that I can not see it has anything to do with Eagle-Picher whatsoever.

We are charged here with an unfair method of competition. Anything that happened between directors of Eagle-Picher Company and National back in 1931 that led to nothing is no evidence of any unfair method of competition or participation in conspiracy or anything else on the part of Eagle-Picher. I think it is completely irrelevant to the case.

Trial Examiner Norwood: I do not think that that was received by me as showing anything against Eagle-Picher —that offer of National. It was offered as against National.

Mr. Wood: This is a conspiracy charge. I have nothing more to say about it if it is understood that it has nothing to do with Eagle-Picher.

Now, the Commission's position is very difficult to comprehend in some respects, because it takes this position, that National is so big, so powerful, so monopolistic, that it has controlling power and can force Eagle-Picher and the rest to follow it; and, on the other hand, that we have conspired to follow them.

Now, certainly if they haven't the power to force
4283 us, that negatives the inference, in the absence of any
clear showing, that we have conspired with them to do it.

The truth is sort of halfway in between there. Eagle-

Picher does compete with National but is not strong enough to compete in price. In other words, National is the bigger company, with the larger distribution, the greater number of plants, the greater resources. They have some of that power that the Commission attributes to them, and Eagle-Picher can not pursue an independent pricing policy.

If we cut a price, they can cut it and then cut it again. And if we start to fight that way, we are going to get licked. I mean there just is not any question about that.

So, to that extent the Commission is right. But where in its complaint it summarizes the evils allegedly flowing from these practices complained of and states the competition is stifled and nullified, now that is not true. We put on a series of witnesses on behalf of Eagle-Picher, all of whom testified to Eagle-Picher's efforts to compete with National.

The Commission talks of matched prices all the time. Now, this money that Eagle-Picher is putting into research, a very substantial amount of money that otherwise might go into profits, they are putting that in to avoid matched products. We are doing everything we can to have better products.

4284 The mere charge of matched prices seems to me rather silly when a company is spending a fortune to avoid matched products. The two are ~~not~~ consistent. We could pocket that profit if this was a rigged industry and we weren't competing. There is no point at all in putting that money into research except for the sake of competing to better advantage.

We had witnesses who testified about the dry pigments. We had witnesses who testified about the battery oxides, about the technical services provided by Eagle-Picher.

We put in pictures of the fence out in Joplin, with the thousands of samples on it. We showed that all of that was available to all of our customers. We testified about our work with battery oxides. We showed that about half of the batteries made in the country are made by concerns who manufacture their own battery oxides, who do not buy them either from Eagle-Picher, National or anyone else.

Mr. Mitchell testified that he started out with a small company and that his company grew. He testified that Eagle-Picher was instrumental in keeping the small companies in competition with the large battery companies who manufactured their own oxides.

Trial Examiner Norwood: Eagle-Picher charged that differential on the less than five ton, didn't it?

Mr. Wood: We follow the pricing policy of National quite literally. There may be a few points of devia-
4285 tion, but to a major extent we followed the pricing
policy of National except on a product like lead sulphate or blue lead or leaded zinc oxide or some of our specialties which compete with National products. That is, our basic lead sulphate competes with their basic carbonate in mixed paints.

On the pricing of our sulphate we are rather in an independent position. Of course, we sell it in relation to a great many other cost factors; that is, the price of carbonate and—oh, there are a lot of factors that enter into the pricing there. But we are not in the same position on basic lead sulphate as we are on basic lead carbonate, because we make it from ore concentrates instead of putting it through the stage of pig lead.

Trial Examiner Norwood: You sell that for less than National sells the carbonate?

Mr. Wood: I think it is usually a half cent a pound under the price at which National sells the carbonate. We sell more basic lead sulphate than carbonate to the mixed paint manufacturers, and we have always urged it and pushed it in paint formulæ. In fact, one of the purposes of the test fence is to test one against the other and to be in a position to prove to our trade that they can make up formulæ with the basic lead sulphate that will give them as good results at a lesser price than they can get with the carbonate.

It is that type of thing I refer to when I say there
4286 is competition and active, vigorous competition be-
tween the two companies. And regardless of the coincidence of some of the pricing policies they are forced to by the size and power of National, still we are competing as hard as we can in the only way that it is safe for us to compete, by offering different and better products, better technical service, everything we can give them in the way of laboratory help, research, advice, and everything else. I call attention to the fact I have asked for specific findings in regard to the subject matter which I have just discussed.

Trial Examiner Norwood: Yes.

Mr. Wood: And you will remember that the president of Eagle-Picher, Mr. Bowlby, testified that this was the policy, the competitive policy, of the Eagle-Picher Company, which it had been pursuing as a matter of company policy over a period of years.

Now, Mr. Wright said this morning that as to the Robinson-Patman Act there were two types of discrimination—discrimination coming from selling on delivered price and selling on zone system on one hand, and discrimination as a matter of quantity discount on the other hand.

Back in June 1946 when Mr. McIntyre put in those heavy summaries of invoices, I raised the objection that we ought to be given some warning of just how those were to
4287 be used. Apparently my fear was unfounded, because when I had received this document I looked in vain for anything specific as to just where Eagle-Picher had violated the Robinson-Patman Act. There is absolutely nothing in here—that is, in the Commission's proposed findings of fact—that tells me any more than I was told in June 1946 as to just what it is that the Commission claims to be a violation of the Robinson-Patman Act on the part of Eagle-Picher.

Now, it is true that we have followed the pricing policy of National, but the mere selling at different prices is not in and of itself a violation of the Robinson-Patman Act, because the Act specifically provides and I quote:

"And where the effect of such discrimination may be substantially to lessen competition or tend to create a monopoly in any line of commerce or to injure, destroy or prevent competition with any person who either grants or knowingly receives the benefit of such discrimination, or with the customers of either of them."

Well, in the first place, I am sure that it is not charged that any of the pricing policies of Eagle-Picher tend to create a monopoly in any sense. There is nothing in the record to justify it, so that is out.

The last part of it—"or prevent competition with any person who either grants or knowingly receives the benefit of such discrimination"—there is nothing in the rec-
4288 ord here to show that anyone has knowingly—I mean any customer of Eagle-Picher—has knowingly received the benefit of the discrimination. There is absolutely nothing in the record to justify any finding in that regard.

That leaves the question of whether or not the effect of such discrimination may be substantially to lessen competition. We are in no position to defend in respect to that charge unless we are given specific instances. In other words, we have to be told, "You sell to Customer A, let's say, in less than carload lots. You sell to Customer B in carload lots. The price is different on the two. Those two companies are in competition with each other, and that competition is lessened."

Then, we have a chance to say, "Well, no. After you look at all the factors in the case, the competition is not lessened. They are still in competition and in plenty of competition."

If we are not given certain specific situations, then we are in a position of having to try to prove a negative, you might say. In other words, we would have to take all our customers and say, "We sell to Customer D at one price, and we sell to Customer X at another, but there is no decrease in competition there."

Then, we would have to go on to Customer E and Customer Y and all the permeations and combinations.
4289 We would have to prove a series of negatives, you might say, unless we are given some sort of specific proposition to meet and given a chance to defend ourselves on it.

Now, I have searched through this in vain, and I can not find a single instance where there is an example of competition being lessened.

Mr. Wright said something this morning about some battery manufacturers in Joplin, Missouri, one of whom I think bought at less than carload price, or something like that, and there was competition from national manufacturers located elsewhere.

I do not see where that is evidence. That was his statement. I do not think it is in the record in quite that form. But, even so, I do not see where that is evidence of lessening competition. That is evidence that there is competition. It might be Mr. Wright's theory that the man in Joplin was entitled to a monopoly in Joplin; that is one possible theory. But the statute says "lessening competition," and I do not see how evidence that there is competition can be construed that competition is being lessened or injured or destroyed.

In regard to the battery manufacturers in Chicago, there was just one after another that came in and testified. There-were any number in that group who testified they started out as small companies, that they bought on the less 4290 than carload scale, that they were helped along and received technical help from Eagle-Picher or National, that they grew, that they got into carload class, and they competed with other concerns.

There were numerous examples of that type. And it seems to me that that is evidence that competition is not being lessened in fact. The mere fact that some very small fellows say that five cents a battery might make a difference to them—I mean the very smallest in the industry, the rebuilders, the people that work in cellars and attics and do not have insurance or any accounting or any of the normal costs of business—of course they'd like to pocket every extra nickel they could get. And from the looks of some of them a nickel might have counted quite a bit!

But, taking that Chicago testimony as a whole, the testimony was that there was a great deal of competition and active competition. The little were competing with the big, and the big were competing with the little. And that the battery business of the country was handled by over 200 manufacturers at least.

The same way with the paint business. There are hundreds of small paint companies. The paint people too would like their extra nickel or dime. But the testimony is there that small companies are competing with Sherwin-Williams and Glidden and duPont and all the rest of 4291 them. They are competing with small paint companies.

There is no evidence that these pricing policies have in any way prevented widespread and wholesale competition in the paint business. In fact, all the testimony is that there is competition. And, of course, where there is competition anybody would like a nickel or dime saving if he could get it. That is human nature.

But I do not think that type of testimony is sufficient to satisfy the statute that the pricing policy lessens competition. That is entirely a matter of guesswork one way or another. And I want to repeat that in as far as Eagle-Picher is concerned, for us to be enjoined under the Robinson-Patman Act, it seems to me, it has to be shown that some specific violation of the Robinson-Patman Act existed, some situation where competition may be substantially lessened by the existing practice, and that it can not be done by means of generalities.

That applies to the Commission's case regardless of whether the quantity discount is involved or whether the zone differential is involved.

Now, I also ask for the finding that Eagle-Picher can not compete with National except by selling on a delivered price basis because of National's greater size and greater number of manufacturing plants. We are the second largest; that is, Eagle-Picher is the second largest. It is 4292 trying to compete. I think it is clear from the Government allegations, from the statements made by Mr. Wright, and from all the evidence in the case that it is absolutely necessary for Eagle-Picher to be able to put down goods in a customer's factory at the same price National does, no matter what you call it. We have to be able to deliver the goods at National's price. Otherwise, with our smaller number of factories, our smaller size, we are simply going to be out of business, and National will have the whole thing.

I am going to file a written reply, a written statement in reply to this. I received it at such a late date that I did not have time to prepare in detail with citations to the record for this argument.

Trial Examiner Norwood: Counsel may do that.

Mr. Welch: Your Honor, without at this time presenting my argument in connection with proposals that have been made on Sherwin-Williams, I would like to take just a few minutes in connection with the argument that has been made by Mr. Hinds and Mr. Wood, particularly on the meaning of the phrase "may substantially lessen competition" as it appears in the Clayton Act.

I call attention to the case of the *Standard Fashion Company* v. *Magrane Houston Company*, 258 U.S. 346. That case involved Section 3 instead of Section 2, but the language is the same in that it prohibits certain con- 4293 tracts or agreements or understandings where the effect may be to substantially lessen competition or tend to create a monopoly in any line of commerce.

That language is exactly the same as the language in Section 2; consequently, the court's language is equally applicable, and I quote from the decision handed down by Mr. Justice Day:

"Section 3 condemns sales or agreements where the effect of such sale or contract of sale 'may' be to substantially lessen competition or tend to create a monopoly. It thus deals with consequences to follow the making of the restrictive covenant limiting the right of the purchaser to deal in the goods of the seller only.

"But we do not think that the purpose in using the word 'may' was to prohibit the mere possibility of the consequences described. It was intended to prevent such agreements as would under the circumstances disclosed probably lessen competition or create an actual tendency to monopoly; that it was not intended to reach every remote lessening of competition is shown in the requirement that such lessening must be substantial."

I just wanted to call that Supreme Court decision to your Honor's attention in connection with the arguments advanced by Mr. Wood and Mr. Hinds.

Mr. Wright: I just want to say one thing. I am 4294 not going to attempt to make any detailed answer.

But with reference to Mr. Welch's quotation of the Magrane Houston decision and the meaning of that term as applied to Section 3, I would like to invite your Honor's attention to the recent opinion by the Supreme Court of the United States in United States *vs.* International Salt Company, also involving Section 3 where an entirely and wholly different construction was put upon that very phrase.

Trial Examiner Norwood: What is the volume?

Mr. Wright: I can not give you the citation. It is the present term; it is unreported. It is within the past few weeks, handed down by the Supreme Court. I will attempt to furnish a copy of that in support of it.

Trial Examiner Norwood: I think I have a copy on my desk.

Mr. Ewing: I move, your Honor, that we adjourn to Monday here, at which time I will present National's position and Mr. Welch that of Sherwin-Williams.

Trial Examiner Norwood: Is there any objection to that?

Mr. Wright: No, sir, no objection at all.

Trial Examiner Norwood: I will put on the record an explanation while Mr. Wood is here. I told counsel that they may file supplemental or reply proposals and any sort of briefs or arguments that they wanted to not later 4295 than January 25th. I have thought about that since Mr. Gardiner insists on a few more days. I think that is too late. Physically I don't think it would be possible to be any later than that. But if it is after that date, you can file it with the Commission anyway.

I could not undertake to transmit those things if they are not filed before that time—on or before that time. I could not undertake to transmit those and submit rulings on them for the record in my report if they are any later than that, because I am endeavoring to finish this by the 31st of January. I may not be able to do so.

But I do not see how I can see my way clear to extending the date any further than that. If it comes in after that, though, I will transmit it to the Commission along with my report.

Mr. Gardiner: Could your Honor make it the 26th, which is Monday?

Trial Examiner Norwood: Yes. If it gets here Monday I will receive it and rule on it. That is Monday, the 26th.

Also I will ask counsel to properly specify which are proposals on which the Procedure Act requires me to rule, and which are reasons and argument. They have done that in these very helpful proposals that are already made.

So, with that understanding, we will recess until
4296 10:00 a.m., Monday, being January 12, 1948, in this
room, Room 332, Office of the Federal Trade Commission, Washington, D. C.

(Whereupon, at 4:00 p.m., January 7, 1948, the hearing in the above-entitled matter was adjourned.)

4297 Room 388
Federal Trade Commission Building
Washington, D. C.
Monday, January 12, 1948.

Met, pursuant to adjournment and agreement, at 10 a.m.

Before:

John W. Norwood, Trial Examiner.

Appearances:

Joseph S. Wright, Esq., appearing for the Federal Trade Commission.

James D. Ewing, Esq., and
E. Z. DuBose, Esq., appearing for the National Lead Company.

J. T. Welch, Esq., appearing for The Sherwin-Williams Company.

4298 PROCEEDINGS.

Trial Examiner Norwood: The hearing will come to order. Pursuant to adjournment on January 7th, the hearing in Docket No. 5253 is now convened in room 388, Offices of the Federal Trade Commission, Washington, D. C., at 10 o'clock a.m., Eastern Standard Time, January 12, 1948.

Appearing for the Federal Trade Commission: Joseph S. Wright.

Appearing for the respondents: James D. Ewing; E. Z. DuBose; and J. T. Welch.

The hearing is convened to receive further argument, and any corrections of the record which counsel may wish to offer.

Mr. Wright: Your Honor, there are a number of corrections in my statement of January 7th. I am only going to touch upon those which make some substantial difference. On page 4215, line 5, the figure 2, referring to the sections of Article 7 of the Code for the Lead Pigments Industry, should be 3.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record.

Mr. Wright: There is a statement appearing on lines 13 and 14 of page 4239 that might be subject to some misinterpretation, although it is a literally accurate
4299 statement, that there are no instructions to dealers bidding on Government business. Well, that is true, in the sense of dealers for resale, so far as I know, but there are instructions in the record, as appears from the exhibit, to the branches and agents as to the method of bidding on Government business.

There are a number of other corrections, which I will take up later, as they aren't of too considerable importance at this time.

Argument on Behalf of Respondent, National Lead Company.

Mr. Ewing: On behalf of respondent, National Lead Company, we propose to outline generally our position in this case, what we think it has boiled down to by way of really fundamental issues, and, without going into any great detail, indicate why we have submitted the proposed findings that we have, and comment in some detail with respect to each or certain of them.

In preparing our proposed findings, we were mindful of the new Administrative Procedure Act and of the new rules of the Commission, and we have endeavored to set forth factual statements as far as possible, and where they require explanation such as to indicate that they are ultimate facts, we have tried to give them. Perhaps we have gone unnecessarily into detail in respect to some matters, but we felt that to cover the subject under the conditions under which the proposed findings were prepared, that it was necessary.

4300 Now, I propose to discuss what we might call the affirmative side of our position, and when I am finished, Mr. DuBose is going to discuss the Commission's proposed findings.

My recollection is that back in February, 1947, after the Commission's case had been completed, Mr. Wright stated that this in his view—and he was expressing his personal view—was essentially a price fixing conspiracy case. Of course, he was not eliminating the Robinson-Patman angle.

As I see it, from the standpoint of the conspiracy charged, this case has boiled down to, say, three fundamentals. They are, of course, not as simple as I am going to make them, but there are three fundamental points that I see in the claim, or in the charges as supported in the Commission's case.

First, it is claimed, as I read the record, that the adoption of what we have called the agency plan, was one of the evils, and a part of the conspiracy charged.

Second, the adoption of the zone system of selling, or method of selling, if you prefer. Putting that in another way, you could call it the use of territorial divisions, or territorial differentials, there being a uniform price in each territory graduated as the country goes west until you come back to a normal par on the west coast. When I speak of those two methods, agency and zone, I am not unmindful of the fact that not all of the respondents used agency, and I am not unmindful of the fact that at 4301 least one of the respondents takes the very positive position that they do not use a zone or territorial method.

The third fact, or the third one of these three points, is the use by some or all of the respondents generally of what has been described as uniform terms and conditions of sale. Now, of course, the contentions made with respect to those three major features in the case, go into a great many ramifications.

As to the second part of the case, there is the fundamental claim that the use of a uniform zone delivered price method is per se a violation of the Robinson-Patman Act, because it is claimed that there is discrimination as between the near buyer and the far buyer in each territory, and it is also claimed that the use of zone differentials in and of themselves is bad.

As I read Mr. Wright's proposed findings, I see now no claim similar to the one made in the complaint, or the amended complaint, to the effect that there is discrimination as between customers along the zone boundary lines or borders. And I think that Your Honor will recall that there was considerable testimony to the effect that there was no such thing, and that the territorial outlines had been adopted with the idea of eliminating, or at least reducing to the absolute minimum, the possibility of there being an adverse effect on competition.

There is also the claim that the oxide differentials 4302 are discriminatory. And, finally, there is the claim in the case of the National that discrimination results, or has resulted from the agent classification on the one hand and the dealer classification on the other.

Now, as I see it, those are the main points in the charges against the respondents.

Trial Examiner Norwood: Now, in that oxide differential, you refer to the five ton differential?

Mr. Ewing: The quantity differential.

Trial Examiner Norwood: In the sale of dry white lead.

Mr. Ewing: Oxide. Carload 5 ton and less than 5 ton. Now, while there may be quarrel with the wording, I think that a substantial portion of the first section of those findings is not the subject of any real dispute. We felt that as a basis for the subsequent findings, it was advisable, if not necessary, to first cover in some detail the nature of the products involved in the proceeding. Now, we all know what they are, and I am certainly not going to waste everybody's time by standing up here and talking about these products, but I do want to emphasize two things in connection with them.

In the first place, the respondents had competing products in two senses, to the extent that they all manufactured dry white lead basic carbonate. We say that they competed with each other, to the extent that Eagle, 4303 for example, not only manufacture the dry white lead basic carbonate, but also the sulphate, which they say they press, and which the record shows to have been sold, at least in recent years, in greater quantity than they have sold their basic carbonate.

There is another element of competition—there is the further element of competition with certain products that are not lead pigments, for example, that have been mentioned, described somewhat, in this proceeding, ingredients which enter into and have entered into the manufacture of so-called ready-mixed paint. And there is evidence in this proceeding that clearly establishes that the lead pigment business, leaving aside the oxide, from the standpoint of the paint industry as a whole is a very small factor as compared with the ready-mixed paint business. It has, therefore, been our contention that the ceiling of the ready-mixed paint business hanging over all of the lead pigment business, involving paints ultimately, is a factor which constrains against monopoly and also against unlawful competition and conspiracy.

The second factor that seems to us of importance about pigment—and I do not believe there is any dispute about this—is the importance of pig lead. Now in the original complaint the Commission charged in effect that National controlled the price of pig lead through its large purchases from the American Smelting and Refining Company. In the amended complaint that charge, if I have correctly
4304 stated it, was in effect withdrawn, and there was a substitute of quite a different nature, although fundamentally, perhaps, bearing on the same point.

It is charged in the amended complaint, paragraph 7-A-8, that National, through its relationship with American Smelting and others, had a monopolistic influence on and was an important factor in the determination and quotation of market prices for pig lead, and that American Smelting and Refining holds a dominant position in the sale and production of pig lead.

Now, I think that so far as those charges are concerned, it is fair to say that through the testimony of Mr. Brownell, former chairman of the board of the American Smelting and Refining, and also through the testimony given more than two years ago by Mr. Baer, it is clear that while National has been a large customer of American Smelting and Refining, about which there is no doubt, that it has not exercised, and does not exercise, and could not exercise, any control over the pricing of pig lead. And that is further borne out by the fact that the record shows that in recent years National's purchases, generally speaking, have been in greater quantity from the St. Joe Lead Company than they have been from any other source. That, of course, in a sense is a side issue, but it points up the fact about which I am sure, there is no dispute that the price of pig lead is a very important thing in this case, because, these being lead pigments, and pig lead as converted
4305 being the principal ingredient in the pigments, and representing substantially all of the material cost in the case of some pigments, and a substantial part, at least, in the case of others, it naturally has a direct bearing—the price of pig lead naturally has a direct bearing on the price of lead pigments, I am going to say more about price later.

The next heading that we put in our findings was to outline the business of the respondents. Now, there is no need of discussion on that. There isn't any real dispute about that. It is there, really, simply for record purposes. We give some statistics with respect to the business done, but it has no particular importance other than the general background. We then give the history, as we read the record, of the National Lead Company itself.

Now, there has been a suggestion in this case that prior to the organization of the National Lead Company in 1891, you had a very active, competitive industry, comprised of a great number of small companies, all engaged in the business to a greater or lesser extent. The detail does not appear in the record, if my memory serves me.

There isn't any question about the fact that in December, 1891, National was organized, and the process of the organization took the form of its acquiring the assets of some sixteen or seventeen companies, most of which were in the lead pigment business—I think there was one 4306 linseed oil company, or castor oil company—and at the same time it acquired the stock of those companies, all of which had been members of the so-called National Lead Trust, which existed prior to 1891 and in substance controlled the industry. So, it is not quite exact to say that you had a lot of competing individual entities before and that National Lead when it came into being, scooped them all up and made them into one tight knot.

Trial Examiner Norwood: Well, what is the difference in the concerns owned by the National Lead Trust, and the United Lead Company? Are they the same thing?

Mr. Ewing: No, sir. The United Lead Company was organized by the Guggenheim interests and Thomas Fortune Ryan. It was an amalgamation of companies, and eventually the United Lead Company was sold to the National Lead Company in February, 1906.

Now, there is a difference between the two situations, because the companies making up United Lead Company were principally engaged in the manufacture, sale and distribution of metallic lead and lead alloys as distinguished from the business of the National Lead Company, which was lead pigments.

It is unimportant, perhaps, but the record indicates that the Guggenheim interests forced the sale, or the purchase by National of United Lead.

Now, in 1907, the National Lead acquired the stock of

Magnus Metal. Magnus Metal was never engaged in
4307 the sale of lead pigments, or their manufacture.

In March, 1913, we acquired all of the stock of Heath and Milligan Manufacturing Company, but in September, 1919 we sold it to the Glidden Company.

Prior to that, and in March, 1906, we had acquired the stock of the Carter Lead Company, and in 1912, the stock of the Matheson Lead Company, and so on, as set out in our ~~findings, and~~ in our answer.

Trial Examiner Norwood: You say Magnus was sold to Glidden?

Mr. Ewing: No. Heath & Milligan. Now, there is testimony, not exact as to date, except it places the time a great many years ago, that indicates with respect to the plants which had manufactured lead pigments, for economics, and other similar reasons, National abondened manufacture. We have, if I recall it now, some 12 branches. I think the record indicates that at one time or another there was some form of manufacture at those branches. Now there are five branches, which encompass a plant which makes lead pigments in the form of white lead basic carbonate. There are nine plants which manufacture the oxides, litharge and red lead.

Trial Examiner Norwood: Let me see—National now has twelve manufacturing branches?

Mr. Ewing: Twelve branches, but not manufacturing
branches. At five of the twelve branches, you will find
4308 a white lead plant. At nine out of those same twelve
branches, you will find an oxide plant.

Now, on pages 10 and 11 of our proposed findings—finding No. 16, we set out in some detail what I will term for convenience the Eagle Picher transactions. It has been charged that National has attempted to acquire, or has acquired or did attempt to acquire the control of the Eagle Picher Company, and there have been three divisions of evidence on that point—if divisions is the right word.

First, there is the unquestioned, undisputed fact that through Mr. Cornish, National did in fact acquire in the early '30's and continued to hold until the early '40's, up to some forty thousand odd shares of stock of Eagle Picher. And it is also clear, and I do not believe disputed, that, as the result of that stock transaction, National made a very nice profit, to say the least.

The testimony from Mr. Simon, the treasurer of the

National Lead Company, who was right in on the transactions, is clear and unequivocal to the effect that National bought it as an investment. They did have a policy that permitted them to invest in companies of the same general nature where they thought they knew something about the business and could make an intelligent investment. But, as the record indicates, they made no great practice of that.

Secondly, and this, I believe, has been the subject 4309 of much more discussion than it deserves, there is the evidence, in the form of the Chatfield letters, which to my mind, and I would say to any reasonable man's mind, simply indicates that an ambitious broker was trying to drum up a deal, and he certainly didn't drum one up. And, as I have said before, and as I hesitate to say again, it is no proof of anything, so far as I can see. Certainly we didn't inspire it, and there is nothing to indicate that we inspired it, and it certainly cannot be used as the basis for an inference that we were trying to get into the Eagle Picher picture through that channel.

The third thing, and here there is no dispute, is that some time early in January, 1931, Mr. Hertenstein, who, in fact, was vice-president and director of Eagle Picher, came to Mr. Cornish as an individual and attempted to arrange a deal whereby National should purchase a substantial amout of Eagle Picher stock.

By May of 1931 the point was reached where Mr. Cornish and National felt themselves in a position to make an affirmative offer; and a copy of that offer, which was in the form of a letter addressed to the president and the board of the Eagle Picher Lead Company, was sent by Mr. Cornish to Mr. Hertenstein, with the request that he deliver it to the proper authorities.

At the same time, Mr. Cornish sent a copy of that letter to the Department of Justice, which had been receiv-4310 ing advice about this proposed transaction from time to time.

Mr. Hertenstein replied to Mr. Cornish, stating that the stipulation didn't go so far as to cover what he said. Mr. Hertenstein never delivered that letter, as requested by Mr. Cornish. In other words, it never reached the Eagle Picher Company officially, and he returned it to Cornish without presenting it to the board, expressing the opinion that the offer was unsatisfactory. And that was the end of that.

Now, it is obvious that the proposal as contained in the letter was there to be submitted, if Hertenstein had wanted to submit it, and to that extent it indicated a willingness on National's part to do what it proposed to do. But, to my mind, it is equally obvious, and particularly because of the steps taken in connection with the Department of Justice, that that is not substantial probative evidence of an attempt on National's part at monopoly.

Trial Examiner Norwood: Did they offer a stated price in that letter?

Mr. Ewing: My recollection is that they did. Am I not right, Mr. Wright?

Mr. Wright: Well, I do not recall that they did in that letter. Off the record.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record.

4311 Mr. Ewing: I do not want to trust my recollection
as to what it stated with respect to price, but, of course, the letter is in the record.

Now, I think that I have reached the point which leads to a discussion of the activities of the respondents in the Lead Industries Association. I am afraid that I am responsible for having burdened the record with a great deal of material in that connection.

I have already said, and I repeat it, because I think it is one of the most important facts in this case, that Lead Industries Association is an entirely different colored horse from any other industry association that I have seen involved in one of these proceedings brought by the Commission. In fact, if the others are horses, the Lead Industries Association isn't a horse at all.

I say that, not only because of the nature of its activities and its purposes, and the way it carried them out, but also because of the very nature of the beast itself. The Lead Industries Association was formed back in November, 1928, and, according to its charter, it was formed to foster scientific research, promotional work, disseminate pertinent information concerning lead products, and act as a representative of the industry before the public.

From the very beginning, it included the primary producers of lead, that is, the miners, the smelters, and
4312 the refiners; and it also included the manufacturers
of lead products, some of whom were also ultimately retailers of lead products.

Now, it is perfectly obvious, and the secretary of the association so testified in effect, that a large smelter and refiner, such as American Smelting and Refining, or St. Joe Lead Company, would not stand idly by and let National Lead and the associated manufacturers or processors of lead pigments, monopolize manufacture and distribution of the finished product, because if they did, they would cut the outlet for their own production, and it would necessarily be very much against their self-interest.

The same, of course, is true in converse with respect to the position of the manufacturers of lead pigment. If they found the smelters and refiners going monopolistic, they would certainly want to take action about it.

Now, that, in effect, was the testimony that Mr. Wormser gave. And you will recall that back in New York in April, 1947, he testified in some detail as to what the association did, and what views various members had expressed with regard to the activities of the association, and his own personal views.

So I say that as far as its purposes, its inception,—and I am now speaking generally,—its activities are concerned, the overwhelming weight of evidence shows that 4313 Lead Industries Association took no part in, would have violently opposed, and would have had nothing to do with a conspiracy such as that charged.

Now, it is interesting to note that in this proceeding, Lead Industries was not made a party. There again is a difference between it and some of the other proceedings, not being a party, but being the subject of charges put Lead Industries in an anomalous position, to say the least.

It is true that the amended complaint does not charge Lead Industries Association with nefarious activities to the extent that the complaint itself did, but it does charge that the respondents—and I will summarize—it is paragraph 7-B-3—in effect that the respondents secured the advice, assistance, and cooperation of Lead Industries Association in fixing, adopting, publishing and using noncompetitive terms and conditions of sale.

And it further charges, sub-paragraph 4, that the respondents exchanged directly and through the offices of Lead Industries Association price factors and informing concerning price factors expected to be used and which at times were used in calculating, determining and announcing prices.

Lead Industries not being represented, I am in effect undertaking to represent them. As I said, in the overall picture, the evidence is overwhelming in establishing that
Lead Industries did not and could not have furthered
4314 a price fixing conspiracy in this case. No price in-
formation was ever disseminated by Lead Industries Association.

It is true that each company reported to Lead Industries Association certain statistical matter, but that statistical matter was never transmitted from the Association office, say in the case of a report made by National, to Sherwin-Williams, with the statement that this is National's report. What was transmitted and published was the overall picture, the totals of all, and I do not believe at this time that Mr. Wright makes any contention that there was price reporting as such, or dissemination of price information as such.

Now that leaves, I believe, in the Association's history that which is perhaps the most important single thing in this case, and that is, what did the respondents as members and the Lead Industries Association do in respect to the National Industrial Recovery Act and Codes.

Now, I do not pretend to carry the detail in my head, and if I tried to carry it, I would undoubtedly make a series of erroneous statements, but I think I can summarize the picture generally.

There was a master code for the lead industry, and under it, it was contemplated that there should be filed supplementary codes, and one of these supplementary codes was to be a supplementary code covering the lead pigments
division of the industry. Those supplementary codes
4315 were to cover unfair practices.

There isn't any doubt about the fact that the lead pigments division of the Lead Industries Association, whose members were the representatives of the companies interested in those goods, met for the purpose of formulating a supplementary code, commencing their meetings early in July, 1933. They met repeatedly. They met in two subdivisions. There was a dry products committee, which in turn had a white lead and oil subcommittee. There was an oxide committee, which was part of the dry products committee, as I recall it.

Now, these people didn't want any code at all, and they didn't want this supplementary code, but, as the record shows, the Deputy Administrator, N. R. A., was very, very insistent. So they attempted to undertake the drafting of the code, and the record, as you know, is full of successive drafts. It is also full of the meetings.

Each and every one of these meetings—and I believe that this appears in almost all of the minutes—was held in connection with the formulation of this code, or the attempt to formulate it. And, if that doesn't appear affirmatively in the minutes themselves, it is clear from the testimony of Mr. Wormser and of others who actually attended meetings and who have testified in this case.

These discussions embraced a number of subjects, all of which were brought up and considered for the purpose of determining whether they should be proposed 4316 as an element or elements of the code.

In many instances you will find that a committee adopted a resolution to a certain effect, indicating that such and such provisions were offered by that committee for the purpose of inclusion in the code, and then it never appears in any supplementary code, or in the code itself.

In some cases the minutes show a clear abandonment. In other cases, you must infer the abandonment from the fact that it didn't appear. But all of those discussions, and all those agreements, if you want to call them such, were discussions with respect to the inclusion of a certain provision or provisions in the code, and the agreements were not agreements to do these things, they were agreements to have a provision such as this go into the code.

Now, there is a great difference, because Mr. Wright's position is that we discussed them, they didn't find their way into the code, but we agreed on them anyway. I say there isn't a scintilla of evidence to justify that; that it is plain on the face of the minutes, it is plain from the uncontradicted testimony of every witness, that they were discussed for code purposes only, and that they were not the subject of agreement only to the extent of agreeing on them to go into the code. Of course, I could repeat myself on this subject ad nauseam, but I am not going to—if 4317 I have not done so already—but I think it is of somewhat importance in this case.

Now, before I leave the subject of Lead Industries, there are one or two other matters that I want to direct your attention to. In the first place, there has been a suggestion that an effect should be given, or a recognition taken, of an attitude expressed in one way or another with respect to the anti-trust laws.

The record indicates that Mr. Cornish, then, I believe, president of National, stated publicly that he did not think the N. R. A. was going to last, and that the anti-trust laws were still on the books, and that they should be lived up to; and a more or less similar statement appears in the record in another form.

That would indicate to my mind an awareness of the fact that, regardless of the N. R. A., regardless of whether you were a protagonist of the N. R. A. or a reluctant associate with it, that these people did not intend to violate the anti-trust laws.

A different interpretation is now suggested, and that is that they were aware of the anti-trust law, and they thought they had found a way they could get around it. Everyone is entitled to his own view, but to my mind that consideration suggested is wholly unpersuasive, for this reason: These people may not have been the smartest people in the world, but at least they were, generally
4318 speaking, successful business men engaged in the
operation of large business enterprises, and to suggest that they would plaster their record with statements of that nature and then stick their necks out in a wholly obvious way, is just incredible to me. I just cannot believe such a thing would happen.

Now, I do not say that, whatever their intentions were, that they might not have been successful in violating the anti-trust law, but I do say you cannot infer from their previous allegiance to the anti-trust law, an intention to in fact violate it.

Second, when N. R. A. was declared unconstitutional, the Lead Industries Association and the Pigments Division in Memphis wound it up just as fast as they could, and you can almost hear them saying "Good riddance."

And then in November, 1935, the Coordinator for Industrial Coöperation, a Mr. George L. Berry, who, apparently, was in charge of activities by some organization to perpetuate by voluntary means in industry practices that had met with approval under the N. R. A., approached the Association with such a suggestion, and they turned it down flatly, as appears from the resolution which is in evidence as part of, or is in evidence as Respondents' Exhibit 92.

Trial Examiner Norwood: Was he the attorney that they consulted?

Mr. Ewing: No. He formerly, I believe, had some
4319 connection with N. R. A., but at the time he wrote
Lead Industries in November, 1935, he was Coordinator for Industrial Cooperation, whatever that may be; and he wrote them asking them to come down to discuss and consider voluntary action to continue the N. R. A. activities.

Now, when the Lead Industries Association received that request, the executive committee met, and adopted this resolution, to which I have referred; and the substance of the resolution, after recitals, the final recital in this resolution reads as follows:

"Whereas, the Lead Industry has made greater progress out of the depression from the standpoint of both employer and employee since the termination of the N.R.A. than it did before, Now, Therefore, Be It Resolved, that it is undesirable for the lead industry as a unit to send a representative to the meeting called by Mr. George L. Berry, to be held in Washington on December 9, 1935."

Now that is a plain indication, as plain as it can be, that they wanted no part of the N.R.A. in any substitute form, and to my mind it leads directly to the inference, or directly supports the contention we make with respect to the nature, character and activities of the Association and its members.

Now, I think you can say that the Commission's case
contains the suggestion that you had an industry
4320 which was going along, operating—perhaps the con-
tention is that it was operating more rigidly than prior to 1891, as I mentioned earlier, but that when you got to 1933 and N.R.A., you had an overturn, and things were all different. The facts just do not bear that out. I am not going to go into the detail, because that is going to be covered by Mr. DuBose, but I mention it, because some of the things I am now coming to discuss bear on my point at the beginning. I said that the agency method was one of the big factors here.

My recollection of the testimony is that International Smelting and Refining had a so-called consignment method, commencing early in 1932. In 1932, National adopted on a local basis the so-called agency method. Under the agency method, title remained in National. It experimented with agency, and it determined to, and did, effective as of November 15, 1933, go on agency on a nation-wide basis, except for the Pacific Coast, which never had it.

Now, there isn't any dispute about the fact that Eagle went on an agency plan in substance of the same character. There isn't any dispute about the fact that National's officials discussed it with Eagle, and there isn't any question about the fact that we told Eagle we were going to go on it in advance; on November 15, 1933.

Where is the vice? The cause—and I think it is perhaps
indicated in the record that there was some reluctance
4321 about adopting agency—but the cause was an industry evil, and that was loss leadership.

Now, that was particularly important to us, because here we had as the result of years of business established our Dutch Boy label to the point where it had the highest degree of consumer acceptance, and that it was recognized in effect as a premium product. Its competitive position was entirely different from the admittedly inferior brands of some competitors. Anything that the mind could devise to stop the practice of having dealers use Dutch Boy as a loss leader was something that was to be given consideration by National. Of course, it is something that is given consideration by all kinds of businesses, because the problem is not confined to lead pigment.

Certainly, there can be no reason why National could not have, in and of itself, adopted an agency method, provided it fell within the law, if it wanted to. There was no reason why Eagle could not do it if it wanted to. There was no reason why Glidden could not, as it did—did it with reluctance, and then quit.

I cannot see the basis for an inference because of the fact that two or three companies discussed this thing and decided for the obvious economic reason to use it. It is clear from the Code minutes that at one meeting National's
representative came right out and said "We are
4322 going to do it. Here is the way it is." And some
said they thought they might do it, too.

Now, one reason, as you know, for National and others fighting the attempt to bring them under the paint and varnish code, was the fact that the paint people were unalterably opposed to consignment, and, if their code prohibited consignment, why, that, at least, was not a possible solution to the loss leader problem. In any event, there is no agency now.

Second, zones. Now, Mr. Wright stated, at least last week, and he may have said the same thing before, that his point in connection with zones doesn't rest upon the existence or non-existence of a map, it is because the fact is that what we have called a zone method involves the territorial system of selling whereby certain territories take a differential higher than the so-called par territory.

I quite agree with him that the existence of a map, or the non-existence of a map, while it may be a factor of some sort, certainly doesn't determine whether you are doing business on a zone basis, with uniform delivered prices in the particular territory and with advancing differentials as you come to changing lines.

We have testimony in this case—before I come to that, there is testimony in this case that indicates that National and the others who did use maps, took to the map 4323 form of expressing the zone territorial method of sale and distribution some time between the fall of 1933 and June of 1934. When that occurred, except as between those dates, it is impossible, I think, for anyone to say, but it certainly occurred.

Now, take National's case. McNair, who was manager of the Atlantic Branch dating back to 1910, testified that ever since he knew, National had always used a territorial method of selling which involved the use of differentials. He didn't purport to be able to tell you the details of it, but he was positive in his testimony on it.

Then there is in evidence the exhibit—the number of which I can never remember, which sets forth National's branches, delivery points, differential and equalization points. I think it is 859.

Mr. Wright: 659.

Mr. Ewing: 659. I am not going to attempt to go into or waste your time here with an explanation of the differential delivery point system, but we do know that by 1930 —this exhibit dates back to 1920—we do know that by 1930 there were better than 500 points. Now, we took those points, and superimposed them on a map, and the result is startling, and wholly confirmatory of Mr. McNair's testimony. If you will look at the territories that are determined by the point system, if you want to call it that, as against the map, I don't say it fits like a glove, but it 4324 is very, very close.

Trial Examiner Norwood: That is a respondent's exhibit, is it not?

Mr. Ewing: That is right. It is our map—Respondents' Exhibit No. 147. Now, I think the fair inference—first, I should say I think the evidence is very clear that National in substance, even though it first came up with a map some time between November, 1933 and June, 1934, in substance used a zone or territorial method of sale which involved differential territories, at least since 1910, and there is every reason to believe since long before that. So that the actual use of a map, whenever it occurred, had no particular significance, and didn't represent a chameleon change of color from before 1933 and after.

Trial Examiner Norwood: When they sold from those delivered points, did the customer pay the freight from the equalization point to his location?

Mr. Ewing: If he were a customer located at a point other than a delivery point, he would pay the freight differential, but most of the delivery points were big cities, and most of the business, of course, was done there.

Trial Examiner Norwood: That is the same system that Sherwin-Williams now apply, does it not?

Mr. Ewing: Well, not quite, no. But I will let him point out the difference in his system. Therefore, I say as
a practical proposition that the record establishes
4325 that we have been doing business in substantially the
same way. In what I have just been talking about, I should limit to white lead and oil. With respect to dry white lead basic carbonate, National divided the country into two zones, east of the Rockies, and west of the Rockies. Sprague testified, as I recall it, that prior to 1933 the West Coast had carried a differential. In any event, the division as between west coast and east, is not an arbitrary one, obviously, and it is not unrealistic, or anything like that.

Oxide, zones. There again, you have a map, but the record indicates very plainly as to how those oxide zones were set up by National. It is true that during the code meetings there had been discussions of that subject, and that zones were a matter which never found their way into the code.

While the code was waiting for approval, in the late spring of 1934, National sent a letter to its branch managers, which has been referred to before, and that is Harold Rowe's letter of May 11, 1934, Respondent's Exhibit 159-B. That makes it very clear that National at that point de-

cided to have zones and to adopt and put into effect the terms and conditions of sale which were found in the proposed code subsequently approved. And he states plainly that that is what they were doing. I think the only inference that you can draw is that National independently decided then that it wanted oxide zones and was going to use these terms and conditions of sale, and that it
4326 was doing it regardless of what anybody else did.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record.

Mr. Ewing: Now, what I have said with respect to the adoption by National of oxide zones, is true with respect to the adoption of the so-called uniform terms and conditions of sale, which were covered by the same memorandum. In view of the fact that both of those subjects are going to require more discussion by Mr. DuBose, I am not going to burden the record with further comment on them.

On the question of price, there isn't any doubt about the fact, as I have said, that lead being the principal material component, the price of lead is the principal factor by way of material cost affecting price. And we all know that in the case of litharge and red lead, the custom of the business has been to sell those products at a fixed differential over the current market price of pig, and that as that market price varies, depending on the quantity, you get a variation in the price of lead pigment to oxide.

The record shows that National adopted that differential method of selling the oxides back in 1927. It didn't come into being, it wasn't new, and followed after the code days —they adopted it in 1927. Now, the price being what it is, and the nature of the oxide product being what it is,
4327 it is almost inevitable that the differential method of selling it was involved, because otherwise, the industry would have had a hard time in pricing.

Dry white lead, being sold in large quantities to large paint manufacturers, generally speaking, reflected fewer price changes than any of the other products. White lead and oil consistently reflects the price changes in pig lead, but with a lag, and, of course, there are other factors in the pricing of white lead and oil, such as the cost of the linseed oil, and so forth.

Why is there a lag in the case of white lead and oil?

Well, white lead and oil represents a product with respect to which there are a large number of small outlets, and, as I say, as distinguished between dry white lead, which is a quantity proposition, you have a very narrow margin. It is obvious there is some profit in the case of red lead and litharge. I don't know whether you can figure it or not, but Mr. Wright pointed it out the other day, and I think the same is true with respect to all of these products. There is a greater spread between the painter price, because for all practical purposes there were no direct customer sales.

In the case of white lead and oil and the price of pig. Under the Old Dutch process, it took 120 days to corrode your lead, with the result that from a pricing standpoint, you had all of that stock in process, as well as raw
4328 material on hand and finished goods coming out. Under the Carter process, the time is reduced to ten days, I believe, so that the amount of material tied up in process is not the same. But in the case of each product, the price of pig certainly has a very definite bearing and relation to the price of the product, and as the price of pig changes and reacts, there is a reaction in the price of the product.

I repeat that in the case of oxides, the margin is very small, and the margin, I think it is fair to say, is small in the case of dry white lead; and white lead and oil, although it is a little larger. But the prices vary, and they reflect the price of the principal raw material ingredient. So that you have not got here a case of rigidity in price not reflecting the true underlying market condition. And I think that is a very important factor.

Now, there is just one other subject I want to mention briefly, and that is reverting to the suggestion that the respondents here have no protection from the provisions of the National Industrial Recovery Act.

Entirely aside from my contention, which I believe the evidence establishes, that there were no agreements except for standard code prices, any person carrying out a provision of that code is entitled to protection. I certainly think that it cannot be disputed that industry representatives when they were considering the formulation of
4329 codes, could discuss any matters they wanted to with absolute and complete freedom. When they came in this case to the point of having a code, they included a

price reporting provision and a provision at least permitting the use of uniform terms and conditions of sale. I say at least permitting, because I can see room for the contention that the provision was mandatory, although the particular provision does not so state itself.

What happened? The code was approved, and they asked to be relieved from compliance with those provisions, and they were given three months' relief. They asked again, and the record indicates that they never did attempt to comply with those provisions. There was no price reported.

Now it is contended that since we didn't have to comply with the provisions relating to terms and conditions of sale, anybody who did anything can't claim protection because they weren't carrying out the terms of the code.

Now I say that the code was there. The mere fact that we might have been given relief, or had it held in abeyance, that there is an exemption, doesn't lead to the conclusion that there was no code provision, and that because he did this he had no protection.

That, as I say, is entirely aside from the argument that I earnestly urge, that National adopted a uniform standard of terms as its own independently and without agreement, but I do not see how they can blow hot or cold on that point.

4330 That concludes my part of our presentation.

Mr. DuBose: Your Honor, these first few matters I am going to take up for the most part involve perhaps minor corrections to the proposals as submitted by Mr. Wright.

I call Your Honor's attention to page 4 of the proposed findings and conclusions of counsel for the Commission, and the first paragraph following the list of cities, the first sentence, which states: "National is by far the largest producer and seller of lead pigments in the United States," and then he sets up the white lead and oil percentages, and the next phrase is: "About 50 per cent of the dry white lead."

Now, actually, that is incorrect. McCarthy, who was manager of trade sales for National, stated that according to his recollection for a great many years National's percentage of dry white lead sales and shipments was approximately 30 per cent.

Now that is transcript, page 1665, in addition, Commission's Exhibit 664, which shows the percentage of National's dry white lead basic carbonate sales for 1940, 1941 and 1942, shows that those percentages varied between 35 and 37 per cent.

Now, on page 5 of the proposals of Mr. Wright, at the middle of the page, reference is made to the alleged negotiations during 1902 between National and the well-known Messrs. Thomas Fortune Ryan, Daniel Guggenheim, et al. looking to the purchase of certain properties. And
4331 at the bottom of that page reference is made to Commission's Exhibits 5-B and C, which were the minutes of a special meeting of the board of directors of National held December 11, 1902.

It is true that at that meeting the purchase of those properties was authorized. Now on page 6 of Mr. Wright's proposals, the first line, it is stated: "These negotiations do not appear to have been completed."

Well, in the first place, the minutes don't show negotiations as such. There was an authority to purchase. Actually, that authority to purchase was rescinded, as is clearly shown in Commission's Exhibit 6-C, which is a portion of the minutes of the adjourned regular meeting of the board of directors of National, held on January 22nd, 1903.

Trial Examiner Norwood: Authority as to this list on page 5, that was rescinded?

Mr. DuBose: That was rescinded.

Trial Examiner Norwood: On C-Ex-6-C?

Mr. DuBose: On Commission's Exhibit 6-C. Now, Mr. Ewing has already brought out the facts with respect to the stock purchases, and so forth, by National, in Eagle Picher, and I just want to point out that the stipulated facts with reference to the proposal in May, not June, 1931, as listed there, appear at pages 4182 and 4183 of the transcript.

We begin on page 9 of the proposals by counsel for the Commission to come to the first, you might say, im-
4332 portant inference or implication which counsel seeks to put into his proposals, most of which, we will demonstrate, are wholly unsupported or directly contrary to the reliable probative and substantial evidence.

I refer on page 9 to the last sentence of the paragraph under the heading "American Smelting and Refining Company," where it is stated that the position of the AS&R, as that company is called by all the parties here, in the domestic lead market, and its dominance "is demonstrated by the fact that the respondents herein agreed to use its daily quotations of lead prices as the sole basis for quoting spot carload prices on red lead and litharge."

I take it that the inference there is that not only was there an agreement, which in itself would be illegal, to use AS&R's daily quotations, but that the amounts to be added to AS&R's pig lead quotations is sought to be inferred.

Well, reference is made to Commission Exhibits 809, 615, and Respondents' Exhibit 137. Now, Commission Exhibit 615 is a notice from the home office of the National Lead Company to its branch managers, pointing out that on carload quotations for government, municipal, industrial, rail, steamships, and so forth, National itself was using a straight differential over AS&R's pig lead quotations. The other two exhibits relate to the code, one of them being the code itself. Respondents' Exhibit 137 is the minutes
4333 of the meeting of the Lead Oxide Committee of the
Lead Pigments Division, held on December 14th and 15th, 1933, which was one of the meetings at which terms for the supplemental code covering lead oxides were discussed. Commission's Exhibit 809 is the code itself. In Schedule A, Articles 1 and 2 contain the conditions for sale of lead oxides, as to both less than carload, and carload lots.

And, as Your Honor pointed out last Wednesday, with respect to the carload differential over pig lead, article 2 of the code itself states that the differential shall be "as agreed upon by buyer and seller," another indication that the lead pigments industry, unlike almost every over industry in the country in 1933 and 1934, did not want price fixing, even in a code.

Trial Examiner Norwood: Well, as I read that proposal there, it was merely cited to show American Smelting and Refining Company's importance in this price structure here. So if that wording were changed there, would that be satisfactory?

Mr. DuBose: I should think so.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record.

Mr. DuBose: Now, on page 10 of counsel's proposals—and when I throw this out and refer to counsel's proposals,
I mean proposals submitted by counsel for the Com-
4334 mission, in the matter of the first full paragraph,
which is just before Part II, page 10, it is stated that

the respondents between them account for a substantial portion of the production of competing products, that is products which compete with these lead pigments.

Now, there is really no proof in the record as to just what portion of these competing products the particular respondents produce, that is, of pigments, other than those mentioned in the amended complaint, although it is true that Glidden, through its own vice-president stated that it was one of the largest producers of lithopone.

However, when you come to perhaps the most important competing product, such as leaded zinc oxide, true, Eagle-Picher stressed this—but there are no per cents in the record, and I take it that there wasn't any claim that there was any such proof.

Then we come to the next to the last sentence of the same paragraph, in which the statement is made that the National Lead and DuPont "have recently been found to have a monopoly power in production and sale of titanium pigments, which are also produced and sold by Glidden through its subsidiary, American Zirconium Company."

There is nothing in the record with respect to this alleged recent finding, but I suppose that counsel wishes the
Trial Examiner to take official notice of the recent
4335 decision of the Supreme Court, affirming a decree of
the Southern District of New York Federal Court—
United States *vs.* National Lead Company, which is reported in the Advance sheets, 332, U. S. 319.

Now, actually, if official notice may be taken of that case by the Trial Examiner without proof of record in that case, actually, that case dealt with cross licensing of patents and a cartel arrangement, and the lower court in denying divestiture by National and division of certain of its plants, held, and the Supreme Court reiterated that holding, that in the absence of these restrictive cross licensing and cartel arrangements, healthy competition would be fostered in the industry. The court, particularly at pages 347 and 348 of Volume 332 of U. S. Reports, and again at pages 351 and 352, points out that even with these restricted agreements between National and DuPont, there was still active and healthy competition between those two. And it also points out that the two other producers not involved had increased their competition while this arrangement was going on. So that the court concluded that this was not a proper case for divestiture, which the Government was seeking to have the Supreme Court decree to be proper, because they stated—

Trial Examiner Norwood: Well, I would like, before full argument on both sides, to be shown the relevancy of that matter.

4336 Mr. DuBose: I suppose it is this: By making that statement, counsel for the Commission was saying that National, while it is true that its lead pigments compete with other products, nevertheless had a monopoly power in one of these competing products, namely, titanium.

In that connection, Your Honor will recall that in the 1946 St. Louis hearings, one of the paint manufacturers from St. Louis pointed out that in the early '30's, when titanium first came on the market, it was very high priced; prices had been reduced; they had found that it was better in some respects than basic carbonate of lead, and that it was being used more and more to replace basic carbonate of lead.

And I suppose counsel's contention is there, "Sure, you have these competing products, but you control those two," and I just wanted to point out that that record in that anti-trust case is not before the Trial Examiner. But if you can take official notice of it, that statement that National and DuPont had monopoly power, is contrary to the direct holding in that Supreme Court case.

Trial Examiner Norwood: We will recess to 1:30, and we will reconvene in room 332, on this floor.

(Whereupon, at 12:10 o'clock p.m., a recess was taken until 1:30 o'clock p.m. of the same day.)

4337 Afternoon Session.

1:30 p.m.

Trial Examiner Norwood: The hearing will be in order. You may proceed, Mr. DuBose.

Argument of Mr. DuBose (Resumed).

Mr. DuBose: Your Honor, before we go into the merits of counsel's proposals, and not in a spirit of criticism, we would like to say that in our opinion the proposals of counsel for the Commission hardly meet the requirements of the Rules, as we understand them.

We understood, and attempted to set forth in our proposed findings—and I speak for all Respondents there—numbered findings of fact, some evidentiary, a lot of ultimate facts, and referred therein to the record, made concise conclusions of law, and attempted to give our reasons for both at the end.

In reading counsel's proposals, however, we are faced with a mixture of all three intertwined, and I say we don't say that in any spirit of criticism. We all were working against time, but it has to some extent made our work of reply a little more difficult.

Now, before I leave our proposals, the proposals of respondent National, perhaps in some instances we have cut a few corners and made flat statements that there
4338 was no agreement; there was no conspiracy. In so
doing, of course, we meant that the record contained no evidence, and no substantial, probative and reliable evidence that those ultimate facts existed.

So, as I say, in a non-critical spirit we point this out, which will explain perhaps the rather voluminous reply that was necessitated by the manner in which counsel's proposals were given to us.

As we understand the new Administrative Procedure Act and the new rules of the Federal Trade Commission, under both of which this proceeding is being heard, the evidence necessary to support either proposed findings or the findings that are finally made must be reliable, probative and substantial, and that counsel in support of the complaint under the Administrative Procedure Act has the burden of proof; under the new rules of the Federal

Trade Commission must support them by the greater weight of such evidence, namely reliable, probative and substantial evidence.

Inferences can be drawn only from such reliable evidence. Inferences cannot in turn be based upon inferences. Nor can an agency in arriving at its informed expert judgment neglect to found that judgment on the substantial evidence in the case.

In Part 2 of his proposals, counsel begins what I imagine
he would view as the crux of his case. In Part 2 the
4339 attempt is made to show that before 1933 the lead
pigments industry was characterized by deviations
among the various manufacturers as to practices and methods of sale; but that after 1933, under the guise and cloak of forming a code, the Respondents set forth a rigid system.

Now, counsel states that the recollection of witnesses as to practices prior to 1933 was very vague. Necessarily, much of the parol testimony was vague even as to a few years ago, since 1933; but we believe that the evidence clearly shows that as a general matter the same pricing practices have obtained in the lead pigments industry for years prior to 1933. Some of the price cards prior to 1933 substantiate this.

Respondent's Exhibits 154-A to I, which was a tabulation that was gotten out by the witness Tibbetts showing the relationship between common pig lead prices New York and the prices of the various pigments, substantiate that statement.

Perhaps next to McNair, the one witness who had a more intimate connection with the industry prior to 1933 was Mr. Sprague, who in 1924 and 1925, upon the acquisition by Glidden of Houston Lead, went into that plant to run it. He testified as to the pricing practices then in effect. He showed that the market leader then, as now, was National
Lead Company, based largely upon the amazingly
4340 successful consumer acceptance that the Dutch Boy
label had established for itself among master painters in this country, who handed down their knowledge of this particular product from generation to generation.

There was the same practice prior to 1933 of selling white lead in oil and dry white lead on the basis of territorial differences in price.

Prior to 1933, oxides were sold on what might be called a territorial differential basis, because on distant shipments, as Mr. Carroll testified, where the freight was more than 25 or 30 cents, freight was added to the price on carload shipments, and on l.c.l. shipments freight was charged in addition to price from certain designated warehouses.

The attempt has been made to show that from 1933 on, oxides were sold on a flat differential over pig lead; litharge at a dollar and a half for carload quantities, red lead at two and a half dollars over pig lead.

The minutes of the National Lead Company Board of Directors of May, 1927, show that National Lead then established that differential of a dollar and a half and two and a half—in 1927, six years before 1933—and at the same time established minimum card prices on l.c.l. shipments of two and a half dollars and three and a half dollars respectively.

4341 So what do we come down to? As Mr. Ewing pointed out this morning, the complaint seems to be that regardless of this general pricing schedule and system as we have seen, which went back to the beginning of the industry, nevertheless, certain changes were made which found their way into Schedule A of the Code.

You adopted agency, and you adopted zones.

Trial Examiner Norwood: But the agencies and zones didn't get into the supplemental code, did they?

Mr. DuBose: They were discussed, and as the Commission's own proof shows—Commission's Exhibit 505—in the meeting in October 1933, freight and zoning problems were discussed without any understanding or agreement being made. That is the Commission's own exhibit. The minutes do not again refer anywhere to zones for white lead in oil, which was the subject of that discussion. We say the Commission can't ignore its own substantial, reliable and probative evidence.

On dry white lead, counsel—on page 12, and in other places in his proposals—states that apparently prior to 1933 there was a lower differential on the Pacific Coast for dry white lead, and he refers to the cross-examination of McNair and the ancient documents that McNair had in preparing his schedule of selling practices.

4342 The reference there was to a price card of 1924, and it merely shows that in certain quantities at that time there apparently was a lower differential for both white lead in oil and dry white lead on the Pacific Coast.

However, Sprague was definite in his recollection that prior to 1933 there was a one-quarter cent differential for dry white lead, prior to 1933, and that is also a reasonable inference to be drawn from certain other testimony.

Trial Examiner Norwood: Now, how does that bear on the issues here?

Mr. DuBose: Very much so.

Trial Examiner Norwood: —as to whether they were selling lower or higher on the Pacific Coast?

Mr. DuBose: Well, our contention is that dry white lead prior to 1933 was also sold on a higher differential on the Pacific Coast, and that the only change made in June 1934 by National itself was the addition of four other states to that Pacific Coast Zone—New Mexico, Colorado, Wyoming, and Montana.

As counsel for the Commission points out, in December 1933, National Lead Company resolved to adopt the terms and conditions of sale in Schedule A for dry white lead basic carbonate beginning January 1, 1934, some five and a half months before the Code was approved, and that appears in the minutes.

Nowhere is any mention there made of selling at a quarter of a cent higher on the Pacific Coast. There was
4348 a quantity discount carload and less than carload, so
that when we come to June, and Respondent's Exhibit 159-A, which was Mr. Rowe's letter to the branch managers of National of June 9, 1934, in the second paragraph it said:

"On dry white lead, a difference of one-quarter cent per pound has been added to the par price in those four states," which would tie in with Sprague's recollection that there was only a modification in 1933-1934 of the dry white lead zones.

Mr. Ewing has also pointed out that the white lead in oil zones for all practical purposes went back to 1910, so we are left with oxide zones and agencies, and the terms and conditions set forth in Schedule A.

Before we get to that, we might look into the claim beginning on page 12, the bottom thereof, of counsel's proposals, in which it is stated that for the ostensible purpose of considering and drafting a supplementary code, the Respondents met together in the fall of 1933.

What are the contemporary documents aside from the parol testimony?

In the first place, here are Respondent's Exhibits 50-K and L, which was a letter dated October 2, 1935—before this case was ever heard of—sent by Mr. Wormser of Lead Industries Association to Mr. Marshall, who was a director of the Division of Review of the NRA, which was
4344 winding up its affairs, and who wanted a lot of information from the Lead Industry as to how the Code worked there and what was back of the Code, and so on. He had a long list of questions that he sent.

The Board of Directors of Lead Industries Association met and authorized Mr. Wormser to send a letter dated October 2, 1935, to which I have just referred, in which, among other things—it was stated:

"In general the members of the lead industry were not of the opinion that a Code under the National Industrial Recovery Act would materially help the lead industry, but pursuant to urgent representations by National Recovery Administration officials, steps were taken to draft a code for the industry."

Respondent's Exhibit 50-O, which is a letter dated the day after—or rather before—October 1, 1935, sent by Mr. Wormser to Mr. Janssen, who was a Deputy Administrator in charge of the lead code of NRA, reads:

"Answering your telephone inquiry as to the reason for the suspension in the operation of Section 2 of Article VII of the Lead Code, you will recall the history of this particular section.

"The Pigments Division had mixed feelings from the start about the advisability or need of incorporating an open price provision in the Code. The section was
4345 included only, I think it fair to state, at the insistence of NRA, which strongly endorsed the proposal. Upon approval of the Code, however, the Pigments Division felt that the lukewarmness of some members made it desirable to postpone the establishment of this practice and to request a suspension until full agreement had been reached."

In Respondent's Exhibit 81-A to C, which are minutes of the Executive Committee of the Lead Industries Association held on September 21, 1933 during the code period, the Chairman called attention to the fact that he had received the following communication from the NRA, and this is a letter from NRA to the Chairman of Lead Industries Association, Executive Committee:

"In conversation with you on September 11 it was our understanding that you would file supplemental codes to the basic lead code not later than September 16.

"We beg to advise that up to this date we have not received these supplementals and are asking that you give this your prompt attention."

That was signed by H. O. King, Deputy Administrator.

The Lead Industries Association replied that they were working on them and hoped to have them in shape.

4346 Now, what do these documents establish? That the Respondents under the guise and cloak of meeting the requirements of the NRA met to form an illegal conspiracy?

That insinuation flies in the very face of the documentary evidence, and that documentary evidence is fully supported by the clear and convincing testimony of Mr. Wormser, who stated the same thing, that they didn't want codes, but did it at the urgent insistence of NRA, and of the other witnesses who testified as to those meetings.

Then in Part 3, which runs from pages 13 to 28 of counsel's proposals, we come to the crux of his case.

Trial Examiner Norwood: Just a minute. Cite me that documentary evidence you are talking about there.

Mr. DuBose: Respondent's Exhibit 50-K and L; 50-O; 81-A to C, particularly 81-A and B.

Trial Examiner Norwood: All right.

Mr. DuBose: There may be others; we don't say that is all.

In Part 3 counsel comes to what he apparently regards as the crux of his case, and that is entitled "Cooperative activities (1933-1934)."

As we see it, his position comes down to three propositions:

First, that under the guise of drafting supplementary codes we met and formed illegal agreements. I think
4347 we have fully answered that.

Second, that some of the agreements did not find their way into the Code, and therefore were not protected by the exemption from the anti-trust statutes which is provided for in Section 5 of the NIRA.

What are these so-called agreements? They are listed on pages 26, 27 and 28 of counsel's proposals, beginning near the bottom of page 26, and they are numbered 1 to 14.

Since that apparently is the crux of his case, let us look at those alleged agreements.

The first is to sell white lead in oil and keg products on the basis of territorial differences or zones. We have shown that as far as white lead in oil is concerned that that went back to 1910, so that can be disregarded.

Second is to sell white lead in oil on the basis of consignment contracts, and even in this counsel has to state "except that Sherwin-Williams and Glidden did not take part in this understanding."

Well, Mr. Ewing has fully covered that agency situation, and all I want to do is to show this: that National started this thing for itself in 1932, before the NIRA was passed. They found it was a good method around New York and in the east to get rid of this vicious practice of using Dutch Boy as a loss-leader so they could sell what we claim 4348 are some of the inferior products of some of these other respondents.

Trial Examiner Norwood: Why did the others do it?

Mr. DuBose: Why did the others do it? Which one did it? Eagle-Picher [illegible] the only other one that did it. They had an Eagle brand that was being kicked around, too, but we didn't care what they did with their Eagle brand. We were going to protect our Dutch Boy brand.

It is perfectly obvious that there was no agreement among the respondents.

Trial Examiner Norwood: Well, didn't International?

Mr. DuBose: Never. International, before we even started agencies, had a consignment arrangement, not an agency.

Trial Examiner Norwood: And Glidden didn't come in until '39?

Mr. DuBose: Glidden tried it. As Mr. Sprague testified, their salesmen thought that would be another method whereby they could sell their product. They tried it, but they didn't sell any substantial part. It was a headache to them because of the mixed paint situation, and they dropped it.

Trial Examiner Norwood: Thank you.

Mr. DuBose: Both Sherwin-Williams and Glidden 4349 at these meetings were violently opposed to the consignment feature.

Now, here is Commission's own Exhibit 505-A, which was a meeting of the White Lead in Oil Committee of October 28, 1933. The same exhibit which shows there was no agreement on white lead in oil zones also shows this:

"The Chairman described a new agency system which the National Lead Company was putting into effect—"

And, by the way, the Chairman was Mr. Carter, I believe, or Mr. Rowe of the National Lead Company.

"—for the sale of its lead in oil products, stating that it was an adaptation of a method used by General Electric and other companies, and was designed to correct destructive price-cutting in the white lead in oil business which had seriously affected the marketing of the product. Some other members stated that they, too, were planning to use the consignment system."

We know of no law or any principle of law in the cases which prohibits one competitor from telling any other competitor of a legal method of getting rid of what, from the manufacturer's standpoint, is an economic evil.

In that connection, the agency method of the Gen-
4350 eral Electric Company had at that time received Su-
preme Court approval in, I believe, 272 U. S., and it
is referred to by the Chairman there.

Now, Number 3 is to sell lead pigments in kegs and cans at uniform container differentials. Well, I don't know any proof to show that that started in 1933. Perhaps there is. I don't know.

Number 4 is an agreement to eliminate and refrain from permitting guarantees against declines in prices upon lead pigments packaged in kegs or cans, and red lead and litharge in less than carload lots.

Well, as far as red lead and litharge in l.c.l. lots is concerned, Schedule A of the Code itself in Article I, Subdivision B(4)(c), states that no protection against decline in seller's price may be given.

Trial Examiner Norwood: Was that in the supplemental code that was suspended and never put in operation?

Mr. DuBose: I will come to that in a moment. It was in the Code, suffice it to say for the present.

Fifth is to sell dry white lead on the basis of differentials in zones. We have just shown that prior to 1933 apparently dry white lead had a higher differential on the Pacific Coast.

Sixth is to sell dry white lead upon uniform discounts
with a uniform addition to price quotations for de-
4351 livery in lots of less than twenty tons. That is spe-
cifically provided for in Article III of Schedule A,

Subdivision B(2)(c), which provided for the quarter cent differential for carload lots.

Seven is to eliminate and refrain from entering into contracts to sell dry white lead at a stated differential over the price of pig lead.

In that connection counsel has referred to certain price cards of Eagle-Picher, or certain price data of Eagle-Picher which apparently shows that Eagle-Picher at some time had sold on a differential basis. Again Article III of Schedule A shows that the price shall be the seller's price on the date the contract is made.

Eight and nine deal with oxide zones, and we maintain that Respondent's Exhibit 159-B to J inclusive, which is the letter from Harold Rowe to the Branch Managers of National—not to the other Respondents—shows that National Lead, in connection with Articles I and II of Schedule A was going to set up oxide zones on its own, and evidently the others followed that, since National Lead was the largest producer. They were glad to get a higher price in those distant areas since they didn't have plants there.

Ten is to eliminate and refrain from entering into contracts to supply red lead and litharge in quantities
4352 less than twenty tons at a stated differential over the
price of pig lead. Well, I don't know what that means, because both before and after 1933 on l.c.l. shipments of red lead and litharge National, beginning in 1927, charged customarily a differential of two and one-half cents and three and a half cents.

Trial Examiner Norwood: Isn't there something in the complaint charging you with doing that?

Mr. DuBose: This is what counsel says the evidence in 1933 shows that we agreed to at that time. I don't know how in 1933 National could agree to eliminate and refrain from entering into contracts on l.c.l. red lead and litharge at a stated differential over the price of pig lead when it did it before that time and has done it since on the same basis.

Eleven is to quote and sell red lead in quantities of less than twenty tons on the basis of price cards to go up and down when pig lead fluctuates as much as twenty-five cents.

Well, Article I of Schedule A again said that the seller's price shall be the card price, and as far as I know that has always been the situation, the card price. We have got card prices on red lead and litharge on l.c.l. shipments going back to antiquity.

Twelve—and as far back as the twenty-five cents a
4353 hundred, there is no showing when that started. Both
Zoller and Merson said that is customary, but whether or not it is customary before or after, we don't know.

Twelve is to quote and sell red lead and litharge in twenty-ton quantities on the basis of an S&R price in New York on these stated differentials, a dollar and a half for litharge, litharge seventy-five per cent, $1.75; and ninety-five per cent red lead, $2.50; ninety-eight per cent, $3.00.

Well, the basic litharge and red lead, ninety-five per cent red lead of $1.50 and $2.00 again we say was established by National itself in 1937 and the record so shows. I don't know when the record shows as to seventy-five per cent litharge and twenty-five per cent red lead. However, Article II of Schedule 5 provides for the differentials for ninety-seven per cent red lead and ninety-eight per cent red lead in Subdivision B (5) (d), which says that ninety-seven per cent or ninety-eight per cent red lead shall be marked on the package and "shall be sold at not less than one-quarter cent and one-half cent per pound irrespective of the seller's price for the grades of lower red lead content."

Thirteen alleges agreement to fix arbitrary alleged discrimination between carload, five ton, and less than five
ton purchases of oxides on certain stated differen-
4354 tials. I will go to the differentials first; two litharge
two and one-half over pig lead, and ninety-five per cent red lead of three and one-half again were established by National in 1927. In both carload and less than carload, the Schedule A did make a change because there it provided that the New York price would govern to which a differential as agreed upon between buyer and seller would be had, while prior to that it had been National's custom to permit Chicago and St. Louis to sell on their pig lead.

The five-ton differential is the only thing added there. Prior to 1933 we had a carload and less than carload of a cent. The five-ton differential for oxides is set forth and provided for in Article I of Schedule of the Code in Subdivision B (4) (a) (1). That brief says that in less than carload lots, oxides shall be sold at a price which are the seller's card or quoted price in effect on the date the order is received with an allowance of not more than one-half cent per pound for minimum shipments of five tons.

Trial Examiner Norwood: Well, are there any differences in costs shown, costs of delivery and so on as between five ton and less than five ton?

Mr. DuBose: Not any specific showings as such, not as we showed, for instance, in connection with the white lead in oil zones and as we showed in dry white lead.
4355 On that five ton, Mr. Roe in his letter of May 11, Respondent's Exhibit 195-B, said 'that the five ton price is being induced to take care of the medium size buyer who is unable to meet the twenty-ton requirement but is entitled to something better than the occasional users of the single barrel, which is provided for as I say in Schedule A.

Fourteen is an alleged agreement to establish arbitrary prices, terms and conditions of sale applicable to sales to customers classified as "Government," railroad, steamship lines and industrial.

As far as Government contracts are concerned, if any such agreement were ever made, Respondent's Exhibits 306 to 308 dealing with Government bids on red lead, litharge, dry white lead and white lead in oil in quantities from ten thousand to a million pounds, shows that that agreement was not followed, to say the least. I know of nothing in the record that shows any agreement on prices and materials and conditions of sale to railroads and industrials.

Trial Examiner Norwood: What about this condition here? Are any of these people competitors? Government, railroads, steamship lines and industrials?

Mr. DuBose: Well, railroad, steamship lines and industrials were generally in the same general classification. They all use them for maintenance purposes. In
4356 other words, the red lead in paint and white lead in oil they would use in keeping up their plants and equipment, and so on. I don't think there is any proof that they use it for any other purposes except in the case sometimes—

Trial Examiner Norwood: Were all of them consumers?

Mr. DuBose: Well, I suppose sometimes the paint manufacturer might be classed as an industrial. Now, he would use the raw product in the grindings of his paint which he would later resell to the public, but here he is not talking about discrimination. He is talking about these agreements. This is what he says was done in 1933, and we have shown, 1, that it wasn't done before 1933, or 2, that there is no proof of any such agreement and any such inference would be directly contrary to the substantial evidence, or, 3, it found its way into Schedule A, so that the next step became extremely important to counsel for the Commission. He realized he must try to knock out Schedule A, and he does that by an argument which can only be classified as tortuous. Any argument so tortured would raise doubts as to its validity on its face. How does that argument run? First, he says in the Code itself, Article VII.

Trial Examiner Norwood: Is that in his oral argument to me?

4357 Mr. DuBose: Both in this oral argument and in his proposals as we spell out his argument. Article VII contains a trade practice rule for lead pigment differentials, and I am reading from page 337 of Commission Exhibit 809. He says Section 5 merely required filing of prices and differentials from the terms and conditions of sale of Schedule A, and therefore Schedule A didn't have to be followed. Then what is his step to follow it? He says you get no protection from Section 5. Now, Section 5 of the NIRA says: "While this title is in effect, and for sixty days thereafter, any Code agreement or license approved, ascribed or issued and in effect under this title, and any action complying with the provisions thereof taken during such period shall be exempt from the provisions of the anti-trust laws of the United States."

Now, he says, "You weren't even required to follow Section 2 of Article VII, and right there he comes up against his first insuperable barrier. If there was no agreement to follow them even for Code purposes, how can you spell out agreement on any of their basis?"

Secondly, even if there were agreement on those terms and conditions of sale which found their way into Schedule A, it was agreement to include those in the Code. The section, or Schedule A, Section 2, Article VII, and Schedule A is incorporated by reference into Section 2 of 4358 Article 7—was not deleted from the Code. It was not deleted from the Code. They merely obtained an exemption from the mandatory or impliedly mandatory provisions. Again counsel is faced with a second insuperable barrier. If there was nothing mandatory about it, there couldn't have been any agreement to follow.

Now, why did they get an exemption?

Trial Examiner Norwood: Do you think they couldn't agree to follow it in case they weren't forced to follow?

Mr. DuBose: There could be outside of that, yes, but what does the record show? In the code meetings they agreed to have this in the Schedule, then when they get up to the Code they get an exemption from it. Why?

The exemption order—it didn't delete the Schedule or the Section, exempted the members of the industry from the provisions of Section 2 of Article VII and Schedule A for a period of three months provided, "that such exemption be granted without prejudice to further extension beyond three months if at the end it shall appear to the Administrator that the industry has been unable to determine it upon either the execution of Section 2 of Article VII and Schedule A—which is a part thereof—or upon the modification thereof.

4359 Now, a further exemption was requested in the fall of 1934 at the expiration of those three months. Why?

Because the industry "has not yet been able to determine upon the modification of Article VII, Section 2, it desires."

There are two ideas there, on both of which counsel is hooked. If it weren't mandatory, there is no agreement, because the only agreement in the record was to include it for Code purposes, and if they later decided to get an exemption from it, the agreement falls itself. In the second place, regardless of that, it was in the Code, and anyone, whether by common course of action, planned or otherwise, who followed Schedule A was complying with a term or provision of a Code, and specific granted exemptions under it and the anti-trust statutes as provided for in Section 5 of the NIRA.

Trial Examiner Norwood: We will recess for five minutes.

(A short recess was taken.)

4360 Trial Examiner Norwood: Proceed.

Mr. DuBose: In this Part 3 of his proposal, counsel repeatedly refers to a statement which appears in one of the minutes of the meetings, Commission's Exhibit 504-B, where uniform bases for the sale of oxides and dry white lead were being discussed for code purposes. Those eventually became Schedule A, and he attempts to imply and have one infer that the words "that prices were not mentioned in deference to existing statutes" was used in some cynical or sinister fashion to mean "Well, we have already agreed on prices, why do we have to put them in?"

Then he says, "They were well aware—"

Trial Examiner Norwood: I don't find any part 3. It skips from 2 to 4.

Mr. DuBose: I think part 3 begins on page 13 at the top of the page.

Trial Examiner Norwood: Thank you.

Mr. DuBose: It also says that the manufacturers of lead pigments were well aware of the anti-trust statutes, because they sent Wormser to consult counsel, and then Mr. Carter later wrote to the other respondents.

Well, we say that "in deference to existing statutes" means exactly what the term implies. In other words, they were not going to indulge in price fixing even for code purposes when the sky was the limit, as Mr. Wormser
4361 said, and when almost every other industry, as has been seen in the other cases before the Commission, put in everything that they possibly could in the code to have exactly every price known. Every price had to be reported. If they did not follow the pricing, they were to be cracked down upon by the Administrator.

We knew the NRA was temporary. We were not going to have any price fixing provisions, even in the code, regardless of what these fellows said. Even on price reporting we were reluctant to put in anything. The Administrator put in or suggested and urged the adoption of a section which would practically amount to rigid adherence to filed prices. We didn't even want that, and we redrafted it.

He says that Mr. Carter discussed, in the Fall of 1933, the use of uniform provisions with the others. What does Mr. Carter say in that letter? He says that it was thought that since prices were not mentioned, that in spite of the fact that counsel did not give a go-ahead signal, after discussion, they felt there was nothing wrong in having the privilege of following them, if they wanted to, and what is the proof?

There was only one company, National Lead, which followed any of those in Schedule A before May 1934, and that was only as to dry white lead. We know of no law that prohibits any manufacturer or seller from adopt-
4362 ing any schedule of materials which in themselves

are non-discriminatory or otherwise fair methods of competition.

Would Mr. Cornish, then president of the National Lead, and a lawyer, have made the public statement in July of 1934, Respondent's Exhibit 168, and we quote:

"We feel"—We, National Lead—"that price fixing permits inefficient competitors to enter an industry. For this reason we are glad that none of the N. R. A. associations in which National Lead Company holds memberships provides for price-fixing.

"The suspension of the anti-trust laws, which was effected by the National Industrial Recovery Act, is only temporary in my opinion. When the anti-trust laws return, many companies may again have to learn to operate on an efficient, economical basis."

Would the president of a large concern, who is a lawyer, have made that public statement if he did not sincerely believe, and having known of the code and all of its provisions, that there was nothing in there which in itself contravened the anti-trust statutes?

There is one other thing that deserves comment on this Part 3, and that is the apparent attempt to use this group of documents, Respondent's Exhibit 159-A to J, as a
springboard from which to claim that this on its face
4363 shows agreement with other respondents. We say
nothing could be further from the fact. In support
of that, counsel refers to 159-D, where is was stated:

"All sellers have agreed to discontinue the old 90-day card price contracts. All sellers have agreed." That is what Mr. Rowe told his branch managers. He also refers to the quotation later on on that same page:

"There was a great deal of discussion as to the rule against protection against price decline, and it was finally decided to make a definite rule which was intended to mean that the price to apply on any order is that 'in effect on date order is received'."

Both of those provisions are in Schedule A. He is referring there to Schedule A, Article 1, Terms of sale as to oxides in lots of less than 20 tons. The price there was to be the seller's card or quoted price. There was no protection against decline.

Now, when you come to the 90-day contract, the price was to be seller's card price. Article 1 further provides in Subdivision (B) (7), that shipment shall be made at least within 30 days from the date order is received.

With respect to this provision, which in effect got rid of 90-day contracts, Mr. Rowe said:

"The words 'at least' were put in at the request 4364 of the N. R. A.,"—This is from Respondent's Exhibit 159-D—"which is also responsible for some of the other phraseology in the schedules. Any order taken at the prevailing price must be for shipment within 30 days."

The N. R. A. itself requested that 90-day contracts be discontinued, and it was provided for in Schedule A, and any action complying with that, we say, is protected by Section 5 of the N. I. R. A.

We realize that counsel in this case has been placed in a difficult position, counsel for the Commission. This is the first case that we are aware of where it is not claimed—and there is no proof of any agreement after the termination of N. R. A. to continue the practices.

All the other cases—Deitgen, Malters, Milk and Ice Cream Can, and Ford Howard—proved either agreements before N. R. A. or after or both.

Thus, in the Ford Howard Paper Company case they met a few days after N. R. A. was declared unconstitutional in their association. "The Crepe Paper Association case we agree to continue the practices." A year later they say, "We agree that this shall be our list of prices."

That, we believe, accounts for what we again say is the tortured argument in this case, that we couldn't follow the terms of a code, and the attempt to show by inference, based upon inference and ignoring the re- 4365 liable and substantial documentary evidence that no agreements on anything that was not in Schedule A were ever made.

We believe that this case is the case in which the language of the Circuit Court in the Cement Case Company can aptly be used, and I am quoting from 157 Federal 2d 533 at page 549:

"To hold that members of an industry can be invited and perhaps required by the Government to participate in a program for the general welfare under a promise of immunity, and that evidence of their doings and activities in connection therewith can be used to hold them for a conspiracy would constitute a fraud or perhaps confidence game would be a more appropriate designation."

Counsel, to get around that principle, which is more than equitable estoppel, but is based upon the statute of the N. I. R. A. itself, relies upon the Socony Vacuum case, and he says there the court pointed out how you could obtain exemption by putting it in the code and getting it approved, which we did.

But let us look at the Socony Vacuum case. What were they doing there? They were buying distress gasoline in the Texas and Midcontinent area for the practically admitted purpose of keeping the retail prices of gasoline up in the midwest. With this hot oil coming in there, it
4366 would have destroyed their price structure. While
they urged acquiescence on the part of the N. R. A. officials, actually the record shows that after the Schechter decision on May 27, 1935, and with that in mind, the Tank Car Stabilization Committee of the respondents in that case, the oil producers, held a meeting at which is was decided that the buying program should continue, and thereafter the committee continued to meet each month to set up these powers. That is after the N. R. A. appeared, and that is referred to at 310 U. S. 185. That is a wholly different situation.

That brings counsel down to Part 4. He now says there is an illegal conspiracy, because you did these things, and in spite of the fact that the N. R. A. urged you to do it, you got it in your code. You don't obtain the benefit of an exemption. But he does not claim that there is any agreement among any of the respondents after N. R. A. He could hardly make such a claim. When N. R. A. was ended, the code authority of the Lead Industries Association, which is composed of the executive Committee and the chairman of the various divisions like Lead Pigment, Metallic Lead, and so on, met and wound up its affairs, returned the labor statistics in the fall of '35, as Mr. Ewing pointed out, when Berry, who had the resounding title of Coordinator of Industrial Cooperation, wanted to get the lead industry down in Washington to discuss voluntary following of N. R. A., they said nothing doing.

4367 No exclaiming, of course, no meeting of the respondents after N. R. A. But he says National Lead, on June 6, 1935, by its executive committee, says that the termination of N. R. A. does not require any changes in our practices. Why not? No order, that I know of, ever issued by the Federal Trade Commission in a case of this sort has prohibited anything but a planned or agreed-to course of action.

That shows on its face that National Lead itself, in general, was going to follow these terms and conditions of sale as a matter of individual choice. They didn't wait to talk to anybody else. They said, "We don't think there was any price fixing in this business we had before, and we think we are going to follow it. We know of nothing illegal in that. And, as a matter of fact, there hasn't been rigid adherence to that, as Mr. Carter and Mr. Merson testified.

Certain provisions of Schedule A have not been followed as a matter of general company policy. The same way with Eagle Picher. They have not adhered rigidly to that program. They have made certain exceptions.

On page 29 of his proposals, counsel tacitly admits that what he calls "the considerable dissimilarity in offered prices" on bids by the respondents and others to governmental agencies, might be some evidence of substantial competition, but he says, "Even if such were the case, the price difference as to one particular type of customer
4368 does not detract from a conspiracy as found."

Well, we have quoted from those government bids on pages 40 to 42 of our proposals. We have shown the quantities involved. We have shown that those bids, on their face, are all over the lot. If these respondents were going to try to fix up a price fixing conspiracy and adhere to it, how can that action on those big bids be explained?

As the Court in the Cement case said, if they were conspirators, they were a queer lot of conspirators.

Now, sales to government agencies are not governed by the Clayton Act, Section 2-A, as amended by the Robinson-Patman Act. Everyone knows that. So, where you don't have that Robinson-Patman Act language hanging over your head, and you have these big bids coming in, which may mean the difference between keeping up your plants to full capacity or not, you have got them bidding all over the lot. If they started bidding all over the lot in these other sales of pigments, which would be governed by the Robinson-Patman Act, someone in Cleveland may say, "Hey, how about this? You are selling in Cleveland at this price." And we say, "Well, we thought we might get the business." The Robinson-Patman Act acts to promote a certain rigidity.

We have a low margin of profit, and it is curious to note that on page 41 of this proposal, while complaining of the dealer-agent differential, and while stating that white 4369 lead in oil was a low margin product, on the same page, under a different heading, Effects of Respondent's Practices, counsel says, "Well, the effects are to keep the prices of lead pigments at levels above those that would prevail were it not for such combination."

Now, it is perfectly obvious that you can't have both. Look at this case. You have got a pig lead floor. You have got a narrow margin in every one of the products between pig lead and the finished product.

National Lead for years had been the market leader. These other fellows felt the squeeze. Sometimes they tried to put out a shoddy product, and they found they couldn't get away with that. They tried to improve their methods of manufacture, and that cost something. As McNair said, it costs a million dollars to build a decent white lead plant of good capacity. They found themselves in a squeeze there between the ceiling of our price—because certainly they couldn't sell at prices above Dutch Boy—and the narrow margin between that and the floor of pig lead.

We say that this case demonstrates on its face that for years the market leader has been a conservative and beneficial influence in the industry.

Now, when we get to discrimination, so-called, in Count 2, as we see, the counsel claims four specific things: 1. The quantities differential in oxides; 2. The practice of 4370 selling dry white lead throughout this big zone which extends all over the United States except for those Pacific Coast States; 3. The zones themselves in white lead in oil, and running throughout all three of those, of course, is the mill net theory, or, as counsel now calls it, net shipping point, but I don't think that changes the theory. The fourth element of discrimination claimed by counsel applies only to National Lead. That is its alleged customer classification between dealers and agents. Well, now, to support the quantities differentials on oxides, counsel relies upon the testimony of battery manufacturers. Some said, "Sure, it would be of advantage to us from a competitively standpoint to save five to ten cents a battery."

What did others say? It wouldn't make a bit of difference. In the first place, we believe that the testimony that a saving of five or ten cents per battery would be of advantage to a competitor does not show either the tendency or the fact of substantial lessening of competition, and we say that the testimony of such battery manufacturers as did so testify was not even as strong as the evidence that was thrown out in the Morton Salt case by the Circuit Court, 7th Circuit, in *Morton Salt* against *Federal Trade Commission,* 162 Federal 2d 29.

We say even if that tended to show substantial lessening of competition, counsel, who called all the battery
4371 manufacturers except one, Mitchel, called by Eagle Picher, can't say, "Well, I am going to pick out these that I want and forget about the others." It is his own evidence, and he has got to support his proposals by the greater weight of the evidence.

Now, in any event, counsel tried to limit most of the battery manufacturers to this price competition that they had in what? A 13-plate low-powered battery that all of them admitted was a loss leader, something they had to make because other people made them. When you get into the premium batteries, the quality batteries, as Mitchel testified, and as the others testified, there are prices all over the lot. Price was not then the determining factor in the majority of batteries. It is quality.

Then we come to dry white lead. The mill net theory there is the only thing they had. As far as quantity differentials on dry white lead are concerned, our witness, Owens, by his charts and his figures, fully substantiated the difference of 25 cents in the cost of delivery and invoicing and of sale alone.

Now, what does he show in dry white lead? Well, they are paint manufacturers. They are the largest buyers of the dry white lead basic carbonate. All of those that testified operated in the par zone. As a matter of fact, no paint manufacturer in the east or midwest would probably
4372 go into those Pacific Coast States, so for practical purposes you practically have the mill net theory working in all the United States up to the Pacific Coast.

Well, we just say that mill net is not the way to define price. Price is what the buyer and the seller agree upon to pay for something for delivery to a certain point, and in addition to the Staley case, from which Mr. Hinds, I believe, quoted the other day, we would like to call your Honor's attention to this statement from the Senate Committee report of February 3, 1936, which we quote on page 45.

Trial Examiner Norwood: I am familiar with that.

Mr. DuBose: And in addition, the witness Vasterling showed why paint manufacturers want a flat delivered price. At first glance, someone might say, "Well, that testimony looks funny." But examine it. These paint manufacturers, even those that testified in St. Louis went all over the country into Texas and Louisiana and Georgia, some of them even as far as lower Alabama, and manufacturers in Kansas City, competing with manufacturers in St. Louis, want to be put on an equal basis. They don't think it is discriminatory. They don't want to be punished because of their location, because of a disadvantage on freight, which is in counsel's theory.

They don't want to be penalized for that accident of location.

4373 Can the Commission or any administrative agency compel an industry, regardless of merits of the law, to follow a system which purchasers don't want?

Now, in white lead in oil zones, he says the same shipping point, net shipping point theory applies, and we say that is absurd as a matter of law.

Counsel also states that you can't justify differentials from zone to zone on an average freight cost basis.

Well, on that we respectfully submit that justifying those different prices from zone to zone on an average basis comes strictly within the proviso, because it is making due allowance for differences in the cost of sale or delivery resulting from the differing methods in which such commodities are to such purchasers sold or delivered.

The zone method is just such a method as to come within that proviso, and the only way you can justify such a method is on the average basis.

Trial Examiner Norwood: Making due allowance would be making an adjustment on the basis of the actual freight in shipment.

Mr. DuBose: This is on the basis of actual freight.

Trial Examiner Norwood: And allow for an average for an entire zone.

Mr. DuBose: That is what we claim, that we, by 4374 showing that, come within that proviso in any event, and of course there has been no attempt to show that these differentials, which go up by one-eighth of a cent, have any effect, competitively or might tend substantially to lessen competition. There is no showing of that, nothing from which such an inference could be drawn.

Now, the only other thing deals with the alleged discrimination policy of National between its agents and dealers. The simple answer to that is that in transactions between itself and its agents, the Robinson-Patman Act has no application, that is, in transactions between National and its agents. They are not sales. Title to that white lead in oil remains in National, and the agent sold it for the account of National. It is as though National sold it itself, and National could sell itself to anyone, provided that the general classifications were not competing with each other, and that we clearly showed, I believe.

There is one other thing that we would like to mention just briefly. Counsel apparently urges that an order be entered which, among other things, would, in effect, permanently enjoin National Lead Company from acquiring the stock or assets of any competing concern. There is no thought, so far as we know, in any law or any statute for that proposed order, and in that connection Mr. Justice Frankfurter, in the recent International Salt case, 4375 said in his dissenting opinion that "The Commission is not authorized to make its order needlessly destructive. The baby is not to be thrown out with the bath."

As we see it, there is no present law which prohibits, under any and all circumstances, one competitor from acquiring the assets of another, although there is a certain bill pending that may become law. Under certain circumstances, of course, under the Sherman Act, an injunction can be obtained for some specific acquisition, but never has there been any permanent ban that will run forever against a competitor under any circumstances acquiring the assets of another. Even as to stock purchases you have got to bring an individual action under Sections 7 and 11, the Clayton Act, and even there the Federal Trade Commission has to show some specific instance that the law has been violated or is about to be violated, and you have to have a special hearing, and of course this case was not brought under those sections.

Just one other thing. Counsel for Sherwin Williams, the other day, quoted from the Standard Fashion Company case, 258 U. S. 346, and counsel for the Commission, although he said he had not checked the case thoroughly, stated that the International Salt case contained a definition of those words, "May tend to substantially lessen competition,'' splitting the infinitive, as the statute 4376 does, that the salt case contains a construction of Section 3 of the Clayton Act in those very words in an entirely opposite fashion. I don't believe he is correct there. Of course, in the International Salt case, the practice under attack was making tie-in sales of unpatented articles, and the Court merely held, ''It is unreasonable, per se, to foreclose competitors from any substantial market,'' and further said, ''The volume of business affected by these contacts can not be said to be insignificant or insubstantial, and the tendency of the arrangement to accomplishment of monopoly seems obvious.''

We say that does not destroy the effectiveness of that definition which was quoted the other day.

Mr. Ewing: That closes what the National Lead has to offer.

Trial Examiner Norwood: Thank you, sir.

Mr. Welch?

Mr. Welch: Do you want to take a five-minute recess before you start hearing from me?

Trial Examiner Norwood: We will take a five-minute recess.

(A short recess was taken.)

4377 Trial Examiner Norwood: Proceed.

Argument by Mr. Welch.

Mr. Welch: Mr. Examiner, I find myself in the very enviable position of being almost a Monday morning quarterback. I have been on the side lines in this case for several years without too much direct participation in it. Consequently I think I have some insight on some of the angles that the others in the heat of passion may have missed, and I would like to take the opportunity to expound on those for a few moments.

Before doing so, I cannot refrain from taking the opportunity to direct a few remarks to this document that I believe is entitled ''Proposed Findings and Conclusions'' prepared by Mr. Wright.

Now, throughout this case we have heard quite a bit about blended tobacco, blended whiskey—blended paint, even. This document is even more blended than any of those products, so I want to call your Honor's attention—as has already been done by my associate, Mr. DuBose—

to the fact that this document is a combination of a good many things, including the white dog with the black spot on his tail, or vice versa, depending on which way you are looking at the dog, from the north end or the south end—conclusions, argument, generalization, lack of citation, or what have you. It isn't my understanding that that is
4378 what Rule 21 calls for.

Trial Examiner Norwood: Rule 21 calls for a factual proposal and conclusions, doesn't it?

Mr. Welch: With citations, references and reasons.

Trial Examiner Norwood: It has more citations than Glidden.

Mr. Welch: I have no comment in reply to that, Your Honor.

I call your attention to Item 4 on page 2 where the statement is made that the litharge is sold by the respondents to the battery manufacturing industry, or sometimes referred to in the trade by the respondents as oxides of lead.

Of course, Sherwin Williams doesn't sell oxides to the battery trade, and Mr. Wright in fairness does at some other points in his proposed findings so state, but this is merely cited as an evidence of the generalization and I will cite one or two others and then stop on that thought that we strenuously object to any commitment or agreement on our part inferentially or otherwise that the generalized use of the term "Respondents" describes anything Sherwin Williams did unless there is a specific page citation where it says in black and white that Sherwin Williams did it, and we want that objection to run throughout this entire proceeding.

Now, for another illustration I call your attention
4379 to page 8, down at the bottom of the page, "but is engaged in the sale of such products to paint and varnish manufacturers and other users."

Well, I looked that up, page 1648, and I found where Mr. Merson did make some reference to the fact that red lead was sold for use in paint manufacture, and Mr. Wright said "And Litharge for varnish?"

Mr. Merson said, "No, not that very much. Red lead for paint."

Then I see this further statement in the paragraph including lithopone. What are the facts about that? Mr. Sprague was testifying at page 2652 and 2653. Mr. Sprague said:

"Oh, yes, they make lithopone." Mr. Wright queried, "Do they market it?" "Not to my knowledge."

Now, is that a justification for this generalized statement talking about competitive products?

It is said here also that Sherwin Williams is a manufacturer and producer of zinc oxide. Well, that just isn't so, because the record shows that Mr. Sprague was being questioned as to whether Sherwin Williams made zinc oxide, and Mr. Sprague said, "Do you mean as distinguished from leaded zinc?"

Mr. Wright said "Yes," and Mr. Sprague said,
4380 "No." He said, "No, they don't make it."

Now, then, we come to page 10 at the top of the page. "The Respondents Eagle Picher and Anaconda do a limited amount of business on the West Coast in states west of the Rocky Mountains."

We contend if any respondent is entitled to an accolade for a small amount of its business in any particular territory, we are entitled to it doubled in space, because our volume is less than every other respondent's volume in every one of the products mentioned, and it has been so indicated on the record repeatedly.

As a matter of fact, Sherwin Williams sells no dry red lead and no litharge on the Pacific Coast at all. In 1941 we sold 318 tons of white lead in oil on the Pacific Coast.

Those items are merely given as illustrations, and in making those statements I can appreciate the difficulties that counsel for the Commission was up against. I understand that—the limitations of time and the number of respondents involved—so I have no criticism from that standpoint.

My sole purpose in making the statement is that by my failure to specifically attack any single use of a general term "Respondents" I do not want to be understood as acceding to that being a proper designation of the activities of my own client.

4381 Now, the first discussion that I note of Mr. Wright's to which I want to call some attention is at 4210 where he refers in 1933 to a system of differential and free delivery points, and that, as shown in the list of differential points appearing in Commission's Exhibit 659-C, literally hundreds, and so on—and he goes on to the next page.

Trial Examiner Norwood: That is in his discussion?

Mr. Welch: That is right.

Now, then, when I go from there I go back to page 11 of his brief, and I find his illustration. There is a reference to Commission's Exhibit 659-O, and he said there there is only one town in each of four said states.

I don't know where he picked those four states, and I don't know why he omitted the great state of Mississippi when he made those selections. But be that as it may, it isn't correct, and I do like to have the record correctly reflect the situation, and I therefore call your Honor's attention to Commission's Exhibit 659-J, the same exhibit but another sub-letter, that is all.

Now, what is this differential—an equalization point system? I think the National Lead people have explained that very clearly as applied to their company. The testimony shows very clearly that as applied to Sherwin Williams it is quite a different thing.

4382 The other companies have differentials and equalization points from which shipments may never be made. They are arbitrarily selected points in various cities.

Sherwin Williams' shipping points are actually factory warehouses in every instance. They are places where we carry warehouse stocks.

Trial Examiner Norwood: Are shipments always made from those stocks?

Mr. Welch: Yes, with the one exception that for convenience purposes, when there is a carload order, rather than ship a carload to a warehouse, and then reload it and reship it, we make up the carload back at the factory point and ship direct.

I will go into some of those later, and at this time if I may interpolate, your Honor, my entire discussion of this subject is on the cuff, so if at any time you have any questions you want to ask, please feel at liberty to do so. It will not interrupt my chain of thought, if there is such.

Trial Examiner Norwood: Thank you.

Mr. Welch: Now, when I look at these cities Mr. Wright has referred to in Alabama, Arkansas, Kentucky and Louisiana, he has one city in each of those states.

Well, in the first place, we say there is no evidence that we used the same system, or that if we did use the same system, we used the same cities. And there is con-
4383 siderable variance in that scope.

As a matter of fact, in New Orleans, Louisiana, Sherwin Williams at that time had at least 4 stores, not only in New Orleans, but Monroe, Shreveport and Baton Rouge. In Kentucky we had two that were the same, but we had one additional store—we had one in Lexington.

Now, your Honor, that is assuming what the Commission has contended, that is to the effect that exhibits such as 662-C and D represent a list of shipping points, and that Sherwin Williams stands ready and willing to ship from any of those points.

We contend we do not, but even assuming we do—I am willing to assume that for the moment—assuming we do, they are not the same as National's, so how can the general statement be made as to there being industry wide any equalization point system.

Now, just a moment on equalization, that term has been used differently by two different groups in this case. The National people have explained how they use it, that they have an equalization point. If you ship somewhere else, you equalize freight against that point.

We have explained how equalization is used in the Sherwin Williams setup, and it is simply this: a lot of people apparently throughout this case have thought there was a lot of hocus-pocus and legerdemain about it, but 4384 it isn't that at all, and I will go back to the original example that we used.

We have a man from Union, Mississippi. We have a warehouse in New Orleans, Louisiana. We have a warehouse in Dallas, Texas. The one in Dallas, Texas is a much larger and more complete warehouse than New Orleans.

We look up the rates when the man from Union wants to buy from us, and we find we can ship from Dallas to Union cheaper than we can ship from New Orleans to Union. Now, that doesn't stand to reason. It is silly. It shouldn't be, but we didn't do it—the Interstate Commerce Commission did that. They set those rates.

The purchaser was shipped from Dallas, but he got the advantage of the Dallas rate, and the witness has testified repeatedly that in no instance of equalization did the man pay any more than he would have paid had he received his products from his ordinary shipping point.

Trial Examiner Norwood: You have cited in that connection Respondent's Exhibit 205, wasn't it?

Mr. Welch: I believe that was one of the numbers, Your Honor.

Now, basically to get down to Sherwin Williams' position in this case, the two basic positions that we take are these: The first is about the zone system. As to that we say simply that Sherwin Williams—and I am 4385 referring now to the keg products, any item sold in containers of a hundred pounds or less—didn't have a zone system. We didn't have the zone system because we used a shipping point system, and by that I don't mean the same thing that some of the other respondents mean when they say equalization point.

We actually shipped from the places that we called shipping points. They were that in fact, and that is where the goods came from.

With certain exceptions, the shipments from that shipping point to the ultimate distination carried their full freight, and not a nickel more and not a nickel less. There was a general offer to sell FOB certain shipping points, and that offer was adhered to, and it was so stipulated in the record that we did.

Trial Examiner Norwood: Were your delivery prices at the shipping points the same as the zone prices of the Respondents?

Mr. Welch: Your Honor, I went to considerable effort in my proposals to demonstrate beyond all doubt that that was not a fact, and that was the second point I wanted to raise.

Trial Examiner Norwood: Go ahead.

Mr. Welch: That if you deny our contention that we don't operate on a zone system, and admitting for 4386 the purpose of this argument that we did, it is so different from the others that you wouldn't recognize it, price-wise, and in several other respects which I have set out fully, and I don't think it is necessary to take your time to repeat them except I can say this briefly: Take the eight western states. In the East we had as much as a dollar and a half variance between dry white lead, white lead in oil, dry red lead and litharge.

On the west coast they are all the same, and actually—I mean that—they were all the same price, though in the East there was as much as a dollar and a half variance between them.

In the West, Sherwin Williams red lead in oil was a dollar a hundred pounds higher—less than the difference between it and other products in the East.

Sherwin Williams pricing structure is such—and it is demonstrated in these proposed findings—without regard to National's position of selling to both dealers and agents, Sherwin Williams' price was different from that National offered to either category, and that was consistently true.

Now, that isn't an idle statement that Sherwin Williams has made predicated merely upon the presence in evidence here of price card information.. That is taken from invoices, and I have tabulated that. The long tabulation 4387 was put in by Commission's counsel to show substantial adherence to those price structures, and they do not correspond to the ones set out in subparagraph A of paragraph 8 of Count 1 of the Complaint.

It is like a cross-word puzzle. Sometimes it just won't add up, and this one doesn't. The figures just don't match anybody else's. Why? I think that is pretty easy. Sherwin Williams covers the earth in paint. We are highly competitive with the lead industry. We are not interested in selling lead particularly. It is merely a line that is carried to fill out our line with our dealers so that when painters come in and insist on having lead in oil or dry lead, rather than a ready-mixed paint, they can get it.

Price is not important to us. We set our own price on our own system and schedule, and we held out for it and got it, and the invoices show we got it.

Now, then, coming to dry white lead, we are accused of having done some very reprehensible things there. Maybe we did, but this record doesn't show it. It just hasn't been proved.

You know, this new rule that we have has just recently come into effect, and I was quite interested in it, having been a former Commission employee, and I approached my proposals from the standpoint that I thought 4388 most Commissioners would approach them and as I have probably approached them before.

How much do I have to have? It is in there? Can I get it? Can I squeeze it out?

It can't be done. It can't be squeezed out of this record because it just isn't there. The cow is completely dry—no cream, not even any bluejohn.

The same thing applies, coming to the oxides. Here is the setup, Map No. 3, carload, red lead and litharge zone map, and the only thing I know about carloads of litharge and red lead is contained in a very simple little stipulation which says, "Sherwin Williams does not do business in these products on the Pacific Coast. Company officials do not now have any information that carload shipments of red lead or litharge are made to any point in differential territories except shipments to Sherwin Williams' own plants."

Plants is different from branches or from warehouses. We use that product in our own plants in manufacturing paints, and we ship to those plants in what has been described in the complaint as differential territories.

There is not one single scintilla of evidence in this case that Sherwin Williams ever sold one single carload of red lead or litharge in the territories described as differential territories.

4389 I can't say any more than that. Once I have said that, there is no point in my discussing the differential territories, who designed them, how they operated, or what they did with them because I have never gotten to that point.

They have never proved that we operated any business in those areas, so why are we concerned with them?

Of course the two primary factors in this conspiracy angle of the case are the agency plan and the zones. Well, admittedly we have nothing to do with the agency plan. Everybody admits that. They admitted it at the time, and there was a fight going on, and it was obvious, between the paint people who were trying to bring the lead people under their code, and the lead people saying, "We will have nothing to do with you."

Unfortunately Sherwin Williams was in a position where they did to some extent have to be in both industries, though of course obviously their heart was in the paint industry, and when the proposition of agencies and consignments was broached, Sherwin Williams says, "We will have no part of it", and never did. That is Number One.

Number Two is the zones. We say we have no part of
that. Now, there is a statement in here—I was much sur-
prised—to the effect that before these famous agreements
were reached in 1933 there weren't any quantity dis-
4390 counts. Well, I looked at the Sherwin Williams price
card for January 6, 1933, six months before the first
meeting. I find quantity discounts, 500 pound orders, ton
orders, five ton orders, carload orders. On what product?
White lead in oil, dry white lead, dry red lead, dry litharge.

I don't know what the other people were doing, but here is this general statement that I find in these proposals submitted by the Commission to the effect that there weren't any quantity discounts in those products before these famous or infamous meetings of 1933 took place.

Well, of course, I don't know how seriously counsel for the Commission is taking the position that the respondents in this case are in a position to influence, if not force, a certain retail price on their items.

Well, some of them did have fair trade contracts in certain States. Obviously, that is not against the law, if they do it individually, but as far as Sherwin Williams is concerned, it never had them in any State. There is a statement on Sherwin Williams' price cards which says, "Sherwin Williams suggested retail prices," but there isn't a line of testimony from any dealer that he was ever in any way criticized for not adhering to those prices, if he did not; that any line was taken away from him; that he was refused the poducts when he ordered them, or that any other policing activity ever took place.

4391 Of course, we controlled the retail prices in stores we owned. Remember, Sherwin Williams is in a different position than these other respondents in that we have over 300 stores located throughout the United States where we sell to people such as the Examiner, counsel for the Commission, and counsel for Sherwin Williams, who goes and buys direct from Sherwin Williams a pint, a quart or a gallon of paint or white lead or litharge or whatever product he may want, and of course we control those prices.

There is no law that can prohibit us from doing that.

Now, coming to Count 2 and this matter of discriminations, I must confess that I have had many a sleepless night about this case. I feel somewhat in the position of the man who at one time had a medical case down here before the Commission and the Commission stopped him from representing anything at all about his product, so he ended up with it in a great big beautiful bottle with a great big star on it, and all it said was, "Cited by the Federal Trade Commission."

Is that what is going to happen out of this case, if the order proposed by counsel for the Commission is the result? That has worried me for no little bit, because despite the fact that I am now on the outside, I do have regard for the Commission, for the Commission's proce-

dures, and for its effective control over monopolistic practices. But by the eternal Gods, I don't like to see the
4392 Commission confirm one and give it a certified copy of a degree, saying to any respondent here, "You take nine-tenths of the United States and leave the rest for the little suckers."

4393 I don't know whether the Commission will see it. I don't know. But it is so simple.

Of course, it is stated here in the findings very adroitly —these proposed drafts—about how Chicago has an advantage over other plants in one of these fields. Very interesting, but every other plant except the one in Chicago, and including Chicago, is controlled by one of the respondents, and then we are met with the proposition that there is a reciprocal giving up of territorial advantages. Why, that is sheer poppy-cock. We have got nothing to give up. We are hanging on by the skin of our teeth and always have been.

Your Honor, I feel very seriously about the effect, the possible effect if there should come out of this case an order saying, "You can realize only a uniform mill net on your products because"—and I think these two simple little maps, and I kept them as simple as I could because I thought by their very simplicity they might demonstrate to the Commission the serious economic possibilities that might flow, might or will necessarily flow, they can't do otherwise. Here is National, nine oxide plants, five white lead plants. You talk to me about reciprocal giving up of territorial advantages? There just aren't any such.

4394 Your Honor, that is about all, with one exception, and that is that I think throughout this whole case, broadly speaking, there has been a complete failure of proof in so far as Sherwin-Williams is concerned. What do I mean by that? I mean by that that I think it is still the law—of course, it has been changed very considerably, but I think it is still the law that the Commission has to prove something about some competitive effect, and that has not been done. Battery manufacturers? Sure. Sherwin-Williams did not sell to the battery trade. Paint manufacturers? Dry white lead? Yes. Is there any showing that Sherwin-Williams sold white lead to any one of them or to any one of their competitors? Not a line, not a line. There is one statement by Mr. Merson that Sherwin-Williams sells red lead for use in paint, but there isn't anything about white lead. There is not one line in this 4,000 page record showing anything about the effect of any practices in so far as Sherwin-Williams is concerned in selling its products.

Now, as I stated in my proposals, I don't care if five cents a battery or ten cents a battery does make a vital difference in the battery business. Maybe it does, but that has nothing whatever to do with what difference or lack of difference it would make in some other industry, particularly when we bear in mind the fact that Sherwin-Williams'
own price announcements show that we are primarily
4395 selling maintenance accounts, railroads, steamship
lines, apartment houses, industrial concerns. They are not making a product they are requesting to sell out of the product they buy from us. They are merely keeping up their equipment.

It seems to me that with that being the situation it is almost impossible—and perhaps that is why it wasn't done —almost impossible to prove any competitive effect in the respective lines of business of the concerns making the purchases. Oh, yes, the argument that I will be met with is what about your own line? My answer to that is that any concern whose business is one per cent or less can have very little effect, competitively or otherwise, on the business of anyone else. Thank you, sir.

Trial Examiner Norwood: Mr. Wright.

Mr. Wright: May we go off the record here?

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Mr. Welch: It is now rather late in the day, and I am not going to be able to cover a reply to all of the statements by Mr. Hinds, Mr. Gardiner, Mr. Ewing, Mr. DuBose, Mr. Welch and Mr. Wood in the time remaining today. I understand that counsel want to return to their offices, so if that is agreeable with counsel and with the examiner, I will file as quickly as possible a statement in lieu of my oral reply to the arguments of counsel.

4396 Mr. Ewing: That is certainly agreeable to all
counsel for the respondents.

Trial Examiner Norwood: Counsel may do that, and we have a clear understanding then about filing any additional proposals between now and the 25th. I will ask counsel to send those in, in whole or in part, as soon as they can. The quicker you send it the more help it will be to me.

Now, there is nothing further, I understand, so the case is now closed.

Mr. Welch: Your Honor, just one second. Corrections to the record. I don't believe they have been disposed of.

Trial Examiner Norwood: Do you have any statements of corrections for the record?

Mr. Wright: Can we attempt to get together with counsel? It will not be necessary for Your Honor to hold a hearing, I don't think. We will get an informal agreement between ourselves on that, and submit that matter with the corrections that we are agreed on and any other representations that we might have about those things we might not agree on. I don't think it will be any of those.

Mr. Ewing: I don't think there is a chance of their being disagreement as to the corrections.

Mr. Wright: To you by the 25th of January.

4397 Trial Examiner Norwood: They should be made
long before that. You don't contemplate then their being entered on the record in a conference with the rule?

Mr. Wright: It was my thought they could be filed in the form of a statement which would be a part of the record.

Trial Examiner Norwood: The Commission's rule is that those corrections be in the record proper, and appearing at the last hearing so that everybody will know just where to turn to find out what the corrections are that have been made.

Mr. Wright: If that is the case, Your Honor, could we then set a hearing for the 25th for the limited purpose of inserting in the record the corrections that we can agree on, and it will not be necessary for any counsel except those local counsel here to attend that.

Trial Examiner Norwood: Not on the 24th, 25th or 26th of January, because I will have my report well under way by that time. We have to close the case and then the docket transmits to me the entire record so that I can go to work on the report, and I can't delay that any longer. I suppose in the emergency you may submit the agreed list to me and I can approve them all and file them in the record.

Mr. Wright: I should think that would be satisfactory, because this presupposes that we will all be in agreement
on what they are, and none of us will urge anything
4398 inconsistent.

Mr. Ewing: I can't conceive of there being any disagreement.

Trial Examiner Norwood: There is nothing to prevent my approval of these corrections after the case has been closed, so with that understanding that you will submit to me agreed lists of corrections to the record, which I will allow in whole or in part, as appears just and proper, and I will have those filed in the record, and with that understanding the case is now closed. Within thirty days, or such further time as may be necessary, I will file my report and recommend a decision to the Commission. Counsel, under the rule, will have the stated number of days to file their briefs and serve them on each other. I refer you to the rule on that.

The hearing is adjourned sine die.

(Whereupon, at four o'clock p.m., the hearing was adjourned.)

1386 COMMISSION'S EXHIBIT NO. 5.

Minutes of Special Meeting of Board of Directors of National Lead Company held at No. 100 William Street, New York, on Thursday, December 11, 1902 at 11 A. M.

Present:

Messrs. L. A. Cole
J. A. Stevens
J. L. McBirney
R. P. Rowe
E. F. Beale
A. P. Thompson
G. O. Carpenter
F. W. Rockwell
E. C. Goshorn

The time of the meeting was taken up in discussing the advisability of entering into a contract for the purchase of properties and businesses of a number of concerns engaged in the manufacture of lead and kindred products.

On motion, the meeting was adjourned until the following day at 10 A. M.

Charles Davison,
Secretary.

Minutes of Adjourned Special Meeting of Board of Directors of National Lead Company held at No. 100 William Street, New York, on Friday, December 12, 1902, at 10 A. M.

Present:

Messrs. L. A. Cole
J. A. Stevens
J. L. McBirney
R. P. Rowe
E. F. Beale
A. P. Thompson
G. O. Carpenter
F. W. Rockwell
E. C. Goshorn

The principal part of the time was again consumed in discussing the contract referred to in minutes of meeting held the previous day.

1387 On separate motions, the following resolutions were each unanimously adopted, the roll being called in both cases:

~~Resolved,~~ That the officers of this company be authorized to execute and deliver an agreement between this company and Messrs. T. F. Ryan, Daniel Guggenheim and H. H. Rogers, which said agreement is in words and figures following:

This Agreement made this .... day of ...., 1902 between ...., parties of the first part and National Lead Company, a corporation of the State of New Jersey, party of the second part, Witnesseth:

Whereas, the said parties of the first part have acquired or control by purchase or option to purchase the properties and businesses of the following concerns engaged in the manufacture of lead products and kindred products:

Name of Concern	Located At
Hoyt Metal Company	St. Louis
Chadwick-Boston Lead Company	Boston
Tatham & Bros.	New York
Tatham & Bros.	Philadelphia
Gibson & Price Mfg. Co.	Cleveland, O.
James Robertson Mfg. Co.	Baltimore
Raymond Lead Co.	Chicago
E. W. Blatchford Mfg. Co.	Chicago
Lawrence Shot Lead Company.	Omaha, Neb.
Markle Bros.	E. St. Louis, Ill.
American Shot & Lead Company	New York, Cincinnati, St. Louis, Mo.
Kahn Bros. & Co.	New York
Thomas W. Spark	Philadelphia
Ronalds, Johnson & Co.	Brooklyn
L. M. Ramsey Mfg. Co.	St. Louis
N. O. Nelson	St. Louis
W. J. Matheson & Co., Ltd.	New York
Wetherill & Bro.	Philadelphia
N. Z. Graves & Co.	Philadelphia
McDougall White Lead Co.	Buffalo, N. Y.
Sterling White Lead Co.	Pittsburgh, Pa.
The Davis Lead Co.	Pittsburgh, Pa.
Gebhart White Lead Co.	Dayton, O.
1388 The Eagle White Lead Co.	Cincinnati, O.

Carter White Lead Company
Chicago and Omaha
Hammar Bros. White Lead Company
St. Louis, Mo.
Union Lead & Oil Company Brooklyn, N. Y.

and

Whereas, the said party of the second part is now engaged in the manufacture of lead and kindred products and desires to enlarge its business:

Now, Therefore, in consideration of the premises and of the sum of One dollar by each party to the other in hand paid, the receipt of which is hereby acknowledged, the parties hereto covenant and agree as follows:

I. The parties of the first part agree to sell, convey and deliver or cause to be sold, conveyed and delivered unto the party of the second part the aforesaid properties and businesses as going concerns, including the good will and all property and rights, real and personal, of every description of said concerns, and each of them, as the same existed on the first day of July, 1902, with such changes as have since occurred in the ordinary course of business, together with all accretions and additional property acquired by said concerns, or any of them, between said date and the date of the consummation of the sale contemplated in this agreement (except that in the case of the aforesaid Ronaldo, Johnson & Co., of Brooklyn, N. Y., L. M. Rumsey Mfg. Co. of St. Louis, and N. O. Nelson of St. Louis, the good will, machinery and fixtures only are to be sold and delivered) also all the shares of capital stock of such of the aforesaid concerns as are incorporated (except in the case of the said Union Lead & Oil Company of Brooklyn, N. Y. whose capital stock is not to be delivered). The said properties and businesses are to be sold and delivered free and clear of any and all liens or encumbrances of any nature or description, except an obligation of $150,000 for the purchase price of property occupied by the said Union Lead & Oil Company, which said obligation is to be assumed by the party of the second part.

II. The parties of the first part agree that the titles of the aforesaid concerns to their respective properties may be examined under the supervision of counsel of the party of the second part and that the reasonable expense of such examination and certification of said title shall be borne by the parties of the first part.

1389 III. The party of the second part agrees (subject to and conditioned upon the assent of its stockholders) to purchase from the parties of the first part the aforesaid properties and businesses, and to pay therefor $17,000,000 in par value of 5% debenture bonds and $15,000,000 in par value of the common capital stock of said party of the second part, when and after the assent of the stockholders of the party of the second part to such purchase and to the increase of capital stock and issue of stock and debentures required to complete the same shall have been obtained.

IV. In case the parties of the first part shall find it impracticable to deliver within six months after January 1, 1903, the property and business of Wetherill & Bro. of Philadelphia, or the property and business of the aforesaid Eagle White Lead Company of Cincinnati or the property and business of Hammar Bros. White Lead Company of St. Louis, they shall not be required to do so, but in that case there shall be deducted from the aforesaid purchase price $706,000 in par value of said debenture bonds for the said Wetherill & Bro., $2,353,000 in par value of said debenture bonds for the said Eagle White Lead Company and $529,000 in par value of said debenture bonds for the said Hammar Bros, White Lead Company.

V. The parties of the first part agree to procure from each of the individuals composing the aforesaid concerns and from each of the officers and directors of such of said concerns as are incorporated and from said Union Lead & Oil Company an agreement satisfactory in form and effect to the party of the second part that neither of them will, except as manager or director or employee of the party of the second part or of some branch of its business carry on or be engaged or interested or permit their respective names to be used directly or indirectly in any business which could compete with the business heretofore carried on by their respective concerns, or the business to be hereafter carried on by the party of the second party, for the period of fifteen years from the date of this agreement in any part of the United States of America except .... without the written consent of the party of the second part.

VI. The parties of the first part agree, upon the consummation of the sale contemplated in this agreement,
1390 to pay to the party of the second part the sum of
$6,500,000 in cash, provided all said properties and
businesses are delivered, in the event that the properties

and businesses of the said Wetherill and Bro. cannot be delivered $300,000 is to be deducted from said payment in cash, if the said properties and business of the Eagle White Lead Company cannot be delivered the sum of $900,000 is to be deducted from said payment in cash, and if the said properties and business of the Hammar Bros. White Lead Company cannot be delivered the sum of $200,000 is to be deducted from said payment in cash. The parties of the first part shall be credited as part of such payment with the amount of net quick assets (exclusive of tools, implements, animals, vehicles, materials or tools or implements in use or which have been used) of the concerns whose properties and businesses are sold and delivered to the party of the second part. For the purpose of ascertaining the amount of such net quick assets, in every case where they are not mutually agreed upon by the parties hereto, the same shall be appraised by ...., certified accountants, whose certificate as to such amount shall be final and binding upon both parties, for the purposes of this agreement. In making such appraisal said accountants shall estimate raw materials at their market price at the date of transfer, and raw materials in process of manufacture at their actual cost at the several stages of such manufacture. In all cases where accounts and bills receivable are included among said quick assets the payment thereof at maturity shall be guaranteed by the parties of the first part.

VII. The party of the second part shall pay to the parties of the first part, in addition to the considerations already mentioned, the further sum of $1,000 in par value of the aforesaid debenture bonds for each one cent of saving per ton effected in the manufacture of white lead by the Union White Lead & Oil Company's process, as compared with the process in use at the Jewett Works of the party of the second part on Staten Island, provided, however, that the product of said Union White Lead & Oil Company's process proves to be of equal commercial value with that of the product of the said process in use by the party of the second part; the comparison to be made over a period of six months, commencing .... under conditions to be mutually agreed upon by the parties hereto.

The amount of said savings, if any, shall in case of disagreement, be ascertained by three arbitrators, one 1391 selected by the parties of the first part, one selected by the party of the second part, and the third chosen by the two so selected.

VIII. The sale and transfer contemplated by this agreement shall be consummated on or before January 1st, 1903, provided the assent of the stockholders of the party of the second part shall theretofore have been obtained. But in case it shall not have been possible to complete the examination of the titles of said concerns by said date, such further time shall be allowed as shall be reasonably necessary to complete such examination.

In Witness Whereof, the parties of the first part have hereunto set their hands and seals, and the party of the second part has caused its corporate seal to be hereunto affixed and these presents to be signed by its .... the day and year first above written.

Resolved, That the following actions of the Executive Committee be and are hereby approved and confirmed:

Appropriating $6,000 for repairs to corroding houses at Southern Works, Chicago, to be charged to Repairs as cost is incurred.

Appropriating $1,000 for cost of erecting storage tank for water, about 20,000 gallons capacity, at Southern Works, St. Louis.

On motion, the meeting then adjourned.

Charles Davison,
Secretary.

1392 COMMISSION'S EXHIBIT NO. 6.

Minutes of Adjourned Regular Meeting of Board of Directors of National Lead Company held at No. 100 William Street, New York, on Thursday, January 22, 1903, at 11 A. M.

Present:

Messrs. L. A. Cole
J. A. Stevens
R. R. Colgate
R. P. Rowe
G. O. Carpenter
A. P. Thompson
E. F. Beale
F. W. Rockwell

The minutes of meetings held November 20, December 11, 12 and 18, 1902, and January 15, 1903, were read and duly approved.

President Cole officially notified the Board of the death of the Treasurer Joseph L. McBirney on December 24, 1902, and on motion appointed the following Committee to draft resolutions expressing the sentiments of the Board:

F. W. Rockwell, Chairman
E. F. Beale
J. A. Stevens

On separate motions, the following resolutions were each unanimously adopted, the roll being called in each case:

Resolved, That the following actions of the Executive Committee be and are hereby approved and confirmed:

Authorizing sale to Cass & Daly of a plot of ground 140 x 285 ft. at Salem, Mass. for the sum of $5,000.

Appropriating $650 for cost of hydraulic pump at Eckstein Works to be charged to Repairs during 1903 in equal monthly amounts.

Appropriating $4000 for cost of 4 new corroding houses at the Eckstein Works.

Authorizing the following completed C. & R. Ac-
1393 counts to be charged to Maintenance Account on December 31, 1902:

Atlantic Branch.

No. 169—	2,217.35	One hand furnace and repairing German furnace at Bradley Works.
No. 174—	5,346.99	Dock at Crooke Works.
No. 176—	1,977.50	Re-building Stacks at Jewett Works.
	$9,541.84	In all.

John T. Lewis & Bros. Co.

No. 166—	$3,535.55	Cost of erecting tan Sheds.

Resolved, That the net amount of $5,652.85 credited to Plant Investment during the year ending December 31, 1902, as per detail below, be and is hereby approved and confirmed:

Cr.

Net Proceeds from Sale of Davis-Chambers property by the National Lead & Oil Co. of Pa.	49,476.00
Sale of a strip of land by the St. Louis S. & R. Co. to the St. Louis Branch	375.00
Sale of old engine &c. from Anchor W. L. Works	300.00
Sale of old boilers &c. from Maryland W. L. Works	165.52
	$50,316.52

Dr.

Maryland W. L. Works Charged back	32,803.75	
Balance of cost of Chicago Oxide Plant	923.39	
Cost of 5 add'l Red Lead Furnaces at Chicago	7,339.59	
Cost of add'l Lead Pipe Press at Chicago	3,221.94	
Purchase of a Strip of Land by the St. Louis Branch from the St. Louis S. & R. Co.	375.00	
Balance to Cr. of Plant Investment	5,652.85	$50,316.52

Resolved, That the sum of $159,234.07 be and is hereby carried to the credit of Surplus Account, Said Sum being the undistributed portion of net earnings of the Company for the fiscal year ending December 31, 1902.

Resolved, That this Board hereby fixes the amount to be reserved out of the accumulated profits as working capital until further action by this Board at $1,437,041.57, being balance shown in Surplus Account on December 31, 1902.

1394 Resolved, That in conformity with the By Laws of this Company, the annual meeting of stockholders be held February 19, 1903, at No. 1 Exchange Place, Jersey City, N. J. and that the books for both Common and Preferred Stock be closed January 29, 1903, and remain closed until February 9, 1903, and that the President appoint a Committee, with power of substitution, to receive proxies, and to vote the same, at the said meeting of stockholders.

Resolved, That John B. Frothingham and Harold Naudain be and are hereby appointed Inspectors of Election of Directors at the stockholders meeting to be held February 19, 1903.

Resolved, That a sum not to exceed $50,000 be and is hereby appropriated to cover cost of Advertising during 1903.

Whereas, At a meeting of this Board held December 12, 1902, a resolution was passed authorizing the execution and delivery by the officers of this Company of a certain agreement, which said agreement was made a part of the record of that meeting and

Whereas, The said proposed parties to said agreement have since declined to become parties thereto,

Therefore be it resolved, That the resolution of December 12, 1902, authorizing the execution and delivery by the officers of this Company of the said agreement be and the same is hereby rescinded.

In accordance with a resolution above recorded, the President appointed the Committee, with power of substitution, to receive and vote proxies at the annual meeting of stockholders, to consist of Messrs. L. A. Cole, F. W. Rockwell and J. A. Stevens.

On motion, duly seconded, Mr. L. A. Cole was constituted Chairman of the Committee on Construction, Repairs and Manufactures, to fill the vacancy made by the death of Mr. McBirney.

On separate motions, the roll being called each time, the following resolutions were adopted. Mr. Stevens voting in the

---

United Lead Company
National Lead Company

Dealings and Contracts.

On Feb. 26, 1906, the American Smelting and Refining Company entered into a contract with the National Lead Company for the sale of pig lead. The contract recites that the Smelting Company is a producer and seller, and the National Company a consumer and purchaser, of pig leads, known as "corroding", "desilverized common", "soft Missouri" and "chemical" lead, and that the National Company owned the entire capital stock of the St. Louis Smelting and Refining Company, engaged in mining lead ores in Missouri and refining lead ores at its works at Collinsville, Ill.; and the contract provides in substance as follows: that the Smelting Company shall endeavor to procure ores derived from domestic sources for the production of pig lead in sufficient quantity to fill the orders of the National Company; that the Smelting Company agrees to sell, and the National Company agrees to buy, (1) all the requirements of the National Company for pig lead for the purpose of corroding and in the manufacture of white lead, except pig lead to the amount of not exceeding 30,000 tons

a year, produced by the Collinsville works and used by the National Company in the manufacture of white lead and oxides of lead, (2) 85% of the total requirements of pig lead of other kinds of the National Company in each year, but not exceeding altogether (including pig lead covered by 1) 85% of the pig lead derived from domestic ores produced by the Smelting Company and the companies which the latter operates or otherwise controls, excluding the Selby Company; that if the Collinsville works in any year produces lead in excess of 30,000 tons, the National Company shall sell to the Smelting Company, at the option of the latter, all such excess, or so much thereof as the Smelting Company shall elect, at 5% less than the schedule price of the Smelting Company for corroding pig lead; that in determining the 85% of the National Company's requirements (other than for corroding purposes) that company may, at its option, deduct (a) lead which the National Company is compelled to take under contract now in ef-
1439 fect, such contracts not to be extended without the
consent of the Smelting Company, (b) chemical pig lead not made or deliverable by the Smelting Company as the National Company may be required to buy to meet the demands of its trade; that so much of the said 85% of the National Company's requirements as the Smelting Company fails to ship may, at the option of the National Company, be purchased from other parties; that the price for pig lead, other than corroding lead, shall be the average of the lowest daily schedule prices of the Smelting Company for the respective qualities and brands specified, at the respective points of delivery, in effect in the calendar month preceeding the month of shipments, such price, however, not to exceed on any day the price at which lead of a similar quality could be imported and delivered at the points of delivery if purchased at the spot quotation of the London metal exchange on the same date, after payment of commission, freight, duty, etc.; that the price of corroding lead shall be the foregoing price for pig lead, plus $2 per ton in excess thereof (subject to certain corrections on account of the presence of bismuth); that the agreement shall continue in force for 15 years from its date.

On the same day, Feb. 26, 1906, the American Smelting and Refining Company entered into a contract with the Hoyt Metal Company, a constituent company of the National Lead Company, for the sale of antimonial lead. The contract recites that the Smelting Company desires to sell, and the Metal Company to buy, the Smelting Company's entire product of domestic antimonial lead, the latter term being defined as "antimonial lead in commercial form produced in the United States of America, but not including antimonial lead produced in bond, nor including antimonial lead held by the Smelting Company for further treatment, reduction, refining, or composition, nor including lead containing less than 2% of antimony". The contract provides in substance that the Smelting Company shall sell, and the Metal Company shall buy, all the domestic antimonial lead produced by the former during the life of the contract, such lead to contain not less than 14%, nor more than 40%, of antimony; that all lead shipped from 1440 refineries in Chicago or west thereof shall be delivered f.o.b. cars St. Louis, and all lead shipped from refineries east of Chicago shall be delivered f.o.b. cars Perth Amboy; that all lead produced in any one month under the contract shall be shipped during that month or within five days thereafter, up to 800 tons, no shipment in any month to exceed 800 tons, except with the consent of the Metal Company; that the price of the lead for St. Louis delivery shall be the average daily price of common desilverized lead as quoted in that month by the Smelting Company for lots of 50 tons or more for delivery in St. Louis within 30 days; that the price for lead shipped for Perth Amboy delivery shall be the average of the daily prices of common desilverized lead as quoted within the month by the Smelting Company for lots of 50 tons or more for delivery in New York City within 30 days, provided that if this price shall be more than 1.075¢ per pound above the average of daily spot quotations for soft Spanish lead given by the London metal exchange for the month in which such shipment is made, then the price to be such average London metal exchange spot quotations, plus 1.075¢ per pound (this proviso being based on a tariff rate of 1½¢ per pound, and the margin of 1.075¢ per pound to vary in proportion as the tariff rate may vary); that the price specified is subject to certain corrections on account of the presence of arsenic; that the contract shall continue in force for 15 years from its date.

The foregoing agreements with the National Lead Company and the Hoyt Metal Company were made simultaneously with an agreement by the National Lead Company for the purchase of the common stock and bonds of the

United Lead Company from the managers of a syndicate which had undertaken the underwriting of the securities of the latter company, to which underwriting the American Smelting and Refining Company was a subscriber.

The United Lead Company was organized under the laws of New Jersey in January (certificate amended in May), 1903, and was capitalized at $25,000,000, divided into 250,000 shares of $100 each, of which $10,000,000, represented by 100,000 shares, was 6% cumulative preferred stock, and $15,000,000, represented by 150,000 shares, 1441 was common stock. The company was also authorized to issue $15,000,000 in 5% debenture gold bonds, due July 1, 1943, and redeemable any time after April 1, 1911, by lot.

The organization of the company was promoted by Grant Hugh Brown, who entered into a contract with the United Lead Company, dated June 17, 1903, (copy not available) whereby he undertook to convey, or cause to be conveyed, to the United Company the capital stock, or the properties and business, of the following companies:

1. American Shot and Lead Company; entire capital stock.
2. Gibson Price Company; entire capital stock.
3. McDougall White Lead Company; property and business.
4. Hoyt Metal Company; capital stock.
5. Markle Lead Works Company; capital stock.
6. Union Lead and Oil Company; property and business.
7. Gebhart White Lead Company; property and business.
8. J. Van Lengerke; letters patent.
9. James Robertson Manufacturing Company; property and business.
10. E. W. Blatchford Company; property and business.
11. Tatham and Brothers; property and business.
12. Picher Lead Company.
13. Raymond Lead Company; property and business.
14. Bender and Aldred Company.
15. Carter White Lead Company.
16. Chadwick Boston Lead Company; capital stock.

Of the foregoing companies, three, namely, the Picher Lead Company (12), Bender and Aldred (14), and the Carter White Lead Company (15), were not acquired. Of those acquired; the American Shot and Lead Company is said to have been a consolidation of the principal shot towers of the country; it had plants at New York, Chicago, Cincinnati, St. Louis, New Orleans, Omaha, St. Paul and Pittsburg. The other companies named included many of the principal lead alloy factories and some of the white lead works outside of the National Lead Company, which was the largest manufacturer of white lead and various lead oxides in the country.

Brown further agreed to pay to the company $3,000,000, most of which was paid in quick assets of the companies acquired. In exchange he was to receive $12,000,000 par value in the company's bonds and $15,000,000 par value
in the company's common stock. Owing to the failure
1442 of Browne to acquire the Picher Lead Company, the
Bender and Aldred Company, and the Carter White Lead Company, it was agreed that $1,360,000 par value in bonds of the company should be deducted from the amount of such bonds deliverable to him under his contract, thus making the total amount deliverable $10,640,000 par value.

In the organization of the United Lead Company Browne was associated with Thomas F. Ryan, who had heavily invested in the Union Lead and Oil Company above mentioned, a concern organized to manufacture white lead according to a new process. This company had not proved successful, and the plan was formulated for the consolidation of the Union Company with the other lead manufacturing companies above enumerated in the formation of the United Lead Company. In this project Mr. Ryan interested Mr. Daniel Guggenheim. Accordingly, on July 16, 1903, a syndicate agreement was made between Grant Hugh Browne of the first part, the subscribers of the second part, and Thomas F. Ryan and Daniel Guggenheim, syndicate managers, of the third part. This agreement referred to the contract between Browne and the United Lead Company, and provided for the underwriting of $5,000,000 of the bonds of the United Lead Company at 80% of their par value. The agreement further provided that Browne should deliver to the syndicate managers, in addition to bonds up to $5,000,000 as paid for at 80%, all the common stock of the United Lead Company receivable by him under his contract, except so much thereof as might be needed to acquire properties and except such as Browne was entitled to for his expenses and commissions. The American Smelting and Refining Company subscribed to $750,000 par value of these bonds and paid on account of its subscription $600,000, such payments being made in June, July and August, 1903. This subscription proportionally represented 22.11% of the total subscriptions.

Up to February, 1906, the United Lead Company had received on account of the Browne contract, in addition to the properties and capital stock of the constituent companies mentioned, $2,096,764.92 in cash or its equivalent, on account of the $3,000,000 cash or its equivalent payable by Browne. The United Lead Company, on the other hand, had issued on its part $9,510,000 par value in bonds
1443 on account of the $10,640,000 par value in such bonds
issuable under the contract, as well as $5,000,000 par value in common stock on account of the $15,000,000 par value in such stock issuable under the contract. At this time, therefore, the securities of the United Lead Company were held as follows:

Bonds authorized	$15,000,000
Bonds issuable under contract,	10,640,000
Common stock authorized,	15,000,000
Common stock issuable under contract,	15,000,000
Preferred stock authorized,	10,000,000
Preferred stock issued (in treasury)	16,500
Bonds held in treasury,	$ 700,000
Bonds held by public,	5,418,000
Bonds held in syndicate,	3,392,000
	$ 9,510,000
Common stock held in treasury,	$10,000,000
Common stock held by public,	255,800
Common stock held by syndicate,	4,744,200
	$15,000,000

To entitle the syndicate, therefore, to the additional bonds deliverable under the contract, amounting to $1,130,000 par value, and to the additional common stock deliverable under the contract, amounting to $10,000,000 par value, the syndicate was required to pay to the United Lead Company the difference between the $3,000,000 in cash or its equivalent payable under the contract and the $2,096,764.92

already paid, or $903,235.08. This amount was paid in February, 1906. The syndicate managers thereupon had at their disposal—

Bonds already held,	$ 3,392,000
Bonds now received,	1,130,000
Total bonds,	$ 4,522,000
Common stock already held,	$ 4,744,200
Common stock now received,	10,000,000
Total common stock	$14,744,200

On Feb. 26, 1906, the syndicate managers entered into a contract with the National Lead Company for the sale to the latter company of all the securities of the United Lead Company thus held by them; and they further agreed by this contract to cause to be conveyed to the National
Company the white lead plant and business of the
1444 Selby Smelting and Lead Company in California near
San Francisco. The National Company agreed to give in exchange $9,725,091.69, payable $2,713,600.00 par value in its preferred stock, $5,750,000.00 par value in its common stock, and $1,261,491.69 in cash. The National Lead Company was capitalized at $50,000,000, divided into 500,000 shares of $100 each, half preferred and half common. At this time $17,904,000 par value of preferred stock was outstanding, and $14,905,400 of its common stock was outstanding. The stock of the National Lead Company issued in exchange for the securities of the United Lead Company increased the outstanding stock of the National Company by the several amounts so issued. In the distribution of the stock of the National Company made by the syndicate managers the American Smelting and Refining Company received as its share 5,400 shares of preferred stock and 9,839 shares of common stock. In the syndicates distribution of cash the American Smelting and Refining Company received as its share on account of its subscription, $33,932.59.

Apart from its subscription of $600,000 to the syndicate underwriting; the American Smelting and Refining Company, in January 1904, bought 50 bonds of the United Lead Company directly from that company, paying par value for the same, or $50,000. These bonds were sold by this company in June and October, 1906, for $38,950. In the months of April, June, July and October, 1906, and February, 1907, the stock of the National Lead Company received by the American Smelting and Refining Company on account of its syndicate subscription was sold for $1,321,233.59. The details, therefore, of the investments of the American Smelting and Refining Company in connection with the organization of the United Lead Company are as follows:

1445

1903	Payments account subscription to syndicate:		
June	Amount paid	$ 25,000.00	
July	Amount paid	250,000.00	
August	Amount paid	25,000.00	
1904			
Jan.	Amount paid	300,000.00	600,000.00
	Purchase of United Lead Co.'s 5% bonds:		
1904			
Jan. & Apr.	Cost par		50,000.00
	Total cost		650,000.00

Amount Realized:

National Lead Co.'s stock received from syndicate: 5,400 shares preferred, 9,839 shares common; sold as follows:

1906		
April	2,400 shares preferred	$ 245,327.00
June	700 shares preferred	71,123.50
July	2,300 shares preferred	233,691.50
October	9,000 shares common	712,655.50
1907		
February	839 shares common	58,436.09
	Total	1,321,233.59

	Sale of 50 bonds:			
1906				
June	34 bonds	$27,030.00		
October	16 bonds	11,920.00	38,950.00	
	Cash received from syndicate:			
1906				
December		$30,021.32		
1906				
September		3,911.27	33,932.59	
	Total realized			1,394,116.18
	Net amount carried to Profit & Loss			744,116.18

In addition to the stock of the National Lead Company received by the Smelting Company on account of its syndicate subscription, the Selby Smelting and Lead Company received for its white lead plant and business at San Francisco 7,500 shares of the National Lead Company's common stock. This stock was sold during the year 1907 for $563,950.

1446 It will be observed from the foregoing account that although the United Lead Company was formally organized in the spring of 1903 and was engaged in business as a separate entity from about that time, its organization had not been completed up to the time of the sale of certain of its securities to the National Lead Company, inasmuch as all the terms of the Browne contract had not been fully complied with and, hence, all the securities deliverable thereunder had not been issued, much less finally disposed of by Browne or the syndicate managers. From this circumstance it resulted that the affairs of the United Lead Company during the period from its organization to the sale to the National Lead Company were virtually under the control of the syndicate managers. The president and treasurer of the United Company during this period were also officers of the American Smelting and Refining Company. The directors of the United Company were Thomas F. Ryan, J. J. Moreman, Charles Tatham, E. R. Hoyt, Daniel Guggenheim, Morris Guggenheim, Simon Guggenheim, Barton Sewell and Edward W. Nash. Of these nine directors, the last five named were directors of the Amer-

ican Smelting and Refining Company. Following the sale of United Lead securities to the National Lead Company, the officers of the United Company were chosen by the National Company and no longer included any persons identified with the American Smelting and Refining Company. On the board of directors, however, the latter company continue to be represented by Murry Guggenheim and Edward Brush. The American Smelting and Refining Company was also given representation on the board of directors of the National Company, in 1906. Of the fifteen directors of the latter company, three were, Daniel Guggenheim, Murry Guggenheim and Edward Brush. These representatives, respectively, resigned their positions on the directorates of the above companies in 1911. The reasons for such resignations were two: first, because neither the American Smelting and Refining Company nor the directors named were stockholders in either company, except as holders of qualifying shares and except as stock of the National Company may have been bought and sold from time to time
1447 as an investment; second, because it was felt that the position of these gentlemen as directors in a lead purchasing company was inconsistent with their position as directors in a lead selling company with which they were primarily concerned. Aside from the connection involved in these directorships, the American Smelting and Refining Company ceased to have any interest in the stock or other securities of both the United Lead Company and the National Company after the purchase of the former by the latter and after the Smelting Company had disposed of its distributive share of the National Company's stock as above noted.

By reference to the lead sales contract made with the National Lead Company, it will be noted that the National Company is required to buy from the American Smelting and Refining Company—

> (a) all of the National's corroding lead requirements, except so much thereof as its Collinsville plant supplies up to a maximum of 30,000 tons per annum;
>
> (b) 85% of all its pig lead requirements, exclusive of corroding lead, less so much chemical lead of other brands as may be demanded by its trade;

and that the Smelting Company is required to meet these requirements up to 85% of its domestic production of pig lead of all kinds, excluding the production of Selby. For the earlier contract years, accurate figures of sales under this contract are not available. Figures for subsequent years are the following.

Corroding Lead (tons)

Contract Year	Nat'l Production Collinsville	A. S. & R. Co. Sales to Nat'l	Total
Feb. 1906 to Mch. 1907

1450 Company, or in the sale of the latter to the National Lead Company. It may, or may not, have been an object of some of the others concerned. The profits realized on the sale of the United to the National were sufficient to furnish an adequate motive for such sale on the part of the sellers.

2. The situation of the Smelting Company throughout these transactions, as it must always be, by reason of the peculiarity of its business, was that of a producer who must always take, and pay for on the spot, all the raw material of his product that may be offered, when it is offered, and in the quantities offered, with practically no control over such quantities. This procedure involves enormous outlays of money and enormous acquisitions of stocks, which are constantly replenishing, and which, therefore, cannot be suffered to accumulate. To keep such a process in motion, stocks must be disposed of practically as fast as they are acquired; and to keep the business solvent, prices must be realized on the sale of such stocks which on the whole are as high as the prices paid. The risk that this steady intake and output cannot be as regularly disposed of, and that such prices cannot be realized, is necessarily very great. In proportion to this risk is the need of the Smelting Company for an assured market at steady prices for its product. Instead of marketing its product in the form of crude metal, the Smelting Company might extend its operations by working up its product, in whole or in part, in form for final consumption, and market the same as a manufacturer. This would be one way of assuring a demand and outlet for its product, or a portion of it. Instead of taking its chances in the market as it may exist from time to time, and making no effort to diminish the risk incident to its business, the Smelting Company might contract ahead for the sale of its product, or portions of it, with consumers whose requirements are both large and constant. Both courses were followed in the present instance. In itself, either course would seem to be, not only legally unobjectionable, but commercially natural and proper.

3. But, it may be said, at the time of making the lead sales contract in question, the National Lead Company was engaged in the lead smelting business as well as in the 1451 lead manufacturing business, and deriving its supply of corroding lead in part from its smelting operations,

and was in a position to so extend such operations as to derive therefrom, not only its supply of corroding lead, but its supply of pig lead generally; the Smelting Company, in turn, was in the lead manufacturing business as well as the lead smelting business; to the extent that each company was engaged in the business primarily conducted by the other, they were competitors; and by the lead sales contract this competition was eliminated. The fact is, however, that the extent to which the two concerns were so competing was negligible. The National's smelter at Collinsville (St. Louis Smelting and Refining Company) treated only ores from its own mines in Southeastern Missouri (Ingalls, pp. 116-117), and when the contract was made, was producing but 1,500 tons per month or 18,000 tons per year (Brush to Lehmann Apr. 4, 1913). It still treats the same ores, and is permitted under the contract to produce 30,000 tons per year. Since the contract was made, it has actually produced from 20,000 to 26,000 tons per year and as much as 28,000 tons per year. At no time prior to the contract did the Smelting Company's relative interest in the United Lead Company exceed 23 per cent of that company's capitalization. The products of most of the constituent companies, furthermore, like shot and lead alloys, were not manufactured by the National Company. In so far, moreover, as the Smelting Company's interest in the United Lead Company was anything more than a mere investment, which it seems principally to have been, and is to be regarded as an entry into the manufacturing field, it marked a departure from the settled policy of the Smelting Company to confine its operations to the production of raw metals, and was a tentative venture at most. Both before and since, the Smelting Company has consistently stopped short of taking up those branches of the metal industry which undertake to put metals in shape for final consumption (except on the West coast, where the situation is peculiar, and where the Selby Company had already adopted a different course, which it has continued to follow). To have remained permanently in the lead manufacturing business the Smelting Company would have had to go outside of its chosen field and become qualified
1452 in the details of a separate industry. If, therefore,
the effect of the contract was to rid the Smelting Company of a possible competitor in the smelting business, and the National Company of a possible competitor in the manufacturing business, this was a remote and incidental

result of the acts of the parties, and neither the direct and necessary effect of the contract, nor the primary purpose it was plainly intended to serve. The subject matter of the contract was the sale and purchase of pig lead—the product which the Smelting Company must dispose of, and which the National Company must obtain. The contract directly tended to meet the respective needs of both companies. It gave the former company a market for a large portion of its product at prices reasonably steady; it gave the latter company, in large part, an assured supply of necessary material at similar prices. This was the obvious and controlling motive of the contract, as well as its immediate and necessary result. If it also resulted in the abandonment of any possible intention, on the part of the Smelting Company, to compete with the National Company in manufacturing, or, on the part of the latter, to compete with the former in smelting, this was an entirely secondary and incidental effect. The object of the Smelting Company being to insure a continuous outlet for its pig lead, there would be no need of retaining an interest in a manufacturing company, if a long term contract could be made to supply, not only that company's requirements, but the requirements of another large company in addition. The object of the National Company being to insure a constant supply of raw material, which it was able itself to produce in part only, it might prefer to subordinate its own production to that of another company, if it could contract for the purchase of the entire excess of its requirements on favorable terms. The contract in no way restricts the output of the National Company in respect of its proper and established business of manufacturing; nor does it in any way restrict the output of the Smelting Company in respect of its proper and established business of smelting and refining.

4. The open lead market is contracted, of course, by virtue of the agreement, to the extent, on the one hand, that the product which this company would have to offer is 1453 diminished by the requirements of the National Company, and, on the other hand, to the extent that the National Company is no longer obliged to bid for its requirements. The extent to which a closed market thus exists is much less than would appear from the face of the contract. Assume that this company produces and sells 60% of the lead product of the country. As shown above, the National Company purchases under the contract only

52% of this company's production, or 31.2% of the country's production. This leaves 48% of the production of this company, or 28.8% of the total production, for sale in the open market. The latter percentage added to the 40% produced independently of this company makes 68.8% of the total production available for the market. Of the total requirements of the National Company, this company furnishes only 66%; of the remaining 34%, about 14% represents corroding lead of the company's own production, and about 20% represents market purchases.

5. Under the contract, the largest single consumer of pig lead in the United States agrees to purchase exclusively from the largest single producer, for fifteen years, all its requirements for corroding lead (save so much as it produces itself up to a certain maximum), and eighty-five per cent of all its requirements for other lead (save such quantities as it may require of other brands); and such producer agrees to sell to such consumer a sufficient amount to meet such requirements up to eighty-five per cent of its domestic production. As the contract has worked out, the consumer actually purchases from the producer but 67% of its requirements in respect of corroding lead, only 65% of its requirements in respect of other lead, and but 66% of its total requirements of lead of all kinds, while the producer actually sells but 52% of its total production. Does this situation give evidence of wrong-doing? The largest, no less than the smallest, producer must sell to some one, if he is to produce at all, just as the largest, as well as the smallest, consumer must buy from some one. There can be no objection to their dealing with each other, as in the present case, unless the dealing is of such a nature as to deprive other consumers of an opportunity to purchase their supplies, or to deprive other producers
1454 of an opportunity to sell their production, or unless the dealing results in the making of a monopoly price. None of these features characterize the dealing in question. The supply of pig lead has never fallen short of the full demand on the part of all consumers, who have accordingly never suffered from an inability to procure their raw material as needed (except, possibly, at rare intervals of short duration when an abnormal industrial situation has existed, in no wise due to the workings of the contract). Other producers have regularly been able to dispose of their product, at prices which on the whole were at least equal to the prices paid to this company and frequently

higher. Of the country's total production of pig lead, 40%, say, comes from other producers. Purchases of the National Lead Company under the contract absorb not more than 32% of the total production, leaving 68% thereof to be taken by other buyers. Such other producers, therefore, representing 4/10 of the supply, have open to them a consuming field representing 7/10 of the demand, so far as the present contract is concerned. Neither a specific price nor a specific scale of prices is fixed by the contract. The prices are determined by reference to the average of those specified in the regular schedule of prices issued by this company on which its sales of pig lead are made in New York from month to month. The fact that a large proportion of the total pig lead sold is delivered under a contract between a single seller and a single buyer, under the circumstances, does not result in the fixing of a monopoly price, but tends to the maintenance of steady prices and to avoidance of wide fluctuations. The latter fact is shown by a comparison of this company's New York quotations with the general market quotations in New York. Thus in 1905, the first year of the contract, the general market quotations were: highest 6.25; lowest 4.45; difference 1.80; while the company's quotations were: highest 5.60; lowest 4.45; difference 1.15; and this company's highest price was 55 cents lower than the highest outside price. Similar figures for other years were—

1455

	Gen'l Quot'n, N. Y.			A. S. & R. Quot'n, N. Y.			Below
	High	Low	Diff.	High	Low	Diff.	High
1906	6.35	5.45	.90	6.00	5.35	.65	.35
1907 (1)	6.35	3.50	2.85	5.75	4.75	1.00	.60
1908 (1)	4.60	3.65	.95				
1909	4.75	3.95	.80	4.70	4.00	.70	.05
1910	4.75	4.375	.375	4.60	4.40	.20	.15
1911	4.60	4.25	.35	4.45	4.25	.20	.15
1912	5.15	4.10	1.05	5.10	4.00	1.10	.05

[(1) In November 1907, this company ceased to quote a price distinct from that of the general market, and for the balance of that year and during the year following there was only one quotation. This company was powerless to prevent the falling of prices which occurred.] In the foregoing figures, there is nothing to suggest either the power or the attempt to exact monopoly prices. If prices were high in 1906, they were more than correspondingly low in 1907 and the year following. In the first period there was

a great expansion of trade; in the second there was a panic. But this company is without power to raise prices and keep them raised, even if it wished to do so, because it does not control production. It must take the ores that are offered to it by the mines, and the higher the price the more the mines offer and the greater the production. The increased production must be sold to avoid greater increases. When the supply has outrun the demand, and sales must be made, prices must inevitably fall. When they fall below what was paid for the metal in the ore, *i. e.*, the prices previously ruling, the smelting company must lose. Hence the necessary policy of the company to fix prices for its product at the level, as nearly as it can be judged, corresponding to the relation between supply and demand, as that may vary at different times. Such prices are not monopoly prices.

1511 COMMISSION'S EXHIBIT NO. 93.

Agreement, made this Twenty Sixth day of February, 1906, between American Smelting and Refining Company, a corporation organized and existing under the laws of the State of New Jersey, (hereinafter called the "Smelting Company"), party of the first part, and National Lead Company, a corporation organized and existing under the laws of the State of New Jersey, (hereinafter called the "National Company"), party of the second part.

Whereas, the Smelting Company are sellers or producers of pig lead of the kinds or classes called "corroding" and "desilverized common" and "soft Missouri" and "chemical" lead and desire to sell such pig lead, and:

Whereas the National Company are consumers and purchasers of these several kinds or classes of pig lead, and:

Whereas the National Company are owners of the entire capital stock of the St. Louis Smelting and Refining Company, which company is mining lead ore in Missouri and smelting and refining lead ores at its works at Collinsville, Illinois:

Now, Therefore, in consideration of the premises and of one dollar, lawful money of the United States of America, by each of the said parties to the other in hand paid, the receipt whereof is hereby acknowledged, and of the agreements herein contained, the parties hereto agree with each other as follows:

I. The Smelting Company agrees to use its best efforts to produce or acquire ores derived from domestic sources for the production of pig lead of the various kinds
1512 which it hereinafter agrees to sell in sufficient quantities to fill the orders of the National Company lodged in accordance with the provisions of this agreement.

II. The Smelting Company agrees to sell to the National Company, and the National Company agrees to buy from the Smelting Company, at the prices and upon the terms and conditions hereinafter stated:

First: All the requirements of the National Company for pig lead for the purpose of corroding and in the manufacture of white lead, except pig lead to the amount of not exceeding thirty thousand (30,000) tons in any one year produced by said Collinsville works which is used by the National Company in the manufacture of white lead and oxides of lead.

Second: Eighty-five per cent. (85%) of the total requirements of pig lead of the other kinds hereinbefore specified (measured by tons) of the National Company in each year, but not exceeding all together (including pig lead covered by sub-division "First" above) eighty-five per cent. (85%) of the quantity of pig lead derived from domestic ores which is produced by the Smelting Company and the companies in which it owns a majority of the capital stock or which it operates or otherwise controls (excluding the Selby Smelting and Lead Company); subject, however, to the exceptions hereinafter stated in clause "V" hereof.

III. The requirements of the National Company for pig lead or for any kind or class of pig lead shall for the purposes of this contract be understood to be the amount of such pig lead actually used in the several processes
1513 of manufacture at the several works owned, leased, operated or controlled by it.

IV. If the said works at Collinsville shall in any year produce lead in excess of thirty thousand (30,000) tons, then, and in such case, the National Company shall sell to the Smelting Company, at the option of the Smelting Company, all such excess, or so much thereof as the Smelting Company shall elect, at five per cent. (5%) less than the schedule price of the Smelting Company for corroding pig lead for point of delivery designated by the Smelting Company, such price to be ascertained as hereinafter specified in the case of corroding lead sold to the National Company.

V. From the requirements of the National Company before determining the eighty-five per cent. (85%) of its requirements for pig lead other than for corroding and the manufacture of white lead to be purchased as above provided by the National Company from the Smelting Company, the following deductions or exceptions may, at the option of the National Company, be made, viz:

(a) Pig lead and corroding lead taken and paid for by the National Company which it is compelled to take by the provisions of contracts now in effect, copies of which are hereto annexed; which said contracts, however, shall not be renewed or extended without the consent of the Smelting Company;

(b) Such chemical pig lead not made or deliverable by the Smelting Company as the National Company may be required to buy to meet the demands of the trade for special brands; but the National Company agrees to
1514 use every reasonable effort to limit such purchase of chemical pig lead;

VI. So much of said eighty-five per cent. (85%) as may at any time be ordered in accordance herewith by the National Company from the Smelting Company, and which the Smelting Company fails to ship in accordance with the provisions hereof, upon said orders, may, at the option of the National Company, be purchased from parties other than the Smelting Company.

VII. Sales hereunder by the Smelting Company to the National Company shall be on the following terms and conditions:

(a) All such kinds or classes of pig lead shall be of good merchantable quality.

(b) All such corroding lead shall be carefully selected and refined at the various refineries owned, leased or controlled by the Smelting Company.

(c) Orders from the National Company for deliveries of pig lead hereunder shall be lodged with the Smelting Company on or before the first day of the calendar month previous to the month in which shipment is to be made, specifying the dates of shipment, kinds, quantities and destinations of deliveries required, and all such orders shall be filled and shipment thereof provided for by the Smelt-

ing Company during the calendar month specified in said orders, and such shipment is to be made as near as practicable to the day of shipment so specified; provided, however, that if the amount of orders for shipment in any calendar month exceed eighty-five per cent. (85%) of
1515 the total production during such month of pig lead
by the Smelting Company and by the companies in which it owns a majority of the capital stock or which it operates or otherwise controls (excluding the Selby Smelting and Lead Company) derived from domestic ores, or if the amount of such orders exceeds the amount of the kinds or classes of pig lead actually used in the various processes of manufacture at the works owned, leased, operated or otherwise controlled by the National Company during the month preceding the month in which said order is made, then the Smelting Company shall not, except with its consent, be required or hereby bound to fill or conform to or recognize or make shipments upon any such orders for any such excess; and provided, further, that the Smelting Company shall ~~not~~ be obliged without its consent to sell hereunder for delivery at any point more than eighty-five per cent. (85%) of the amount of pig lead other than corroding lead required by the National Company at that point during any one calendar month.

(d) Deliveries of lead hereunder by the Smelting Company shall be "f.o.b." tracks most convenient to the works of the National Company at the destinations specified in the orders therefor, the routing of the pig lead to point of destination being in all cases controlled by the Smelting Company.

(e) Terms of settlement shall be prompt cash on arrival of pig lead at destination.

(f) The Smelting Company shall take a suitable sample of each carload of corroding lead shipped hereunder. Such sample shall be divided into three portions, of which one shall be sent to the National Company, and one
1516 shall be sealed for references in case of umpire. If
any dispute shall thereafter arise concerning the percentage of bismuth contained in any corroding lead sold hereunder, the umpire sample of the carload in dispute shall be sent to Messrs. Ledoux & Company (or some other reputable assayer in New York City to be mutually agreed upon in case Messrs. Ledoux & Company cannot or will not act or shall be unsatisfactory to either party), and the determination of the umpire shall be final as a basis for set-

tlement, except in case the report of the umpire assayer is higher than both of the reported assays of the parties hereto or lower than both such reported assays, in which case the assay of the party nearest to the results obtained by the umpire assayer shall constitute the basis and control in settlement of the particular lot in question. The cost of the umpire's determination shall be paid by the party hereto whose results are farthest removed from those of the umpire assayer.

VIII. The prices to be paid by the National Company for pig lead hereunder shall be as follows:

(a) The price for pig lead, other than corroding lead, shall be the average of the lowest daily (exclusive of Sundays and New York legal holidays) schedule prices of the Smelting Company for the respective qualities and brands specified in said orders of the National Lead Company at the respective points of delivery therein designated in effect in the calendar month preceding that during which shipments are to be made; such lowest daily schedule prices, however, shall not exceed on any day the prices at which lead of a similar quality could be imported and 1517 delivered to the respective points designated as points of delivery in the orders of the National Company if purchased at the spot quotation of the London Metal Exchange of the same date, and after all expense of purchase, including interest, commission, freight and duty has been paid.

(b) The price for corroding lead shall be based upon that to be charged for desilverized common pig lead at the same time, such price for desilverized common pig lead being determined as in the last foregoing paragraph "(a)" hereof; and the price for corroding lead shall be two dollars ($2.00) per ton in excess of such price for common desilverized pig lead, except that from such price for corroding lead there shall be deducted in the case of corroding lead containing over five one-hundredths per cent. (.05%) and not over eight one-hundredths per cent. (.08%) of bismuth the following amounts per ton:

In case of lead containing over five one-hundredths per cent. (.05%) and not over six one-hundredths per cent. (.06%) twenty cents (20¢).

In case of lead containing over six one-hundredths per cent. (.06%) and not over seven one-hundredths per cent. (.07%) forty cents (40¢);

In case of lead containing over seven one-hundredths per cent. (.07%) and not over eight one-hundredths per cent. (.08%) sixty cents (60¢); and except that the price for corroding lead containing over eight one-hundredths per cent. (.08%) of bismuth shall be the same as the price of desilverized common pig lead.

1518 (c) Should the National Company desire shipments of pig lead to be made in less than fifteen (15) days from the date of receipt of the order by the Smelting Company, and in amounts exceeding in the aggregate two hundred (200) tons in any one calendar month, and the Smelting Company shall be able to and shall fill such orders, the price of such excess over two hundred (200) tons shall be fifty cents (50¢) per ton in excess of the regular price above fixed.

IX. Where either party hereto has herein covenanted or agreed with respect to anything to be done by any corporation controlled by it, or a part of whose stock is owned by it, such agreement is intended to and shall be taken to be an agreement of such party hereto by proper means to procure such action by such corporation.

X. This agreement shall continue in force for fifteen (15) years from the date hereof, and shall be binding upon and enure to the benefit of the successors and assigns of the respective parties hereto.

In Witness Whereof, the parties hereto have caused these presents to be signed in their respective names by their respective Presidents or Vice Presidents and their respective corporate seals to be hereto affixed, attested by their respective Secretaries, pursuant to resolutions of their respective Boards of Directors, certified copies of
1519 which resolutions are hereto attached, the day and year first above written.

COMMISSION'S EXHIBIT NO. 94.

1521 Agreement, made this 26th day of February, 1906, by and between American Smelting and Refining Company, a corporation of the State of New Jersey, (hereinafter called the Smelting Company), party of the first part, and Hoyt Metal Company, a corporation of the State of Missouri, (hereinafter called the Metal Company) party of the second part:

Whereas, the Smelting Company is a manufacturer or producer of domestic antimonial lead, and desires to sell to the Metal Company, and the Metal Company desires to buy, the Smelting Company's entire product of such lead during the term of this contract;

Now, Therefore, the parties hereto, in consideration of the premises and of one dollar by each to the other paid, the receipt whereof is hereby acknowledged, and of the agreements herein contained, hereby agree with each other as follows:

First: It is mutually agreed that the phrase "domestic antimonial lead" as used in this contract, means antimonial lead in commercial form produced in the United States of America, but not including antimonial lead produced in bond, nor including antimonial lead held by the Smelting Company for further treatment, reduction, refining or composition, nor including lead containing less than two per cent. (2%) of antimony; that the word "ton" as used in this contract, means a ton of two thousand (2,000) pounds, and that the word "month" as used in this contract, means calendar month;

Second: The Smelting Company agrees to sell to
1522 the Metal Company, and the Metal Company agrees to buy from the Smelting Company, all of the domestic antimonial lead produced by the Smelting Company while this contract remains in force at the prices, and upon and subject to the terms, conditions, limitations and exceptions in this contract expressed; and the Smelting Company agrees that all such lead shall contain not less than fourteen per cent. (14%) and not more than forty per cent. (40%) of antimony.

Third: It is mutually agreed that deliveries of lead sold hereunder shall be made by the Smelting Company as follows: Lead shipped from refineries in Chicago or west thereof shall be delivered f.o.b. cars at St. Louis, Missouri, and all lead shipped from refineries east of Chicago shall be delivered f.o.b. cars at Perth Amboy works of the Smelting Company.

Fourth: The Smelting Company agrees that it will ship such lead to the Metal Company as follows: Such lead produced in any month while this contract remains in force shall be shipped during such month or within five days thereafter, except that if such lead produced in any month shall exceed eight hundred (800) tons, such excess shall not be shipped unless the Metal Company shall in writing notify the Smelting Company of its election to receive the same or some stated part, proportion or amount thereof. If at any time the Smelting Company shall have on hand any such excess, the Smelting Company may add such excess to its production during any subsequent month in which the product of the Smelting Company is less than eight hundred (800) tons to an extent sufficient to
1523 make, with such addition, a total amount not greater than eight hundred (800) tons and such amount so increased shall be considered to be the product of the Smelting Company during such month.

Fifth: It is mutually agreed that the price for lead sold hereunder shipped in any month for St. Louis delivery shall be the average of the daily prices of common desilverized lead as quoted in said month by the American Smelting & Refining Company for lots of fifty (50) tons or more for delivery in St. Louis within thirty (30) days; and that the price for lead sold hereunder, shipped in any month for Perth Amboy delivery, shall be the average of the daily prices of common desilverized lead as quoted in said month by the American Smelting & Refining Company for lots of fifty (50) tons or more for delivery in New York City within thirty (30) days;

Provided, however, that if the price as above computed for any shipment of said lead would be more than one and seventy-five thousandths (1.075) cents per pound above the average of the daily spot quotations for soft Spanish lead, as given by the London Metal Exchange (without any discounts or deductions) for the month in which such shipment is made, then the price to be paid for the lead in such shipment shall be such average of London Metal Exchange spot quotations plus one and seventy-five thousandths (1.075) cents per pound, instead of said average price quoted by American Smelting & Refining Company;

And provided, further, that inasmuch as the United States tariff on imports of antimonial lead (known in the tariff law as "type metal") is now one and one-half (1½) cents per pound, now, therefore, if such tariff should

1524 be increased or diminished, then the above mentioned amount of one and seventy-five thousandths (1.075) cents per pound shall be modified by increasing or decreasing the same by the exact amount per pound by which such tariff shall be so increased or diminished, and the amount as so modified shall be substituted in the foregoing provision for said amount of one and seventy-five thousandths (1.075) cents; and if the parties hereto shall at any time be unable to agree as to the amount of such modification, each party hereto shall immediately name an arbitrator, and the two arbitrators so appointed shall determine the amount of such modification, and if they fail to agree they shall appoint a third, and the decision of any two of such arbitrators thereon shall be final and binding upon the parties hereto.

If any dispute shall arise concerning the meaning and effect of this agreement, such dispute shall be arbitrated and determined in like manner.

And provided, further, that if the arsenic contained in any of the lead sold hereunder shall exceed one and one-quarter per cent. (1¼%) then the following deductions shall be made from the price hereinbefore provided, viz: if the arsenic exceeds one and one-quarter per cent. (1¼%) and does not exceed one and one-half per cent. (1½%), the deduction shall be two dollars ($2.) per ton; if the arsenic exceeds one and one-half per cent. (1½%) and does not exceed one and three-quarters per cent. (1¾%); the deduction shall be three dollars ($3.) per ton; if the arsenic exceeds one and three-quarters per cent. (1¾%) and does not exceed two per cent. (2%), the deduction shall be 1525 four dollars ($4.) per ton; if the arsenic exceeds two per cent. (2%) and the Metal Company is willing to accept such lead, the deduction shall be four dollars ($4.) per ton.

If the arsenic contents of the antimonial lead exceed two per cent. (2%) and the Metal Company, or its assigns, is not willing to accept the same at a price of four dollars ($4.00) per ton less than that fixed in the Fifth Article hereof, then such lead shall not be shipped hereunder and neither the Metal Company nor its assigns shall be under any obligation to purchase it under this contract, unless an agreement can be reached as to its value and the Smelting Company is willing to ship at such value. If such an agreement cannot be reached, the Smelting Company shall be at liberty to dispose of this portion of its product of antimonial lead elsewhere, as it may see fit.

Sixth: It is mutually agreed that all payments hereunder shall be made in thirty (30) days from the date of the bill of leading for each shipment, with the privilege to the Metal Company of paying within sixty (60) days from said date, with interest after the expiration of said thirty (30) days until the date of payment at the rate of six per cent. (6%) per annum, and with the additional privilege to the Metal Company of paying "spot cash" less interest at the rate of six per cent. (6%) per annum from the date of payment to the expiration of said thirty (30) days.

Seventh: This contract shall continue in force for fifteen (15) years from the date hereof.

Eighth: This contract shall respectively bind and
1526 inure to the benefit of the successors and assigns of the respective parties hereto. Notices to be given hereunder may be given by or to such successors or assigns and shall be sufficient as to their interest; but either party, its successors or assigns, in giving any notice hereunder, may disregard any succession to or assignment of any of the rights of the other party, or of any interest therein or thereunder, unless written notice shall have been given of such succession or assignment and of an office of the successor or assignee at which notices may be delivered.

In Witness Whereof, the parties hereto have caused these presents to be signed in their respective names, by their respective Presidents, and their respective corporate seals to be hereto affixed, attested by their respective Secretaries, pursuant to resolutions of the respective Boards of Directors of the parties hereto, certified copies of which resolutions are hereto attached.

Pigments Division.

White Lead-in-Oil Committee.

New York, N. Y. August 9, 1933.

A meeting of the White Lead-in-Oil Committee of the Lead Pigments Division of the Lead Industries Association was held at the Lawyers Club, New York City, on Wednesday, August 9, 1933, at 2:45 P. M.

Present:	Representing:
W. E. Maston, Chairman	Eagle-Picher Lead Co.
F. M. Carter	National Lead Co.
J. G. McNair	National Lead Co.
Harold Rowe	National Lead Co.
P. E. Sprague	Euston Lead Co.
T. H. Zappert	Euston Lead Co.
S. B. Coolidge, Jr.	Sherwin-Williams Co.
R. L. Ziegfeld, Assistant Secretary.	

Mr. W. E. Maston occupied the chair.

It was agreed that this group would consist of those companies now manufacturing White Lead-in-Oil, and be open to any other company or individual who may become manufacturers of this product as a member of the Lead Industries Association. The present membership follows:

Members:

- Anaconda Lead Products Co.
- Eagle-Picher Lead Co.
- Euston Lead Co.
- W. P. Fuller & Co.
- National Lead Co.
- Sherwin-Williams Co.
- Wetherill & Brother

Non-Member:

- E. I. duPont de Nemours & Co. Inc.

The Supplementary Code of Fair Competition for the Lead Pigments Division was discussed, but no definite recommendations as to its final form were made.

1615 The item of "reports" was given the most consideration, and it was the general sense of the meeting that individual reports of production, stocks, and shipments (or sales) as now reported to the Association be made available to all other members of the group at periodic meetings of the Committee.

Price Lists: At a given date, preferably on or before September 15, 1933, all members of this group will file with the Secretary their price list with terms and conditions of sale. Any change in the lists or terms to the trade shall be reported to the Secretary in writing. Upon making a sale or quotation at variance with this previously announced price list or terms, each member shall notify the Secretary in writing within 48 hours of such variation, giving name to whom made. It was left for decision at next meeting if these variations would be reported promptly to all members of the group or be held for distribution at a regular Committee meeting. Regarding the question of making a price concession on any lead pigment or products designed to cut the price of White Lead, dry or when ground in oil, or using either of these products to cut the other, should be effectively covered by the industry's code.

Grinders Paste White Lead: This product has caused considerable disturbance among the trade, particularly where it has found re-sale as White Lead-in-Oil packed in standard kegs. It was the sense of the group that a means should be found to stop such practice, preferably by a guarantee from buyers that Grinders Paste is for use in their finished products only, and never offered for sale as Pure White Lead-in-Oil. Further consideration of this important point will be given at the next meeting, and include the possibility of restricting the sale of Dry White Lead when it is ground to paste form and sold as Pure White Lead-in-Oil in conjunction with other paint products at below cost.

The Agency or Consignment method of marketing White Lead-in-Oil, as now being used in a restricted territory, extending from New York City south to and including Washington, was thoroughly explained and discussed. At the present time the National Lead Co. and the Eagle-Picher Lead Co. are selling almost exclusively under this plan, and report that jobbers and dealers with hardly a

dissenting voice have approved the plan. The Agency plan is not the exclusive type designed to give certain rights or privileges, which competitors cannot meet, but one
1616 under which a Distributor may sell as many brands as he chooses. It is expected the two companies now using the Agency plan will extend it over a much wider area on or before October first. Under the Agency plan of selling, it is evident many of the abuses and non-profit sales among distributors can be corrected at the same time it removes the practice of—Price Guarantees, Spring Datings, deviation from terms, etc. This method of selling will in the future be described as the "Agency Plan."

Freight Differentials: There is a lack of just what points in the country take on advance differentials over the par list price. It was suggested that a zone basis similar to that used by the Linseed Oil group might be worked out and thus simplify the arrangement. The Chairman agreed to offer further suggestions at the next meeting.

The West Coast situation was briefly discussed, and it was agreed that the Committee should work out some plan for coordinating with this group of manufacturers whereby their territorial conditions as to prices, terms, etc. would not be disturbed. It might be necessary to establish a dividing line between East and West to avoid confusion.

The question of open quotations on Government and State business was thoroughly discussed. Any plan to eliminate excessively low bids would be helpful to the entire industry. The possibility of apportioning such business was discussed. There was a difference of opinion as to the method which might be used—the following being suggested:

Capacity
Last year's Government and State business
Average last three years Government & State business
Average last ten years Government & State business

The group was asked to give this further thought.

Painter's Meetings: It was generally agreed that such meetings have considerable educational value, and therefore have proven useful. The manner of entertainment came in for the most criticism, particularly the advertising of such affairs as dinners, banquets, etc. From relatively small groups usually held in Distributors' stores with "light refreshments" the plan has grown to such an extent that outside halls and hotels are necessary to take 1617 care of the "banquet" feature. Vaudeville has recently come into the scheme of things, and the entertainment feature bids fair to overshadow the educational. Many of the meetings are "padded" for effect, and in some towns as many as four "feeds" have been on tap in one week. Some method might be worked out to keep this plan on its original basis.

The meeting adjourned at 7:45 P. M. to meet in Chicago, Monday, September 11, 1933.

W. E. Maston,
Chairman.

R. L. Ziegfeld,
Assistant Secretary.

1618 COMMISSION'S EXHIBIT NO. 502.

Lead Industries Association
Graybar Building, 420 Lexington Avenue
New York, N. Y.

Pigments Division.

White Lead-in-Oil Committee.

New York, N. Y. September 6, 1933.

A meeting of the White Lead-in-Oil Committee of the Lead Pigments Division of the Lead Industries Association was held at the Commodore Hotel, New York City, on Wednesday, September 6, 1933 at 10:00 A. M.

Present	Representing
F. M. Carter, Chairman	National Lead Co.
F. O. Case	Anaconda Lead Products Co.
J. R. MacGregor	Eagle-Picher Lead Co.
W. E. Maston	Eagle-Picher Lead Co.
F. W. Potts	Eagle-Picher Lead Co.
P. E. Sprague	Euston Lead Co.
T. H. Zappert	Euston Lead Co.
J. G. C. McNair	National Lead Co.
Harold Rowe	National Lead Co.
S. B. Coolidge, Jr.	Sherwin-Williams Co.
A. P. Wetherill	Wetherill & Bro.

F. E. Wormser, Secretary.

Mr. F. M. Carter occupied the chair.

The Chairman suggested that in view of code developments since the last meeting the Division immediately consider what provisions should be included in a Supplementary Code of Fair Competition for the Lead Pigments Division if one were to be filed in Washington prior to the hearing of the Lead Code.

Several paragraphs in the proposed Paint Code, being applicable to the White Lead-in-Oil Division, were adopted as follows:

(1) Guaranteeing Paint Jobs—Definite time guarantee on the life and/or service of the products of the Industry is hereby prohibited.

1619 (2) Misbranding, mislabeling and false advertising—Transactions known to the law as misbranding, mislabeling and false advertising are specifically prohibited by this Code, and after the effective date, shall be punishable as a violation thereof in addition to any other penalties imposed by any other law.

(3) Gifts to Employees of Another—It shall be a violation of this Code for any person engaged in the Industry to offer or give—or permit any representative of his to offer or give—any commission, gratuity, or other thing of substantial value to employees of his customers or prospective customers, except in the case of payments made with the consent of the employer for a definite service rendered.

(4) Exchange of Goods—No manufacturer shall exchange his goods for those of another.

(5) Inducing Breach of Contracts—No manufacturer either directly or indirectly or through his salesmen, representatives, or agents, shall encourage any purchaser of the products of the Industry to disregard or fail to live up to his commitment to another member of the Industry.

(6) Disparagement of Competitors—The use of or participation in the publishing or the disseminating of any false statement, representation or insinuation which disparages the business of a competitor, or attacks the reputation, goods, prices, credit, service or advertising of any competitor or of any other industry, is an unfair and uneconomic practice and is prohibited.

(7) Returned Goods—No merchandise shall be returned without first securing the consent of the manufacturer. On such goods as are accepted for return, a reasonable charge shall be made and freight charges must be prepaid by the shipper returning the merchandise, except in the case of defective products or where in some other way the manufacturer may be responsible.

The following paragraph on Taxes was adopted:

Taxes—Any sales tax uniformly becoming applicable upon all sellers shall be for buyer's account and shall be added to the selling price and paid by the buyer.

The advisability of including a paragraph in the Code covering price lists and the exchange of price information was next considered.

1620 Whereupon it was unanimously resolved that members of this group file with the Secretary their price lists together with terms and conditions of sale. Any change in the said lists and terms shall be reported promptly to the Secretary. Upon making a sale or quotation at variance with the previously reported price list or terms, each member shall notify the Secretary in writing promptly concerning the variation.

It was also agreed to adopt the following paragraph as an unfair trade practice:

No product shall be sold at a concession in price in order to influence the sale of any lead product.

Meeting adjourned at 5:30 P. M.

F. M. Carter,
Division Chairman.

W. E. Maston,
Committee Chairman.

F. E. Wormser,
Secretary.

Lead Pigments Division.

Dry Products Committee.

Chicago, Illinois. October 27, 1933.

A meeting of the Dry Products Committee of the Lead Pigments Division of the Lead Industries Association was held at the Chicago Athletic Club, Chicago, Illinois, on Friday, October 27, 1933 at 10:00 A. M.

Present	Representing
F. M. Carter, Chairman	National Lead Company
F. O. Case	Anaconda Lead Products Co.
W. H. Hayt	Eagle-Picher Lead Co.
J. R. MacGregor	Eagle-Picher Lead Co.
W. E. Maston	Eagle-Picher Lead Co.
F. W. Potts	Eagle-Picher Lead Co.
R. M. Evans	Evans Lead Company
Wm. Wilke, Jr.	Hammond Lead Products Inc.
P. E. Sprague	Metals Refining Co.
W. P. Carroll	National Lead Co.
O. H. Greene	National Lead Co.
Harold Rowe	National Lead Co.
S. B. Coolidge, Jr.	Sherwin-Williams Co.
J. W. Todd	Sherwin-Williams Co.

F. E. Wormser, Secretary.

Mr. Carter occupied the chair.

The Chairman suggested that the members proceed to discuss the third draft of the Supplementary Code of Fair Competition for the Pigments Division whereupon a general discussion arose as to the desirability of including paragraphs which had been omitted from the third draft relating to the Limitation of Productive Facilities and to Dumping. Divergent views being expressed.

It was moved and seconded that the third draft of the Supplementary Code of Fair Competition for the Lead

Pigments Division be adopted subject to the approval 1622 of the Executive Committee and to be submitted to Washington at a date later to be agreed upon.

Unanimously carried.

The members then proceeded to discuss the features of a Uniform Basis for Sales as provided for in the Code. In the course of this discussion

It was moved and seconded that Article V on Taxes in the third draft of the Supplemental Code of Fair Competition for the Lead Pigments Division be eliminated and be included in Uniform Sales Contracts.

Motion carried.

After much study and discussion outlines setting forth Uniform Bases for the Sale of Lead Oxides and Dry White Lead in Carlots and Less Than Carload Lots, respectively, were drafted, subject to further study by the members. The suggested outlines appear on pages appended.

It was agreed, in deference to existing statutes, that no reference to prices should appear in the outlines except for the specification that "prices were to be agreed upon between buyer and seller."

A question arose as to the possibility of adopting the provisions of the Supplementary Code for the Pigments Division immediately rather than waiting for the approval of the President, but as the decision hinged upon the legality of the Code provisions, the Secretary was requested to procure a legal opinion on the subject, reporting to the Chairman.

Whereupon it was moved and seconded that the third draft of the Supplementary Code of Fair Competition for the Lead Pigments Division, as revised, together with the suggested Uniform Bases for Sale, be submitted to the N.R.A. subject to approval of its legality. (Revised draft appended.)

Unanimously carried.

The meeting adjourned at 11:15 P. M.

F. M. Carter,
Chairman.

F. E. Wormser,

1623 COMMISSION'S EXHIBIT NO. 505.

Lead Industries Association
Graybar Building, 420 Lexington Avenue
New York, N. Y.

White Lead-In-Oil Committee.

Lead Pigments Division.

Chicago, Illinois. October 28, 1933.

A meeting of the White Lead-in-Oil Committee of the Lead Pigments Division of the Lead Industries Association was held at the Chicago Athletic Club, Chicago, Illinois, on Saturday, October 28, 1933 at 9:00 A. M.

Present	Representing
F. M. Carter, Chairman	National Lead Company
F. O. Case	Anaconda Lead Products Co.
W. H. Hayt	Eagle-Picher Lead Co.
J. R. MacGregor	Eagle-Picher Lead Co.
W. E. Maston	Eagle-Picher Lead Co.
P. E. Sprague	Metals Refining Co.
O. H. Greene	National Lead Co.
Harold Rowe	National Lead Co.
S. B. Coolidge, Jr.	Sherwin-Williams Co.

F. E. Wormser, Secretary.

Mr. F. M. Carter occupied the chair.

The Chairman described the new Agency System which the National Lead Company was putting into effect for the sale of its lead-in-oil products, stating that it was an adaptation of a method used by General Electric and other companies and was designed to correct destructive price cutting in the white lead-in-oil business which had seriously affected the marketing of the product. Some other members stated they too were planning to use the consignment system.

Freight and zoning problems were discussed without any understanding or agreement being made.

Mr. Maston suggested that the white lead members endeavor to devise a slogan which might be used by all of

them in advertising during 1934 and also suggested
1624 that the Lead Industries Association might be a very
useful medium for joint publicity purposes with the
added support of the mining and smelting companies in
furthering the use of white lead.

The meeting adjourned at 12:00 A. M.

F. M. Carter,
Chairman.
F. E. Wormser,
Secretary.

1625 COMMISSION'S EXHIBIT NO. 506.

Mr. F. M. Carter, President
National Lead Company
111 Broadway
New York, N. Y.

Dear Mr. Carter:

I have written Mr. Richter as you suggested in your letter of September 8th and a copy of my communication is attached.

Shall I be guided by the policy of keeping Mr. Richter fully informed of our meetings in the future to save you the trouble of further correspondence?

Sincerely yours,
Secretary.

1626 CC. Mr. Carter

September 11, 1933.

Mr. Wm. Richter, General Manager
Fabrics and Finishes Department
E. I. Du Pont de Nemours Company
Wilmington, Delaware.

Dear Mr. Richter:

Mr. F. M. Carter, Chairman of the Lead Pigments Division of the Lead Industries Association, has asked me to provide you with a copy of the Master Code of the Lead Industries Association, together with copies of the Minutes of the two meetings of the Division which have so far been held.

Accordingly, I am pleased to enclose a copy of our Code as it was filed in Washington and the minutes of the meeting of August 8th, Dry Products Committee, and August 9th, White Lead-in-Oil Committee. Just as soon as the minutes of the meeting of September 6 and 7th have been prepared for distribution to our members of this Division, I shall see that you are provided with a copy.

Sincerely yours,

Secretary.

President

September 8, 1933.

Mr. F. E. Wormser, Secretary
Lead Industries Association
420 Lexington Av.
New York, N. Y.

Dear Mr. Wormser—

I attach copy of a letter which I am sending Mr. Richter, of the Dupont Co. because I want you to know what I have said to him. Will you please see that he is provided with a copy of the master code, and copy of the minutes of the Pigment Section meeting.

I realize that there might be some members of the Committee a little critical about a non-member being posted, but here is a situation where I do feel under obligations to Mr. Richter to be very frank and if he does not get it direct from you I would feel required to send him a copy of my own minutes.

In any event, he has assured me they would go along and co-operate. As a matter of fact, that is a fundamental characteristic of the Dupont Co.—they work co-operatively with others and I am not anticipating any trouble from that source.

Yours very truly,

F. M. Carter,
President.

1628 September 8, 1933.

Mr. W. H. Richter, General Manager
E. I. Dupont de Nemours Co.,
Wilmington, Dela.

Dear Mr. Richter—

You told me you were quite willing that the National Lead Co. should represent your Company in code discussions, held by members of the Lead Industries Association, and you were willing to go along with anything which was agreeable to the others.

There have been several meetings of the Pigment Section, without however having as yet reached a final draft. There are, however, several features about which I think you should have some information and it is for that purpose that I write you.

As I think you know, Lead Industries Association adopted a master code covering only the subject of rates of wages and hours of labor. This was filed with the Administration and members were granted the use of the Blue Eagle. I am asking Mr. Wormser, Secretary of the Lead Industries Association to send you a copy of that code so that you will be fully informed.

As you will note, the right was given to file supplementary codes for the several Divisions, and what I refer to now relates to the Pigment Section, the only part, I think, in which you have an interest. I am asking Mr. Wormser to provide you with the minutes of the last meeting, and hope there will be no objection to your receiving it through this channel. If there is, I will pass it on to you direct as soon as I get it.

The only feature which I expect you will find it difficult to agree with is the Agency System for selling white lead, in oil, which we are expecting to adopt later in the season. It has not been announced nor are we in a position to say anything about it, but we discussed it with members of the Pigment Section. Under this Agency System, we will follow the plan which we have been testing out during the current year in some of the eastern markets. Under this plan, we consign a stock to the dealer, and he acts as our agent. It is practically the same plan as has been in successful use for many years by the General Electric Co. for the sale of Mazda lamps. It permits us to control the resale price, which is a feature of vital importance to the corroder selling in markets like the New York district, for example; where, under present conditions, prices were absolutely demoralized, lead in oil being sold some times below the cost to the dealer.

1629 In operating the plan, we have been "choosey" in the selection of agents, seeking the better class of dealer, but not refusing to sell any one who could qualify because of the size of outlet offered, and who could subscribe to the requirements of the contract. We expected a good deal of trouble but the Atlantic Branch, in this metropolitan district, has found occasion to discipline only two agents. In each case, they were obliged to withdraw the agency and take the stock away because of the dealer not conforming to the prescribed schedule of prices.

Under this Agency Plan, the dealer is not bound to the sale of any one particular brand of lead, but is free to handle such other brands as he chooses. We do, however, expect him to maintain the market on such other brands as well as our own, although we have no control over that.

Under this plan we have been confining all quantity sales to agents, that is to say, we have sold no dealer on the 5-ton or carload basis without his being an agent. Industrials or large consumers have, of course, been sold without regard to the agency basis, that plan being adapted only to a dealer or distributor.

As I say, this plan has been in effect in this metropolitan district; also in Baltimore, Washington, Philadelphia and surrounding district, ever since the first of the year. It has operated even better than we had hoped, and we are planning to give it a wider application so that in 1934 it will be in effect generally, except possibly at far western points.

When the plan was first discussed, I will confess I, and pretty generally all of my confreres, were violently opposed to selling on a plan which involved selling on consignment. While selling on consignment is admittedly an evil, I now feel confident that of the two evils with which we are confronted, we have chosen the lesser in selecting the agency system.

Now, then, we discussed the plan at the meeting of the Pigment Section the other day and found both Sherwin Williams Co. and Glidden Co. radically opposed because of its consignment feature. I can well understand it and I would expect your reaction to it would be the same because it will involve you in embarrassing situations with paint customers. Sherwin-Williams frankly told us they could not follow such a method. By the way, the code under which the Pigment Section will work contemplates each member filing with the Secretary of the Lead Industries Association, a price list representing list upon which he sells and his regular discounts. Each member is asked to report to the Secretary deviations from this list. He is a free agent to make whatever price he chooses but is under obligations to report it to the Secretary, and he in turn will inform the other members. In this respect, it parallels the method used in the old days of the Lead Institute, of which Dupont was a member. I might add, by the way, it worked very well in those days.

As you will, I think, observe from the above brief outline, Dupont should find itself in a position to readily function and conform to the code requirements. I certainly hope that this will be true, for in all of my own thinking I have tried constantly to keep in mind the great desirability of avoiding conditions or situations which might be found
1630 onerous to some member of the Association. Whatever plan we work under should be practical and workable for all concerned.

I am not trying to post you fully in all details as to what has been discussed and done, but rather, because I felt an obligation to do something in the way of informing you as to discussions held; feeling a responsibility because of your generous offer to put Dupont's interest in our hands.

With very kind regards,

Yours very truly,

Signed (F. W. Carter),
President.

Mr. F. M. Carter, President,
National Lead Company,
111 Broadway,
New York, N. Y.

Dear Mr. Carter:

I am enclosing copy of a proposed draft of letter to Mr. Janssen, requesting extension of the temporary exemption from the provisions of Section 2, Article VII and Schedule A, granted us under date of June 27, 1934.

If you and Mr. Roosevelt, as Chairman of the Pigments Division approve this draft, I shall mail it to Washington tomorrow.

Will you, therefore, kindly telephone me your criticisms and your suggestions?

Sincerely yours,

Secretary.

1632 September 17, 1934.

OK 9/18/34

Mr. R. M. Roosevelt, Vice President,
Eagle-Picher Lead Company,
420 Lexington Avenue,
New York, N. Y.

Dear Mr. Roosevelt:

I am enclosing copy of a proposed draft of letter to Mr. Janssen, requesting extension of the temporary exemption from the provisions of Section 2, Article VII and Schedule A, granted us under date of June 27, 1934.

If you and Mr. Carter approve this draft, I shall mail it to Washington tomorrow.

Will you, therefore, kindly telephone me your criticisms and your suggestions?

Sincerely yours,

Secretary.

1633 **Proposed Draft.**

Dear Mr. Janssen:

Under date of June 27, 1934, an order granting temporary exemption from the trade and marketing provisions for the Lead Pigments Division of the Lead Industry, particularly in reference to the provisions of Section 2 of Article VII and Schedule A was granted by the Administrator for a period of three months from that date, provided "that such exemption be granted without prejudice to further extension beyond three months if at the end it shall appear to the Administrator that the Industry has been unable to determine upon either the execution of Section 2 of Article VII and Schedule A, which is a part thereof or upon modification thereof."

Inasmuch as the Lead Pigments Division has not yet been able to determine upon the modification of Article VII, Section 2 it desires, a further extension for a period of at least three months granting temporary exemption from the provisions of Section 2, Article VII and Schedule A is respectfully requested.

Very truly yours,

Secretary.

1644 COMMISSION'S EXHIBIT NO. 508.

Mr. F. O. Case, Manager July 27, 1933.
Anaconda Lead Products Company
East Chicago, Ind.

Dear Mr. Case:

I believe that the notice which I sent out on July 25th, referring to the forthcoming meetings of the Lead Pigments Division, crossed your letter of the 24th in the mail. By this time you will know of course that Mr. Carter is planning to devote August 8th to a meeting and discussion of the Dry White Lead and Oxide problems to be followed on the 9th with a meeting of the Lead-in-Oil group.

Although I realize that the lead oxide meeting is not very important to you I do hope you will be able to be with us on August 9th. In any event, I shall see that the point you bring out for discussion about the LCL differentials is placed before the meeting.

With very best wishes,

Sincerely yours,

Secretary.

July 24, 1933.

Mr. F. E. Wormser,
Secretary,
Lead Industries Association,
420 Lexington Avenue,
New York, N. Y.

Dear Mr. Wormser:

I have at hand yours of the 21st enclosing a copy of the minutes of the last meeting of the Lead Industries Association, Lead Pigment Division. I note the amended code as proposed and voted upon. Personally, I am sorry that the base rate should not have been at least 40¢ and the hours somewhat lower. I do not think that we can get by with the schedule we are placing in our code, but hope that when it comes to chiseling with the Governmental authorities that we will come out reasonably well.

I note the probable points that are to come up for discussion at the August 8th meeting. As far as I can tell, these do not apply to lead-in-oil and dry white lead.

I am not certain that it will be possible for me to be in New York on the 8th. I am also uncertain as to what should be added to the list for discussion, because I do not know how broad the discussion will be. One thing I would like to see discussed is, however, the question of an LCL differential. This has been brought up by the National Lead Company on the Pacific Coast and I understand that they are going to charge a differential of one-quarter of a cent for all shipments under five tons. This applies to dry lead only.

With kindest personal regards, I am,

Very truly yours,

F. O. Case,
Manager.

July 25, 1933.

Members of the Lead Pigments Division:

In order to facilitate consideration and disposition of the problems peculiar to the several products represented in your Division, the Chairman, Mr. F. M. Carter, has appointed the following to act as Chairmen of the Sub-Committees set opposite their names:

Mr. W. E. Maston—Chairman, Lead-in-Oil Committee.
Mr. Harold Rowe—Chairman, Dry White Lead and Lead Oxides Committee.

Each member of this Division becomes automatically a member of one or both of these Sub-Committees, depending upon the pigment or pigments he manufactures.

The forthcoming meeting of the members of the Lead Pigments Division on August 8th at the Lawyers Club, 115 Broadway, New York, will consider first, the problems of the lead oxide group and it is planned to follow this meeting on August 9th with a meeting of the producers of white lead-in-oil & dry white lead.

If you have not already done so it will be very helpful indeed if you will mail to Mr. Carter or myself your views as to what trade practices may properly be included in the discussion on both the 8th and 9th. All suggestions will be summarized and presented for consideration at the meetings.

Very truly yours,
F. E. Wormser,
Secretary.

By Order of the Chairman.

Dear Wormser:

Today I am forwarding map and list of old freight differentials to the following members of the Lead in Oil group:

F. O. Case	Anaconda Lead Products Co.
S. B. Coolidge, Jr.	Sherwin-Williams Co.
P. E. Sprague	Euston Lead Company
T. H. Zappert	Euston Lead Company
A. P. Wetherill	Wetherill & Brother

The National Lead Company is fully informed of the details, and are gathering further data on this important matter. When suggestions come in I shall endeavor to get them in shape so that a final report may be submitted for approval of the next group meeting.

For your information file I am sending you a map and list of freight differential points.

Yours very truly,
W. E. Maston,
Chairman,
White Lead-in-Oil Committee.

1662 COMMISSION'S EXHIBIT NO. 514.

Anaconda Lead Products Company
East Chicago, Indiana
Office of General Sales Manager Plant East Chicago, Ind.

September 27th, 1933

Mr. F. E. Wormser,
Secretary,
Lead Industries Association,
420 Lexington Avenue,
New York.

Dear Mr. Wormser:

I am glad to receive yours of the 22nd concerning the debatable Paragraph VII of the tentative Pigment Code. If I read your letter correctly, I understand that selling below cost does not apply to white lead. In other words, Mr. Carters' intention is, that it shall not apply to white lead but to other lead oxide pigments. Reporting of white lead prices is intended to take care of the situation as regards white lead itself.

Would it not be possible to show in the code that white lead is exempted from this provision. I would hesitate to have a joint code drawn up, having only part of it apply to white lead, but to the layman reading it, have it read as if it all applied to every pigment.

This may not be a serious proposition because in our particular case we probably could figure the cost from the ore, and technically get out from under the clause. I see no reason, however, why we should be obliged to go to a lot of trouble to keep from violating the code technically, when others might take a different view and not pay any attention to the clause.

1663 As I understand it, certain provisions in the zinc oxide might be in the same category as Paragraph VII. They are getting around this by showing that they do not apply to certain products. Would it not be possible to handle this clause in this way?

With kindest regards,

Sincerely yours,
F. O. Case,
Manager.

F.O.Case:ed

1664 Copies Sent to Mr. F. M. Carter
Mr. J. C. McCarthy.

September 22, 1933.

Mr. F. O. Case, Manager,
Anaconda Lead Products Company,
East Chicago, Indiana.

Dear Mr. Case:

Supplementing my letter to you of September 19, I am wondering whether I made my thought clear to you that the Committee which considered Paragraph VII of the tentative Pigments Code had in mind the situation which might develop if manufacturers making oxides for their own consumption (there are some today) were to market surplus output at cost or at a very slight margin over cost. This, of course, would tend to demoralize the oxide market.

Regarding your view that any member selling white lead might be guilty of infraction of the Code because of situations created by metal market fluctuations, I have discussed the subject further with Mr. Carter, and he seems to feel that any member selling white lead will undoubtedly dispose of it at a price above the price basis outlined in our paragraph and that inasmuch as the seller would report to the Secretary any sale made below the listing filed, destructive price cutting would thereby be reduced.

No attempt was made at the meeting definitely to establish overhead cost and other expense items, because it would involve setting up accounting systems, probably accompanied by hiring accounting talent, and was considered unnecessary.

As you probably know, the lead oxides have been, and will continue to be, sold to large buyers at a price very little above the cost of production.

When I see you again, I hope to discuss some of these subjects in more detail with you.

With kindest regards,

Sincerely yours,

....

Secretary.

1665 National Lead Company
111 Broadway
F. M. Carter
President

New York
September 21, 1933.

Mr. F. E. Wormser, Secretary
Lead Industries Association
420 Lexington Avenue
New York, N. Y.

Dear Mr. Wormser:

Regarding question raised by Mr. Case as to Paragraph 7 in the Tentative Code. I think Mr. Case will understand the situation better when he knows that the Committee were thinking about the situation which might develop if the battery manufacturer, making black oxides for his own consumption, were to market surplus product at cost, or a very slight margin above cost.

Mr. Case seems to fear that any member selling white lead, for example, might be guilty of infraction because of situations created by wide fluctuations in the metal market. There might be some irregularities develop at such a time, but I am sure the price will always be above the basis as outlined in our paragraph. Furthermore, the seller would be reporting to the Secretary any sale made below the list he had filed. This, I think, is the only feature we need to be concerned about.

It is true that no attempt was made to definitely establish cost, overhead and other expense items. As a matter of fact, oxides have been, and will continue to be, sold to large buyers at a price very little above actual cost of production. It will be impossible to sell this product on a wide margin basis. We are anxious, however, to achieve a basis which will be a little above cost, and that is all that was contemplated in this paragraph.

I am sorry that Mr. Case was offended by actions taken in his absence. As you know, the discussion developed in connection with oxides and (if I remember rightly) when Mr. Case appeared for a short time on the day following the white lead discussion, we told him of all that had been done during his absence.

However, I think when he more clearly understands what happened and the cause of it, he will feel all right about our actions.

Yours very truly,
F. M. Carter,
President.

1666 September 19, 1933.

Mr. F. O. Case, Manager
Anaconda Lead Products Company
East Chicago, Indiana.

Dear Mr. Case:

Thank you for the suggestions contained in your letter of September 15th, relating to the proposed Code for the Pigments Division.

I am sure it was furthest from the thoughts of any of those who attended the recent meetings to introduce anything into the Code which meets with strenuous objections from the members. It so happened that the subject matter of Articles VI and VII in the tentative draft was discussed by the Oxide group and with the intimate tie-up with white lead manufacture on the part of most oxide producers, it was felt that the broad principles expressed in Articles VI and VII, namely, production capacity control, selling below cost, and dumping applied to all the lead pigments.

As you know, we were working and still are under great pressure to perfect the supplementary codes prior to our hearing on September 23rd (now postponed to October 4th) and if another joint meeting of the Division was to be avoided with proper notice to all out of town members, it was essential to draft a preliminary code for immediate submission to and criticism of all interested parties. The draft you received was purely tentative and the criticisms contained in your letter of September 15th and suggestions from other members are precisely what we need in order to perfect the working draft.

I might also point out that Articles VI and VII were mainly my work with legal aid, in carrying out the sense of the meeting of September 7th as I was requested
1667 and authorized to do, and at which meeting these important topics were discussed.

No member has as yet formally approved either of these articles and they await such revision or elimination as may be ultimately decided upon.

With best wishes,

Sincerely yours,

Secretary.

1668 Anaconda Lead Products Company
East Chicago, Indiana

Plant
Office of General Sales Manager East Chicago, Ind.

September 15, 1933.

Mr. F. E. Wormser,
Secretary,
Lead Industries Association,
420 Lexington Avenue,
New York City.

Dear Mr. Wormser:

I am in receipt of the minutes of the last meetings held in New York, by the Pigment Division of the Lead Industries Association. I am also in receipt of the proposed amendment of the Supplementary Code of Fair Competition for the Lead Pigments Division of the Lead Industries Association.

All of this is in agreement with my understanding, with exception of Articles 6 and 7. To my knowledge these were not taken up at the meeting.

Under Article 3, Section C, I might suggest that technical service work be explicitly exempted from this proposition. All of the producers have technical service men, and may, at times, do something for a firm that is really valuable. No doubt, this would not be understood to come under paragraph C, but to prevent any misunderstanding, it might be well to so state it.

Article 6, so far as I know, was not discussed. Perhaps it came under the oxide division, but as lined up here it would also apply to white lead. I see no particular objection to it, but I do see a big objection to including a paragraph not discussed or not voted upon.

Paragraph 7 is very ambiguous, and I am entirely against it as written. It may be just "window dressing", but if so, it may lead to trouble. It will take a great deal better definition of cost to make this paragraph mean anything, than a statement that such costs will include a portion of overhead, selling and administrative expense.

With violent fluctuations in the metal market and a staple price over a fairly long time of pigments such as white lead, we might all conceivably be guilty of infraction of the code. In addition, companies such as our own would have difficulty establishing exact costs and allocating the overhead to the various metals. Of course, we nor
1669 no one else can sell below cost indefinitely or generally without going out of business. Perhaps it is meant that each one shall judge his own interpretation of costs.

In addition to being against this paragraph, I also want to strenuously object to the inclusion of propositions in the code that have not been considered. What is the use in spending time and money to attend meetings and then have the important things run in without consideration?

With kindest personal regards, I am

Yours very truly,
F. O. Case,
Manager.

F.O.Case:vlc

1685 COMMISSION'S EXHIBIT NO. 517.

cc-R. P. Prentys
F. E. Wormser

November 10, 1933

Mr. W. P. Fuller, Jr. President
W. P. Fuller & Co.,
San Francisco, Calif.

Dear Mr. Fuller—

The third draft of the Pigments Section Code of the Lead Industries Association has been approved by the Executive Committee of the L. I. A. and Mr. Wormser has been told to file same as Washington when directed to do so. If so filed, it would come up for a hearing with Lead Industries Code when that hearing has been set by the administration. At the moment, it is impossible to guess how soon that will be.

You have received a copy of this third draft of the Supplemental Code, and it is the conclusion of all who attended the discussions, that it will be desirable to file at Washington. Mr. Wormser discussed with legal counsel the question as to whether, under the Sherman Act, all members of the industry could use a common form of sales contract without violation of said Act. While counsel was not disposed to give a definite and clear go ahead signal, it was concluded that the common use of a contract which established grades, basis for pig lead when differential contracts were being made, duration of contract, and general terms but which left the question of price strictly a matter between buyer and seller, with no agreement among members of the selling industry, there should be no contravention of the Sherman Act. Furthermore, it is believed by all members of the Pigment Section, who were present during the discussions, that it is desirable to have the privilege of using such uniform sales contract embodied as a feature in the code.

As the matter now stands, the Code provisions, aside from the usual features covering misbranding, libeling of competitors, etc., contain only two important paragraphs, one which relates to filing of price lists, reporting exceptions and the other to the use of a uniform sales contract.

It is, therefore, a very simple set up as compared with some of the elaborate codes which have been developed.

While you have been kind enough to give me your proxy in respect to these code matters, I would like, before Mr. Wormser is directed to file the Supplemental Code, to have your definite approval of such action and will therefore appreciate prompt reply.

With my kind regards,

Yours very truly,
F. M. Carter
President

1689 COMMISSION'S EXHIBIT NO. 518.

January 18, 1934

Mr. W. E. Maston, Vice President
Eagle Picher Lead Co.,
Cincinnati, O.

Mr. Harold Rowe, Assistant to the President
National Lead Co.,
Building.

Gentlemen:

Deputy Administrator Janssen suggested as a substitute for the paragraph written in our Code providing for the filing of price lists, the following paragraph:

"Schedules:

Section 3. Each member of the industry, within ten days after the effective date of this Code, shall file with the Secretary of the Code Authority, the price or prices and terms and conditions of sale at which he is offering his products for sale; this original filing to become effective on the date of such filing. Any member of the industry desiring to change the price or prices of his products and terms and conditions of sale shall notify the Code Authority of such intention by filing his revised schedule, which shall become effective ten days thereafter. The revised schedule so filed with the Code Authority shall be immediately distributed among the members of industry. In the event that any member of industry shall not receive sufficient notice of the filing by any other member of revisions in such other member's price, or prices or terms and conditions of sale, as will enable him to meet such revisions of such other member on the effective date thereof, then if such member shall file with the Secretary of the Code Authority such revisions of his price or prices and terms and conditions of sale as may be required to meet the revisions filed by such other member, within 48 hours after the receipt of notice thereof, the revision so filed by such member shall become effective on the same date as the revisions of such other member, or if they be already effective shall become effective immediately."

This paragraph, as you know, differs radically from that agreed upon by your Committee, which read as follows:

"Price Lists

Section 3. Each member of the Code shall file with the Secretary within ten (10) days after the effective date of this Code, his price list, together with terms and con-
1690 ditions of sale. Any change in the said list or terms shall be reported to the Secretary in writing within twenty four (24) hours after the effective date of such change. Any member making a sale or quotation at variance with his price list or terms on file at the time said sale or quotation is made, shall notify the Secretary concerning the variation by letter, mailed within twenty four (24) hours. The information, as reported, shall be reissued by the Secretary to the members at such time, and in such manner as may be determined by the members of the division."

The writer was in Washington on Tuesday, together with Mr. Wormser. We stated to Mr. Janssen that we do not regard the substituted paragraph as providing a workable and practical set-up. The reasons for this will, I am sure, be obvious to you and need not be gone into at this time.

We were told that the principal reason for suggesting a change is due to the delay they anticipate when the Code comes under the scrutiny of the Consumers Advisory Board, and possibly the Legal Division. Reason for this expected delay seems to be due principally to the fact that it is so different from similar provisions coming before these Boards. Mr. Janssen stated that if his recommended paragraph were used, it would go through without trouble, because it is in a form to which these Boards have become accustomed, because it conforms to paragraphs which have been favorably passed upon in other Codes, whereas in the form as we wrote it, a lot of time would be spent looking for the "nigger in the woodpile".

If we insist, I think there is little doubt that we can reinsert our draft of this paragraph, but it is quite possible it could be re-written in a form more acceptable to all interested. It might, for example, be possible to provide for classification of sales and file price lists applying to such classification. This might produce a more stabilized price structure, upon which I expect we are all agreed is a desired result.

I wish you would pass this on to the people interested and when you have your meeting next week, see if we can come to a conclusion in the matter.

Yours very truly,
(Signed) F. M. Carter,
President.

Mr. F. E. Wormser, Secretary
Lead Industries Association
New York, New York.

Dear Wormser:

I am enclosing Zone Map for the White Lead in Oil industry. I believe you will find it self-explanatory.

When new points are set up or any suggested change in the differential made they can in the future be passed through your office.

From this map we will eventually build up an official freight arrangement for this division of the lead industry.

Yours very,

W. E. Maston.

1697 COMMISSION'S EXHIBIT NO. 522.

(Form of Postal Telegraph.)

October 30, 1933.

Mr. F. M. Carter
c/o Palmer House
Chicago, Illinois

Locke Believes Agreement Upon Suggested Uniform Basis Of Sale Pending Approval From Washington To Code Might Place Us On Uncertain Legal Ground And Might Be Embarrassing Later Stop He Suggests One Member Use Uniform Basis And Others Follow Voluntarily

F. E. Wormser,
Secretary Lead Industries Association

1698 October 30, 1933.

Mr. F. M. Carter
c/o Palmer House
Chicago, Illinois

Dear Mr. Carter:

I called on Mr. Locke this afternoon to obtain his opinion with respect to the legality of immediately installing a Uniform Basis of Sale for the Lead Oxides and Dry Products by agreement among the producers. Mr. Locke read the Supplementary Code provisions, Article II, and also the suggested outlines of the Uniform Basis for Sale. Although he noted that stipulations as to price had been omitted from the outlines, he felt that it might be unsafe to have an agreement prior to the approval of our Code as factors other than price in the Uniform Sales Contracts might possibly be picked up by the authorities as having a bearing on price and hence being in restraint of trade.

He suggested that the best practical solution for the moment seemed to be the adoption of the Uniform Basis of Sale by one or more of the interested members, which could be followed voluntarily by the others, without agreement on the subject but merely because it was individually to their best interests to do so.

I wired you the substance of Mr. Locke's views for no doubt you will wish to discuss the subject further with other members who now happen to be in Chicago.

Sincerely yours,

Secretary.

1706 COMMISSION'S EXHIBIT NO. 523.

F. E. Wormser
Same to W. E. Maston
F. O. Case
R. B. Coolidge, Jr.

November 9, 1933

Mr. P. E. Sprague, Vice President
Metals Refining Co.,
Hammond, Indiana.

Dear Mr. Sprague—

While legal counsel did not give Mr. Wormser a go ahead signal on the question as to whether the adoption of a uniform sales contract would be in strict conformity with the Sherman Act, it is our own conclusion that the common use of a contract which sets forth general terms, specifies grades, etc. but is entirely free from any price agreement would not be subject to criticism or involve us in trouble with the Sherman Act, or similar legislation.

The Pigments Section supplemental code as finally agreed upon was submitted to the Executive Committee of Lead Industries Association and was approved. Mr. Wormser was told to await directions with respect to filing. He is ready to file at Washington whenever so told.

I understand it to be the wish of the Committee to have this Supplemental Code filed so that it may be included in the hearing to be given to Lead Industries at some future time.

In order to avoid any possible misunderstanding, would like to have each member of the Committee who has sat in the discussions, confirm the above understanding, which please do by writing a letter to me.

Yours very truly,
F. M. Carter,
President.

Lead Industries Association
420 Lexington Avenue
New York, N. Y.

Lead Pigments Code
Fourth Draft

Supplemental Code of Fair Competition for the Lead Pigments Division of the Lead Industries Association.

As provided in Art. XIII of the Code of Fair Competition for the Lead Industries, hereinafter termed the "Master Code," this supplementary code is hereby made a part of said Master Code with the same force and effect as any provisions thereof, except that it shall be applicable only to Lead Pigments, as defined in Art. II of said Master Code; i. e., basic carbonate white lead, dry or in oil, basic lead sulphate, dry or in oil, litharge, red lead, dry or in oil, orange mineral and other lead oxides with or without metallic lead content.

Price Lists.

Art. I—Each member of the Code shall file with the Secretary within ten (10) days after the effective date of this Code, his price list, together with terms and conditions of sale. Any change in the said list or terms shall be reported to the Secretary in writing within twenty-four (24) hours after the effective date of such change. After December 31, 1933, any member making a sale or quotation at variance with his price list or terms on file at the time said sale or quotation is made, shall notify the Secretary concerning the variation by letter, mailed within twenty-four (24) hours. The information, as reported, shall be reissued to the members at such time and in such manner as may be determined by them.

Uniform Sales Contracts.

Art. II—Uniform sales contracts specifically designed for use in selling Dry White Lead and Lead Oxides shall be developed as soon as practicable and thereafter used by all members after said contract forms shall have been adopted by a two-thirds vote of members manufacturing the products to which the contracts apply. From time to time, changes in the uniform sales contracts can be made by a two-thirds vote of members manufacturing such products. All sales shall conform to the conditions set forth in the uniform contract forms.

1708 Unfair Trade Practices.

Art. III—The following shall be considered unfair trade practices and are violations of this code:

(a) Misbranding or misrepresentation of lead pigments.

(b) Making or promising to any purchaser or prospective purchaser of lead pigments, or to any officer, employee, agent or representative of any such purchaser or prospective purchaser, any commission, gratuity, or other payment or remuneration, directly or indirectly, except in the case of payments made with the consent of the employer for definite service rendered.

(c) Inducing or in any manner attempting to induce a breach, default or cancellation of a contract between a competitor and his customer during the term of such contract.

(d) Guaranteeing for a definite time the life and/or service of lead pigments.

(e) Making false or derogatory statements with respect to the prices, policies, products, practices, business or credit of any competitor.

(f) Exchanging the products of a member for those of another.

(g) No merchandise shall be sold at a concession in price, or used as an inducement, to influence the sale of any lead product, nor shall any concession be given in the price or terms of sale of a lead product to influence the sale of any other merchandise.

Returned Goods.

Art. IV—No member of the Code shall accept the return of merchandise without first giving consent for its return. On such goods as are accepted for return, a reasonable charge shall be made and freight charges must be prepaid by the shipper returning the merchandise, except in the case of defective products or where in some other way the manufacturer may be responsible.

1709

Lead Industries Association
420 Lexington Avenue
New York, N. Y.

(To be submitted to N. R. A.
with Supplemental Code.)

Suggested Outline of Uniform Basis for Sale of Lead Oxides in Carlots.

"Sale" or "Order" as used herein refers to any transaction whereby a Seller quotes on or becomes obligated to deliver material.

Whatever terminology may be used, the intent and meaning thereof shall conform to the following requirements of sales:

(1) Material—Dry Oxides of lead, or mixtures consisting principally thereof, each grade of material to be specifically designated.

Guarantees as to Pb_3O_4 content of red lead shall be given on only two grades, designated respectively as Grinders Red Lead 95% Pb_3O_4 and Grinders Red Lead 98% Pb_3O_4.

(2) Quantity—As agreed between Buyer and Seller, provided, however, that

(a) Each order or release shall be an amount not less than 20 tons.

(b) Any quantity to be supplied at an average price must be definitely fixed prior to the beginning of the period whose average governs the price thereof.

(3) Period—To be specified.

(4) Packages—To be agreed upon and specified for each grade of material. Special packages required by buyer shall be charged for according to cost.

(5) Price—As agreed between Buyer and Seller.

(6) Delivery—F. o. b. cars Seller's shipping point, or by truck, f. o. b. Buyer's premises.

(7) Transportation Allowance—The actual freight paid by buyer. Cartage may be allowed at warehouse points where it is a practice to make free store-door delivery.

(a) On pick-ups by Buyer's trucks: No allowance.

(b) Shipment via Buyer's boats: Allow the actual amount Seller would have paid for like transportation at published rates in effect on date of shipment up to 40¢ per cwt. after equalization with nearest manufacturing point.

(8) Shipment—As ordered, within 60 days from date of order in carlots with reasonable notice to Seller, provided also.

(a) Deferred shipments are to be billed on the basis originally applicable thereto: Seller may bill orders in excess of 500 tons on basis of pig lead cost therefor on 30 day terms from date of sale.

(b) Shipments at average price shall be made only against orders placed before the beginning of the period whose averages governs the price, each such order to constitute a firm sale.

1710 (c) Shipment by truck must be complete on each carlot quantity the third day from date of shipping the first portions.

(9) Terms—One per cent for cash ten days from date of shipment, net thirty days, subject to Buyer maintaining credit position acceptable to Seller.

(10) Taxes—Any tax or other governmental charge upon the production and/or shipment of goods sold imposed by Federal law, and applicable to this transaction, shall be added to the price and be paid by the Buyer.

(11) Force Majeure—Subject to strikes, fires, floods, delay in transportation and other causes beyond the control of either party; this contract to be deemed suspended so long as such causes prevent or delay its execution.

Suggested Outline of Uniform Basis for Sale of Lead Oxides and Dry White Lead in Less Carload Lots.

"Sale" or "Order" as used herein refers to any transaction whereby a Seller quotes on or becomes obligated to deliver material.

Whatever terminology may be used, the intent and meaning thereof shall conform to the following requirements of sale.

(1) Material—Dry oxides of lead, or mixtures consist-

ing principally thereof, and dry basic carbonated white lead, each grade of material to be specifically designated.

Guarantees as to Pb_3O_4 content of red lead shall be given on only two grades, designated respectively as Grinders Red Lead 95% Pb_3O_4 and Grinders Red Lead 98% Pb_3O_4.

(2) Quantity—Any amount as agreed.

(3) Period—As desired, to be specified.

(4) Packages—As agreed.

(5) Price—(a) Spot sales—Sellers card or quoted price in effect on date of order.

(b) Contract sales—Price to govern will be sellers card or quoted price on date of contract protected against advance or decline on undelivered portions to the end of the current calendar quarter.

(6) Delivery—F. o. b. cars Seller's shipping point, or by truck, f. o. b. Buyer's premises.

(7) Transportation Allowance—The actual freight paid by buyer. Cartage may be allowed at warehouse points where it is a practice to make free store-door delivery.

(8) Shipment—(a) Spot sales—As ordered within 30 days from date of order with reasonable notice to Seller.

(b) Contract sales—As ordered with billing of undelivered portion or cancellation at end of calendar quarter at Buyer's option.

(9) Terms—One per cent for cash in ten days from date of shipment, net 30 days, subject to Buyer maintaining credit position acceptable to Seller.

(10) Taxes—Any tax or other governmental charge upon the production and/or sale and/or shipment of goods sold imposed by Federal law, and applicable to this transaction, shall be added to the price and be paid by the Buyer.

(11) Acceptance—Subject to price changes.

1714 COMMISSION'S EXHIBIT NO. 527.

From File of F. M. C.

2501 Union Central Bldg.
Cincinnati, Ohio,
June 15, 1933

Mr. E. J. Cornish,
Chairman of the Board,
National Lead Company,
New York, N. Y.

Dear Mr. Cornish:

Upon my arrival home, and as soon as I was able to see Mr. Hertenstein, I acquainted him with the gist of our conversation in reference to the Eagle-Picher Lead Company and your present interest in the purchase of the assets of that company.

From him, I learned that the Eagle-Picher Lead Company, within the next two weeks, is to have a stockholders vote upon the reduction of the company's stock from a par of $20.00 to one of $10.00 per share. He is so engrossed with this matter that he does not see how he can take up the matter with Washington, which we discussed in your office, until after the date of this meeting.

He also stated that he thought there would be considerably more difficulty in getting the permission you desired in view of the apparently hostile attitude of the present Administration toward business.

I will keep you posted.

Very truly yours,
/S/ Albert Chatfield.

AC

1715 COMMISSION'S EXHIBIT NO. 528.

From File of F. M. C.

Cincinnati, Ohio,
July 20, 1935.

Mr. F. M. Carter, Pres.,
National Lead Company,
111 Broadway,
New York City.

Dear Mr. Carter:

Since my return, I have been in touch with Mr. Hertenstein in an effort to get together 675,000 shares of the stock of The Eagle-Picher Lead Company, less the 50,000 shares owned by your Company. This, I find, will be a harder job than I anticipated, owing to the fact that after 500,000 shares have been rounded up, the remainder of the stock is held in much smaller lots and it takes considerable time and effort to call upon and explain the matter in question to each stockholder.

However, I am working toward the end you proposed and will acquaint you with the progress I am making from time to time.

Yours very truly,
/S/ Albert Chatfield.

1718 COMMISSION'S EXHIBIT NO. 533.

E. I. Du Pont De Nemours & Company, Inc.
Wilmington, Delaware

March 2, 1938.

National Lead Co.,
111 Broadway,
New York, N. Y.

Gentlemen:

—Mr. Harold Rowe—
Assistant to President.

For the purpose of calculating replacement costs of Dry White Lead and Grinders Lead under our new contract, will you please forward your latest price card, showing the published card price of subject material, and also forward card showing any subsequent changes, addressed to the DuPont Company, care of the following individuals:—

H. S. Risler
2100 Elston Ave.
Chicago, Ill.

W. R. Barrett
Hamilton & St. John Sts.
Flint, Michigan

W. F. Tierman

March 10, 1938

National Lead Co.
111 Broadway
New York, N. Y.

Attention of Mr. Harold Rowe
Assistant to the President

Dear Harold:

In connection with my letter of March 8th and your favorable reply of the 9th, will ask if you do not think it advisable for you to give us a letter at the beginning of every period, covering the price to be in effect for the quarter, subject to any decline changes. In this way we would not depend upon receipt of the card, but would have for our file and transmitting to departments, the exact and definite information.

Yours very truly,
/S/ E. B. Melson,
Division Purchasing Agent.

National Lead Company
111 Broadway
New York

September 13, 1940.

Mr. E. B. Nelson, Div. Pur. Agt.
E. I. du Pont de Nemours & Co., Inc.
Wilmington, Delaware.

Dear Mr. Nelson—

This is to advise you that we are making no change in our prices for Dry White Lead and Basic Lead Sulphate, in barrels, for contracts for the fourth quarter of 1940. Shipments up to and including December 31st will be charged as follows:

For Plants Located in the East and Middle West Territories	C/L Lots	LCL Lots
Dry White Lead	7¢ per pound	7¼¢ per pound
Basic Lead Sulphate	6¼¢ per pound	6½¢ per pound

Pacific Coast prices—¼¢ per pound higher.

Any reduction in our prices during this period will become effective at once.

We are very pleased to have the opportunity to continue to serve your company.

Yours very truly,
/s/ Harold Rowe—K.V.

April 8, 1941.

Mr. J. L. Roque, Ass't. Mgr.
National Lead Company
Chicago Branch.

Dear Mr. Roque—

Referring to your letter of April 4th and mine of the 7th regarding cash discounts, I notice an article on page 4 in this week's Oil, Paint & Drug Reporter in which the DuPont Company announces a change in their policy which will become effective on orders received on and after May 1st. Perhaps others in the industry will follow this good example which would make it possible for us to do likewise without too much disturbance among our dealers.

Yours very truly,
/S/ Harold Rowe.

1773 Eagle Keg Products.

Identification of Symbols.

T14: Prices shown are available to only those accounts which have been properly approved by Division Manager, and who have subsequently entered into contract with Eagle-Picher which definitely establishes them as an Authorized Distributor.

#—To compute prices, Zones 2, 3, 4, 5, 6, and 7, increase prices per Cwt. shown for Zone 1 as follows:

Zone 2: For all sizes, add 12½¢
Zone 3: For all sizes, add 25¢
Zone 4: For all sizes, add 37½¢
Zone 5: For all sizes, add 50¢
Zone 6: For all sizes, add 75¢
Zone 7: For all sizes, add $1.00

##—To compute prices, Zones 2, 3, 4, 5, 6, and 7, increase prices per Cwt. shown for Zone 1 as follows:

Zone 2: For all sizes, add 13¢
Zone 3: For all sizes, add 25¢
Zone 4: For all sizes, add 38¢
Zone 5: For all sizes, add 50¢
Zone 6: For all sizes, add 75¢
Zone 7: For all sizes, add $1.00

*—Observe special qualifications of these accounts.

**—Quote as instructed by General Office.

E—Prices are net: No customer or quantity discounts.

H—Freight equalized with nearest Authorized Distributor's point on all shipments made to a destination in which no Distributor is located.

I—Freight allowed at not to exceed the established thru rate from nearest stockpoint to any destination in which an Authorized Distributor is located. On shipments to railroads, freight is allowed only to nearest point on buyer's line: to Steamship Lines, freight allowed only to dock. No freight allowance on small quantity shipments which do not equal carrier's minimum lot or rate requirement.

J—Stockpoint warehouses (LCL) quantities: All LCL shipments are to be made from stockpoint which can serve the destination most economically. Stockpoints are located as follows:

Baltimore, Md.
Boston, Mass.
Joplin, Mo.
Kansas City, Kansas.

March 1, 1937. Page 1

(Cancels Sheet Dated January 1, 1937.) WL

1774 Buffalo, N. Y.

Cincinnati, Ohio
Cleveland, Ohio
Dallas, Texas
Detroit, Mich.
E. St. Louis, Ill.
Milwaukee, Wis.
Minneapolis, Minn.
Newark, N. J.
New Orleans, La.
Pittsburgh, Pa.
Philadelphia

N—Carload quantity defined: 36,000 lbs. All keg products can be shipped in mixed car to secure CL rate. CL shipments are to be made only from Cincinnati, Ohio.

O—Packages: Non-returnable lithographed steel kegs and cans of net weights shown in price schedule. I lb. cans packed 25 pounds to the carton. 5 pound cans packed 10 to the carton. Note: Only White L/O is available in 1 and 5 pound cans.

F.O.B. Points:

(1) Cincinnati, Ohio
(19) Stockpoint Warehouses
(21) Distributor's place of business.

P—Pertinent Information—(Distributors—(T14)

(a) Consignment arrangement (White L/O only): Authorized Distributor must render to Eagle-Picher on last business day of each month a report of all sales during the current month, accompanied by itemized inventory of remaining stock at close of month.

(b) Taxes: Any fee imposed by a governmental agency must be added to the prices shown in this schedule and borne by the Authorized Distributor.

(c) All shipments are made with transportation charges prepaid.

Q—Pertinent Information: (Except Distributors.)

(a) Terms:

To T7, T8 and T16, 2% 10 days. Net 60 days.

To T15: 2% 10 days. Net 30 days.

(b) Taxes: Any fee imposed by a governmental agency must be borne by the purchaser.

September 14, 1937 Page 2

(Cancels Sheet Dated January 1, 1937) WL

1775 (c) On direct sales made to a central purchasing agency which call for small shipments to be made to branches or subsidiaries, the quantity shipped to each destination will govern the price, and in differential territories the differential applicable at point of destination applies; if the point of destination is not a distributor's point and is equalized with the nearest distributor's point, the differential applicable at such distributor's point applies.

(d) If a buyer or distributor picks up his order of White Lead-In-Oil, or other keg products at our stock point warehouse, no allowance for cartage or trucking will be allowed.

R—Special Instructions: (Distributors)

(a) No products other than White L/O may be purchased on a consignment basis.

(b) For full details of consignment arrangement, see contract, "Appointment of ...., as Distributor for Eagle White Lead in Oil."

S—Special Instructions:

(a) Sales to all branches of U. S. Government, quote as instructed by Division Office.

(b) Sales to any State, County, or Municipal Governmental Agency; quote as instructed by Division Office.

(c) Sales to Railroads and Steamship Lines; quote as instructed by Division Office.

(d) Sales of Dry Red Lead and Litharge to Industrials; quote as instructed by Division Office.

January 1, 1937 Page #3 WL

1776 Trade Classifications.

T6—Industrials

Manufacturing firms whose purchases are of such volume that especial prices are provided. No firm is entitled to the classification without approval of Sales Manager.

T7—Paint Dealers

Firms who purchase keg products either directly from Eagle-Picher or from an authorized Distributor for resale to painters or general consumers. Examples: hardware stores, paint stores, etc.

T8—Consumers

Individual private property owners and others not regular buyers of paint products.

T14—Authorized Distributors

Firms engaged in the resale of paint materials who have entered into a contract with Eagle-Picher entitling them to purchase Eagle White L/O on a consignment basis, and to enjoy especial prices on other keg products.

T15—Preferred Contracting Painters

Purchasers of Eagle White L/O in five (5) ton lots by one concern or individual for delivery at one time to one destination. Pooling of orders cannot be permitted.
See Note: Page 10.

T16—Miscellaneous Contracting Painters

Firms (or individuals) who purchase keg products for resale on an applied basis only, but whose purchases do not meet the quantity requirements defined under T15.

Euston White Lead in Oil.

Premium Zones and Price Differentials Applicable Thereto.

This supersedes previous schedule of differential zones.

(a) States in par territory (which take no differential premium): Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Pennsylvania, Maryland, Delaware, Ohio, West Virginia, Michigan, Indiana, Illinois, Wisconsin, Kentucky and District of Columbia.

Exceptions: Areas in above States which take ⅛¢ advance:

Kentucky—Mayfield, Paducah and Fulton.
Illinois—Cairo, Moline, Quincy and Rock Island.
Wisconsin—Eau Claire, LaCrosse, Superior, Ashland, Chippewa Falls and Rice Lake.

(b) States taking ⅛¢ advance differential: Minnesota, Iowa, Missouri and Virginia, also certain areas as per (a) above, in Kentucky, Illinois and Wisconsin and certain areas as per (c) below in Nebraska and Kansas.

Exceptions: Areas in above States which take no advance differentials:

Missouri—St. Louis, Clayton, Ferguson, Kirkwood, Manchester, Maplewood, St. Charles and Webster Groves.
Virginia—Arlington County and Fairfax County.

Areas in above States which take ¼¢ advance:

Virginia—Southwestern section of Virginia including the following counties and points west: Bath, Allegheny, Craig, Montgomery, Floyd and Carroll.

(c) States taking ¼¢ advance differential: Tennessee, North Dakota, South Dakota, Nebraska and Kansas. Also certain areas in Virginia as per (b) above.

Exceptions: Areas in above States which take ⅛¢ advance.
Nebraska—Lincoln and Omaha.
Kansas—Atchison, Kansas City and Leavenworth.

(d) States taking ⅜¢ advance differential: North Carolina, South Carolina, Georgia, Florida, Alabama, Mississippi, Louisiana and Arkansas.

No exceptions.

(e) States taking ½¢ advance differential: Oklahoma, Colorado and Wyoming.

No exceptions.

(f) States taking ¾¢ advance differential: Texas.

Exceptions: Area in above State which takes a 1¢ differential: El Paso.

(g) States taking 1¢ advance differential: New Mexico.

No exceptions.

1781 COMMISSION'S EXHIBIT NO. 595.

(Letterhead of National Lead Company,
111 Broadway, New York.)

September 8, 1933

To All Branch Managers:

Please prepare as quickly as possible and send to this office a list of all towns in your territory where you think it would be desirable to appoint agents under the Agency System for selling, which is planned to go into effect October 1st.

One of the objectionable features of such a plan of selling is the extent to which money is locked up in consigned stocks scattered over the country. This is one important reason why great care must be used in offering the agency proposal. It should not be extended to accounts of small size, or where the turn over is slow.

In the Atlantic Branch, it was originally held to accounts selling not less than twenty tons per annum and to date there have been, I think, few exceptions to this standard. However, because this Branch has felt the need of securing better co-operation from a class of dealers of somewhat less importance, the revised plan which carries provision for the so-called "B" agents will permit the extension of the offer to smaller accounts, but which, it is hoped, can be developed into active sellers of lead.

The point we are trying to make is we must, at the outset, use care and go slow in the selection of agents; otherwise, we will accumulate too heavy a load of stock to carry. The offer should first be made to that type of account which either already is or in your judgment can be developed into a worthwhile distributor of white lead.

We want, therefore, at this time, and as quickly as possible, a list of those points where, in your judgment, the plan should be instituted. We hope to supply you very soon with a list of such towns which represent the ideas of other corroders. We think it will be desirable at this time to confine not only offers of the agency contract to dealers at these particular points, but also to avoid any mention of the new plan elsewhere.

After these lists have been checked over and considered, it is our thought that a letter should be sent to each account which you consider to be a desirable prospect, stating that on or about October 1st it is your intention to offer a new basis for the sale of white lead and your representative will call and explain the proposal in the immediate future.

At metropolitan points we think it would be very desirable to follow the plan used by the Atlantic Branch and the Philadelphia Branch in talking to important dealers as a group and explaining just what the new deal means and its advantages to the distributors of white lead. There is no need of going into this feature because it was discussed at length at the last meeting of the Sales Committee.

Yours very truly,

President.

1782 COMMISSION'S EXHIBIT NO. 596.

(Letterhead of National Lead Company,
111 Broadway, New York.)

October 21, 1933.

All Branch Managers:

It is possible that a decision may be made within a few days to go ahead with the agency plan for selling lead-in-oil which we had expected to put into effect on October 1st. Word will probably be sent you by wire and you should be prepared to get under way immediately. This letter is for the purpose of making clear some of the points that should be handled in a uniform manner by all branches.

Printed forms of the agency agreement are being made up here and a sufficient quantity to take care of their requirements will be mailed to each branch early next week. Forms for agent's monthly stock reports will be sent out shortly afterward. The latter will not be required before November 30th.

The agents' discounts are as follows—

"A" Agent	10%—10% & 3%.
"B" Agent	10% & 10%.

The Atlantic Branch will attach a rider to the agreement allowing an extra 1% to "A" Agents for tonnage sold and special service rendered. This will read as follows:

"For special service in encouraging the sale and consumption of White Lead by efficient merchandising methods and proper use and display of advertising material supplied by the manufacturer, the agent shall be allowed additional compensation amounting to 1% of the net paid value of the White Lead distributed by such agent provided his total annual sales aggregate .... tons.

"Credit memorandum to cover such additional compensation as may become due, less any amount due the manufacturer, will be issued annually, or semi-annually, or as stipulated by the manufacturer, and neither the whole amount nor any part thereof shall be withheld or deducted by this agent from any remittance made or amount due the manufacturer prior to the actual issuance of said credit."

The tonnage requirement varies, depending upon the locality, but the extra 1% is not given to small accounts.

Sales made by the agent are to be at the full card price with the following exceptions—

	Discount
Painters	10%
Dealers (any quantity)	10% & 4%
Painters) or) Dealers) 1,000 lbs. in one delivery	10% & 6%

1783 Small lots sold direct by you to dealers who are not agents are subject to discount as follows:

500 lb. lots	10% & 4%.
1,000 lb. lots	10% & 6%.

In other words, the agent is permitted to sell a dealer less than 500 pounds at 10% and 4% discount, while you will be obliged to charge the list.

The Atlantic Branch is planning to send out a card to all dealers on their mailing list (agent or otherwise), which will read "Re-print of list issued June 1, 1933" and will show our discount to dealers; namely, the 10% and 4% for 500 pounds, and the 10% and 6% for 1,000 pounds, mentioned above. It would seem desirable that you also do that.

Along with the agency contract should go a card showing the list price, discounts and net prices. The one formerly used by the Atlantic Branch is attached. This card is important because it does away with the possibility of agents using the excuse that they made a mistake in figuring prices. They should not be permitted to give cash discount in spite of the fact that there are some good arguments for their doing so. It has been necessary to put this rule into effect in the Atlantic territory because of the price confusion after it was adopted.

Agents are not permitted to display any price in their stores other than the list. The Atlantic Branch has made up cards of this sort which are distributed to dealers. Mr. McNair believes that they are helpful in establishing the schedule. A sample will be sent to you as early as possible next week with all other printed matter the Atlantic Branch is planning to have made up.

As soon as you receive word to go ahead with the agency plan it will be in order for you to have contracts signed and start selling on consignment. If this occurs prior to November 1st, you should tell the agents that the new discount schedule will go into effect on November 15th.

Please note that the plan applies only to White Lead-in-Oil and does not include Dry White Lead or Oxides.

Owing to the fact that it will take some time for you to contact all customers that you desire to make agents, it will probably be advisable for you to write a letter to the ones you select, explaining briefly the new selling arrangement and telling them that your representative will call on them as soon as possible. Mr. Carter again would like to emphasize the importance of appointing at the start as "A" or "B" agents, only those concerns that you are sure properly qualify. It would be a great mistake to extend the plan too far down the line. Additions can be made easily at a later date.

If you are in doubt about any points, please do not delay in asking us for further information.

Yours very truly,

EMH
Encl.-Card.

1784 COMMISSION'S EXHIBIT NO. 597.

Date: October 26, 1933

To:

From: J. G. C. McNair, Assistant Manager (Atlantic Branch)

At Mr. Carter's request I am confirming a telegram sent to you today reading:

"Agency plan reinstated to go into effect November 15. Resume campaign Monday. Contract forms being mailed Friday. Letter following.

F. M. Carter".

The letter reference pertains to this letter. Mr. Carter requested me to write and advise that you are authorized to go ahead and put into effect the agency plan of selling. Any orders which you may receive from now on from agents that you establish such orders can be sold on consignment but the new price schedule will become effective on November 15. This will give you an opportunity to line a great many agents up so that the new price schedule for White Lead may be put into effect by the distributors simultaneously which is the reason for establishing November 15 as the date when the new schedule becomes effective.

A supply of contract forms will go forward to you via parcel post tomorrow and in the event that an additional supply is required they can be had by sending your request to Mr. Harold Rowe as the printer will keep the form set up. Report pads for distribution to your agents for reporting the stock on hand at the end of the month are now in the hands of the printer and we would thank you to advise us promptly of the approximate number of these pads you will require to distribute to your agents so that they may be sent to you promptly.

In the event that you should ship an order on consignment prior to November 1 it will not be necessary for the agent to report his sales on this consigned stock until the end of November so there will be ample time for you to receive your stock of report forms for distribution to the agents.

The report forms will only cover White Lead in Oil in the various size packages as this is the only product that will be sold on the consigned basis. Orders from agents for Dry White Lead, Litharge, Dry Red Lead, and Red Lead in Oil will be sold to them outright with discounts extended to the agent in accordance with the contract terms.

New York
November 9, 1933.

To All Branch Managers:

Several questions have been brought up regarding the application of the Agency Plan and it seems advisable to answer them in a general letter to all branches.

1. Objection has been raised to the idea of giving 10% discount on sales to painters in small lots. There are some sections where full list price is being obtained on such sales. It would be a mistake on our part to deprive the dealer of the margin he has been getting. For that reason all of our printed matter showing discounts should read "To the Trade", without mentioning painters. It will be for the dealer to decide who shall be classified as "The Trade". Ordinarily we would assume that the 10% would be allowed to painters who are frequent buyers and perhaps also to some industrial concerns who might be considered as regular purchasers of white lead. In localities where you do

not believe the 10% should be given to painters generally, it will probably be advisable for your representative to have an understanding among the dealers similar to what must now be in effect where prices are not cut.

2. Freight Allowance. All cities where agencies are established will be considered delivery and equalization points. No freight allowance will be made to agents on shipments from their stock to their customers. On quotations made by us direct to buyers other than agents, freight will be equalized with nearest agency point.

3. Cash Discount. Because of their experience the Atlantic Branch has decided to do away with cash discounts on agents' sales over the counter. They will not apply this restriction to charge accounts where bills are rendered by the agent and paid within the discount period. If you do not think it advisable to apply this rule to any sections of your territory, where dealers are in the habit of giving such a discount, you may leave it to them to do so or not as they choose.

4. Price Guarantee. Obviously it will be unnecessary to rebate agents for stocks on hand in case of a decline in price. The question will come up on sales they have made to dealer customers who still have the lead in stock. It has been decided that no allowance whatever will be made.

In the event of an advance in price, agents will probably report a large proportion of their stock sold before the change. The limit of our obligation should be the amount of stock an agent has on hand.

1790 It is not desirable to maintain excessive stocks except where it will be advantageous to ship in carload lots.

5. Insurance. You will receive a letter from Hamlin & Company within a few days explaining that this will be handled from their office.

6. Reports of Sales. On the weekly report—"Deliveries to Trade" (Form 213)—which you render to the Comptroller's office, only such tonnage should be included as has actually been invoiced to your customers.

7. Price, Lists, etc. The forms sent to you by the Atlantic Branch are the ones which they have made up to suit their particular requirements. It is not necessary that you use exact duplicates. For example, the point has been raised that in some territories dealers display a retail price card showing packages under 100 lbs. at an increase

greater than the regular differential which we apply. This can be continued where it is possible for dealers to obtain the extra margin. Please keep this office advised of all notices that you are sending to the trade.

8. Our Prices on Direct Sales to customers other than agents—dealers, painters or consumers—will be as follows:

Less than 500 lbs.	List
500 lbs.	List less 10%
1,000 lbs.	List less 10/6%

No sales in 5-ton or carload lots will be made to dealers who are not agents. Instructions covering direct sales to painters buying large quantities and to industrial concerns were included in our letter of October 23rd.

It should be kept in mind that the purpose of the whole Agency Plan is to control the dealers' selling price of white lead, so that he may be assured of a reasonable profit. It is impossible to lay down a complete and definite set of rules which will be entirely satisfactory for all sections of the country. There will have to be some flexibility permitted and branch managers will be expected to use their own judgment in handling special situations. It is important, however, that you inform this office of any important variations which you contemplate.

Harold Rowe.

1791 COMMISSION'S EXHIBIT NO. 603.

National Lead Company
111 Broadway

Harold Rowe
Asst. to the President

New York
November 21, 1933.

To All Branch Managers:

1. Apparently there has been some misunderstanding regarding the discounts applying on agency agreements. In at least one case the impression has been given that our contracts are limited to two schedules, namely—10/10/4% or 10/10%.

2. It has been our opinion that most all of those accounts who formerly were regular 5-ton buyers would be desirable

agents. In general, they would be considered to qualify as what we have called "A" agents and be entitled to 10/10/3% discount. The 10/10/4% is given only to the larger outlets that previously would have been classified as carload buyers.

3. The 10/10% discount is designed for the smaller dealer who has not been a 5-ton buyer but who gives promise of developing into a good lead account with the encouragement of a slightly greater margin than 10/6%. There will be comparatively few such agents.

4. You are familiar with the Atlantic Branch policy of withholding until a later date the 1% due large distributors in addition to the 10/10/3%. The claim has been made that this is an unfair trade practice because the tonnage requirement tends to shut out other brands of lead. It will be necessary to revise such contracts to carry a straight 10/10/4% discount. Very few of our branches have followed the Atlantic plan and in view of the situation which may develop it would be better for you not to make contracts with extra discount contingent upon tonnage sold.

In the weekly report which you send to the office showing orders received, you should include those from selling agents as well as from other customers.

Yours very truly,

Harold Rowe.

1794 COMMISSION'S EXHIBIT NO. 613.

Appointment of Selling Agent
Dutch Boy White Lead

National Lead Company
Atlantic Branch
111 Broadway New York, N. Y.

1795 National Lead Company

Appointment of Selling Agent
Dutch Boy White Lead

National Lead Company, a New Jersey corporation (hereinafter called the manufacturer), through it's .... Branch, with office at

.... hereby appoints
...., of
(Street) ...., (City) ....,
(State) ...., having branches at No.
(Street) ...., (City) ....,
(State) .... and No. (Street) ....
..............................., (City) ...., (State) ....
(hereinafter called the agent), an agent to sell, for it, Dutch Boy White Lead at price schedules of the manufacturer in effect at the date hereof (a copy of which has been delivered to, and receipt of which is hereby acknowledged by, the agent) or any revised schedule that may become effective during the life of this contract, upon the terms and subject to the conditions herein set forth; and said agent hereby accepts the appointment and agrees to comply with said terms and to perform all conditions hereof:

1. The Agency Hereby Created shall remain in force until terminated as herein provided.

2. The Manufacturer Agrees To Maintain On Consignment in the custody of the agent, to be disposed of as herein provided, a stock of Dutch Boy White Lead. All of the white lead in such consigned stock shall be and remain the property of the manufacturer until the white lead is sold, and the proceeds of all white lead sold shall be held in trust for the benefit and for the account of the manufacturer until fully accounted for as hereinafter provided. The sizes, types and quantity of white lead and the length of time it shall remain in stock are to be at all times determined by the manufacturer; but the intent is to maintain the stock on an average basis of approximately the normal requirements of the agent for a reasonable period. No liability of any nature is assumed or incurred by the manufacturer in the performance of this contract because of its inability to supply white lead required by the agent, arising from circumstances beyond the manufacturer's reasonable control.

All white lead shipped direct to the agent, until it is sold or distributed in accordance with the agent's authority hereunder, shall be stored, housed and displayed for sale only in the agent's regular place or places of business specified above and in such manner as to afford ready inspection and identification by the manufacturer, and any duly authorized representative of the manufacturer shall have access at all times during business hours to the place or places in which said white lead is stored. The agent shall pay all expenses in the storage, cartage, transportation, handling, sale and distribution of white lead hereunder, and all expenses incident thereto and to the accounting therefor and to the collection of accounts created.

The agent shall pay all taxes, excises and charges, which are now, or may hereafter be, levied, imposed or charged (whether by federal, state, municipal or other public authority), with respect to white lead sold by the agent hereunder. The agent shall make all reports required by the public authorities with respect to such sales of white lead. When authorized by the law imposing such tax, excise or charge, the agent may, at his option, increase the price of white lead to the purchaser by an amount equal to such tax, excise or charge.

The agent shall return to the manufacturer at any time when directed by it, all or any part of the consigned stock which has not been sold. The agent shall keep account books and books and records giving complete information covering all of his transactions in connection with the sale and distribution of the manufacturer's white lead, and such books, records and copies of invoices shall be open at all times during business hours to the inspection of any duly authorized representative of the manufacturer.

3. The Agent Is Hereby Authorized to sell from said stock to any dealer or consumer, white lead at the schedule of prices as provided.

The agent has no authority to sell or transfer or in any way dispose of such white lead, except as herein expressly provided. The agent has no authority to accept orders for or commit the manufacturer to the sale or delivery of white lead in excess of the unsold stock at the time in his custody.

Schedules pertaining to prices, discounts, terms and conditions of sale will be supplied agents, each and all of which are subject to change by the manufacturer from time to time. All sales and quotations shall be made only
1796 at such prices, upon such terms and under such conditions as may be established by the manufacturer from time to time and the agent shall at all times observe the manufacturer's sales policy, as may be determined by said manufacturer.

4. The Agent Shall Render To The Manufacturer, on the 25th of every month, on forms provided by the manu-

facturer, a complete itemized report or inventory of all the manufacturer's white lead on hand at the close of business on the 25th of the month and shall render within fifteen days after the termination of this appointment, a similar report of all such white lead on hand at the date of such termination.

5. The Agent Shall Remit To The Manufacturer, not later than the 15th day of each month an amount equal to the total sales value of all white lead sold by said agent during the preceding calendar month less the compensation allowed him as provided in Paragraph 7 below. At the time of rendering his inventory report the agent shall pay the manufacturer for all white lead lost, missing from, or damaged in the aforesaid stock in his custody.

6. The Agent Agrees That Upon Notice From The Manufacturer, specifying other dates than those specified herein for forwarding reports and remittances, he will promptly thereafter forward said reports and remittances on such changed dates.

7. As Compensation for the performance of his obligations, hereunder, the agent shall be allowed the difference between (1) the total value of his sales, and (2) the total value of the merchandise sold calculated at the following schedule of prices per hundred pounds:

If all reports have been forwarded as required in this contract of appointment and if remittance is made not later than the 15th day of each month covering in full for all white lead sold during the preceding calendar month by this agent, whether or not all accounts for such sales may have been collected, such remittance shall be subject to two per cent (2%) discount.

The manufacturer reserves the r[illegible] any time during the term of this appointment, to ch[illegible] any or all rates or bases of compensation of the agent upon written notice, which revised rates or bases of compensation become effective upon issuance of said notice.

If the agent shall be or become insolvent or shall fail to make any report or remittance herein required to be made or shall fail to conduct the business of the agency to the satisfaction of the manufacturer, or shall fail to observe or perform any of the other provisions, terms or conditions herein contained on the part of the agent to be observed or performed, or if the agent shall become involved in any financial difficulty which in the opinion of the manufacturer may impair the agent's ability to properly conduct the business of the agency, then and in any such case the manufacturer may cancel and terminate the agency hereby created by notice in writing to the agent. This agency appointment is personal in its character and the manufacturer reserves the right to cancel the agency in the event of the transfer of the agent's business or the control thereof to parties other than those now in control. This appointment is not assignable by the agent without the written consent of the manufacturer.

Either party to this agreement, by written notice to the other, may at any time terminate the agency hereby created.

The termination of this agency for any reason shall be without prejudice to the rights of the manufacturer against the agent, and shall not relieve the agent of any of his obligations and guarantees hereunder. Immediately upon any such termination, the agent shall deliver to the manufacturer all white lead consigned hereunder which remains unsold and shall fully perform all obligations of the agent which then remain unfulfilled.

9. This Appointment Shall Not Be Binding On The Manufacturer Until Signed for the manufacturer by its duly authorized representative. None of the terms of this appointment shall be deemed to have been waived by the manufacturer unless such waiver be in writing and signed by said duly authorized representative.

10. This appointment applies only to white lead in oil in one hundred, fifty, twenty-five, and twelve and one-half pound packages.

1798 COMMISSION'S EXHIBIT NO. 615.

Price Schedule
Effective April 26, 1941

Railroads—Steamship Lines.

Quantity & Period:

Buyer's requirements up to a stated maximum—for shipment by June 30, 1941.

Delivery:

Railroads—F. O. B. Seller's nearest factory point. Freight allowed to nearest point on Buyer's line.

S/S Lines—Deliveries to dock. No further freight allowance.

Prices:

	White Lead in Oil	Dry White Lead	Red Lead in Oil	Dry Red Lead
100 lb. kegs	10.50	9.50	11.00	10.00

Usual advances for smaller packages.

Terms—30-1-10.

When "nearest point on Buyer's Line" is located outside of par territory, add full differential as shown on white lead-in-oil zone map. (This includes all four of the above items.)

Prices for dry red lead and red lead-in-oil in 100 lb. kegs have been included in the three months' contract. They are intended to apply to lots of less than 5 tons. For large lots you should not make three months' contracts but should quote on specific orders as follows:

Dry Red Lead:

In bbls. (less than 5 tons)—Card price.
Terms—30-1-10. Shipment—30 days.
In bbls. (5-ton lots)—Card price less $\frac{1}{2}$¢ per lb.
Terms—30-1-10. Shipment—30 days.
In bbls. (20-ton lots)—$2.50 per 100 lbs. over the A., S. & R. Co.'s closing price of common lead at New York on the date order is received.
Terms—Net 30 days. Shipment—60 days.

The following small package differentials shall be added to the barrel price:

100 lb. kegs	$1.00 per 100 lbs.
50 lb. kegs	1.25 per 100 lbs.
25 lb. kegs	1.50 per 100 lbs.
12½ lb. kegs	1.75 per 100 lbs.

Except for kegs in lots of less than 5 tons (covered above), zone differentials shall be added in accordance with the oxide zone map.

Red Lead-In-Oil:

In 5-ton lots, 100 lb. kegs—1¢ per lb. over 5-ton price of Dry Red Lead in 100 lb. kegs. Terms—30-1-10.

In 20-ton lots, 100 lb. kegs—1¢ per lb. over 20-ton price of Dry Red Lead in 100 lb. kegs. Terms—Net 30 days.

Litharge:

In all cases—1¢ per pound under Dry Red Lead.

1800

Price Schedule
Effective April 26, 1941

Industrial Accounts (Whom We Sell Direct).

For quarterly contracts ending June 30, 1941.

	White Lead in Oil	Dry White Lead	Red Lead in Oil	Dry Red Lead
100 lb. kegs	10.75	9.75	11.25	10.25

Usual advances for smaller packages.

Terms—30-1-10.

Delivered to destinations in par territory. For deliveries outside of par territory, add full differential as shown on white lead-in-oil zone map. (This includes all four of the above items.)

Prices for dry red lead and red lead-in-oil in 100 lb. kegs have been included in the three months' contract. They are intended to apply to lots of less than 5 tons. For large lots you should not make three months' contracts but should quote on specific orders as follows:

Dry Red Lead:

In bbls. (less than 5 tons)—Card price.
Terms—30-1-10. Shipment—30 days.

In bbls. (5-ton lots)—Card price less ½¢ per lb.
Terms—30-1-10. Shipment—30 days.

In bbls. (20-ton lots)—$2.50 per 100 lbs. over the A. S. & R. Co.'s closing price of common lead at New York on the date order is received.

Terms—Net 30 days. Shipment—60 days.

The following small package differentials shall be added to the barrel price:

100 lb. kegs	$1.00 per 100 lbs.
50 lb. kegs	1.25 per 100 lbs.
25 lb. kegs	1.50 per 100 lbs.
12½ lb. kegs	1.75 per 100 lbs.

Except for kegs in lots of less than 5 tons (covered above), zone differentials shall be added in accordance with the oxide zone map.

Red Lead-In-Oil:

In 5-ton lots, 100 lb. kegs—1¢ per lb. over 5-ton price of Dry Red Lead in 100 lb. kegs. Terms—30-1-10.

In 20-ton lots, 100 lb. kegs—1¢ per lb. over 20-ton price of Dry Red Lead in 100 lb. kegs. Terms—Net 30 days.

Litharge:

In all cases—1¢ per pound under Dry Red Lead.

1802 Government—State—Municipal—W. P. A., Etc.

Minimum Prices Effective April 26, 1941.

Quantity:

As specified in the inquiry.—A definite amount of "requirements" over a period.

Shipment:

As specified in the inquiry.

Delivery:

Prices as outlined below include delivery to destination or to any other pick-up point for which quotation is requested in the inquiry.

Prices and Terms:

White Lead-In-Oil:

Less than 5 tons—In par territory quote on basis of $9.25 for 100 lb. kegs, less 2% cash discount (dropping any fraction of a cent). In other zones, add differentials to $9.25 price and deduct 2%. Terms—Net 30 days.

In lots of 5 tons or over—In par territory quote on basis of $9.00 for 100 lb. kegs, less 2% cash discount (dropping any fraction of a cent). In other zones, add differentials to $9.00 price and deduct 2%. Terms—Net 30 days.

In par territory prices will be:

Less than 5 tons	5 tons or over
100#—9.06 Net	100#—8.82 Net
50#—9.31 Net	50#—9.06 Net
25#—9.55 Net	25#—9.31 Net
12½#—9.80 Net	12½#—9.55 Net

Red Lead-In-Oil:

In par territory quote on basis of $10.50 for 100 lb. kegs, less 2% cash discount (dropping any fraction of a cent). In other zones add differentials to $10.50 price and deduct 2%. Terms—Net 30 days.

Par territory prices will be:

Red Lead-In-Oil
100#—10.29 Net
50#—10.53 Net
25#—10.78 Net
12½#—11.02 Net

Dry White Lead:

(a) In barrels—card price per 100 lbs. with 1% cash discount deducted, dropping any fraction of a cent. Terms—Net 30 days. (Card price in following states is 25¢ per 100 lbs. over par territory:

Arizona, California, Colorado, Idaho, Montana, Nevada, New Mexico, Oregon, Utah, Washington, Wyoming.)

(b) In 100 lb. kegs—Barrel price at point of delivery (1% cash discount deducted, dropping fractions) plus $1.50 per 100 lbs. Terms—Net. Usual advances for smaller sizes.

1804 Dry Red Lead—Litharge:

(a) For Deliveries Of Less Than 20 Tons in One Lot.

(1) In barrels—Card price for state in which delivery is to be made (with usual 50¢ per 100 lbs. deduction for five tons in one delivery).

Terms on all L. C. L. shipments—1% for cash paid within discount period stated on bid (not beyond 30 days). If no period is stated terms shall be 1%—30 days.

The card price used in making quotations shall be the one in effect on the 5th day prior to date of opening. If 5th day is a Sunday or holiday, use closing price of next preceding business day.

States carrying differentials over card price (L. C. L. shipments) are as follows:

25¢ per 100 lbs. in Alabama, Arkansas, California, Florida, Georgia, Louisiana, Mississippi, Oklahoma, Texas, and west of Cascade Mountains in Oregon and Washington.

50¢ per 100 lbs. in Colorado, Montana, New Mexico and Wyoming.

75¢ per 100 lbs. in Arizona, Idaho, Nevada, Utah, and east of the Cascade Mountains in Oregon and Washington.

(2) In small packages—To barrel prices add—

$ .50 per 100 lbs. for 100 lb. kegs.
.75 per 100 lbs. for 50 lb. kegs.
1.00 per 100 lbs. for 25 lb. kegs.
1.25 per 100 lbs. for 12½ lb. kegs.

Terms—same as barrels above.

(b) For Deliveries Of 20 Tons Or Over In One Lot.

(1) In barrels—In par territory a flat price

$2.50 per 100 lbs. for Red Lead
over A. S. & R. Co.'s price of common lead at New York

$1.50 per 100 lbs. for Litharge
over A. S. & R. Co.'s price of common lead at New York

in effect at the close of the market on the 5th day prior to date of opening. If 5th day is a Sunday or holiday, use closing price of next preceding business day.

Terms—Net 30 days.

Add 25¢ per 100 lbs. for deliveries in following states:

Alabama, Arizona, Arkansas, Colorado, Florida, Georgia, Idaho, Louisiana, Mississippi, Montana, Nevada, New Mexico, Oklahoma, Texas, Utah, Wyoming, and east of Cascade Mountains in Oregon and Washington.

(2) In small packages—To barrel prices add—

$ .50 per 100 lbs. for 100 lb. kegs.
.75 per 100 lbs. for 50 lb. kegs.
1.00 per 100 lbs. for 25 lb. kegs.
1.25 per 100 lbs. for 12½ lb. kegs.

1821 COMMISSION'S EXHIBIT NO. 624.

(Letterhead of National-Boston Lead Company,
Boston, Mass.)

January 19, 1944

To Dutch Boy White Lead Agents.

Because of the present conditions resulting from governmental restrictions on oils, containers, and labor, and as provided for in our Dutch Boy White Lead Agency Agreement, we hereby notify you that as of the close of business on January 25, 1944, we are terminating the Agency Agreement entered into with your firm.

To effect the termination of our agency appointment with you, we will bill you as of January 25th on your agency price basis for all the consigned lead you had on hand December 25, 1943, plus any lead that has been shipped to you on consignment in the interim.

If for any reason you decide not to purchase your present stock of lead, we will adjust the billing when we have arranged a transfer of your stock to another outlet or for its return to us charges collect.

We suggest that our present resale prices to dealers and the consuming paint trade be maintained. All agency agreements in the territory served by the National-Boston

Lead Company are being terminated, at least for the duration, and we sincerely believe that this change will be advantageous to all concerned since it will better enable us to distribute the White Lead available in 1944.

Very truly yours,
National-Boston Lead Company,
Karl Fischer,
Vice President.

1822 National-Boston Lead Co.

January 19, 1944

To Dutch Boy White Lead Distributors.

We are sending the attached letter to all of our Agents today and we believe you will concur with the wisdom of this action at this time.

However, it is our desire to have you continue as a Direct Distributor, and effective this date we quote you the following prices in accord with approved OPA ceilings:

Net Weight Packages	Cents Per Pound One Delivery of not less than 2000 lbs.	1000 lbs.
100 lbs.	10¾	11¼
50 lbs.	11	11½
25 lbs.	11¼	11¾
12½ lbs.	11½	12
5 lbs.	12¾	13¼
1 lb.	14¼	14¾

Terms: Net 60 days less 2% for cash in 10 days, F.O.B. Boston Freight allowed.

As to resale, we are sure you will want to retain the selling schedules already established and we suggest the following prices be continued since they likewise are in accord with established OPA ceilings:

Net Weight Packages	To Dealers	Cents Per Pound to Painters 500 lb. lots	Less than 500 lbs.	List Prices
100 lbs.	11¾	12¼	12¾	13¾
50 lbs.	12	12½	13	14
25 lbs.	12¼	12¾	13¼	14¼
12½ lbs.	12½	13	13½	14½
5 lbs.	13¾	14¼	14¾	15¾
1 lb.	15¼	15¾	16	17¼

We believe this selling plan will help assure you of an adequate supply of Dutch Boy White Lead and enable us to serve you more efficiently.

When you desire to purchase an additional supply of Dutch Boy White Lead, please give us notice as far in advance as possible. Regulations of the Office of Defense Transportation may prevent us from making our usual prompt deliveries.

Should there be any question before our representative makes his next call, please write or phone us. In the meantime we want to thank you for your past cooperation and assure you of our earnest desire to be of all possible service to you during this emergency period.

Very truly yours,
National-Boston Lead Company.

1827 COMMISSION'S EXHIBIT NO. 629.

November 15, 1933

(This form of contract issued November 15, 1933, at time consignment plan was extended to all territories.)

This Copy Is The

Appointment of Distributor for

Eagle White Lead In Oil
The Eagle-Picher Lead Company
Cincinnati, Ohio

1828 Appointment of Distributor For
Eagle White Lead In Oil.

This Agreement made this .... day of ....193....., by and between The Eagle-Picher Lead Company, an Ohio Corporation, with its principal office in Cincinnati, Ohio, (hereinafter for convenience called Manufacturer) and

....

....

(hereinafter for convenience called the Distributor).

Witnesseth:

That in consideration of the mutual promises hereinafter set forth, said parties agree as follows:

1. Manufacturer hereby appoints the Distributor as a selling agent for the sale of Eagle White Lead in Oil at price schedules furnished by the Manufacturer, and in effect at the date hereof, or any revised schedule that Manufacturer may furnish during the life of this contract, upon the terms and subject to the conditions hereinafter set forth. A copy of the price schedule issued by the Manufacturer has heretofore been delivered to the Distributor, and receipt of same by the Distributor is hereby acknowledged. The Distributor hereby accepts said appointment, and agrees to comply with said terms and to perform all the conditions hereof.

2. The Manufacturer agrees to place in the custody of the Distributor a stock of Eagle White Lead in Oil, which shall be and remain the property of the Manufacturer until sold by the Distributor. The sizes, types, and quantity of White Lead in Oil, and the length of time it shall remain in stock are to be at all times determined by the Manufacturer. It is agreed that no liability of any nature is assumed or incurred by the Manufacturer in the performance of this contract because of its inability to supply White Lead in Oil required by the Distributor, arising from circumstances beyond the Manufacturer's reasonable control.

3. The Distributor agrees to store and prominently display in his regular place of business Eagle White Lead in Oil and at all times to use the advertising material and other sales assistance as furnished by the Manufacturer.

4. The Distributor agrees to pay all expenses of storage, transportation, and sales, which are now or may hereafter be levied either by Federal, State, Municipal, or other public authorities.

5. The Distributor shall return to the Manufacturer at any time when directed by it, all or any part of the said stock which has not been sold. The Distributor shall keep account books and records giving complete information covering all its transactions in connection with the sale and distribution of the Manufacturer's White Lead in Oil, and such books, records and copies of invoices shall be open at all times during business hours to the inspection of any duly authorized representative of the Manufacturer.

6. The Distributor is hereby authorized to sell from said stock to any dealer or consumer, Manufacturer's Eagle White Lead in Oil at the schedule of prices as provided by Manufacturer. The Distributor has no authority to sell or

transfer, or in any way dispose of such Eagle White Lead in Oil, except as herein expressly provided. The Distributor has no authority to accept orders for, or commit, the Manufacturer to the sale of Eagle White Lead in Oil in excess of the unsold stock at the time in his custody.

7. The Manufacturer will furnish the Distributor with price and trade discount schedules which are subject to change by the Manufacturer from time to time, upon notice to the Distributor. The Distributor agrees that all quotations and sales will be made only at such prices and upon such terms and conditions as may be established by the Manufacturer.

8. The Distributor shall render to the Manufacturer, on the first business day of every month, a report on forms provided by the Manufacturer, covering its sales of the Manufacturer's White Lead in Oil during the preceding calendar month, and a complete itemized report or inventory of all the Manufacturer's White Lead in Oil on hand at the close of business on the last day of the preceding calendar month, and shall render within fifteen days after termination or expiration of this appointment, a similar report on all such Eagle White Lead in Oil on hand at the date of such expiration or termination.

1829 9. The Distributor agrees that the proceeds of all Eagle White Lead in Oil sold hereunder shall be held in trust for the benefit, and for the account of, the Manufacturer until finally accounted for as herein provided. The Distributor shall pay over to the Manufacturer, not later than the fifteenth day of every month, an amount equal to the total sales value, less the compensation due this Distributor of all White Lead in Oil sold by it during the preceding calendar month. At the time of rendering its monthly inventory report, the agent shall pay to the Manufacturer for all White Lead in Oil lost or missing from, or damaged in, the aforesaid stock in his custody.

10. The compensation allowed the Distributor for the performance of all its obligations hereunder shall be as follows: On all sales reported by the Distributor at the end of each month the amount due and payable will be based on the Manufacturer's list prices applicable to each product and the various sizes sold, subject to a discount of ....%.

11. If all reports are forwarded as required in this contract and remittances are made not later than the fifteenth of the month covering in full all sales made during

the preceding calendar month a further discount of 2% will be allowed.

12. It is the intention of the parties hereto that this appointment shall constitute a special agency only, and the relationship established shall not constitute a general agency, nor in any way authorize the Distributor to affix the name of Eagle-Picher Lead Company to any contract or other instrument, or to obligate Eagle-Picher Lead Company in any manner whatsoever by reason of anything other than herein.

13. Termination. If the Distributor shall be or become insolvent, or shall fail to make any report or remittance herein required to be made, or shall fail to conduct the business of the agency to the satisfaction of the Manufacturer, or shall fail to observe or perform any of the other provisions, terms or conditions herein contained on the part of the Distributor to be observed and performed, or if the Distributor shall become involved in any financial difficulty which in the opinion of the Manufacturer may impair the Distributor's ability to properly conduct the business of the agency, then and in any such case, the Manufacturer may cancel and terminate the agency hereby created by notice in writing to the Distributor.

14. This appointment is personal in its character and the Manufacturer reserves the right to cancel the appointment in the event of the transfer of the Distributor's business or the control thereof to parties other than those now in control.

15. This appointment is not assignable by the Distributor without the written consent of the Manufacturer:

16. If any statement by the Distributor in its application for this agency appointment is found to be incorrect, the Manufacturer may terminate the appointment.

17. It is further agreed that shipments and deliveries by Manufacturer shall be subject to delays in transportation, embargoes, delays caused by strikes, differences with employes, or accidents at plants, war, insurrection, riot, fire, or any other cause beyond the control of Manufacturer.

18. This appointment shall not be binding on the Manufacturer until signed by the Eagle-Picher Lead Company, the Manufacturer, by its President, Vice-President, Treasurer, or Secretary of the company, at the office of the company, Cincinnati, Ohio. This appointment shall not be renewed, nor shall any of its terms be deemed to have been waived by the Manufacturer unless such renewal or waiver

be in writing and signed by the Eagle-Picher Lead Company, by the President, Vice-President, Treasurer, or Secretary.

19. This appointment shall continue for one year from the date hereof and, thereafter, from year to year, beginning at the date of expiration, unless terminated by either of the parties hereto, giving to the other thirty (30) days' notice in writing of their intention to terminate this agreement.

The Eagle Picher Companies
Graybar Building
420 Lexington Av., N. Y. City

General offices
Cincinnati

March 9, 1942

Haeberle Lumber Co.
1004 Cedar Avenue
Niagara Falls, N. Y.

Gentlemen:

Lead, a critical war material, is under strict government control. The available production of the raw material (pig lead) and the finished lead products such as White Lead in Oil are considerably less than the existing demand.

The government has carefully checked over the entire lead industry and is regarding with a critical eye the consigned stock selling plan, insofar as it creates non-moving or slow moving inventories of White Lead in Oil at a time when certain districts are in immediate and urgent need of the material.

Your sales of Eagle White Lead in Oil during 1941 totalled 1225 pounds. The amount on consignment with you at this time is, according to our records, 475 pounds. You will agree that this situation is one that might be justly criticized by the government during the war emergency.

We, therefore, request your cooperation in establishing a more satisfactory arrangement during these critical times. This can be done by mutual agreement as to the time that stocks are to remain on consignment during the emergency period.

Provision 2 of your distributor contract reads in part as follows:

"The sizes, types and quantity of White Lead in Oil, and the length of time it shall remain in stock are to be at all times determined by the Seller" (Eagle-Picher).

We ask, please, that you give us permission to

1. Bill you at current distributor prices on last day of this month for all Eagle White Lead in Oil, in various sizes, that is now on consignment with you.
2. To make future shipments with the understanding that we have your authority to automatically bill you on the last day of the month for all shipments made during the month.

Terms as per contract.

Such an arrangement will keep your contract in force during the emergency, will eliminate show moving consigned stocks, and will retain for you the right to buy at distributor prices.

Material ordered by you on this basis will be subject to (1) any necessary delay in shipment, (2) our ability to obtain raw materials and (3) price in effect at date of shipment. Please enter orders in quantities of 500# or more for shipment at one time.

We hope you will go along with us. You may accept by signing below, returning this letter and retaining the duplicate copy for your files. We will handle the rest. Please let us have your decision promptly.

Very truly yours,
The Eagle-Picher Sales Company

PHK:FM P. H. Knappen—White Lead Division

P.S.—Our records show your consigned stock of Eagle White Lead to be 4-12½s, 1-25 and 4-100s.

Official News from Headquarters.

Bulletin #MS-238 July 17, 1939

Euston White Lead in Oil Consignment Proposition

We are pleased to announce that the executives of our Company have decided to offer to the trade a new consignment sales agency proposition for the sale of Euston White Lead in Oil, similar to the plan now being used by the other Lead corroders. We must increase our sale of Euston White Lead in Oil and this new plan will make it possible for each Division and Retail Store to approximately double its sale of Euston White Lead.

Consignment Plan.

Attached to this bulletin is a copy of our Euston Distributor Agreement. Read it carefully so that you thoroughly understand all of the conditions of the Agreement. Note carefully, we do not consign sizes smaller than 12½ lb. kegs. Under this Agreement we control the resale price of Euston White Lead in Oil. Should any distributor seriously affect the market by cutting prices we can take up his stock at any time. Be sure the dealer understands he must pay all taxes, insurance, and assume all charges for storage, cartage, handling, etc. We call these conditions to your special attention as we will not approve any changes in our regular sales contract. All contracts must be approved by an executive at Cleveland Headquarters.

Consignment Prices.

To the distributors or dealers that we sell on our new consignment plan our prices will be the same as that of the other corroders. Until further notice these prices will be as follows:

100 lb. kegs	$9.25 per C.
50 lb. kegs	9.50 per C.
25 lb. kegs	9.75 per C.
12½ lb. kegs	10.00 per C.

Outright Sale Prices.

Some of our present dealers, as well as new accounts, may want to continue to buy their Euston White Lead in Oil outright. We will continue to sell these dealers at a lower price, or on the same price schedule we use at the present time. These prices are as follows:

100 lb. kegs	$9.05 per C.
50 lb. kegs	9.30 per C.
25 lb. kegs	9.55 per C.
12½ lb. kegs	9.80 per C.

All of the above prices apply in par territory. In those territories where differentials exist the same differential that has applied to your sales in the past will be applicable at this time.

1883 For orders of full carloads, in one shipment to one destination, we will continue to allow a reduction of 25¢ per 100 pounds less than the foregoing schedule of prices. These two methods make our proposition very flexible and we should very easily and quickly increase our sales of Euston White Lead.

Exclusive Sales Arrangement.

One of the best reasons we offer to the dealer to sell Euston White Lead is because we will give him exclusive sale in markets where it is practical to do so. There are many places where several dealers have consignment stocks of the other corroders and we should make a special drive and go after some of these bigger and better accounts with our Exclusive Sales Contract. Managers and salesmen alike should carefully select the accounts with whom exclusive arrangements are made. It isn't practical or sufficiently productive to offer exclusive sale in the large metropolitan cities but even here the city can be zoned by trading areas and exclusive arrangements can be made accordingly.

Demonstrate Euston White Lead Superior Qualities.

We have more strong selling advantages to offer the dealer because Euston White Lead in Oil is a much whiter product, it is much finer than other white lead, will take more oil, and as a result will make 15 to 20% more finishing paint per hundred pounds. Euston White Lead in Oil is a better tinting base as cleaner toned colors can be made when adding tinting colors. These are distinct advantages over your competition but you must demonstrate to prove these superior qualities and make the dealer see how he can increase his sales with Euston White Lead, and what is still more important, build this business on an exclusive basis. Carry your demonstration outfit with you at all times. Be ready!

Other Euston Lead Products.

The consignment arrangement applies only to Euston White Lead in Oil and does not include our other Euston Lead Products. Painters who use Euston White Lead will also want to use Euston Thinning or Flatting Oil as well as Euston Colors in Oil. Be sure to sell every distributor a complete stock of House Paint Primer, Wall Primer, Colors in Oil and all the other Euston Products. Your Euston Lead Product Portfolio gives you full information, including prices.

Painters Meetings.

We will continue our plan of using a special representative to hold Painters Meetings for important distributors and dealers. Our experience proved that this method is by far the most productive and will create a greater acceptance and usage of Euston White Lead in Oil. We expect, with our new plan, to sell many of the large Lead Distributors and we want to do everything possible to hold and increase their Lead in Oil business. When you offer to hold a Painters Meeting be sure the volume from each account will justify this additional advertising and sales expense. Arrangements for these meetings must be made in advance, so send your requests for dates to Mr. L. A. Radloff at Cleveland. He will give you complete instructions about how to make preparations for these meetings.

1885 Personal Work.

The special representative, as well as the territory salesman, must make personal calls on painters and large users of White Lead in Oil. Calls should be made in advance of the meetings on the most important contractors to make personal demonstrations and also to extend personal invitations to the meetings. The attendance of the better contractors will add to the importance and merit of these meetings. This personal work must be continued immediately following the meetings. Every prospect developed at the meeting should be called on the next day since he will be more receptive and can then be sold. The quick follow-up is the one activity that will really get the business.

Inventories.

With this new plan we will have many inventories. It will be the duty of all representatives to check these inventories regularly and work in close cooperation with the Accounting Department. Mr. H. W. Caton will issue instructions thru your Credit Manager on just what you are to do in looking after these inventories.

Metals Refining Division Salesmen.

The salesmen of the Metals Refining Division will also sell Euston White Lead in Oil to distributors and dealers in Ohio, Michigan, Indiana, Kentucky, Illinois, Missouri and Iowa. We have supplied them with a list of our established accounts in these territories with instructions that they will not be permitted to sell to our old customers. In a like manner, each Glidden salesman has been supplied with a list of towns in which the Metals Refining men work. As new accounts are established the representative in the territory will immediately be informed so as to avoid any confliction or misunderstanding and the account thereafter will be reserved for the salesman who makes the first sale.

Conclusion.

Many of our salesmen and managers have repeatedly stated that if we would give them a Consignment Sales Arrangement the same as offered by other Lead corroders, that they could more than double their business. Well, here it is now and we are certainly expecting each and every one of our men to do just that. This new plan should make it possible to place a stock of Euston White Lead in Oil with every old and established White Lead account, full line agent, and many of our dealers. Go after them now and sign them up quick!

Euston White Lead

Distributor Agreement

The Glidden Company

National Headquarters, Cleveland, O.

1887 Euston White Lead

Distributor Agreement

between

The Glidden Company, an Ohio corporation of Cleveland, Ohio, through its Division located at St. Louis, Missouri, hereinafter called the "Manufacturer," and Carl W. Krauter, Prop., C. K. Hardware Co., of St. Louis, Missouri, hereinafter called the "Distributor,"

In consideration of the mutual promises and agreements hereinafter set forth, the parties hereto agree as follows:

1. The Manufacturer hereby authorizes the Distributor to sell, under the terms hereof, the Manufacturer's Euston brand of White Lead ground in Linseed Oil, hereinafter referred to as "White Lead," in the following described territory which shall not be exclusive: St. Louis.

2. The Manufacturer agrees, subject to conditions beyond its control, to ship a stock of White Lead to the Distributor on consignment, freight allowed, in such amounts, sizes and types as the Manufacturer determines may be necessary for the Distributor to maintain a stock of White Lead adequate to service the trade, which shall be sold by the Distributor as herein provided. Title to said White Lead shall be and remain in the Manufacturer at all times until sold and the proceeds from the sale thereof shall be and remain the property of the Manufacturer and shall be held by the Distributor in trust for the Manufacturer until turned over to the Manufacturer as herein provided.

3. The Distributor shall render to the Manufacturer on the twenty-fifth (25th) day of every month during the term hereof, on the forms prescribed by the Manufacturer, a complete itemized inventory of all said White Lead on hand in said stock at the close of business on the 25th day of such month.

4. The Distributor shall remit to the Manufacturer not later than the fifteenth (15th) day of each month the total sales value of all White Lead sold from said stock, damaged or missing, during the monthly period ending on the 25th day of the preceding month, at the current selling prices established by the Manufacturer, less the compensation allowed the Distributor, determined in accordance with the following paragraph. If said remittance is mailed on or before the 15th day of such month, the Distributor may deduct therefrom, as additional compensation, the cash discount provided in the Manufacturer's current Price List, which is subject to change without notice, applying to sales of White Lead.

5. The compensation allowed the Distributor shall be the difference between the total value of the sales from said stock, including damaged and missing White Lead, and the total value thereof calculated at the following schedule of prices per one hundred pounds:

100 pound keg	$ 9.75
50 pound keg	$10.00
25 pound keg	$10.25
12½ pound keg	$10.50

1888 6. The Manufacturer shall have the right at any time during the term hereof to change any or all rates or bases of said compensation upon written notice to the Distributor and shall have the right to specify other dates than those mentioned herein for forwarding reports and remittances and in the event of any such change or changes, the Distributor agrees to thereafter conform to the same. The Distributor is hereby authorized to make sales from said stock to any dealer or consumer of White Lead at the schedule of prices determined by the Manufacturer, but has no authority to sell, transfer or in any way dispose of White Lead hereunder, except as expressly provided hereby, and has no authority to accept orders for or commit the Manufacturer to the sale of White Lead in excess of the unsold stock thereof in the Distributor's custody under the terms hereof at the time. Schedule of the prices, discounts, terms and conditions of sale of White Lead from said stock, which, however, are subject to change by the Manufacturer at any time during the term hereof, will be supplied the Distributor and all sales from said stock and quotations shall be made only at such prices and upon such terms and conditions and shall be in accordance with the sales policy of the Manufacturer.

7. All said White Lead shipped to the Distributor under the terms hereof shall, while it remains in the Distributor's custody hereunder, be stored, housed and displayed for sale in a careful and proper manner and the Distributor shall exercise due and reasonable care in storing and maintaining the same. The Distributor shall store said stock in such manner as to afford ready inspection thereof by the Manufacturer and its agents who shall have access thereto at all times during regular business hours for the purpose of taking an inventory or making an inspection of said stock. The Distributor shall keep complete records and accounts of all transactions in connection with said stock and such books and records shall be at all times during regular business hours available for inspection by the Manufacturer or its agents.

8. The Distributor will, upon request of the Manufacturer, return to it any or all of said consigned stock then remaining in the possession of the Distributor and the Manufacturer will pay the freight thereon. The Distributor shall pay all expenses in connection with the storage, cartage, transportation, handling, sale and distribution of said White Lead hereunder and all expenses incident thereto and to the accounting therefor and will assume all losses and collection expense resulting from such sales. The Distributor will pay all taxes, excises and charges which are now or may hereafter be levied, imposed or charged by the Federal, State, Municipal or other public authorities with respect to said White Lead in said stock and sold hereunder, and will upon request of the Manufacturer, pay for the insurance placed on said stock in the custody of the Distributor, by the Manufacturer.

9. This agreement shall be continuous subject to the right of termination by either party hereto at any time by giving written notice to the other.

10. This agreement shall not be assigned or transferred by the Distributor without the written consent of the Manu-

facturer and if this agreement is terminated, the Distributor agrees to immediately deliver to the Manufacturer all White Lead remaining in said stock and unsold and shall fully perform all of the obligations of the Distributor remaining to be performed hereunder.

Made and concluded at Cleveland, Ohio this 27 day of May, A. D. 1941.

PICHER

Eagle Sublimed Blue Lead

MEANS DEPENDABLE METAL PAINTING

For Your Painter Friends who want *real value* in their rust-preventative paint. Judged by unbiased experts to be one of the most durable of ALL commercial rust-inhibitive paint materials known. EAGLE SUBLIMED BLUE LEAD spreads much farther, too . . . gives 700 to 800 sq. ft. coverage per gallon for one coat on average surfaces! Mixes as easily as white lead. Dries to an *attractive gray* color, and can be easily tinted. A perfect ground for finishing paints.

Every Painting Contractor needs to round out his supplies with Eagle Sublimed Blue Lead. For metal roofs, gutters, down-spouts, tanks, structural steel. If you do not have a stock of it, order your supply NOW! Your customers will be back for more.

AND THERE'S DURABILITY PLUS IN THESE 2 EAGLE MIXING OILS

Eagle Lead Reducing Oil for use with white lead on brick, stucco, plaster and other porous surfaces. No other ingredients needed.

Eagle Flatting Oil mixed with white lead for interiors; also a turpentine substitute for exteriors. Better finishes.

2197 COMMISSION'S EXHIBIT NO. 684.

The Eagle-Picher Lead Company.
New York.

To Cincinnati General Office,
Atten: Mr. W. E. Maston.

Date August 17, 1933.

Dear Mr. Maston:

The attached is a copy of a circular letter sent out by the National Lead Company which you will no doubt be interested in reading in case you have not already seen it.

Sincerely yours,
J. Stranad.

js k

2198 COMMISSION'S EXHIBIT NO. 685.

National Lead Company.

July 26, 1933.

Dutch Boy Agents.

Our new sales plan whereby you were appointed agent, and under which plan you have received stock from us on consignment, has now been in effect for six months. We believe this six months period has enabled you to form some very definite opinions regarding the value of this sales plan, not only as it has affected your business, but also as it has affected the general sale of Dutch Boy White Lead.

Previous to the present consigned stock agency arrangement that is now in effect, you can undoubtedly recall some very definite opinions you had regarding the resale of Dutch Boy White Lead. Having had this merchandising experience under these two different arrangements, you are in a position to be of very valuable assistance by telling us frankly just what you think of the two different methods, or sales policies, for Dutch Boy White Lead.

To enable us to determine whether or not our present consignment plan of merchandising shall be continued, we need your frank criticism of this sales plan. You have been on the firing line under two different sales plans, and it is your opinion of these two different sales methods that will enable us to reach an intelligent decision as to whether the consignment arangement is to be continued by us.

For the convenience of your prompt reply, for which we thank you in advance, a self-addressed envelope is enclosed.

Yours very truly,
National Lead Company,
Atlantic Branch.

2199 COMMISSION'S EXHIBIT NO. 686.

Monday,
August 21, 1933.

New York Office,
Mr. J. Stranad.

Dear Joe:

Thanks very much for sending me copy of letter of National Lead Company to the trade regarding the Agency plan.

They told us about this letter and showed it to us together with a number of replies, all of which were favorable to the continuance of the plan.

Yours truly,

wem-q

2202 COMMISSION'S EXHIBIT NO. 691.

November 29, 1940.

Mr. Carlton H. Rose,
National Lead Company,
105 York Street,
Brooklyn, N. Y.

Dear Carlton:

We feel that every means should be resorted to in order to make it harder on the chiselers and others who go out and get Flatting Oil business on bids based upon specifications. One way of doing this is to raise the non-volatile content. Therefore, we will recommend that this be raised to a minimum of 12% which will be satisfactory to you. We would, therefore, like to have you make a similar recommendation regarding the proposed Federal Specifications for Flatting Oil, dated August 20, 1940.

Yours very truly,
The Eagle-Picher Sales Company,
Frank L. Chinery,
Chief Chemist,
White Lead Division.

FLC:lh

2203 COMMISSION'S EXHIBIT NO. 692.

National Lead Company.
Research Laboratories.
105 York Street,
Brooklyn, N. Y.

November 20, 1940.

Mr. F. L. Chinery, Chief Chemist,
White Lead Division,
The Eagle-Picher Sales Company,
1030 Broadway,
Cincinnati, Ohio.

Dear Frank:

This is in reply to your letter of November 15th regarding the proposed Federal Specification for Flatting Oil, dated August 20, 1940.

The specifications require a minimum of 11% non-volatile matter. You have suggested that this be raised 3%. Our own Dutch Boy Flatting Oil would be excluded if the minimum requirement for non-volatile matter would be raised to 14%.

We, therefore, would prefer that the minimum be maintained at 11%. However, if you would like it to be increased even a small amount it would be satisfactory to us to have the minimum raised to 12%.

At the present time we are considering this specification and in the near future we will send whatever comments we may have to Mr. Hickson. If you would like to have us recommend that the non-volatile be raised to 12% would you kindly advise us.

Very truly yours,
(signed) Carlton H. Rose.

CHR:AH

2204 COMMISSION'S EXHIBIT NO. 695.

The Eagle-Picher Sales Company.
359 Guilford Avenue,
Baltimore, Maryland.

April 15, 1937.

To Eagle White-Lead-in-Oil Distributors:

When the plan of marketing Eagle White Lead-in-Oil on a consigned basis went into effect in 1934, a special contract was drawn up which all Eagle distributors voluntarily signed at the time they were appointed.

For your protection and that of all Eagle distributors, the following cause was included in this contract:

"The Distributor agrees that all quotations and sales will be made only at such prices and upon such terms and conditions as may be established by the Seller".

Complete observance of the letter and spirit of our contract have added profits to your sales of Eagle White Lead-in-Oil. Everything considered, there is undoubtedly more profit in this product for you than any other line you carry.

To the distributor who deviates from the terms of this contract, we wish to say that he is actually throwing profit away that he could rightfully have. Whether he makes concessions, because of his belief in the stories of lower prices spread by his customers, or whether he reduces his list in the misguided hope that he will attract additional business, the effect can only be destructive.

This plan has been a practical success and, in fairness to you, we are determined that it shall continue. Your cooperation is, of course, most necessary and we are confident you will agree that neither you nor ourselves can therefore countenance any deviations from any of the terms of our Agreement.

The consignment plan of selling was designed to help you make more profits, and therefore, it is to your best interest to help us protect it.

Yours very truly,
The Eagle-Picher Sales Company,
/s/ H. Bendelari,
White-Lead-in-Oil Division.

2206 COMMISSION'S EXHIBIT NO. 696.

Letterhead of Eagle-Picher Lead Company, Cincinnati.

November 16, 1937.

Mr. F. E. Wormser, Secretary,
Lead Industries Association,
420 Lexington Avenue,
New York, N. Y.

My dear Felix:

It was very kind of you to take me to the Miners Club for luncheon with Messrs. Wilson and Martino last Friday.

I fear that the conversation may not have been very interesting to you, because the trend which it took involved National Lead and Eagle policies more than industry problems. I certainly appreciate your making it possible for me to meet these two gentlemen in such a pleasant manner and also your making an appointment for me at St. Joe.

I am writing Willard and asking him to loan you his copy of the report of the International Statistical Bureau when he receives it.

With best regards.

Sincerely yours,

W. R. Dice,

Executive Vice President.

WRD:br

2208 COMMISSION'S EXHIBIT NO. 697

November 19, 1937.

Mr. W. R. Dice, Vice President,
Eagle-Picher Lead Company,
Temple Bar Building,
Cincinnati, Ohio.

My dear Bill:

Many thanks for your kind note of November 10th. I am glad that events turned out as they did so that you were able to meet Messrs. Wilson and Martino.

On the contrary, I was extremely interested in the conversation that took place for I feel that if we had more of them in our industry quite a few of our problems would disappear.

If there is anything I can do for you pending your next visit to New Your please let me know.

With kindest regards,

Cordially yours,

Secretary.

2210 COMMISSION'S EXHIBIT NO. 700.

June 4, 1943.

Mr. Robert T. Dunn,
Federal Trade Commission,
45 Broadway,
New York City.

Dear Mr. Dunn:

In harmony with your request, we are attaching a transcript made from the records of our Stock Transfer Agent covering the transactions in The Eagle-Picher Lead Company common stock registered in the name of Edw. J. Cornish from August 6, 1930 to February 17, 1943, and subsequent in the name of The National Lead Company.

Under date of February 17, 1943, a balance of 3,500 shares, registered in the name of Edw. J. Cornish, then deceased, was submitted for transfer to the name of The National Lead Company. In requesting this transfer, affidavits from the executors of the estate of Edw. J. Cornish and from officers of The National Lead Company were submitted, stating that The National Lead Company was the beneficial owner of the stock in question, and that Edw. J. Cornish appeared only as nominee.

Very truly yours,
The Eagle-Picher Lead Company,
Carl A. Geist,
Vice President-Treasurer.

National Lead Co. Scott.

2217 COMMISSION'S EXHIBIT NO. 705.

The Willard Hotel.
Washington, D. C.
Tuesday Morning.

Dear Bende:

Yesterday a set-up was approved by the American Paint & Var. Mfgrs. Assc. and the National Paint, Oil and Varnish Ass'c directors for the amalgamation of these two groups at the Chicago Convention next month. Upon my return I shall be glad to give you more of the details.

All afternoon (and some of the groups well into the night) the joint group, numbering some 40 members worked over the final draft of the Paint, Varnish and Lacquer Code which is up for hearing this morning before General Williams.

Quite a few objections are on file in writing and some
2218 half dozen large companies are scheduled for a verbal hearing among them Sears, Roebuck Company of Chicago and the Davis Paint Co. of Kansas City—both mail order houses and our customers.

The big stumbling block in the Code is the consignment clause—and there is trouble ahead. Unfortunately neither Mr. Cornish or Mr. Carter appeared before the group meeting of the Industry. Mr. Carter was reported sick and unable to leave his home. The subject was opened wide. The correspondence was read and the letter of Mr. Cornish dated the 22nd made a part of the records. (Mr. Marks is manager of their Milwaukee plant and office and sat in as a member of the Executive Committee of the N. P. O. He asked to be excused from making any comment.)

This placed me on the spot—so I just had to do the best I possibly could to state our position—take a firm stand that we were not ready to tie in with their code or
2219 alter our position to extend the Agency plan of selling when and as we saw fit. Naturally I tried to do this without stirring up ill-will or resentment of this important group towards the Lead Industry.

I was successful in getting them to state the facts to the Administrator for their code and thus keep the door open for any further plans either group may care to develop. This was written in last night.

The way is now open without our getting roped in under the Paint Code regardless of our own wishes in the matter.

Mr. Marks made some notes to pass along to Mr. Carter. We went over them together and as they tell the high spots I have asked him for a copy which I am enclosing
2220 along with letter from Mr. Carter and Cornish's letter to Mr. Trigg.

I will be in Philadelphia Wednesday, New York office Thursday and Friday.

Will try to have visit with Carter and see what plans we must make to meet the situation which I can assure you is quite important and by no means solved.

If things go as now planned I will be in the Cincinnati office Saturday morning next.

Sincerely,
Willard.

2221 COMMISSION'S EXHIBIT NO. 706.

Letterhead of National Lead Company, New York.
September 22, 1933.

Mr. Willard Maston,
Willard Hotel,
Washington, D. C.

Dear Mr. Maston:

I am enclosing copy of letter written by Mr. Cornish to Mr. Trigg and which I read to you over the 'phone. I do not think there is anything else to say.

I take it for granted that the Paint Industry Code will be filed as now written, and which does not specifically mention lead-in-oil as a product—although by implication and by interpretation by the paint people of the definition in their code, they are, I think, a unit in considering that it should cover lead-in-oil.

If the Lead Industries Code comes up for a hearing on October 4th, as now expected, the paint industry may appear and protest; but that is a bridge which we do not yet have to cross and such situation may not arise. We should, however, I think, prepare beforehand to combat it if such an effort is made.

In the interim we will not plan to do anything in respect to introducing the agency plan with the trade, but we do expect to start up again just as soon as Lead Industries Code has been heard and the way is clear.

Yours very truly,
F. M. Carter,
President.

(Enclosure)

2222 Draft of letter to Mr. Trigg.

Sept. 22/33

Following Wednesday's informing and interesting interview with you and Mr. Matlack, I find that the National Lead Company is in an embarrassing position.

For many, many years it has been the policy of the National Lead Company not to appear before any government officer, United States Senator or Congressman, either asking or resisting any legislation. This policy has been in vogue for twenty-five years to my knowledge. In the matter of codes, as the owner of lead mines in Missouri and the West and as a member of the Lead Industries Association, we have gone along with that Association, in general assent with such code provisions as the membership wished to adopt.

Corroders of white lead, burners of red lead, litharge and orange mineral all logically and naturally treated themselves as a part of the Lead Industries Association, of which they were all members. We also manufacture lead products, including sheet lead, lead pipe, traps and bends, type metal and plumbers' supplies. We therefore lined up with the Metallic Products Division of the Lead Industries Association.

We also manufacture titanium pigments, which logically and naturally became associated with the Chemical Industry. We also manufacture linseed oil, and therefore properly joined the Linseed Oil Manufacturing Industry of the

United States. We also manufacture journal bearings, consisting of copper, lead, zinc and tin, and therefore logically and properly have joined that Association.

We also make calcium carbide. I have not heard yet if such an Association is being formed, but if such is formed, we would logically become a member of that. These Associations all have one thing in common; namely, reducing the hours of labor and increasing wages; to which the National Lead Company has acquiesced, endeavoring to con-
form to such other restrictions or codes as the other
2223 people interested may desire, but under no circum-
stances do anything that would be a crime if the Sherman Law were still in force.

We are engaged, as you know, in the manufacture of ready-to-use paints in California. In addition, we manufacture colors in oil and a few paint specialties. We have not attended any of your meetings; expecting that whatever you considered necessary or desirable would not apply to the National Lead Company, excepting as to the above activities, and in no case include lead-in-oil.

It therefore seems to be absolutely necessary to limit our association with the manufacturers of ready-to-use paints to the ready-to-use products above referred to.

I would be sorry to engage in any discussion attempting to establish rules for any industries that are to some extent competitive with the National Lead Company. For instance, we sell to the manufacturers of prepared paints a very large percentage of our white lead (both dry and in oil), titanium pigments and lead sulphate. We do not establish exclusive agencies, but sell to wholesalers, retailers, painters and the general public. In many cities, manufacturers of ready-to-use paints have exclusive agencies from some of which our products are excluded.

If we were to take any hand in forming codes, we would like very much to abolish exclusive agencies and leave all dealers free to buy their products from anyone whom they saw fit.

Of course, I recognize that white lead-in-oil, or sublimed lead-in-oil, or zinc-in-oil can be looked upon as a paint, and yet no white lead that we sell is usable without further preparation. I hope, therefore, that any code adopted by the paint, varnish and lacquer manufacturers will not contain any matter which would limit the activities of the National Lead Company, excepting where we are engaged in the same similar business.

If the code you are preparing is so limited, the National Lead Company will most certainly fall in line. But if you attempt in the code to limit the Business of the Na-
2224 tional Lead Company, which in some respects is competitive with prepared paints, we feel that you would be doing us an injustice.

There are a great many customs that have grown up in the ready-to-use paint business that we would like to correct; but, as stated in the beginning of this letter, it has long been the policy of the National Lead Company to accept whatever laws are passed, and conform to them without ourselves endeavoring to influence anybody either one way or the other.

For instance: The products of the National Lead Company have been extensively advertised for fifty years and their quality and price well known. There has grown up an unethical practice to use Dutch Boy brands of white lead as a leader, sold without a profit as a means of selling other products such as colors, brushes, painters' supplies, to the great annoyance, irritation and injury of everyone doing ethical business. We have, therefore, for many years attempted to correct this evil.

To that end we have been experimenting with agency agreements (never exclusive agencies), by means of which we can discourage the use of our products in a way to injure us or the other distributors thereof. Our efforts in that respect have been approved by all distributors of white lead-in-oil, both wholesalers and retailers; and have been especially valuable to small dealers in competition with those attempting to sell over large areas to ultimate consumers. It has been injurious to no one and has been advantageous to the industry at large.

You should not embarrass us by saying that our efforts in this connection are improper.

Very respectfully,
E. J. Cornish,
Chairman.

Copy to Mr. Matlack.

2230 COMMISSION'S EXHIBIT NO. 708.

(Letterhead of National Lead Company, Chicago.)

July 30, 1940.

Mr. William H. Hayt, General Manager,
White Lead Division,
The Eagle-Picher Sales Company,
1030 Broadway,
Cincinnati, Ohio.

Dear Bill:

Thank you ever so much for yours of the 26th with which you enclosed labels for your Primer and Finish Coat white lead paint, also for the price set up which you list in your letter.

All of this is very interesting, but the most interesting will be the reaction, in the trade, to your experiment. You have my wishes for the best of luck.

When you get to the city again I hope we can get together for lunch. Remember, the next one is on me!

Kindest regards.

Sincerely,
(Illegible)
Assistant Manager.

2231 COMMISSION'S EXHIBIT NO. 709.

(Inter-Company Letterhead of The Eagle-Picher Lead Company, New York)

September 25th, 1933.

To Cincinnati Office,
Attention Mr. A. E. Bendelari, President.

Dear Mr. Bendelari,

Zinc Code.

The Zinc Code was finished last night and will be presented the end of the week. Mr. Roosevelt got in touch with Miss Reeves, Mr. H. O. King's secretary in Washington, on Saturday afternoon and asked her to tell Mr. King that it would be ready by the end of the week. (Miss Reeves used to be secretary to Nicholas Longworth.) She says she will keep Mr. King in a good humor in this connection.

Lead Code.

Mr. Roosevelt has been working with Mr. Carter, Mr. Rowe and Mr. Wormser all afternoon on the Lead Pigments code. They will meet tomorrow for further conference. Mr. Carter shows every evidence of not desiring to put in any supplementary codes on any lead products. Metallic Lead Products.

Mr. Roosevelt asks me to tell you that he does not know at the present moment whether he will have time to do anything on the Metallic Lead Products code or not.

Yours very truly,
E. B. Pettes,
Secretary to Mr. Roosevelt.

ep

cc to Mr. Potter, Joplin Office.

2232 COMMISSION'S EXHIBIT NO. 710.

July 26, 1940.

Mr. John L. Reque,
National Lead Company,
900 W. 18th Street,
Chicago, Illinois.

Dear John:

Regarding our telephone conversation, the new white lead paint which we are trying out is still very much on an experimental basis, not experimental from the standpoint of the quality of the product but rather from the marketing angle. We are offering it in five gallon kits only and pushing it as a painters product. I am enclosing two labels, one from the Primer Sealer and on from the Finish Coat, which just about tell the whole story. The price is the same for either product.

The list price is $3.25 per gallon in five gallon kits. Quantity prices to dealers and painters are as follows:

	Dealer	Painter
5 to 25 gallons	$2.25	$2.70
30 to 95 gallons	2.15	2.65
100 gallons and over	2.10	2.60

Terms 2-15-60.

These products are not sold on consignment.

I was very sorry to get your report that Harold Rowe is still under the weather and not expected back on the job for some little time. If you see him or have occasion to write to him, please be sure to give him my best wishes.

With kindest regards to yourself.

Sincerely,
The Eagle-Picher Sales Company.
W. H. Hayt,
General Manager,
White Lead Division.

WHH:lh

COMMISSION'S EXHIBIT NO. 712.

(Intra-Company Letterhead of Eagle-Picher Lead Company, Cincinnati.)

Thursday, September 14, 1933.

To Cincinnati Office,
Attention Mr. A. E. Bendelari, President.

White Lead in Oil—August sales showed seasonal decline when compared with June and July tonnage. August '33 compared with August '32 is 615 tons against 546 tons, an increase of 12½%. Buying in anticipation of an advance in price was not evident during the month. September started slowly. There are no definite signs that fall painting will be better than for the same period last year.

Now Product—In August we started introducing our new Eagle "All-Purpose" White Lead. This product is a semi-paste weighing 30 pounds to the gallon, and put up in attractive quart and gallon cans. It is quickly reduced to painting consistency by the addition of an equal volume of thinner. Pure White Lead has always sold by the pound. We want to learn if it can be sold by gallon measure and carry better profit margins.

We expect that the new "All-Purpose" White Lead will be a means of recovering the small town distributor of paint, who as a class, has about given up any serious attempt to sell White Lead in Oil. This new product has very real possibilities, and we intend to develop them.

Eagle Distributors. Shortly after the first of the year our company and the National experimented with a consignment plan of selling in the East (New York and Washington). It is the only legal means of controlling the resale price of White Lead and preserve a profit to dealers.

Both companies agree that it has proven a success in the East, and it should be possible to extend it throughout the country in the near future.

The only competitive company likely to follow this plan is Anaconda. Sherwin-Williams, Glidden, DuPont and Wetherill are likely to continue the straight sales basis. Fuller on the West Coast is doubtful.

During the next few months we will probably shed our old methods of marketing White Lead in Oil. Our aim and hope is to develop a sales plan whereby distributors will make a profit handling this merchandise. If we are successful in doing this the industry will start pulling itself free of a dangerous situation which has for a long time threatened to engulf it completely.

FEDERAL TRADE COMMISSION

Field Report

File No. 1-17116.

EC-Jr:vf
3/28/44

Frank H. Hurless,
Sales Manager, Pigment Division,
International Smelting and Refining Company,
420 East 151st Street,
East Chicago, Indiana.
Date: March 20, 1944
Place of interview:
By telephone.

Informant called the writer to say that he had ascertained the percentage of White Lead-in-Oil business done by his company as compared with the industry. He furnished the following figures:

1937	3.25%
1938	3.12%
1939	3.79%
1940	4.03%
1941	3.83%
1942	3.80%
1943	3.05%

These figures were from statistics supplied by Lead Industries Association, informant stated.

Respectfully submitted,
Eugene Carmichael, Jr.,
Attorney Examiner.

Euston White Lead in Oil

Premium Zones and Price Differentials Applicable Thereto.

This supersedes previous schedule of differential zones and is effective January 1, 1937.

(a) States in par territory (which take no differential premium) Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Pennsylvania, Maryland, Delaware, Ohio, West Virginia, Michigan, Indiana, Illinois, Wisconsin, Kentucky, and District of Columbia.

Exceptions:—Areas in above States which take ⅛¢ advance: Kentucky—Mayfield, Paducah, and Fulton; Illinois—Cairo, Moline, Quincy, and Rock Island; Wisconsin—Eau Claire, LaCrosse, and Superior.

(b) States taking ⅛¢ advance differential—Minnesota, Iowa, Missouri, and Virginia.

Exceptions:—Areas in above States which take no advance differential: Missuori—St. Louis, Clayton, Ferguson, Kirkwood, Manchester, Maplewood, St. Charles, and Webster Groves; Virginia—Arlington County and Fairfax County. Areas in above States which take ¼¢ advance: Virginia—Southwestern section of Virginia including the following counties and points west: Bath, Alleghany, Craig, Montgomery, Floyd, and Carroll.

(c) States taking ¼¢ advance differential. Tennessee, North Dakota, South Dakota, Nebraska, and Kansas.

Exceptions:—Areas in above States which take ⅛¢ advance: Nebraska—Lincoln and Omaha; Kansas—Atchison, Kansas City, and Leavenworth.

(d) States taking ⅜¢ advance differential. North Carolina, South Carolina, Georgia, Florida, Alabama, Mississippi, Louisiana and Arkansas.

No exceptions.

(e) States taking ½¢ advance differential. Oklahoma, Colorado and Wyoming.

No exceptions.

(f) State taking ¾¢ advance differential. Texas.

Exceptions:—Area in above State which takes a 1¢ differential: Texas—El Paso.

(g) State taking 1¢ advance differential. New Mexico.

No exceptions.

2382 COMMISSION'S EXHIBIT NO. 768.

January 1st, 1941.

Montgomery Ward & Company,
Chicago Avenue & Larrabee Street,
Chicago, Illinois.

Gentlemen:

We desire to confirm our arrangement with you whereby we agree to sell and ship and you agree to purchase and accept 300 tons (2,000 pounds to the ton) of our Strictly Pure White Lead in Oil in lithographed kegs or cans during the period from January 1, 1941, to December 31, 1941, at the following prices, freight prepaid on shipments of 100 pounds or more, and f.o.b. our warehouse on shipments of less than 100 pounds. Terms are net thirty days.

Prices—On shipments into the base zones shown on the attached sheet showing the zones and price differentials hereto attached and marked "Exhibit A:"

In lithographed kegs and cans		In black kegs labeled	
100# kegs	$ 8.80 per 100#	100# kegs	$ 8.75 per 100#
50# kegs	9.05 per 100#	50# kegs	9.00 per 100#
25# kegs	9.30 per 100#	25# kegs	9.15 per 100#
5# cans	10.75 per 100#		
1# cans	12.20 per 100#		

The above prices will be increased by the differentials shown on "Exhibit A" when shipments are made into zones other than the base zones.

We will invoice said White Lead in Oil to your stores and warehouses at the following base prices to which will be added the zone differentials shown on the attached "Exhibit A."

100# kegs	$ 9.55 per 100#
50# kegs	9.80 per 100#
25# kegs	10.05 per 100#
5# cans	11.55 per 100#
1# cans	13.05 per 100#

We will credit your account as soon as possible after the close of each month with the difference between the price at which said White Lead in Oil is invoiced to your stores and warehouses and our direct base selling price to you.

The direct base selling price to you and the base selling price to your stores and warehouses shall be subject to change at all times during the life of this contract, either up or down, in accordance with the standard lead companies' prices.

We will make shipments under this arrangement from the following factories and warehouses:

Cleveland, Ohio
New Orleans, Louisiana
Houston, Texas
Minneapolis, Minnesota
Chicago, Illinois
St. Louis, Missouri
Scranton, Pennsylvania

It is understood between us that you will furnish us with written specifications within thirty days showing the proportion of 150 tons that will be packed in 100, 50 and 25 pound kegs, five and one pound cans, and specifications for the balance by July 1, 1941, and if our output of White Lead in Oil is not oversold during the period from January 1, 1941, to December 31, 1941, we will sell you up to 50 tons of our Strictly Pure White Lead in Oil in addition to the 300 tons specified herein on the same terms and conditions.

2383 It is understood that if for any reason this contract is not completed by you, all empty kegs and cans bearing your label will be purchased by you at our actual cost of said kegs and cans. It is provided, however, that you will not be required to accept empty kegs or cans in any amount in excess of quantity agreed upon in this contract.

It is also understood that if this arrangement is not renewed you will buy from us all empty cans and kegs bearing your label at termination of this contract provided, however, that said amount does not exceed 20% of your 1940 purchases, and that you will purchase from us all the stock of your specially labeled lead located in our warehouses listed above up to 40 tons.

It is also understood that fires, strikes, accidents and all other causes beyond our control will absolve us from making any and all shipments under this arrangement while such disability exists, and that you will refrain from referring to us or our division, Euston Lead Company, as the producers of said White Lead in Oil. It is also understood that if for any reason we are unable to make shipments to you, you will then be entitled to order your lead elsewhere and deduct from the 300 ton contract requirements of the amount of lead which you are forced to order elsewhere.

It is also understood that any tax or other governmental charge upon the production and/or sale and/or shipment of said White Lead in Oil imposed by the Federal, State or Municipal authorities and hereafter becoming effective within the life of this contract shall be added to the price herein provided and shall be paid by you unless otherwise agreed in writing.

If the arrangement, as outlined in this letter, is satisfactory to you, we will appreciate your signing and returning the attached copy of this letter.

Yours very truly,
Heath & Milligan Manufacturing Company
(Division of The Glidden Company)
By Z. G. Peck,
Regional Director.

Agreed and Accepted: Montgomery Ward & Company.
By C. D. Ryan,
Vice President.

COMMISSION'S EXHIBIT NO. 769.

December 29, 1942.

Montgomery Ward & Company,
Chicago Avenue & Larrabee Street,
Chicago, Illinois.

Gentlemen:

In confirmation of our arrangement with you whereby we agree to sell and ship and you agree to purchase and receive 300 tons (2,000 pounds to the ton) of our Strictly Pure White Lead in Oil manufactured for sale in lithographed kegs or cans or other available packages either furnished by you or of the same general type and kind as we may be using for our own business, during the period from January 1, 1943 to December 31, 1943, at the following prices, freight prepaid on shipments of 100 pounds or more, and f.o.b. our warehouse on shipments of less than 100 pounds. Terms are net thirty days.

Prices—On shipments into the base zones shown on the attached sheet showing the zones and price differentials hereto attached and marked "Exhibit A:"

In lithographed kegs and cans

100# kegs	$ 9.80 per 100#
50# kegs	10.05 per 100#
25# kegs	10.30 per 100#
5# cans	11.75 per 100#
1# cans	13.20 per 100#

Such stocks of White Lead in Oil filled in black kegs, labeled, as we now have on hand at Scranton, Pennsylvania and at our branch warehouse points, will be supplied at the following prices:

In black kegs labeled

100# kegs	$ 9.75 per 100#
50# kegs	10.00 per 100#
25# kegs	10.15 per 100#

The above prices will be increased by the differentials shown on "Exhibit A" when shipments are made into zones other than the base zones.

We will invoice said White Lead in Oil to your stores and warehouses at the following base prices to which will be added the zone differentials shown on the attached "Exhibit A".

100# kegs	$10.55 per 100#
50# kegs	10.80 per 100#
25# kegs	11.05 per 100#
5# cans	12.55 per 100#
1# cans	14.05 per 100#

We will credit your account as soon as possible after the close of each month with the difference between the price at which said White Lead in Oil is invoiced to your stores and warehouses and our direct base selling price to you.

The direct base selling price to you and the base selling price to your stores and warehouses quoted above shall be subject to change at all times during the period from
2385 the date of this letter to December 31, 1943, either up
or down, in accordance with the standard lead companies' prices and changes in our standard base prices generally, and shall be adjusted on a proportional basis.

We will make shipments under this arrangement from the following factories and warehouses:

Cleveland, Ohio
New Orleans, Louisiana
Houston, Texas
Chicago, Illinois
St. Louis, Missouri
Scranton, Pennsylvania
Minneapolis, Minnesota,

It is understood between us that you will furnish us with written specifications within thirty days showing the proportion of 150 tons of said White Lead in Oil, that will be packed in 100, 50, and 25 pound bags, five and one pound cans, and specifications for the balance by July 1, 1943, and if our output of White Lead in Oil is not oversold during the period from January 1, 1943, to December 31, 1943, we will sell you up to 50 tons of our Strictly Pure White Lead in Oil in addition to the 300 tons specified herein on the same terms and conditions. It is understood also that we shall be under no obligation to ship more than a pro rata quantity during any one month.

It is understood that if for any reason this contract is not completed by you, all empty kegs, cans, or packages bearing your label will be purchased by you at our actual cost of said kegs, cans, or packages, provided, however, that you will not be required to accept empty kegs, cans, or packages in any amount in excess of quantity agreed upon in this contract.

It is also understood that if this arrangement is not renewed you will buy from us all empty kegs, cans, and packages bearing your label at termination of this contract provided, however, that said amount does not exceed 20% of your 1942 purchases, and that you will purchase from us all the stock of your specially labeled lead located in our warehouses listed above up to 100 tons.

It is also understood that fires, strikes, floods, the elements, explosion, war, riot, insurrection, embargoes, acts of God or the public enemy, labor troubles, delays of vendors or in transportation, inability to obtain or produce said White Lead in Oil or the material from which it is manufactured, inability to obtain containers for said White Lead in Oil or transportation facilities, accidents, acts of Governmental authorities and all other causes beyond our control will absolve you and ourselves from liability for failure to make shipments or receive the same under this arrangement while such disability exists and the quantities which were to be delivered or received during such contingency may be cancelled by either of us without affecting the validity of this contract or deliveries to be made or received after the contingency is past.

It is also understood that you will refrain from referring to us or our Division, Euston Lead Company, as the producers of the White Lead in Oil. It is also understood that if for any reason we will be unable to make shipment to you, you will be entitled to order your lead elsewhere and deduct from the 300 ton contract the amount of lead you are forced to order elsewhere.

This contract shall be subject to all of the priorities, orders and regulations of the United States Government or any of its agencies and the Seller, subject to the conditions hereof, shall have the right at its option to modify this contract to conform therewith in any respect, including an increase in the prices provided for herein to the maximum prices fixed by the Government or any agency thereof, provided, however, that it is understood that we will at
no time charge you more than the ceiling price of
2386 said White Lead in Oil, however, nothing herein contained shall require us to sell and ship you White Lead in Oil if the ceiling price therefor would result in our making such sales at a loss.

It is also understood that any tax or other governmental charge upon the production and/or sale and/or shipment of said White Lead in Oil imposed by the Federal, State, Municipal or other government authorities and hereafter becoming effective within the life of this contract shall be added to the prices herein provided and shall be paid by you unless otherwise agreed in writing.

If the arrangement, as outlined in this letter, is satisfactory to you, we will appreciate your signing and returning the attached copy of this letter.

Yours very truly,
Heath & Milligan Manufacturing Company
(Division of The Glidden Company),
By Z G P,
Regional Director.

Agreed and Accepted:

By C. D. Ryan,
Vice President.
RHB-12/29/42-5

2404 COMMISSION'S EXHIBIT NO. 773.

Cleveland, Ohio June 26, 1945

Mr. John C. Sparks
San Francisco

Dear Mr. Sparks:

The examiner for the Federal Trade Commission has gone through the copies of the invoices which you sent to me covering sales of white lead, and has asked me to return the enclosed copies to you. He would like to have you note on the face of each of the enclosed invoices the gross weight, the freight rate and the total amount of freight on the white lead shipped in each instance.

If possible, this information should be taken from the actual freight bills. If the freight bills are not available, the rate and amount should be figured and a notation made "No Freight Bill".

Please also state whether the shipment was made by rail or by truck.

Where the shipment comprises a local delivery from one of our warehouses or stores, kindly make the notation on the invoice, "No Freight—Local Delivery from Warehouse or Store" as the case may be.

In the case of local deliveries, please state if the delivery was made in our own truck, or by trucking companies hired for the purpose, and to what account the expense of making delivery was charged.

Please send me your price lists on white lead and oil for the following periods:

First quarter—1941
Last quarter—1941
First quarter—1943

These price lists should cover the entire Pacific coast area that you are serving, and should show prices to distributors, dealers, painters, maintenance accounts, railroads, government and any other classes of customers.

We are very anxious to turn these invoices over to the Federal Trade Commission as soon as possible, and will appreciate your giving this matter your early attention. I realize that this is causing you a lot of inconvenience, and I want to thank you for your cooperation.

Clifton M. Kolb.

CMK:LG

2405 COMMISSION'S EXHIBIT NO. 774.

San Francisco July 6, 1945 Mr. Clifton M. Kolb
Cleveland, Ohio

Answering Letter of June 26, 1945

We are enclosing the invoices that you returned to us. We have marked each invoice either with the freight rate, the method of shipment, the gross weight, the amount of the freight bill or have indicated that it is a local delivery or shipped on a Government bill of lading. We have no freight bills on hand at San Francisco so all these rates were obtained from various trucking and railway companies. In the case of local deliveries, the expense paid to us by the trucking companies which are hired for this purpose is charged to the Selling Expense Account Cartage.

We have been unable to find the Price List for the first quarter 1941 and the last quarter 1941 but we are enclosing a copy of our price list for the first quarter 1943.

J. C. Sparks.

JCS/ed

(Due to the fact that we have been unable to find any price list for the first and last quarter 1941, Mr. Ehrke suggested that you may want the National Lead Price List for Pacific Coast Branch which was effective May 28, 1940. He says these prices were the same as ours.)

2511 COMMISSION'S EXHIBIT NO. 797.

(Letterhead of E. I. du Pont de Nemours & Company,
Wilmington 98, Delaware.)

June 21, 1946.

Mr. James D. Ewing
Alexander & Green
120 Broadway
New York, N. Y.

Re: In the Matter of National Lead
Co. et al. FTC Docket No. 5253

Dear Mr. Ewing:

Mr. Joseph Wright of the Federal Trade Commission has advised that return on the subpoena duces tecum served upon William Richter, formerly General Manager of our Fabrics and Finishes Department, could be made by our making available to you for production at the hearing the documents called for therein, together with a statement as to those which cannot be found.

Pursuant to this advice, we submit the following:

Specification No. I: After a diligent search we are unable to locate the original letter dated September 8, 1933 from F. M. Carter, President of National Lead Company, 111 Broadway, New York, New York, addressed to William Richter, or any copy thereof. In view of the date of the letter we believe it was destroyed pursuant to a routine destruction of old correspondence.

Specification No. II: There is enclosed the original contract entered into on February 3, 1938, between National Lead Company and E. I. du Pont de Nemours & Co., Inc., concerning the manufacture and packaging of white-lead-in-oil by National Lead Company for E. I. du Pont de Nemours & Co., Inc.; together with a copy of letter agreement dated January 31, 1940 extending the contract of February 3, 1938 to February 28, 1942 (after diligent search we are unable to locate an original thereof); a letter agreement dated June 26, 1942 amending the contract of February 3, 1938 and extending the term thereof to June 30, 1944; and a letter agreement dated June 26, 1944 extending the said agreement, as amended, to June 30, 1945.

2512 Specification No. III: There is enclosed the original of a letter agreement dated May 4, 1945 extending the agreement of February 3, 1938, as amended on June 26, 1942, for a further twelve months' period, ending June 30, 1946, and which is the contract presently in force between National Lead Company and E. I. du Pont de Nemours & Co., Inc. concerning the manufacture and packaging of white-lead-in-oil by National Lead Company for E. I. du Pont de Nemours & Co., Inc.

Specification No. IV: Our records indicate that the original memoranda and attachments concerning costs of producing white-lead-in-oil by National Lead Company under contract with E. I. du Pont de Nemours & Co., Inc., dated January 6, 1938, prepared by W. F. Malloch were given to one Robert T. Dunn of the Federal Trade Commission by Mr. Richter on July 16, 1943. In any event after a diligent search we are unable to find the originals of said memoranda, and we are enclosing carbon copies thereof.

There are also enclosed photostatic copies of each of the attached documents, it being my understanding with Mr. Wright that it will be agreeable to put the photostatic copies into the record, if they are otherwise admissible, so that the originals may be returned to our files.

We greatly appreciate the cooperation of you and Mr. Wright in this matter, and if we can be of further assistance please advise.

Very truly yours,

Oscar A. Provost.

OAP:D-encls.
CC:

Joseph Wright, Esq.
Federal Trade Commission
Washington, D. C.

Mr. William Richter

2513 E. I. du Pont de Nemours & Co., Inc., Wilmington, Del., as Buyer, hereby agrees to purchase and receive, and National Lead Company, New York, N. Y., as Seller, to manufacture and ship Buyer's total requirements of white lead-in-oil, as specified below, during the period beginning Feb. 3, 1938, and ending Two Years afterward in accordance with the following conditions:

1. The white lead-in-oil furnished under this contract shall be the type known as Heavy Paste or that known as Soft Paste, as order by Buyer. The pigment content of both pastes shall consist of basic lead carbonate, 50% Dutch process and 50% Carter process.

2. For the manufacture of white lead-in-oil Buyer shall supply the required quantity of the materials listed below delivered freight prepaid to Seller's plants:

a. Pig Lead, Corroding grade.

b. Raw Linseed Oil, for the refining of which a charge of 1¢ per pound net shall be made by Seller.

c. Turpentine. To be supplied at Buyer's option. If not so supplied, it shall be furnished by Seller and the quantity used in the white lead-in-oil shipped each month shall be separately invoiced at the end of each month at the Seller's net cost for the month of shipment.

d. Packages. For shipment of all white lead-in-oil covered by this contract.

3. Seller agrees to convert the pig lead supplied by Buyer into basic lead carbonate by the Dutch and the Carter processes of corrosion, furnishing 120 pounds of lead carbonate for each 100 pounds of pig lead so supplied. At the end of each month Seller shall invoice Buyer at the rate of $1.05 for each 100 pounds of lead carbonate shipped during that month from Seller's plants at Brooklyn, N. Y., and West Pullman, Ill., and at the rate of $1.30 for each 100 pounds of lead carbonate shipped during that month from Seller's plant at Melrose, Calif. The lead carbonate content shall be considered as 91% of the net weight of heavy paste, and 89% of soft paste.

2514 4. Seller shall mix and grind the white lead, linseed oil and turpentine in accordance with Buyer's specifications and shall pack and store the white lead-in-oil for shipment as directed by Buyer. For these services Seller shall charge Buyer at the following rates, invoices to be rendered as of the date of actual shipment:

For every 100# of white lead-in-oil packed in	600	lb.	packages	$ .178
	500	"	"	.178
	250	"	"	.195
	100	"	"	.23
	50	"	"	.30
	25	"	"	.40
	12½	"	"	.575
	5	"	"	2.58
	1	"	"	4.60

F. O. B. Seller's manufacturing plants at Brooklyn, N. Y., West Pullman, Ill., or Melrose, Calif., as ordered by Buyer, freight and/or cartage to be paid by Buyer.

5. Payment of all charges against Buyer hereunder shall be made on or before the 10th day of the calendar month next following that in which Seller's invoices are rendered.

6. Fires, strikes, accidents and other causes beyond the control of either party, while operative, shall relieve the party affected thereby from buying or selling hereunder, and corresponding quantities may be cancelled at the option of either upon written notice to the other.

Each delivery shall stand and be treated as a separate sale and if payment is not made in accordance with the terms of this contract, Seller to have the option to cancel the undelivered portion thereof.

The Seller may add to the price or prices stated herein any increase in Seller's cost of the commodities sold hereunder (including increased cost of materials used in the manufacture thereof) caused by (a) taxes or other charges imposed by governmental authority upon the production, sale or transportation of said commodities or materials, (b) compliance with agreements, codes or licenses made or issued pursuant to Federal or State legislation. If Buyer is unwilling to accept any such increase as computed by Seller, Buyer shall have the right to terminate this contract by giving Seller written notice within ten days after receipt of Seller's notice of increase in price.

National Lead Company,

Harold Rowe
Vice President

January 31, 1940.

E. I. duPont de Nemours & Co., Inc.
Wilmington, Delaware

Attention of Mr. E. B. Melson, Div. Pur. Agt.

Gentlemen:

On February 3, 1938, contracts were executed by your company and ours under which we have been supplying, since that date, your requirements of Basic Lead Carbonate—Dry, Basic Lead Carbonate—Grinders', and White Lead-in-Oil. These agreements expire on February 2, 1940.

As stated to you in our recent conversation, we shall be pleased to renew the contracts for the period beginning February 3, 1940 and ending February 28, 1942. It is our understanding that this is your desire.

If agreeable to you we shall consider acknowledgment and acceptance of this letter as evidence that the contracts shall continue in effect until February 28, 1942, all other terms and conditions remaining unchanged.

We wish to take this opportunity to express our appreciation of the privilege of serving your company. Please be assured that a relationship covering a period of so many years which has built up such a feeling of confidence and friendship is highly valued by us.

Yours very truly,
National Lead Company,
(s) Harold Rowe,
Vice President.

Harold Rowe
Vice President

June 26, 1942.

Mr. E. B. Melson, Div. Pur. Agt.
E. I. du Pont de Nemours & Co., Inc.
Wilmington, Delaware.

Dear Mr. Melson—

This is to confirm the agreement arrived at in our conference yesterday with Mr. Richter and Mr. Elliott with reference to the contracts under which National Lead Company has been furnishing E. I. du Pont de Nemours & Co., Inc., their requirements of white lead products since February 3, 1938. It is our understanding that those contracts are now to continue in force up to and including June 30, 1944, the terms and conditions to remain as originally written with the exception of certain minor changes noted below.

Contract Covering White Lead-in-Oil in Kegs.

The following paragraphs shall be substituted for those bearing corresponding numbers in the original contract.

1. The white lead-in-oil furnished under this contract shall be the type known as Heavy Paste or that known as Soft Paste, as ordered by Buyer. The pigment content of both pastes shall consist of basic lead carbonate of the same quality as Seller furnishes to its own trade.

2-c. Turpentine or Mineral Spirits, as specified by Buyer. To be supplied at Buyer's option. If not so supplied, it shall be furnished by Seller and the quantity used in the white lead-in-oil shipped each month shall be separately invoiced at the end of each month at the Seller's net cost for the month of shipment.

4. Seller shall mix and grind the white lead, linseed oil and turpentine (or mineral spirits) in accordance with Buyer's specifications, and shall pack and store the white lead-in-oil for shipment as directed by Buyer. For
2517 **these services Seller shall charge Buyer at the following rates:**

June 26, 1942

Mr. E. B. Malson, Div. Pur. Agt.
E. I. du Pont de Nemours & Co., Inc.,
Wilmington, Delaware.

For every 100# of white lead-in-oil packed in

600 lb. packages	$ .178
500 " "	.178
250 " "	.195
100 " "	.23
50 " "	.30
25 " "	.40
12½ " "	.575
5 " "	2.58
1 " "	4.60

F. O. B. Seller's manufacturing plants at Brooklyn, N. Y., West Pullman, Ill., or Melrose, Calif., as ordered by Buyer, freight and/or cartage to be paid by Buyer.

Memorandum invoices shall be rendered as of the date of shipment, and one bill with extensions at the end of each month covering all deliveries made during that month.

5. Payment of all charges against Buyer hereunder shall be made on or before the 15th day of the calendar month next following that for which Seller's invoices are rendered.

6. Fires, strikes, accidents and other causes beyond the control of either party, while operative, shall relieve the party affected thereby from buying or selling hereunder, and corresponding quantities may be cancelled at the option of either upon written notice to the other.

Each delivery shall stand and be treated as a separate sale and if payment is not made in accordance with the terms of this contract, Seller to have the option to cancel the undelivered portion thereof. The Buyer shall reimburse the Seller for all taxes, excises or other charges which the Seller may be required to pay to any Government (national, state or municipal) upon the sale, production or transportation of the commodities sold hereunder.

Contract Covering Dry White Lead and Grinders' Lead.

The only change is revising Section 5 to read the same as Section 6 in the "White Lead-in-Oil in Kegs" contract mentioned above.

Local deliveries of DuPont white lead-in-oil from our Brooklyn Plant are frequently made by our trucks. It has been our practice to charge cartage on the gross weight at

12¢ per pound for Greater New York and 13¢ per pound for Newark. In order to cut down clerical work in your 2518 office and ours we suggest that from July 1st the rate on all such deliveries be 13¢ per pound on the net weight. That will do away with the necessity of showing gross weights on our monthly invoice and your having to check them.

We trust that all the above is in accordance with your understanding. If so will you kindly approve one of the two copies and return it for our file. The changes will then be put into effect on July 1, 1942. We look forward to a continuation of the association which has been such a pleasant one for us during the past many years.

Yours very truly,
Harold Rowe,
Vice President.

E. I. Du Pont de Nemours & Company,
Theo. Mottig,
Director of Purchases.

Mr. E. B. Melson, Div. Pur. Agt.
E. I. du Pont de Nemours & Co., Inc.
Wilmington 98, Delaware.

Dear Mr. Melson—

Referring to our conversation at your office on June 23rd regarding the contract between E. I. duPont deNemours & Company, Inc., and National Lead Company, covering your requirements of white lead products, this letter is to confirm our offer to continue for the twelve months' period beginning July 1, 1944, and ending June 30, 1945, the agreement which has been in effect for the past two years as outlined in our letter to you of June 26, 1942, and accepted in your reply of July 8, 1942. We understand that it is satisfactory to your company to make the extension in this manner without the necessity of writing a new contract. If such is the case will you kindly let us have your acknowledgment.

We are pleased to have the opportunity to furnish your white lead for the coming year and regret that under present conditions we are unable to commit ourselves beyond that time. Assuring you of our appreciation of your many courtesies,

Yours very truly,

Harold Rowe.

E. I. du Pont de Nemours & Company,
E. H. Hawkins,
Purchasing Agent.

Harold Rowe, Vice-President.

Mr. E. B. Melson, Div. Pur. Agt.,
E. I. du Pont de Nemours & Co., Inc.,
Wilmington 98, Delaware.

Dear Mr. Melson—

On June 26, 1942, we wrote you outlining the terms of the contracts under which it would be agreeable for National Lead Company to furnish E. I. du Pont de Nemours & Company, Inc., with its requirements of white lead products, such contracts to continue in force up to June 30, 1944. Your acceptance was sent to us under date of July 8, 1942. This arrangement was extended for the current twelve months' period ending June 30, 1945, as per our letter of June 26, 1944, and yours of the 29, 1944.

This will confirm our telephone conversation this morning in which we offered to continue the present contracts for the year beginning July 1, 1945, and ending June 30, 1946. If that is in accordance with your wishes will you kindly approve and return to us the duplicate copy of this letter which is attached.

Assuring you of our appreciation of the opportunity to supply your requirements,

Yours very truly,
Harold Rowe.

2[illegible]21 January 6, 1938.

White Lead Contracts.
National Lead Company.

Introduction:

Late in the Summer of 1937, it was agreed between Mr. Richter and representatives of the National Lead Company that new contracts for basic carbonate white lead, dry and in oil, would be written which would increase payments to National over those which would have been made under the 1924 contract by not more than $25,000 per year on the basis of materials equivalent to 2500 tons of dry basic carbonate being taken.

National proposed two contracts—one in which dry lead and the dry lead content of grinders lead in oil would be billed at the card price; the other in which keg lead for sales would be furnished on a straight conversion contract involving a corroding charge of $1.34 per hundred pounds of dry carbonate as against $0.885 under the 1924 contract and an increase of 15 per cent in the differentials for milling, packaging and warehousing.

Execution of the new contracts has been delayed by prolonged discussions as to a practicable method of guaranteeing the $25,000 limitation.

The purpose of this memorandum is to indicate the effect the proposed contracts would have on our cost as compared with what would have resulted under the 1924 contract.

Conclusions:

1. If, as was intended for comparison, it is assumed

that takings of the three types of product under the proposed contracts will be distributed in the same proportions as were the 2367 tons of dry carbonate taken in 1936, corresponding cost increases per year would be as follows:

	Based on 1936 prices		Based on 1937 prices	
	2367 Tons	2500 Tons	2367 Tons	2500 Tons
Dry carbonate	$10,250	$10,826	$ 9,379	$ 9,906
Grinders lead in oil	10,239	10,814	9,022	9,529
Keg lead (paste)	13,799	14,574	13,799	14.574
Total	$34,288	$36,214	$32,200	$34,009

Supporting data and calculations are shown on the following attachments to this memorandum:

Detail I—Synopsis of Proposed Contracts.

Detail II—Distribution of Takings by Types of Product.

2522 Detail III-A—Calculation of Cost Increases Based on 1936 Prices.

B—Calculation of Cost Increases Based on 1937 Prices.

Detail IV—1936 Average Prices—Pig Lead, Dry Carbonate C/L Card Prices and Differential.

Detail V—1937 Average Prices—Pig Lead, Dry Carbonate C/L Card Prices and Differential.

2. If it is assumed that the differential between the prices per hundred pounds for common pig lead and basic carbonate white lead will be the same during the period of these contracts as existed in 1936 and the proposed 15 per cent increase in the differentials for milling, packaging and warehousing is granted, the corroding charge in the proposed conversion contract for keg lead should be no more than $0.96 per hundred pounds of dry carbonate content. Based on the 1937 differential, the corroding charge should be no more than $1.03 per hundred pounds of dry carbonate content of keg lead. Calculations showing how these figures were arrived at are set out in Detail VI attached.

3. Assuming 2500 tons as the total dry carbonate to be taken and that this is distributed among the three classes of product in the same proportions as the actual takings of 2367 tons were distributed in 1936, the increased cost under the proposed contracts over that which would have

resulted under the 1924 contract can be quickly calculated from any assumed prices for pig lead and dry carbonate by the formulae given here:

Let A=C/L card price of dry basic carbonate per one hundred pounds

B=price of corroding quality pig lead per one hundred pounds

C=price of common pig lead per one hundred pounds

Then,

Starting with the price of dry carbonate and the price of common pig lead, the total cost increase in dollars will be

$$IC=20620A-17183C-17503$$

Starting with the price of dry carbonate and the price of corroding quality pig lead, the total cost increase in dollars will be

$$IB=20620A-17183B-15785$$

2523 Derivations of the foregoing formulae are indicated in Detail VII attached.

4. If it is desired to determine what the total dollar increase will be under the proposed contracts as against the 1924 contract for any assumed prices for the dry carbonate and for common or corroding quality pig lead, the cost increase per one hundred pounds or per ton of the dry carbonate content of each of the three types of product involved can first be determined from the formulae given herein. The unit increases so determined may then be weighted by multiplying the unit increase in each case by the ratio that the carbonate content of the type under consideration is to the total equivalent carbonate which it is assumed will be taken and then adding these three results to obtain the unit increase per one hundred pounds or per ton, as the case may be, by which the total equivalent dry carbonate can then be multiplied to obtain the total dollar increase under the assumed conditions.

The formulae for the increase in unit price for each of the types are as follows:

Let A=C/L card price of dry basic carbonate per one hundred pounds.

B=price of corroding quality pig lead per one hundred pounds.

C=price of common pig lead per one hundred pounds

Then,

$$B=C+0.10$$

and the unit increases are

a. Dry Carbonate
Per 100 pounds dry carbonate $= A-0.833C-1.348$
Per ton dry carbonate $=20A-16.67C-26.96$
b. Grinders Lead in Oil
Per 100 pounds dry carbonate $= A-0.833C-1.701$
Per ton dry carbonate $=20A-16.67C-34.02$
c. Keg Lead (Paste)
Per 100 pounds dry carbonate $=$ 0.496
Per ton dry carbonate $=$ 9.920

Derivations of these formulae are shown in detail VIII attached.

2524 5. The following additional conclusions may be drawn:

a. For each change of $0.25 in the price per 100 lbs. of dry carbonate, the cost increase varies directly by $5155;

b. For each change of $0.25 in the price per 100 lbs. of pig lead, the cost increase varies inversely by $4295.

c. For the 1936 distribution between types of product and accepting the proposed 15 per cent increase in milling, packaging and warehousing charges, the permissible corroding charge to limit the increased expense under the proposed contracts to any predetermined amount above the 1924 contract is given by:

$$K=1.936+0.0000341+0.585C-0.702A$$

where,

K=permissible corroding charge
I=the permissible total cost increase (heretofore agreed on as $25,000)
A=C/L card price of dry basic carbonate per 100 lbs.
C=price of common pig lead per 100 lbs.

and when the increase is definitely limited to $25,000, this formula becomes

$$K=2.786+0.585C-0.702A$$

Detail IX attached shows, by examples, application of the formulae heretofore developed and the method of arriving at conclusions herein stated.

W. F. Malloch.

Detail I

White Lead Contracts—National Lead Company
Synopsis of Proposed Contracts

1. Dry carbonite—Card price f. o. b. National's nearest manufacturing plant; freight allowed to destination, except for South San Francisco a differential of ¼ cent per pound will be added. Barrels included in card price.

2. Grinders lead in oil—Dry carbonate content to be at card price less a package allowance for standard dry lead barrel. Linseed oil and packages to be furnished by du Pont f. o. b. National's plant. Freight allowed to destination on grinders lead in oil.

3. Keg lead (paste)—Dry carbonate content to be 50% Dutch process and 50% Carter process.

Heavy paste—91% total carbonate.

Soft paste—89% total carbonate.

Du Pont to furnish pig lead, linseed oil, turpentine and packages. Carbonate to be supplied at rate of 120 lbs. for each 100 lbs. of pig lead.

Corrosion charge for 100 lbs. of dry carbonate to be $1.34. Milling, packaging an warehousing charges are 15% higher than in previous contract.

DETAIL III

WHITE LEAD CONTRACTS—NATIONAL LEAD COMPANY
CALCULATION OF COST INCREASES

A.—Using 1936 average prices for pig lead and for the card price of dry carbonate.		
1. Dry Carbonate:		
a. Proposed basis—408 tons dry carbonate @ $6.53 per 100 lbs. (C/L card price)		**$53,285**
b. Previous basis		
Lead—340 tons corroding quality lead @ $4.81 per 100 lbs.	**$32,708**	
Corroding charge—340 tons pig lead @ $21.25 per ton	**7,225**	
Milling, packaging, and warehousing—408 tons dry carbonate @ $0.04 per 100 lbs.	**326**	
Packages—408 tons dry carbonate @ $0.1712 per 100 lbs.	**1,397**	
Freight—408 tons dry carbonate @ $0.169 per 100 lbs. (rate includes tare)	**1,379**	
Total of items involved	**$43,035**	**43,035**
c. Indicated increased cost		**$10,250**
2. Grinders Lead in Oil:		
a. Proposed basis:		
Dry carbonate—568 tons @ $6.53 per 100 lbs.		**$74,181**
Less barrel cost—568 tons dry carbonate @ $0.1712 per 100 lbs.		**1,945**
		$72,236
b. Previous basis:		
Lead—Corroding quality, per 100 lbs.	**$ 4.81**	
Corroding charge, per 100 lbs.	**1.0625**	
Total per 100 lbs. pig lead	**$ 5.8725**	
Per 100 lbs. carbonate	**$ 4.893**	
Dry carbonate—568 tons @ $4.893 per 100 lbs.	**55,584**	
2528		
Milling, packaging, and warehousing—668 tons lead in oil @ $0.155 per 100 lbs.	**2,071**	
Freight—668 tons lead in oil @ $0.325 per 100 lbs. (rate includes tare and return freight on empties)	**4,342**	
Total of items involved	**$61,997**	**61,997**
c. Indicated increased cost		**$10,239**
3. Keg Lead (Paste):		
a. Proposed basis:		
Corroding charge—1391 tons carbonate @ $1.34 per 100 lbs.		**$37,279**
Milling, packaging, and warehousing—1557 tons keg lead @ $0.2837 per 100 lbs. (15% increase over previous)		**8,834**
Total of items involved		**$46,113**

b. Previous basis:		
Corroding charge—1391 tons carbonate @ $0.8854 per 100 lbs.	$24,632	
Milling, packaging, and warehousing—1557 tons keg lead @ $0.2467 per 100 lbs.	7,682	
Total of items involved	$32,314	32,314
c. Indicated increased cost		$13,799
4. Summary of increased costs:		
Dry carbonate	$10,250	
Grinders lead in oil	10,239	
Keg lead (paste)	13,799	
Total	$34,288	

2529

B.—Using ~~1937~~ average prices for pig lead and for the card price of dry carbonate.

1. Dry Carbonate:		
a. Proposed basis—408 tons dry carbonate @ $7.54 per 100 lbs. (C/L card price)		$61,526
b. Previous basis:		
Lead—340 tons corroding quality lead @ $6.15 per 100 lbs.	$41,820	
Corroding charge—340 tons pig lead @ $21.25 per ton	7,225	
Milling, packaging, and warehousing—408 tons dry carbonate @ $0.04 per 100 lbs.	326	
Packages—408 tons dry carbonate @ $0.1712 per 100 lbs.	1,397	
Freight—408 tons dry carbonate @ $0.169 per 100 lbs. (rate includes tare)	1,379	
Total of items involved	$52,147	52,147
c. Indicated increased cost		$ 9,379
2. Grinders Lead in Oil:		
a. Proposed basis:		
Dry carbonate—568 tons @ $7.54 per 100 lbs.		$85,654
Less barrel cost—568 tons dry carbonate @ $0.1712 per 100 lbs.		1,945
		$83,709
b. Previous basis:		
Lead—Corroding quality, per 100 lbs.	$ 6.15	
Corroding charge, per 100 lbs.	1.0625	
Total per 100 lbs. pig lead	$ 7.2125	
Per 100 lbs. carbonate	$ 6.01	
Dry carbonate—568 tons @ $6.01 per 100 lbs.	$68,274	

2530

Milling, packaging, and warehousing—668 tons lead in oil @ $0.155 per 100 lbs.	2,071	
Freight—668 tons lead in oil @ $0.325 per 100 lbs. (rate includes tare and return freight on empties)	4,342	
Total of items involved	$74,687	74,687
c. Indicated increased cost		$ 9,022

3. **Keg Lead (Paste):**
Since relative market prices of pig lead and carbonate, do not affect comparison of costs under previous and proposed contracts, the indicated increase for keg lead remains at.................. **$13,799**

4. **Summary of increased costs:**

Dry carbonate	$ 9,379
Grinders lead in oil	9,022
Keg lead (paste)	13,799
Total	$32,200

DETAIL VI

WHITE LEAD CONTRACTS—NATIONAL LEAD COMPANY

PERMISSIBLE INCREASE IN CORRODING CHARGE TO LIMIT COST INCREASE TO $25,000

In these calculations, it is assumed that the costs for dry carbonate as such and for grinders lead in oil will be as covered by the latest contract proposal for these items and that, in the conversion contract for keg lead, the differentials for milling, packaging and warehousing will be as covered by the latest proposal for that product; i. e., 15 per cent greater than in the 1924 contract.

Starting with the permissible increase of $25,000 and deducting the indicated increases for dry carbonate, grinders lead in oil and the milling, packaging and warehousing, the balance is the amount remaining which can be applied to the corroding charge in the conversion contract.

All figures have been computed on the basis of 2500 tons of dry carbonate per year.

	Based on 1936 prices		Based on 1937 prices	
Permissible increase		$25,000		$25,000
Deduct:				
Dry carbonate increase	$10,826		$ 9,906	
Grinders lead in oil increase	10,814		9,529	
Keg lead increase, excluding corroding charge	1,217		1,217	
Totals, these increases	$22,867	22,867	$20,652	20,652
Balance of permissible increase available for increased corroding cost for 1469 tons carbonate content of keg lead		$ 2,133		$ 4,348
Corroding cost, previous basis		26,016		26,016
Total available for corroding 1469 tons of dry carbonate required for keg lead		$28,149		$30,364
Corroding charge per 100 lbs., available if increased cost of all lead is limited to $25,000 based on 2500 tons of dry carbonate per year				
$\frac{\$28,149}{20 \times 1469} =$		$ 0.96		
$\frac{\$30,364}{20 \times 1469} =$				$ 1.03

DETAIL VII

WHITE LEAD CONTRACTS—NATIONAL LEAD COMPANY

DERIVATION OF FORMULAE FOR DETERMINING INCREASED COSTS UNDER PROPOSED CONTRACTS vs. 1924 CONTRACT

These formulae are based on total takings of the three types of product being equivalent to 2500 tons of dry basic carbonate and the total quantity being distributed among the three types of product in the same proportions as during the calendar year 1936.

The constants used to cover charges for corroding, milling, packaging, warehousing, packages and freight are those indicated in Detail II, A and B, adjusted to the basis of 2500 tons total.

In these derivations, let

A = C/L card price of dry basic carbonate, per 100 lbs.

B = Price of corroding quality pig lead, per 100 lbs.

C = Price of common pig lead, per 100 lbs.

from which,

$$B = C + 0.10$$

Distribution of quantities involved is as follows:

Commodity.	1936 Actual Commodity, Tons	1936 Actual Equivalent Dry Carbonate Tons	1936 Actual Equivalent Dry Carbonate %	2500 Tons of Equivalent Dry Carbonate
Dry carbonate	408	408	17.24	431
Grinders lead in oil......	668	568	24.00	600
Keg lead (paste).......	1469	1391	58.76	1469
	2545	2367	100.00	2500

A.—Formula for working directly from prices of common pig lead and dry carbonate.

1. Dry Carbonate:

a. Proposed basis—$431 \times 20 \times A = 8620\,A$

b. Previous basis

Lead content — $\dfrac{431 \times 20 \times (C + 0.10)}{1.2} = 7183C + 718$

Corroding	7225
Milling, packaging and warehousing	326
Packages	1397
Freight	1379
Total processing, etc.	10327

2535

Pro-rating to 2500 tons $= \dfrac{2500 \times 10327}{2367} =$ 10,907

Total all items affected $= 7183C + 11{,}625$

c. Increase $= 8620A - 7183C - H625$

2. Grinders Lead in Oil:

a. Proposed basis

$$\begin{array}{lcl} \text{Dry carbonate} & -\ 600 \times 20 \times A = & 12\,000\,A \\ \text{Less barrel cost} & -\ \dfrac{2500 \times 1945}{2367} = & 2\,054 \end{array}$$

Net of these items $= 12000\,A + 2054$

b. **Proposed basis**

Lead—Corroding quality, per 100 lbs. = B = C + 0.10

Corroding charge, per 100 lbs. = 1.0625

Total per 100 lbs. of pig lead = C + 1.1625

Per 100 lbs. of carbonate—

$$\frac{C + 1.1625}{1.2} = 0.8333C + 0.9688$$

Dry carbonate—

600 x 20 x (0.8333 C + 0.9688) = 10000C + 11,625

Milling, packaging and warehousing 2071

Freight 4342

Total processing, etc. 6413

$$\text{Pro-rating to 2500 tons} = \frac{2500 \times 6413}{2367} = 6733$$

Total all items affected = 10000C + 18398

c. Increase = 12000A — 10000C — 20452

3. Keg Lead (Paste):

Increase for 2367 tons (Detail III) = 13799

$$\text{Pro-rating to 2500 tons} = \frac{2500 \times 13799}{2367} = 14574$$

4. Total Increase:

Dry carbonate	=	8620 A — 7183C — 11625
Grinders lead in oil	=	12000 A — 10000C — 20452
Keg lead (paste)	=	+ 14574
Total increase	=	20620 A — 17183C — 17503

2536

B.—Formula for working directly from prices of corroding quality pig lead and dry carbonate.

1. Dry Carbonate:

a. Proposed basis— 431 x 20 x A = 8620 A

b. Previous basis

$$\text{Lead content—} \quad \frac{431 \times 20 \times B}{1.2} = 7183\ B$$

Total processing, etc., pro-rated to 2500 tons as in A-1-6, above = 10907

Total all items affected = 7183 B + 10,907

c. Increase = 8620 A — 7183B — 10907

2. Grinders Lead in Oil:

a. Proposed basis

Dry carbonate— 600 x 20 x A = 12000 A

Less barrel cost as in A-2-a, above = 2054

Net of these items = 12000 A — 2054

b. Previous basis

Lead—Corroding quality, per 100 lbs. = B

Corroding charge, per 100 lbs. = 1.0625

Total per 100 lbs. of pig lead = B + 1.0625

Per 100 lbs. of carbonate—

$$\frac{B + 1.0625}{1.2} = 0.8333B + 0.8521$$

Dry carbonate—
600 x 20 x (0.8333B + 0.8521) = 10000B + 10625
Total processing, etc., pro-rated to 2500 tons as in A-2-b, above = 6773
Total all items affected = 10000B + 17398

c. Increase = 12000A — 10000B — 19452

2537

3. Keg Lead (Paste):
Increase pro-rated to 2500 tons as in 3 above = 14574

4. Total increase:

Dry carbonate	=	8620 A — 7183 B — 10907
Grinders lead in oil	=	12000 A — 10000 B — 19452
Keg lead (paste)	=	+ 14574
Total increase	=	20620 A — 17183 B — 15785

WFM:BL
1/6/38

2538

DETAIL VIII

WHITE LEAD CONTRACTS—NATIONAL LEAD COMPANY

DERIVATION OF FORMULAE FOR INCREASED UNIT COSTS UNDER PROPOSED CONTRACTS vs. 1924 CONTRACT

Let A = C/L card price of dry basic carbonate, per 100 lbs.
B = Price of corroding quality pig lead, per 100 lbs.
C = Price of common pig lead, per 100 lbs.
from which,

$$B = C + 0.10 \quad \text{or} \quad C = B - 0.10$$

1. Dry Carbonate:
a. Proposed basis—
b. Previous basis
Lead— $\frac{B}{1.2} = 0.8333B$
Total processing, etc.— $\frac{10{,}907}{431 \times 20} = 1.265$
Total all items affected = 0.8333 B + 1.265
c. Increase, per 100 lbs. carbonate = A — 0.8333B — 1.265

2. Grinders Lead in Oil:
a. Proposed basis
Dry carbonate = A
Less barrel cost = $\frac{2054}{600 \times 20} = 0.171$
Net of these items = A — 0.171

b. **Previous basis**

Lead— = B

Corroding charge = 1.0625

Total per 100 lbs. of corroding lead = B + 1.0625

Per 100 lbs. of carbonate—

$$\frac{B + 1.0625}{1.2} = 0.8333\ B + 0.8521$$

Total processing, etc.—

$$\frac{6773}{600 \times 20} = 0.5644$$

Total all items affected = 0.8333 B + 1.417

c. **Increase, per 100 lbs. carbonate** = A — 0.8333 B — 1.618

2539

3. **Keg Lead (Paste):**

Increase, per 100 lbs. carbonate =

$$\frac{14574}{1469 \times 20} = 0.496$$

4. **Summary of Increases:**

a. **Using corroding quality pig lead price**

(1) **Per 100 lbs. dry carbonate**

Dry carbonate = A — 0.8333 B — 1.265

Grinders lead in oil = A — 0.8333 B — 1.618

Keg lead (paste) = 0.496

(2) **Per Ton dry carbonate**

Dry carbonate = 20 A — 16.67 B — 25.30

Grinders lead in oil = 20 A — 16.67 B — 32.36

Keg lead (paste) = 9.92

b. **Using common pig lead price (from a, above, and B = C + 0.10)**

(1) **Per 100 lbs. dry carbonate**

Dry carbonate = A — 0.833 C — 1.348

Grinders lead in oil = A — 0.833 C — 1.701

Keg lead (paste) = 0.496

(2) **Per Ton dry carbonate**

Dry carbonate = 20 A — 16.67 C — 26.96

Grinders lead in oil = 20 A — 16.67 C — 34.02

Keg lead (paste) = 9.92

WFM:BL

2540

DETAIL IX

WHITE LEAD CONTRACTS—NATIONAL LEAD COMPANY

EXAMPLES OF APPLICATION OF THE FORMULAE

Example I—Effect of a change of $0.25 per 100 lbs. in the differential on the increased cost under the proposed contracts.

Increase, I = 20,620A — 17183C — 17503 (see Detail VIII—A-4).

		1.	2.	3.	4.
Dry carbonate	A =	7.54	7.54	7.29	7.64
Corroding Pig Lead	B =	6.15	5.90	6.15	6.00
Common Pig Lead	C =	6.05	5.80	6.05	5.90
Differential	A-C =	1.49	1.74	1.24	1.74
20620 A	=	$155,475	$155,475	$150,320	$157,537
17183 C	=	103,957	99,661	103,957	101,380
		17,503	17,503	17,503	17,503
17183 C + 17503	=	$121,460	$117,164	$121,460	$118,885
Cost Increase	I =	$ 34,015	$ 38,311	$ 23,860	$ 38,654

Note that,

1. For each change of $0.25 in the price per 100 lbs. of dry carbonate, the cost increase varies directly by $5155;

2. For each change of $0.25 in the price per 100 lbs. of pig lead, the cost increase varies inversely by $4295.

Example II—Determination of the permissible corroding charge per 100 lbs. of dry carbonate in keg lead (paste) in the proposed contracts to arrive at any predetermined cost increase of the total takings under the proposed contracts over which the total cost would have been under the 1924 contract.

Cost Increase = 20,020A — 17183C — 17503 (See Detail VII—A-4).

By referring to the derivation of this formula in Detail VII—A-4, it will be seen that the only element which is affected by a change in the corroding charge for the keg lead portion is the constant 17503.

It will be noted that this constant is the algebraic sum of three constants, as follows:

Dry carbonate	— 11625
Grinders lead in oil	— 20452
Keg lead (paste)	+ 14574
Total	— 17503

2541

and that any change in the numerical value of the constant for the keg lead portion changes the numerical value of the total constant inversely by the same amount

The constant for the keg lead portion (from Detail II—3-B, pro-rated up to the 2500-ton basis) is made up as follows:

$$\frac{2500\ (37{,}279 - 24{,}632)}{2367} = 13{,}357$$

Corroding—

Milling, packaging, and warehousing—.

$$\frac{2500\ (8{,}834 - 7{,}682)}{2367} = 1{,}217$$

Total = 14,574

The corroding portion is,

$$= \frac{2500\ (1391 \times 20 \times K)}{2367} - \frac{2500 \times 24632}{2367}$$

$$= (1469 \times 20 \times K) - 26016$$

$$= 29380\ K - 26016$$

then, the total constant $= 29380\ K - 24799$

where, K = the corroding charge per 100 lbs. of carbonate in keg lead in the proposed contracts.

The cost increase under the proposed contracts over the cost under the 1924 contract then becomes

$$I = 20620A - 17183C - 11625 - 20452 + 29380K - 24799$$

$$29380K = I - 20620A + 17183C + 56876$$

Then, corroding charge,

$$K = 0.000034I - 0.702A + 0.585C + 1.936$$

$$= 1.936 + 0.000034I + 0.585C - 0.702A$$

		1	2	3	4
Dry carbonate	A =	7.54	7.54	7.29	7.64
Common pig lead	C =	6.05	5.80	6.05	5.90
Differential	A-C =	1.49	1.74	1.24	1.74
If I = $25,000,					
		$ 1.936	$ 1.936	$ 1.936	$ 1.936
0.000034I		.850	.850	.850	.850
0.585C		3.539	3.393	3.539	3.452
Total		$ 6.325	$ 6.179	$ 6.325	$ 6.238
0.702A		5.293	5.293	5.118	5.363
Permissible corfoding charge per 100 lbs. dry carbonate	K =	$ 1.032	$ 0.886	$ 1.207	$ 0.875

2542

		5	6	7	8
Dry carbonate,	A =	6.53	6.53	6.28	6.63
Common pig lead,	C =	4.71	4.46	4.71	4.56
Differential,	A-C =	1.82	2.07	1.57	2.07
If I = $25,000					
		$ 1.936	$ 1.936	$ 1.936	$ 1.936
0.000034I	=	.850	.850	.850	.850
0.585C	=	2.755	2.609	2.755	2.668
Total		$ 5.541	$ 5.395	$ 5.541	$ 5,454
0.702A	=	4.584	4.584	4.409	4.654
Permissible corroding charge per 100 lbs. of dry carbonate,	K =	$ 0.957	$ 0.811	$ 1.132	$ 0.800

For $25,000 increase, K = 2.786 + 0.585C — 0.702A

WFM:BL

1/6/38.

2637 COMMISSION'S EXHIBIT NO. 799.

Lead Pigments Division.

New York, N. Y. July 20, 1933.

A meeting of the Lead Pigments Division of the Lead Industries Association was held at the Lawyers Club, New York City, on Thursday, July 20, 1933 at 9:30 A. M. The following were present:

Present:

F. M. Carter, Chairman. Representing: National Lead Company.

A. E. Bendelari. Representing: Eagle-Picher Lead Company.

R. M. Roosevelt. Representing Eagle-Picher Lead Company.

T. H. Zappert. Representing Euston Lead Company.

R. M. Evans. Representing Evans Lead Company.

W. Parmer Fuller, Jr. Representing W. P. Fuller & Company.

Wm. Wilke, Jr. Representing Hammond Lead Products, Inc.

P. E. Sprague. Representing Metals Refining Company.

Harold Rowe. Representing National Lead Company.

F. E. Wormser, Secretary.

The Chairman expressed his opinion that in view of the opportunity presented by the attendance of out of town members, a discussion of suitable trade practices to incorporate in the Supplementary Code for the Lead Pigments Division would be of great value.

In the discussion which followed some of the subjects presented were, (1) the practice of mailing contracts for lead oxides signed by the seller but not subject to immediate acceptance, (2) accepting contracts for delivery of oxides beyond 30 days after acceptance of the order, or beyond the period in which orders might be covered in the pig lead market, (3) selling old prices on the day of advance in the pig lead market.

So many suggestions were made that the Chairman appointed Mr. R. M. Roosevelt, Mr. Harold Rowe and the Secretary, a Committee to collect additional comment from the members of the Lead Pigments Division within the next twelve days, and called a regular meeting of the Lead Pigments Division for Tuesday, August 8, at the Lawyers Club at 9:45 A. M.

Meeting adjourned at 12 noon.

F. M. Carter,
Chairman,
F. E. Wormser,
Secretary.

2638 COMMISSION'S EXHIBIT NO. 800.

Lead Pigments Division.
Dry Products Committee.

New York, N. Y. August 8, 1933.

A meeting of the Dry Products Committee of the Lead Pigments Division of the Lead Industries Association was held at the Lawyers Club, New York, N. Y., on Tuesday, August 8, 1933 at 10:30 A. M. The following were present:

Present:

Harold Rowe, Chairman. Representing National Lead Company.
J. R. MacGregor. Representing: Eagle-Picher Lead Company.
R. M. Roosevelt. Representing: Eagle-Picher Lead Company.
R. M. Evans. Representing: Evans Lead Company.
P. E. Sprague. Representing: Metals Refining Company.
F. M. Carter. Representing: National Lead Company.
S. B. Coolidge, Jr. Representing Sherwin-Williams Company.
F. E. Wormser, Secretary.
R. L. Ziegfeld, Assistant Secretary.

Mr. Harold Rowe occupied the chair.

A summary of suggestions previously offered by members for consideration and a tentative draft of a Code of Fair Competition for dry pigments compiled by Mr. Sprague were submitted for consideration.

Mr. Roosevelt suggested that the simplest method would be to formulate a code requiring that each member file a price list of his selling practices with the Secretary of the Lead Industries Association to be effective ten days after filing and immediately published to all members by the Secretary, allowing other members to file a new list immediately, effective at the same time, if they so desired, and providing that any deviation from the filed lists be violations of the Code.

The other suggestions were then considered in detail and the following paragraphs to be included in a Code of Fair Competition were tentatively adopted to apply to Lead Oxides:

1. Red lead over 90% true red lead shall be sold at the following premiums over grades with lower true red lead content:

90% to 98% true red lead	$.25 per cwt.
98% and over true red lead	$.50 per cwt.

2. Only two grades of guaranteed red lead shall be sold, i. e., grinders red lead guaranteed 95% and red lead guaranteed 98%. Under 95% red lead may be labeled as desired.

2639 3. Price shall be a differential over the lead market in effect on (a) the date sale is made, or (b) some future date, or (c) the average during some future period, the basis to govern to be specified at the time each sale is made.

4. American Smelting & Refining Company's official price shall govern all spot sales, but either the A. S. & R. or Engineering and Mining Journal price may be used for average price contracts. The metal basis for spot orders on any day shall be the A. S. & R. price in effect at the close of business on the previous day.

5. Carload sales shall consist of at least one minimum carlot as defined in freight tariffs in effect on date of sale for freight movements from Members' shipping point to point where Buyer accepts delivery. Trust delivery of carload orders must be completed within three days from start of delivery.

6. On spot sales delivery or billing shall be complete in 30 days from date of sale.

7. As agreed between Member and Buyer, always with reasonable notice to Member, and in the case of sales on an average market basis, Member shall require Buyer to specify amount to be supplied on said basis prior to the beginning of the period whose average governs the price, and such sale is to constitute a firm sale. Deferred deliveries are to be billed on the basis originally applicable to the sale and additional requirements are to take the spot price.

8. Terms shall be 1% for cash not beyond 10 days from date of shipment and net cash 30 days from date of shipment.

9. Delivery place shall be F. O. B. Member's shipping point.

10. Freight shall be equalized with the nearest manufacturing point, with allowance of actual carload rate up to 40¢ per 100 lbs., rail tariffs to govern.

11. Any tax or other governmental charge upon the production and/or sale and/or shipment of products of this Division imposed by the Federal authorities and hereafter becoming effective within the life of a sales contract shall be added to the price provided in the contract and shall be paid by the buyer.

12. The price paid for l. c. l. shipments shall be a flat price established by the seller.

13. Nothing in any part of the Code shall be deemed to hamper full freedom of action of any Member in settling accounts or extending delivery with buyers whose credit position may require special action or adjustment.

14. Maximum allowance to customers using their own carriers shall be the regular tariff rate.

15. No allowance shall be made for warehousing in customer's warehouses unless they are recognized commercial warehouses.

16. No allowance shall be made for cartage in excess of 10¢ per 100 lbs. except in New York metropolitan district and any in excess of this amount shall be reported to the Secretary.

2640 17. No rebate on customers' stocks shall be allowed on account of price decline.

18. Options given to bidders on bid business shall be contingent upon award of the contract to the bidder.

19. On Government bids and on railroad (and industrial) business the following package differentials over l. c. l. barrel prices are hereby established:

100 lb. kegs	$0.50
50 lb. kegs	$0.75
25 lb. kegs	1.00

Consignment accounts were discussed. The general sense of the meeting was to abolish consignment accounts, but the explanation of one member for his use of consignments in certain inaccessible localities caused this question to be passed over for further consideration.

There was a difference of opinion as to whether no allowance or a limited allowance should be made on returnable packages.

It was felt that in the case of off-grade material sold as such, a satisfactory differential below the standard grades should be developed.

It was the sense of the meeting that grave danger for the lead oxide business existed in the manufacture of the oxides by the users themselves, this being particularly true of large battery manufacturers who now are manufacturing black oxide for their own use. It was felt that it would be contrary to the spirit of the N. R. A. for users of the oxides to install their own oxide manufacturing equipment when the capacity of the industry is already in excess of requirements and so long as oxides can be purchased at a fair price. Such a procedure could not increase employment and would be contrary to the declared purpose of the Act "to promote the fullest possible utilization of the present productive capacity of industries." It was felt that some means of licensing new productive equipment might be sought as provided for in the cotton textile and other codes.

The question of combining the purchase of old battery plates with sales of oxides was passed over for further consideration.

It was felt that more detailed or useful credit information than now available would depend upon the establishment of a credit bureau, and that this was beyond consideration at present.

Mr. Evans and Mr. Sprague were delegated to draw up a form of sales contract embodying the features agreed upon at this meeting.

The Committee recessed at 11:45 P. M. until the following day.

Harold Rowe,
Chairman,
F. E. Wormser,
Secretary.

2641 COMMISSION'S EXHIBIT NO. 801.

Dry Products Committee.

Lead Pigments Division.

New York, N. Y. September 7, 1933.

A meeting of the Dry Products Committee of the Lead Pigments Division of the Lead Industries Association was held at the Commodore Hotel, New York, N. Y., on September 7, 1933, at 10:15 A. M.

Present:

F. M. Carter, Chairman. Representing: National Lead Co.
A. P. Knapp. Representing: Andrews Lead Co.
J. R. MacGregor. Representing: Eagle-Picher Lead Co.
W. E. Maston. Representing: Eagle-Picher Lead Co.
F. W. Potts. Representing: Eagle-Picher Lead Co.
R. M. Evans. Representing: Evans Lead Co.
P. E. Sprague. Representing: Metals Refining Co.
Harold Rowe. Representing: National Lead Co.
S. B. Coolidge, Jr. Sherwin-Williams Co.
A. P. Wetherill. Representing: Wetherill & Bro.
F. E. Wormser, Secretary.

Mr. F. M. Carter occupied the chair.

The Chairman called attention to the problem facing Lead Oxide manufacturers in the threat of additional competition from new facilities, despite the fact that existing capacity was large enough to supply all requirements for lead oxides. He also spoke of the danger to the oxide business in the possibility of consumers who were now manufacturing their own requirements dumping their surplus production in competition with independent manufacturers.

After discussion, it was the unanimous feeling that articles providing for these contingencies should be incorporated into the Supplementary Code for the Lead Pigments Division, and the Secretary was authorized to draw up suitable paragraphs for inclusion in its Code and to draw upon legal advice as required.

The Secretary was requested to read the price list paragraph which had been adopted by the Dry White Lead group.

Whereupon it was regularly moved, seconded and carried that the same paragraph be adopted for the Lead Oxide group of the Dry Products Committee.

The unfair trade practices accepted by the Dry Products Committee in earlier session were also adopted as 2642 being applicable to oxide manufacture.

The next subject discussed was the one of uniform sales contracts.

Whereupon it was regularly moved, seconded and carried that the lead oxide group endorse the sales contract paragraph as adopted by the Dry Products Committee at its meeting on September 6, with the addition of the following sentence:

"All sales shall conform to the conditions set forth in the uniform sales contract forms."

The meeting adjourned at 12:30 P. M.

F. M. Carter,
Division Chairman,
Harold Rowe,
Committee Chairman,
F. E. Wormser,
Secretary.

2643 COMMISSION'S EXHIBIT NO. 802.

September 26, 1933.

Second Draft.

Supplementary Code of Fair Competition for the Lead Pigments Division of the Lead Industries Association.

As provided in Art. XIII of the Code of Fair Competition for the Lead Industries hereinafter termed the "Master Code" this supplementary code is hereby made a part of said Master Code with the same force and effect as any provisions thereof, except that it shall be applicable only to Lead Pigments, as defined in Art. II of said Master Code; i. e., basic carbonate white lead, dry or in oil, basic lead sulphate, dry or in oil, litharge, red lead, dry or in oil, orange mineral and other lead oxides with or without metallic lead content.

Price Lists.

Art. I—Each member of the Code shall file with the Secretary within ten (10) days after the effective date of this Code, his price list, together with terms and conditions of sale. Any change in the said list or terms shall be reported to the Secretary in writing within twenty-four (24) hours after the effective date of such change. After December 31, 1933, any member making a sale or quotation at variance with his price list or terms on file at the time said sale or quotation is made, shall notify the Secretary concerning the variation by letter, mailed within twenty-four (24) hours. The information, as reported, shall be reissued to the members at such time, and in such manner as may be determined by them.

Uniform Sales Contracts.

Art. II—Uniform sales contracts specifically designed for use in selling Dry White Lead and Lead Oxides shall be developed as soon as practicable and thereafter used by all members after said contract forms shall have been adopted by a two-thirds vote of members manufacturing the products to which the contracts apply. From time to time, changes, in the uniform sales contracts can be made by a two-thirds vote of members manufacturing such products. All sales shall conform to the conditions set forth in the uniform contract forms.

Unfair Trade Practices.

Art. III—The following shall be considered unfair trade practices and are violations of this Code:

(a) Misbranding or misrepresentation of lead pigments.

(b) Making or promising to any purchaser or prospective purchaser of lead pigments, or to any officer, employee, agent or representative of any such purchaser or prospective purchaser, any commission, gratuity, or other payment or remuneration, directly or indirectly, except in the case of payments made with the consent of the employer for a definite service rendered.

(c) Inducing or in any manner attempting to induce a breach, default or cancellation of a contract between a competitor and his customer during the term of such contract.

2644 (d) Guaranteeing for a definite time the life and/or service of lead pigments.

(e) Making false or derogatory statements with respect to the prices, policies, products, practices, business or credit of any competitor.

(f) Exchanging the products of a member for those of another.

(g) No product shall be sold at a concession in price in order to influence the sale of any lead product.

Returned Goods.

Art. IV—No member of the Code shall accept the return of merchandise without first giving consent for its return. On such goods as are accepted for return, a reasonable charge shall be made and freight charges must be prepaid by the shipper returning the merchandise, except in the case of defective products or where in some other way the manufacturer may be responsible.

Taxes.

Art. V—Any sales tax uniformly applicable upon all sellers shall be for buyer's account and shall be added to the selling price to be paid by the buyer.

Selling Below Cost and Dumping.

Art. VI—It is the consensus of opinion in the Lead Pigments Division of the Lead Industries Association that the sale of the product of any manufacturer of lead pigments, as defined in Art II of the Master Code and reenumerated in the preamble hereof, in competition with the product of other manufacturers of such pigments, at a price less than actual cost of production and delivery, such cost to include a fairly apportioned share of total general overhead, selling and administrative expense, is subversive to the best interests of the industry as a whole and of the purpose of Title I of the N. I. R. A. The Lead Pigments Division is hereby empowered to take such steps as may be necessary to define the method of determining the said actual cost of production and delivery. No manufacturer of lead pigments shall sell or offer for sale, in competition with the product of other manufacturers of such pigments, any product at a price less than the cost so determined. The provisions of this Article shall apply to all persons whose manufacture of lead pigments is incidental to the manufacturer of other products not embraced within the Lead Industries, as well as to those primarily engaged in the manufacture and sale of lead pigments.

2645 COMMISSION'S EXHIBIT NO. 803.

Lead Pigments Division.

White Lead-in-Oil Committee.

New York, N. Y. January 23, 1934.

A meeting of the White Lead-in-Oil Committee of the Lead Pigments Division of the Lead Industries Association was held at the Commodore Hotel, New York City, on Tuesday, January 23, 1934 at 10:00 A. M.

Present:
F. M. Carter, Chairman, Representing National Lead Company
F. O. Case, Representing Anaconda Lead Products Co.
W. E. Maston, Representing Eagle-Picher Lead Company
R. M. Roosevelt, Representing Eagle-Picher Lead Company
A. D. Joyce, Representing Euston Lead Co.
P. E. Sprague, Representing Euston Lead Co.
T. H. Zappert, Representing Euston Lead Co.
Harold Rowe, Representing National Lead Co.
H. G. Sidford, Representing National Lead Co.
S. B. Coolidge, Jr., Representing Sherwin-Williams Company
F. E. Wormser, Secretary.

Mr. F. M. Carter occupied the chair.

The Chairman called attention to the changes that had been suggested in the Trade Practices for the Lead Pigments Division of the Lead Industries Association in the Lead Code and after discussion, it was agreed that the following paragraph be submitted in lieu of the Price Schedule paragraph previously drafted in Washington by the Administration and his advisors:

Each member of the industry engaged in the manufacture and sale of lead pigments shall file with the Secretary within ten (10) days after the effective date of this Code, a list of the prices at which his products will be sold and a memorandum of any of his conditions of sale at variance with those set forth in Schedule "A" attached. Any change in prices or conditions of sale shall be reported to the Secretary in such manner as to reach his office within twenty-four (24) hours after the effective date of such change. Any member making a sale or quotation, which does not conform to the bases he then has on file, shall notify the Secretary in detail by letter mailed within twenty-four (24) hours. The information supplied the Secretary shall be re-issued immediately to the reporting members.

It was also agreed to make changes in the Lead Code in Schedule A for White Lead, as submitted in the attached copy.

Meeting adjourned at 5:00 P. M.

F. M. Carter,
Chairman.
F. E. Wormser,
Secretary.

2646 COMMISSION'S EXHIBIT NO. 804.

January 27, 1934.

Schedule "A".

Art. II. Standard Conditions for Sale of Basic Lead Carbonate (Dry White Lead).

A. "Sale" or "Order" as used herein includes any transaction whereby a member of the industry makes a quotation on or becomes obligated to sell and deliver material.

B. Whatever terminology may be used, the intent and meaning thereof shall conform to the following requirements of sale.

(1) Quantity—Any amount as agreed between buyer and seller.

(2) Period—As desired, to be specified.

(3) Packages—As agreed between buyer and seller.

(4) Price — (a) Spot Sales — Seller's card or quoted price in effect on date order is received.

(b) Contract Sales—1. Seller's price on date contract is made with protection against advance or decline on the undelivered portion to the end of the current calendar quarter.

2. On contracts extending beyond the current calendar quarter, the price applying to subsequent deliveries shall be seller's price in effect on the first day of the calendar quarter in which they are made, with protection against advance or decline on the undelivered portion to the end of each quarter.

(c) The price for minimum 20 ton lots for one buyer to one destination, shipped by rail in one carload, or delivered by truck within a period of three days, shall be ¼¢ per pound less than that charged for smaller quantities.

(d) Emergency shipments may be made at the 20 ton price only to those customers for whom the Seller has a 20 ton order on hand for the same material for immediate shipment or a carload (20 tons) en route to the same destination.

(5) Delivery—F. O. B. cars Seller's shipping point, or by truck, F. O. B. Buyer's premises.

(6) Transportation Allowance—Since transportation is included in the Seller's price, the actual freight paid by Buyer shall be allowed as deduction. No cartage allowance shall be made to Buyer for use of his own truck.

(7) Shipment—(a) Spot Sales—Within thirty days from date order is received.

(b) Contract Sales—Within the period covered by the contract.

(8) Terms—Net thirty days, less 1 per cent for cash in ten days from date of shipment.

(9) Taxes—Any tax or other charge imposed by Federal Law upon the production and/or sale and/or shipment of lead oxides shall be added to the price to be paid by the Buyer on any transaction to which such charge is applicable.

2647 COMMISSION'S EXHIBIT NO. 805.

Lead Pigments Division.
Dry Products Committee.

New York, N. Y. January 24, 1934.

A meeting of the Dry Products Committee of the Lead Pigments Division of the Lead Industries Association was held at the Commodore Hotel, New York City, on Wednesday, January 24, 1934 at 10:00 A. M.

Present:

Harold Rowe, Chairman, Representing National Lead Company
Bob Andrews, Representing Andrews Lead Company
J. R. MacGregor, Representing Eagle-Picher Lead Co.
W. E. Maston, Representing Eagle-Picher Lead Company
Miles Zoller, Representing Eagle-Picher Lead Co.
R. M. Evans, Representing Evans Lead Co.
H. Wilke, Representing Hammond Lead Products, Inc.
Wm. Wilke, Jr., Representing Hammond Lead Products, Inc.
P. E. Sprague, Representing Metals Refining Co.

F. M. Carter, Representing National Lead Company
H. G. Sidford, Representing National Lead Company
S. B. Coolidge, Jr., Representing Sherwin-Williams Co.
F. E. Wormser, Secretary.

Mr. Harold Rowe occupied the chair.

The Chairman called attention to the changes that had been suggested in the Trade Practices for the Lead Pigments Division of the Lead Industries Association in the Lead Code and after discussion it was agreed that the paragraph on Price Schedules adopted at the White Lead-in-Oil Meeting be submitted in lieu of the Price Schedule paragraph previously drafted in Washington by the Administrator and his advisors.

It was also agreed to make changes in the Lead Code in Schedule A for Lead Oxides as submitted in the attached copy.

Meeting adjourned at 5:00 P. M.

Harold Rowe,
Chairman.
F. E. Wormser,
Secretary.

2648 January 27, 1934.

Schedule "A".

Article I. Standard Conditions for Sale of Lead Oxides.

A. "Sale" or "Order" as used herein includes any transaction whereby a member of the industry makes a quotation on, or becomes obligated to sell and deliver material.

B. Whatever terminology may be used, the intent and meaning thereof shall conform to the following requirements of sale.

(1) Material—Dry Oxides of lead, or mixtures consisting principally thereof, each grade of material to be specifically designated.

(2) Quantity—Any amount as agreed between buyer and seller.

(3) Packages—As agreed between buyer and seller.

(4) Price—(a) Seller's card or quoted price in effect on date order is received with allowances as follows:

(1) Not more than ½¢ per pound for minimum shipment of 5 tons for one buyer at one time to one destination.

(2) Not more than ¾¢ per pound for minimum shipment of 20 tons for one buyer to one destination by:

(A) Rail in one carload.

(B) Truck within a period of three days.

(b) These allowances may also be applied to emergency shipments of smaller quantities only when seller has an order on hand for five (5) tons or twenty (20) tons for immediate shipment, or such quantity en route to the same destination.

(c) No protection against decline in Seller's price may be given.

(d) Red Lead containing 97 per cent or 98 per cent Pb_3O_4 shall be so marked on the package and shall be sold at ⅛¢ and ⅜¢ per pound, respectively, over Seller's price for grades of lower Pb_3O_4 content.

(5) Delivery—F. O. B. cars Seller's shipping point, or by truck, F. O. B. Buyer's premises.

(6) Transportation Allowance—(a) Since transportation is included in the Seller's price, the actual freight paid by Buyer shall be allowed as a deduction. No cartage allowance shall be made to Buyer for use of his own truck.

(b) If shipment is made by Buyer's boat, Seller may allow actual amount he would have paid for like transportation at minimum published tariffs in effect on date of shipment.

(7) Shipment—Shall be made at least within thirty (30) days from date order is received.

2649 (8) Terms—Net thirty days, less 1 per cent for cash in ten days from date of invoice.

(9) Taxes—Any tax or other charge imposed by Federal Law upon the production and/or sale and/or shipment of lead oxides shall be added to the price to be paid by the Buyer on any transaction to which such charge is applicable.

2691 Approved Code No. 442

Code of Fair Competition for the Lead Industry As Approved on May 24, 1934

ORDER

Code of Fair Competition for the Lead Industry

An application having been duly made pursuant to and in full compliance with the provisions of Title I of the National Industrial Recovery Act, approved June 16, 1933, for approval of a Code of Fair Competition for the Lead Industry, and hearings having been duly held thereon and the annexed report on said Code, containing findings with respect thereto, having been made and directed to the President:

Now, therefore, on behalf of the President of the United States, I, Hugh S. Johnson, Administrator for Industrial Recovery, pursuant to authority vested in me by Executive Orders of the President, including Executive Order No. 6543-A, dated December 30, 1933, and otherwise; do hereby incorporate by reference said annexed report and do find that said Code complies in all respects with the pertinent provisions and will promote the policy and purposes of said Title of said Act; and do hereby order that said Code of Fair Competition be and it is hereby approved.

Hugh S. Johnson,
Administrator for Industrial Recovery.

Approval recommended:
K. M. Simpson,
Division Administrator.
Washington, D. C.,
May 24, 1934.

2692 Report to the President

The President,
The White House.

Sir: The original Code of Fair Competition for the Lead Industry was submitted on August 3rd, 1933, by the Lead Industries Association, and unincorporated membership society organized in 1928 representing 90% of the known members of the Industry in volume of production.

Several revisions of the Code were made prior to the public hearing held on December 22nd, 1933. The Code was revised during the recess of this hearing and submitted in its final form for approval. Every person who requested an appearance was properly heard in accordance with statutory and regulatory requirements.

The Lead Industries includes the development, mining, concentrating, smelting, and refining of lead-bearing ores, and the utilization of the products. By far the largest product of the refining process is pig lead, normally about 97% of total mine production. A small amount of pigments are made direct from ore.

The major products of the lead industries are pig lead, antimonial pig lead, lead pigments, manufactured metallic lead products, and manufactured metallic foil products.

The lead code covers the Lead Industries in every phase enumerated above except storage battery plates and lead covered cable. The storage battery plate business came in with the addition of starters for automobiles but has become a revolving supply, as was prophesied at its inception, the use of new lead for battery plates per year not representing over 10% of the lead used at present for that purpose. The quantity of lead covered cable used is dependent on the status of telephone and electric companies.

Lead pigments, used in the paint and varnish business, are made from ores, pig lead, and scrap, but chiefly from pig lead. Lead pigments are sold in highly competitive field with zinc pigments, titanium oxide paint, and stainless alloy steels. Foil has to meet the competition of cellophane.

Undesilvered soft pig lead containing relatively high copper is extremely resistant to corrosion by acids and is known to the trade as chemical lead; it is used chiefly in the manufacture of cable, pipe and sheets.

Lead mining and smelting is mainly located in the states west of the Mississippi River and, with the exception of the district in southeast Missouri, is closely associated with the mining of other metals. Consequently, code provisions for lead, zinc, and copper, will often be closely inter-related.

All the lead industries included in the Code have suffered greatly during the depression, particularly the mining industry, which has witnessed a drop in the price of pig lead in the United States, carrying it in 1932 to a lower level than has been observed for at least fifty years, namely, 2.65¢ per pound, New York.

2693 From 1929 to 1932, the contribution of the United States to the total world output of primary refined lead decreased from 36% to 22%. As the United States is a small net importer of lead, the actual and relative decline was primarily due to a decrease in domestic consumption.

Lead is a comparatively low-priced metal whose major uses are for pigments, cable covers, storage batteries, building, ammunition and various alloys. Its principal competitor is zinc, particularly in the pigment industries. About 20% of total normal consumption is destroyed in use; the remainder represents possible ultimate recovery and re-use. The recovery of secondary lead is an important factor in demand for new lead. The rapid development of the storage battery demand for lead served to stimulate mine capacity and new production, but more recently the annual recovery of lead, so used, has reduced the demand for new lead for this purpose to a relatively small factor.

Total consumption of lead in 1933 was only about 40% of the 1929 demand. In spite of a rapid decline in mine production, stocks have been built up until they may be considered excessive in view of the present low rate of consumption.

The number employed in the lead industries is about 50% of the total for 1929, or a decrease of some 14,000. The amount of work for those actually employed has decreased, due to the spreading of available work. Increased employment is dependent on improvement in the construction, automobile and electrical industries.

The production of refined primary lead in the United States declined from 637,000 metric tons in 1920 to 251,000 tons in 1932, or from 36% of the world production to 22%. The decline in production for the rest of the world in the same period was from 1,149,000 metric tons to 906,000 tons. The corresponding percentage of world total showed an increase from 64% to 78%. In other words, the major decline in world output occurred in the United States.

Since the United States has no net export of lead but is a comparatively small net importer, the real cause of the decline in United States' production is due primarily to a decline in domestic consumption.

Under the tariff provision of 1922, still in force, a duty of 1½¢ per pound of lead content was placed on imported ores, 2⅛¢ per pound on lead bullion, 2⅜¢ per pound on lead sheets, and duties ranging from 2½¢ to 3¢ per pound on lead pigments.

The tariff protects the lead industry of the United States from heavy imports from Mexico and Canada. Because of competition within the United States, the price differential at New York over London exceeds the tariff on ores but does not reach the tariff on lead bullion, lead sheets, and lead pigments.

From a standpoint of labor at refineries, the decrease in exports is likewise reflected in the decrease of imported ores and base bullion, meaning less refinery capacity used. The United States formerly imported much lead in various forms, principally in ore and base bullion, and continues to import small quantities. Some of it entered for immediate consumption; most of it, however, is entered for warehouse, is smelted and refined in bond, and is then reexported as refined pig lead or in manufactured products.

2694 These relatively large former exports have been captured by Australia and Canada by the imposition of a 10% tariff on non-British lead imported into Great Britain. United States' exports of lead have dropped from 116,260 tons of pigs, bars, and secondary in 1928 to 22,500 tons in 1933.

The quantity of lead in all forms consumed by domestic industry, as estimated by the American Bureau of Metal Statistics, was 548,000 short tons in 1919, had reached 901,000 tons in 1926, was 972,000 tons in 1929, and steadily declined to 400,000 tons in 1932.

The three principal uses of lead in the United States are cable covering, storage batteries and white lead. In 1929, according to the American Bureau of Metal Statistics, these three outlets used: cable covering, 206,000 tons; storage batteries, 210,000 tons; white lead, 119,700 tons; total of the three 535,700 tons of a total of 930,00 tons used for all purposes; in 1932, cable coverings used were 55,000 tons; storage batteries, 138,000 tons; white lead, 54,500 tons; total of the three, 247,500 tons of a total of 400,000 tons used for all purposes. Revival of the market for lead-covered cable cannot be expected until there is a renewed expansion in the use of the telephone and electric industries.

Large stocks of lead have been accumulated during the depression and now amount to more than a year's supply at present rate of consumption. These unsold accumulations are tangible evidence of the strenuous efforts and

great financial sacrifices mining and smelting companies have made to keep their employees at work.

Mining companies have keenly realized their responsibilities in sharing work among their employees and relieving suffering in the mining camps, especially where mines are the only source of employment. The lead mines never cut wages to the extent justified by the extraordinary low price obtained for lead in 1932 and 1933 and after the enactment of the N. I. R. A., spread work still further, making wage increases which they hoped would be justified by the development of the Administration's Recovery program.

The mining industry, as a result of a distressed lead market, is working approximately 46% of its 1929 rate of production and there is no prospect of any increase in this rate unless the price of lead should advance.

In 1929 the member mining companies in the Lead Industries Association employed 8,450 persons. In 1933, despite the low rate of production, they were engaging 5,500 employees, a number which was increased to 5,650 after the P. R. A. program was put into effect.

As reported by the American Bureau of Metal Statistics, and quoted by the U. S. Bureau of Mines, stocks of refined lead and antimonial lead have risen steadily from 51,050 short tons at the end of 1929 to 103,000 tons at the end of 1930, to 152,000 tons at the end of 1931, to 176,000 tons at the end of 1932, and to 203,000 tons at the end of 1933. These stocks (four times as much at the end of 1933 as at the end of 1929) represent at least a six-months' supply on the basis of the best figures obtainable of the consumption of lead for the year 1932; and have accumulated despite a progressive decrease in mine production of recoverable lead from mines from 648,000 tons in 1929 to 558,000 in 1930; to 405,000 tons in 1931; to 293,000 tons in 1932; and to 274,000 tons in 1933.

2695 The total employment in the Lead Industries coming under this Code, was approximately 28,000 in 1929. About three-fourths of the total are employed in the closely associated mining and smelting operations.

Division	Total employed	Wage earners
Mining and milling	15,004	14,007
Smelting and Refining (primary)	5,690	4,819
Fabricating	6,873	.....
Total	27,567	.....

The general level of operations in the Industry, judged by production and consumption data, fell in 1933 to about 40% of the rate in 1929. Labor requirements probably declined in about the same proportion, but the actual number employed at the end of 1933 was about 50% of the number in 1929 (according to the results of a survey, made by the Lead Industries' Association), which covered from 85% to 90% of the Industry.

The Code, as written, follows the latest standard code provisions. It contains no open price clause for Pig Lead and Metallic Lead products and no provisions relating to cost of production in relation to selling price. No definite control of production or stabilization of the industry is set up, although provision is made in Article VI, Section 6, Paragraph G, that such proposals may be recommended, after voluntary agreement, to the Administrator.

A basic maximum 8 hour day and 40 hour week is provided, with such standard exceptions as are common to other codes or as may be essential to the peculiar character of the mineral industries. These exceptions are generally further safeguarded by the provision of time and one-half for overtime. Fundamentally, the code week of 5 eight-hour days represents a change from a standard week of 7 eight-hour days in 1929. Considering the present restricted output of the industry and the effort to spread employment by staggering such work as is available, little immediate increase in employment will result. However, with any substantial gain in production, there should be a material increase in total employment.

Notwithstanding the depressed condition of the industry, even to the point of having the price of lead drop to an all time low for a 50 year period of 2.65¢ per pound, F. O. B. New York, the industry has made a sincere effort to spread employment. This sincere desire is evidenced by their past performance as indicative not only of their sincerity in drafting their code but also the further high standard they will maintain in adhering to the provisions and functioning of their code.

Article I. Purposes.—States the purpose of the Code.

Article II. Definitions.—Accurately defines specific terms applicable to the Lead Industry.

Article III. Hours.—The maximum hours are limited to forty hours per week for employees engaged in the processing of products and labor incident thereto. Watchmen may be permitted to work 56 hours in any one week period,

provided that such employees shall have at least one day's rest in each seven day period. Office, salaried and
2696 other employees not covered above who receive less
than $35.00 per week shall not be permitted to work in excess of an average of forty hours per week during any one month, nor more than 48 hours in any one week. Employees engaged in an executive, managerial or supervisory capacity who receive $35.00 per week, or more, are not subject to any hourly limitations. The maximum hours shall not apply in cases of emergencies or repairs where safety of life or health or protection of property necessitates longer hours.

Article IV. Wages.—In the Mining Division the minimum rate for totally unskilled or common labor shall not be less than 40¢ per hour above ground or 47½¢ per hour underground. The minimum wages for employees engaged in the processing of products or any labor incident thereto shall be 35¢ per hour for the Lead Smelting and Refining Division, 40¢ for the Lead Pigments Division, and 35¢ for the Metallic Lead Products and Metallic Lead Foil Products Division, provided that as to the Smelting and Refining Division in the Southern District the minimum hourly rate shall be 30¢ per hour. The minimum rates for the several divisions named are in accord with those established in approved codes of related industries. The minimum rates provided for hereinabove shall be construed as the hiring rates applying to totally unskilled or common labor both above and below ground in the mining divisions, and totally unskilled or common labor in the other divisions of the Industry. The established minimum rate of pay for the work performed in any pay period shall apply irrespective of whether an employee is actually compensated on a time rate, piece rate, or other basis. Provision is also made for the employing of handicapped persons. No person employed in clerical or office work shall be paid less than at the rate of $15.00 per week, except that office boys and girls and messengers may be paid at a rate not less than 80% of the minimum paid office employees.

Article V. General Labor Provisions.—Provides that no person under 18 years of age shall be employed except in clerical, office, sales, service, technical and engineering departments, and no person under 16 years of age shall be employed in any capacity. This Article also sets forth the mandatory provision respecting the rights of employees to organize and bargain collectively. This Article also provides for matters having to do with reclassification of employees, standards for safety and health, the observance of state laws and the posting of complete copies of this Code so that they are accessible to employees.

Article VI. Administration.—Establishes a Code Authority consisting of the members of the Executive Committee of the Lead Industries Association, the Secretary of said Association, and such division chairmen who have respectively been elected to such office by such divisions in an equitable manner, approved by the Administrator, so as to be truly representative of such divisions respectively, and who are not members of the Executive Committee; in addition to membership as above provided there may be one to three members, without vote and without compensation by the Industry, to be appointed by the Administrator to serve for such terms from the date of appointment as he may specify. On the effective date of this Code the voting members of the Code Authority shall consist of eleven members, but such number is subject to variation due to the contents of the foregoing provision. 2697

Article VII. Sets forth the Trade Practice Rules for the Lead Pigments Division, and also sets forth open price schedules which are effective immediately after filing.

Article VIII. Sets forth the Trade Practice Rules for the Metallic Lead Products Division.

Article IX. Sets forth the Trade Practice Rules for the Metallic Foil Products Division.

Article X. No provision of this Code relating to price or terms of selling, shipping or marketing, shall apply to export trade or sales or shipments for export trade, or transactions in the foreign commerce of the United States.

Article XI. Sets forth the application of this Code to operations with other Codes wherein other metals are produced.

Article XII. Makes provision for modifications of this Code.

Article XIII. No provision of this Code shall be so applied as to promote monopolies or monopolistic practices, or to eliminate, oppress, or discriminate against small enterprises.

Article XIV. Covers the effective date.

There are also appended to this Code and made a part thereof conditions for sale of lead oxides in lots less than twenty tons and lots of at least twenty tons, and also conditions of sale for basic lead carbonate (dry white lead).

The Deputy Administrator in his final report to me on said Code having found as herein set forth and on the basis of all the proceedings in this matter;

I find that:

(a) Said Code is well designed to promote the policies and purposes of Title I of the National Industrial Recovery Act, including removal of obstructions to the free flow of interstate and foreign commerce which tend to diminish the amount thereof and will provide for the general welfare by promoting the organization of Industry for the purpose of cooperative action among the trade groups, by inducing and maintaining united action of labor and management under adequate governmental sanctions and supervision, by eliminating unfair competitive practices, by promoting the fullest possible utilization of the present productive capacity of Industries, by avoiding undue restriction of production (except as may be temporarily required), by increasing the consumption of industrial and agricultural products through increasing purchasing power, by reducing and relieving unemployment, by improving standards of labor, and by otherwise rehabilitating Industry.

(b) Said Industry normally employs not more than 50,000 employees; and is not classified by me as a major Industry.

(c) The Code as approved complies in all respects with the pertinent provisions of said Title of said Act, including without limitation Subsection (a) of Section 3, Subsection (a) of Section 7, and Subsection (b) of Section 10 thereof; and that the applicant Association is an Industrial Association truly representative of the aforesaid Industry; and that said Association imposes no inequitable restrictions on admission to membership therein.

2698 (d) The Code is not designed to and will not permit monopolies or monopolistic practices.

(e) The Code is not designed to and will not eliminate or oppress small enterprises and will not operate to discriminate against them.

(f) Those engaged in other steps of the economic process have not been deprived of the right to be heard prior to approval of said Code.

For these reasons, therefore, this Code has been approved.

Respectfully,

Hugh S. Johnson,
Administrator.

May 24, 1934.

2699 CODE OF FAIR COMPETITION FOR THE LEAD INDUSTRY.

Article I—Purposes.

To effectuate the policies of Title I of the National Industrial Recovery Act, this Code is established as a Code of Fair Competition for the Lead Industry and its provisions shall be the standards of fair competition for such Industry and are binding upon every member thereof.

Article II—Definitions.

Wherever used in this Code, or any supplement appertaining thereto, the terms enumerated in this Article shall have the meanings herein defined unless the context shall otherwise clearly indicate.

Section 1. The terms "President", "Act", and "Administrator" means respectively the President of the United States, Title I of the National Industrial Recovery Act, approved by the President June 16, 1933, and any amendments thereto, and the Administrator for Industrial Recovery.

Section 2. The term "Member of Industry" includes all those engaged in the Industry either as an employer or on his or its own behalf.

Section 3. The term "Employee" means and includes anyone engaged in the Industry in any capacity receiving compensation for his services, irrespective of the nature or method of payment of such compensation, except a member of the Industry.

Section 4. The term "Employer" means and includes anyone by whom any such employee is compensated or employed.

Section 5. The term "Apprentice" as used herein means an individual (usually a minor), bound by indenture, executed in compliance with the laws of the state where the service provided for therein is to be performed, to serve an employer for a term of years at a predetermined wage, for the period of the indenture in order to learn a trade, art or craft.

Section 6. The term "Industry" as used herein includes the mining of lead ore and/or the concentrating thereof, the smelting of lead ore, and/or lead concentrates, and/or lead bearing scrap, the refining of lead and/or lead bearing scrap, and/or drosses, the manufacturing of pig lead, antimonial pig lead, lead pigments, metallic antimony, metallic lead products, allied products defined hereinafter as "metallic lead products" and/or "metallic foil products", and the original sale of such products by the member of Industry producing or manufacturing the same either directly or indirectly through subsidiary and/or affiliated companies.

(a) "Lead Ore and Lead Concentrates" as used herein is defined to mean ore and the concentrates thereof, containing lead as the principal commercially recoverable constituent.

(b) "Lead Mining" as used herein is defined to mean the mining and concentrating of lead ore and any further beneficiation thereto prior to the shipment to the smelter.

2700 (c) "Lead Smelting and Refining" as used herein is defined to mean metallurgical and/or chemical treatment of lead ore, lead concentrates, lead bearing scrap, and/or drosses, and/or any other lead bearing material into "Pig Lead" and/or "Antimonial Pig Lead."

(d) "Antimonial Pig Lead".—Inasmuch as antimony is a common constituent of most lead ores and a by-product of Lead Mining and Smelting and Refining—metallic antimony and antimonial alloy products (antimonial pig lead) shall be included within the provisions of this Code.

(e) "Lead Pigments" as used herein is defined to mean basic carbonate white lead (dry or in oil), basic lead sulphate (dry or in oil), litharge, red lead (dry or in oil), orange mineral or any other lead oxides, with or without metallic lead content.

(f) "Metallic Lead Products" as used herein is defined to mean extruded, rolled, cast or otherwise fabricated lead or lead alloy products (except storage battery plates and lead covered cable), produced by Members of Industry and kindred products of metallic tin and tin alloy, or other metal or metal alloy products, which are produced by the same Members of Industry on the same type of machinery and under similar labor and fabricating conditions.

(g) "Metallics Foil Products" as used herein is defined to mean lead and/or tin, and/or zinc, or their alloys, or combinations thereof, rolled to a thickness of .006 of an inch or less, whether attached or affixed to other materials or not.

Section 7. The term "Division" as used herein includes respectively the several parts of the Industry as enumerated below:

1. Lead Mining Division
2. Lead Smelting and Refining Division
3. Lead Pigments Division
4. Metallic Lead Products Division
5. Metallic Foil Products Division

and such other and further divisions as may hereafter be created pursuant to the provisions of this Code.

Section 8. The term "Association" as used herein includes the "Lead Industries Association", an unincorporated membership society organized under the laws of the State of New York and having its principal office at 420 Lexington Avenue, New York City, and such other trade associations as may hereafter participate in the activities under this Code or in the selection of the Code Authority.

Section 9. The term "Executive Committee" as used herein shall mean the Executive Committee of the Lead Industries Association.

Section 10. The term "Secretary" as used herein shall mean the Secretary of the Lead Industries Association, who also shall be the Secretary of the Code Authority.

Section 11. The term "Southern District" as used herein shall include the States of Texas, Mississippi, Alabama, Louisiana and Florida.

Article III—Hours of Labor.

Maximum Hours.

Section 1. No employee shall be permitted to work in any
division of the Industry in excess of forty (40) hours
2701 per week, or in excess of eight (8) hours in any
twenty-four (24) hour period except as herein otherwise provided. A normal work day shall not exceed eight (8) hours.

The interpretation of the eight (8) hour provision for the Mining Division in each state shall be in accordance with any laws of such state pertaining to the eight (8) hour day on mining operations.

The Code Authority shall study the operation of the eight (8) hour provision for the Mining Division and not later than ninety (90) days from the effective date shall report fully to the Administrator the results of such study. The Administrator may, at his discretion, appoint an impartial investigator who shall review the conditions in the Mining Division of the Industry concerning the operation of the eight (8) hour provision and shall report thereon to the Administrator not later than ninety (90) days from the effective date and forward a copy of such report to the Code Authority.

Hours for Clerical and Office Employees.

Section 2. No person employed in clerical or office work shall be permitted to work in excess of forty (40) hours in any one (1) week, except that during any one (1) week in a one (1) month period such employee shall be permitted to work a maximum of forty-eight (48) hours in any such week. A normal work day shall not exceed eight (8) hours.

Exceptions as to Hours.

Section 3. The limitation as to hours of labor as specified in Sections 1, 2 and 4 of this Article III shall not apply to the following:

(a) To employees engaged in emergency maintenance, or emergency repair work, involving breakdown or protection of life or property; provided that in such special cases not less than one and one-half (1½) times the normal wage rate for any employee so employed shall be paid for all hours worked in excess of forty (40) hours in any one (1) week.

(b) Nor in the case of the Mining Division shall it apply to hoist men, power house men, or pump men, provided the total working hours of such employees shall not exceed forty-eight (48) hours in any one (1) week.

(c) Nor to employees receiving not less than Thirty-Five (35) Dollars per week in a managerial, executive or supervisory capacity, or to technical staffs; nor to outside sales or service employees.

(d) Watchmen may be permitted to work fifty-six (56) hours in any one (1) week period, provided that such employees shall have at least one (1) day's rest in each seven (7) day period.

(e) There may be a tolerance of 10% additional hours over the forty (40) hours in any one (1) week for employees engaged in the preparation, care and maintenance of machinery and production facilities, stock and shipping clerks and truckmen engaged in outside delivery and pick-up service; provided, however, that at least one and one-half (1½) times the normal wage rate for any employee so employed shall be paid for all hours worked in excess of forty (40) hours in any one (1) week, or eight (8) hours in any one (1) day.

2702 (f) The limitation as to maximum hours of work shall not apply to very special cases where restriction of hours of labor of skilled workers in continuous processes would unavoidably reduce or interrupt production because of demands inherent and peculiar within the process itself provided, however, that such employees in such special cases shall not work more than forty-eight (48) hours in any one week, and provided that in such special cases at least one and one-half times the normal wage rate shall be paid to any employee so employed for hours worked above forty (40) hours per week, or eight (8) hours per day. Such special cases, however, shall be reported to the Code Authority. The limitation of hours does not apply where one employee is acting in temporary relief for a fellow employee in continuous processes.

(g) During any period in which a concentrated demand upon any division of the Industry, except mining, shall place an unusual and temporary burden for production work upon its facilities or to meet seasonal peak requirements or emergencies, an employee of any such division may be permitted to work not more than forty-eight (48) hours per week in not more than six (6) weeks in six (6) months of any calendar year, provided that not less than one and one-half times the normal wage rate shall be paid to any employee so employed for hours worked above forty (40) hours per week or eight (8) hours per day. All such overtime worked shall be reported to the Code Authority.

Standard Week.

Section 4. No employee shall be permitted to work more than six (6) days in any seven (7) day period.

Employment by Several Employers.

Section 5. No employer shall knowingly permit any employee to work for any time which, when totalled with that already performed with another employer or employers in this Industry, exceeds the maximum permitted herein.

Article IV—Wages.

Minimum.

Section 1. The minimum wage for each division of this Industry shall be as follows:

	Cents per hour	
	Surface	Underground
1. Lead mining division	40¢	47½¢
2. Lead smelting and refining division	35	
3. Lead pigments division	40	
4. Metallic lead products division	35	
5. Metallic foil products division	35	

2703 provided that, as to the Smelting and Refining Division, in the Southern District, the minimum hourly rate shall be thirty (30) cents per hour. Minimum wages in all divisions of the Industry in effect on July 1st, 1933, which were above the minimum specified, shall in no case be reduced.

The minimum rates provided for hereinabove shall be considered as the lowest hiring rates applying to totally unskilled labor or common labor above ground in the Mining Division and totally unskilled labor or common labor in the other divisions of the Industry. In the Mining Division, the minimum hiring rate for underground common labor shall be not less than forty-seven and one-half (47½) cents per hour. Other classes of labor shall be compensated at rates above such minimums.

Clerical and Office Employees.

Section 2. No accounting, clerical, office, sales, or service employees shall be paid less than Fifteen (15) Dollars per week of forty (40) hours; provided, however, that office boys and girls and messengers may be paid at a rate not less than 80% of such minimum, and provided further that the number of such boys and girls and messengers so paid shall constitute not more than 5% of the total number of such employees of any one (1) office of any one (1) em-

ployer, but in any case each employer shall be entitled to at least one (1) such employee. Part time employees shall **be paid an hourly rate which shall not be less than the pro rata amount of the wages specified hereinabove.**

Piecework Compensation—Minimum Wages.

Section 3. This Article establishes a minimum rate of pay which shall apply, irrespective of whether an employee is actually compensated on a time rate, piecework, or other basis.

Female Employees.

Section 4. Female employees performing substantially the same work as male employees shall receive the same rate of pay as male employees, and, when they displace male employees they shall receive the same rate of pay as the men they displace.

Wages Above the Minimum.

Section 5. Equitable adjustments in all pay schedules of employees above the minimum fixed in this Code shall be made within thirty (30) days after the effective date of this Code by any employer who has not heretofore made such adjustments under the National Industrial Recovery Act. In no event, however, shall hourly rates be reduced. Within sixty (60) days after the effective date of this Code, each member of the Industry shall make a report of such adjustments whether made prior to or subsequent to the date of approval of this Code to the Code Authority.

2704 Handicapped Persons.

Section 6. A person whose earning capacity is limited because of age, physical or mental handicap, or other infirmity, may be employed on light work at a wage below the minimum established by this Code if the employer obtains from the State Authority, designated by the United States Department of Labor, a certificate authorizing such person's employment at such wages and for such hours as shall be stated in the certificate. Such authority shall be guided by the instructions of the United States Department of Labor in issuing certificates to such persons. Each employer shall file monthly with the Code Authority a list of all such persons employed by him, showing the wages paid to, and the maximum hours of work for such employee.

Apprentices.

Section 7. Employment of apprentices at rates of compensation below the minimum provided herein shall be permitted where they are apprenticed to an employer by an indenture made pursuant to the laws of the state in which such service is to be performed, under any apprentice system established and maintained by such employer, provided such indenture agreements are filed with the Code Authority. Employers shall not be allowed to have apprentices exceeding 5% of the total number of skilled craftsmen of their special class, except that each employer shall be entitled to employ at least one such employee. In no case shall an apprentice be paid less than the minimum wage provided in Section 1 of Article IV in states which do not have laws governing apprentices.

Payment of Wages.

Section 8. An employer shall make payment of all wages in lawful currency, or by negotiable check therefor, payable on demand. These wages shall be exempt from any payments for pensions, insurance or sick benefits other than those voluntarily paid by the wage earners or required by the State Laws. Pay periods for wages shall be at least semi-monthly and for salaries at least once per month. Employers shall not withhold wages except as otherwise provided for by law.

Article V—General Labor Provisions.

Child Labor.

Section 1. On and after the effective date of this Code, no person under 18 years of age shall be employed in the Lead Industry except in clerical, office, sales, service, technical and engineering departments, and no person under 16 years of age shall be employed in any capacity. In any state, an employer shall be deemed to have complied with this provision as to age of employees if he shall have on file a certificate or permit duly signed by the Authority in such state empowered to issue employment or age certificates or permits, showing that the employee is of the required age.

2705

Provisions from the Act.

Section 2. (a) Employees shall have the right to organize and bargain collectively through representatives of their own choosing, and shall be free from the interference, restraint, or coercion of employers of labor, or their agents, in the designation of such representatives or in self-organization or in other concerted activities for the purpose of collective bargaining or other mutual aid or protection.

(b) No employee and no one seeking employment shall be required as a condition of employment to join any company union or to refrain from joining, organizing, or assisting a labor organization of his own choosing, and

(c) Employers shall comply with the maximum hours of labor, minimum rates of pay, and other conditions of employment approved or prescribed by the President.

Reclassification of Employees.

Section 3. No employer shall reclassify employees or duties of occupations performed or engage in any other subterfuge for the purpose of defeating the purposes or provisions of the Act or of this Code.

Standards for Safety and Health.

Section 4. Every employer shall make reasonable provision for the safety and health of his employees at the place and during the hours of their employment. Standards of safety and health for each division of the Industry shall be submitted to the Administrator by the Code Authority within six (6) months after approval of this Code.

State Laws.

Section 5. No provision in this Code shall supersede any State or Federal Law which imposes on employers more stringent requirements as to age of employees, wages, hours of work, or as to safety, health, sanitary or general working conditions, or insurance or fire protection, than are imposed by this Code.

Posting.

Section 6. All employers shall post and keep posted complete copies of this Code and all amendments thereto in conspicuous places accessible to employees.

Company Town and Stores.

Section 7. Employees other than maintenance or supervisory men, or those necessary to protect property, shall not be required as a condition of employment, to live in homes rented from the employer. No employee shall be required as a condition of employment, to trade at a store owned or specified by an employer.

2706 Dismissal for Complaint.

Section 8. No employee shall be dismissed by reason of making a complaint or giving evidence with respect to a violation of a Code.

Article VI—Organization, Powers and Duties of the Code Authority.

Organization and Constitution.

Section 1. A Code Authority is hereby constituted and shall consist of the members of the Executive Committee of the Lead Industries Association, the Secretary of said Association, and such division chairmen who have respectively been elected to such office by such divisions in an equitable manner, approved by the Administrator, so as to be truly representative of such divisions respectively, and who are not members of the Executive Committee. In addition to membership as above provided there may be one to three members, without vote and without compensation by the Industry, to be appointed by the Administrator to serve for such terms from the date of appointment as he may specify. On the effective date of this Code the voting members of the Code Authority shall consist of eleven members but such number is subject to variation due to the contents of the foregoing provision. It is contemplated that supplementary codes of fair competition not inconsistent with this basic Code will be adopted for each division of the Industry. When and if such supplementary codes are submitted and approved they shall contain provisions for a Divisional Code Authority selected in an equitable manner so as to be truly representative of such division of the Industry subject to the approval of the Administrator, to administer the provisions of this basic Code which relates to such division, and the provisions of such supplementary Code, and in addition this basic Code Authority may delegate such of its powers and duties as it deems necessary to such division Code Authority of such supplementary Code, provided, however, that any interested party shall have a right of appeal from any act or decision of such divisional Code Authority to the Code Authority of this basic Code.

Section 2. Each trade or industrial association directly or indirectly participating in the selection or activities of the Code Authority shall, (1), impose no inequitable restrictions on membership and, (2), submit to the Administrator true copies of its Articles of Association, By-Laws, Regulations and any amendments when made thereto, together with such other information as to membership, organization and activities as the Administrator may deem necessary to effectuate the purposes of the Act.

Section 3. In order that the Code Authority shall at all times be truly representative of the Industry and in other respects comply with the provisions of the Act, the Administrator may prescribe such hearing as he may deem proper, and thereafter, if he shall find that any basic Code Authority or divisional Code Authority is not truly representative or does not in other respects comply with the provisions of the Act, may require an appropriate modification in the method of selection of such Code Authority.

2707 Section 4. Members of the Industry shall be entitled to participate in and share the benefits of the activities of the Code Authority and to participate in the selection of the members thereof by assenting to and complying with the requirements of this Code and sustaining their reasonable share of the expenses of its administration. Such reasonable share of the expenses of administration shall be determined by the Code Authority, subject to review and approval by the Administrator, on the basis of volume of business and/or such other factors as may be deemed equitable.

Section 5. Nothing contained in this Code shall constitute the members of the Code Authority partners for any purpose. Nor shall any member of the Code Authority be liable in any manner to anyone for any act of any other member, officer, agent or employee of the Code Authority. Nor shall any member of the Code Authority exercising reasonable diligence in the conduct of his duties hereunder, be liable to anyone for any action or omission to act under this Code, except for his own wilful misfeasance or nonfeasance.

Powers and Duties.

Section 6. Subject to such rules and regulations as may be issued by the Administrator, the Code Authority shall have the following further powers and duties, the exercise of which shall be reported to the Administrator and shall be subject to his right, on review, to disapprove, after such hearing as he may prescribe, any action taken by the Code Authority. If the Administrator shall determine at any time that any action of the Code Authority or any agency thereof is unfair or unjust or contrary to the public interest, the Administrator may require that such action be suspended to afford an opportunity for investigation of the merits of such action and further consideration by such Code Authority or agency pending final action which shall not be effective unless the Administrator approves or unless he shall fail to disapprove after thirty days' notice to him of intention to proceed with such action in its original or modified form.

(a) To insure the execution of the provisions of this Code and provide for the compliance of the Industry with the provisions of the Act, subject to such rules and regulations as the Administrator may prescribe, and receive complaints of violations of this Code and disputes arising thereunder, except as otherwise hereinafter provided for in subsection (h) of this section, make investigations thereof at their own instance, provide hearings thereon, adjust such complaints and make such decisions as are necessary thereon and to interpret the provisions of the Code and to bring violations of this Code to the attention of the Administrator for prosecution, recommendation and other action.

(b) To adopt by-laws and rules and regulations for its procedure and for the administration and enforcement of the Code. The Code Authority shall promptly furnish to the Administrator true copies of the by-laws, rules and regulations adopted pursuant to this paragraph.

(c) To obtain from members of the Industry, through a confidential agency, such statistical information and reports as are required for the administration of the
2708 Code and to provide for submission by members of the Industry of such statistical information and reports as the Administrator may deem necessary for the purposes recited in Section 3 (a) of the Act, which information and reports shall be submitted by members of the Industry to such Federal and/or State agencies as the Ad-

ministrator may designate; provided that nothing in this Code shall relieve any member of the Industry of any existing obligations to furnish reports to any government agency. No individual reports submitted to the Administrator and/or such government agencies as the Administrator may designate, shall be disclosed to any other member of the Industry or any other party except to such government agencies as may be directed by the Administrator.

(d) To use such trade associations and other agencies as it deems proper for the carrying out of any of its activities provided for herein, provided that nothing herein shall relieve the Code Authority of its duties or responsibilities under this Code and that such trade associations and agencies shall at all times be subject to and comply with the provisions hereof.

(e) To make recommendations to the Administrator for the coordination of the administration of this Code with such other Codes, if any, as may be related to the Industry.

(f) To cooperate with the Administrator in regulating the use of any N. R. A. insignia solely by those members of the Industry who have assented to, and are complying with, this Code.

(g) To call meetings of any division of the Lead Industry to consider control of production through voluntary agreement, and to recommend to the Administrator such measures as have been voluntarily agreed upon covering fair trade practices, industrial planning and production control, including stabilization of employment and conservation of natural resources.

(h) Within ninety days after the effective date of this Code, the Code Authority shall submit to the Administrator for his approval a plan for the establishment of a National Industrial Relations Board for the Industry, consisting of an equal number of representatives of employers and employees. Provision shall be made in such plan for division of the country into districts and the creation of regional industrial relations boards to comprise an equal number of representatives of employers and employees truly representative of such districts. The creation and functioning of these boards, including the selection of representatives of employees, shall be in accordance with Section 7 of the Act. Provision shall also be made for the appointment of an impartial person on each board, national and regional, to vote only where such board is unable to render a majority

decision. This plan shall provide that the regional boards shall have the authority to hear and adjudicate all complaints and disputes arising out of Articles III, IV and V of the Code, and the National Industrial Relations Board shall pass on all appeals from the regional boards solely on the basis of the record as certified by the Regional Boards to the National Industrial Relations Board. Before any such plan is approved, it shall be submitted to the Labor Advisory Board of the National Recovery Administration for their consideration and recommendations. The Administrator shall have the right, after such notice and hearing as he may specify, to review, disapprove
2709 or modify such plan and the plan shall become effective as a part of this Code when and as approved by him.

Article VII—Trade Practice Rules for Lead Pigments Division.

Section 1. The following described acts shall be deemed unfair competition for Division 3 (Lead Pigments), and shall constitute a violation of this Code.

(a) Misbranding or misrepresentation of lead pigments.

(b) No member of the Industry shall give, permit to be given, or directly offer to give, anything of value for the purpose of influencing or rewarding the action of any employee, agent, or representative of another in relation to the business of the employer of such employee, the principal of such agent or the represented party, without the knowledge of such employer, principal or party. This commercial bribery provision shall not be construed to prohibit free and general distribution of articles commonly used for advertising, except so far as such articles are actually used for commercial bribery as hereinabove defined.

(c) Inducing or in any manner attempting to induce a breach, default or cancellation of a contract between a competitor and his customer during the term of such contract.

(d) Guaranteeing for a definite time the life and/or service of lead pigments.

(e) Making false and derogatory statements with respect to the prices, policies, products, practices, business or credit of any competitor.

(f) No merchandise shall be sold at a concession, or used as an inducement, to influence the sale of any lead products, nor shall any concession be given in the price or terms of sale of a lead product to influence the sale of any other merchandise.

Section 2. Each member of the Industry engaged in the manufacture and sale of lead pigments shall file with the Secretary within ten (10) days after the effective date of this Code, a list of the prices at which his products will be sold and a memorandum of any of his conditions of sale at variance with those set forth in Schedule "A" attached hereto and which is made a part hereof. Any change in prices or conditions of sale shall be reported to the Secretary in such manner as to reach his office within twenty-four (24) hours after the effective date of such change. Any member making a sale or quotation, which does not conform to the basis he then has on file, shall notify the Secretary in detail by letter mailed within twenty-four (24) hours. The information supplied the Secretary shall be reissued immediately to the reporting members.

Section 3. Each member of the Lead Pigments Industry, as defined in Article II, shall submit promptly to the Secretary the following periodic reports for compilation and reissuance in such manner as may be determined by the Division:

(a) Monthly reports of total production.

(b) Stocks on hand of finished merchandise at the beginning of each month.

(c) Monthly reports of total shipments.

2710 Article VIII—Trade Practice Rules For Metallic Lead Products Division.

Section 1. The following described acts shall be deemed unfair competition for Division 4 (Metallic Lead Products), and shall constitute a violation of this Code:

(a) No member of the Industry shall give, permit to be given, or directly offer to give, anything of value for the purpose of influencing or rewarding the action of any employee, agent or representative of another in relation to the business of the employer of such employee, the principal of such agent or the represented party, without the knowledge of such employer, principal or party. This commercial bribery provision shall not be construed to prohibit free and general distribution of articles commonly used for advertising, except so far as such articles are actually used for commercial bribery as hereinabove defined.

(b) Making allowance for sales promotion and advertising in excess of actual amount expended, or making excessive expenditures on behalf of or for the benefit of a customer.

(c) Misbranding or misrepresenting the percentage or quality of various metals in any products.

(d) No member of the Division shall secretly offer or make any payment or allowance of a rebate, refund, commission, credit, unearned discount or excess allowance, whether in the form of money or otherwise.

(e) Accepting orders guaranteed against a decline in price.

(f) Making false and derogatory statements with respect to competitors' prices, policies, products, practices, business or credit.

(g) Giving any other product at a concession in price or giving it away free, in order to influence the sale of any lead product.

(h) Changing prices after the award of a contract and specifically, but without limitation, canceling any undelivered portion of a contract for the purpose of effectuating a new contract with the buyer when the purpose of such cancelation is to create an unfair price advantage for a Member of Industry.

(i) Contracting for unspecified quantities at a fixed price or giving options at fixed prices for unspecified quantities.

(j) Inducing or in any manner attempting to induce a breach, default or cancellation of a contract, between a competitior and his customer, during the term of such contract.

(k) Taking back obsolete material or material damaged not by the vendor's fault at any value other than its value as secondary material.

Section 2. The following unfair trade practices apply to the Type Metal Business only:

(a) Attaching drum tags to competitors' dross drums without receiving authority to do so from the prospect or customer.

(b) Failing to return competitors' drums to their owner within a period not exceeding thirty days from time of their receipt.

2711 Article IX—Trade Practice Rules for Metallic Foil Products Division

Section 1. The following described acts shall be deemed unfair competition for Division 5 (Metallic Foil Products) and shall constitute a violation of this Code:

(a) No member of the Division shall publish untruthful advertising nor shall any member in any way misrepresent any goods or credit terms.

(b) No member of the Division shall knowingly withhold from or insert in any quotation or invoice any statement that makes it inaccurate in any particular.

(d) No member of the Division shall secretly offer or made any payment or allowance of a rebate, refund, commission, credit, unearned discount or excess allowance, whether in the form of money or otherwise.

Article X—Export Trade.

No provision of this Code relating to prices or terms of selling, shipping or marketing, shall apply to export trade or sales or shipments for export trade, or transactions in the foreign commence of the United States.

Article XI—Application of Code to Operations Wherein Other Metals Are Produced

Section 1. If any member of the Industry is also a member of any other Industry, provisions of this Code shall apply only to that portion of its business which is a part of the Lead Industry.

Section 2. Where there is any question as to whether lead is the major production from the operations which do or which might produce lead, zinc, copper, gold, silver or other materials, then in any and every such event the question as to which Code of Fair Competition shall govern such operations of any such member of this Industry, shall be referred to a Coordination Committee. This Coordination Committee shall be composed of two members to be appointed by each of the Code Authorities for such industries as may be involved in each particular question. In the event such Committee is unable to reach a majority conclusion, then either the Committee shall elect an additional impartial member or upon their failure so to agree on such additional impartial member, the Administrator then may appoint such additional impartial committee member. Any member of the Industry, the operations of which may raise such a question, shall file a statement of fact with the Code Authority for its Industry, and such statement shall contain a statement of its preference as to the Code it would prefer to have such operations be governed by, and such preference shall be granted unless such Coordination Committee shall find that the granting thereof would be unfair in view of the rights of others or that it would have a tendency contrary to the effectuation of the policies of the Act. Any action taken by the Coodination Committee shall be referred to the Administrator and shall be subject to his disapproval.

2712 Section 3. Within ten (10) days after the effective date of this Code, any member of this Industry may file such a statement of fact and preference as to being governed by any of such other Codes which may at that time be in effect. Thereafter upon any such other Code becoming effective, such statement may then be filed; provided, however, that until any such statement is filed and decision is made thereon by such Coordination Committee, such operation of such member of this Industry shall be governed by the provisions of this Code.

Section 4. From time to time thereafter if conditions change, members of this Industry shall be entitled to file such statements of fact and preference as to change of a portion of their operations from the jurisdiction of one Code to the jurisdiction of another, and in such event they shall be handled in the same manner as provided for above.

Section 5. The foregoing Sections 1 to 4 inclusive of this Article XI, shall not be effective until Codes of Fair Competition for the copper and zinc industries, containing an Article substantially the same as this Article XI, have been approved, and are in effect, and certified copies of such approved codes have been filed with the Code Authority for this Industry.

Article XIII—Monopolies

Section 1. This Code and all the provisions thereof are expressly made subject to the right of the President, in accordance with the provisions of Subsection (b) of Section 10 of the Act, from time to time to cancel or modify any order, approval, license, rule, or regulation issued under said Act and specifically, but without limitation, to the right of the President to cancel or modify his approval of this Code or any conditions imposed by him upon his approval hereof.

Section 2. Such of the provisions of this Code as are not required to be included therein by the Act may, with the approval of the Administrator, be amended as provided in Section 3 hereof, in such manner as may be indicated by the needs of the public, by changes in circumstances, or by experience; all the provisions of this Code, unless so modified or eliminated, shall remain in effect until the expiration of Title I of the Act.

Section 3. An amendment to this Code or any Codes supplemental thereto affecting or pertaining to the several divisions of the Lead Industry, may be proposed by any interested party either to the divisional Code Authority, the Basic Code Authority, or directly by or to the Administrator. All such proposed amendments shall be referred to the division affected or interested and then shall be submitted by said division to the Basic Code Authority, who shall give Members of the Industry an opportunity to be heard thereon, and thereafter the Code Authority may make such recommendations thereon as are deemed proper; provided, however, that when approved by the Administrator as necessary to effectuate the policies of the Act, after such notice and hearing as he may prescribe, any proposed amendment shall thereupon become effective as a part of this Code

2713 Article XIII—Monopolies

No provision of this Code shall be so applied as to promote monopolies or monopolistic practices, or to eliminate, oppress, or discriminate against small enterprises.

Article XIV—Effective Date

This Code shall become effective beginning the second Monday after its approval by the Administrator.

Approved Code No. 442.
Registry No. 1217-8-01.

2714 Schedule A

Article I—Conditions For Sale of Lead Oxides in Lots of Less Than Twenty Tons

A. "Sale" or "Order" as used herein includes any transaction whereby a Member of the Industry makes a quotation on, or becomes obligated to sell and deliver material.

B. Whatever terminology may be used, the intent and meaning thereof shall conform to the following requirements of sale:

(1) Material.—Dry Oxides of Lead, or mixtures consisting principally thereof, each grade of material to be specifically designated.

(2) Quantity.—Any amount as agreed between Buyer and Seller.

(3) Packages.—As agreed between Buyer and Seller. Special packages required by Buyer shall be charged for according to cost.

(4) Price.—(a) Seller's card or quoted price in effect on date order is received with allowance as follows:

(1) Not more than one-half cent (½¢) per pound for minimum shipment of five (5) tons for one buyer at one time to one destination.

(b) Emergency shipments of smaller quantities may be made at the 5-ton price only to a customer for whom the Seller has a 5-ton order on hand for the same material for immediate shipment, or five (5) tons en route to the same destination.

(c) No protection against decline in Seller's price may be given.

(d) Red Lead containing ninety-seven per cent (97%) or ninety-eight per cent (98%) Pb_3O_4 shall be so marked on the package and shall be sold at not less than one-quarter cent (¼¢) and one-half cent (½¢) per pound, respectively, over Seller's price for grades of lower Pb_3O_4 content.

(5) Delivery.—F.O.B. cars Seller's shipping point, or by truck F.O.B. Buyer's premises.

(6) Transportation Allowance.—(a) Since transportation is included in the Seller's price, the actual freight paid by Buyer shall be allowed as deduction. No cartage allowance shall be made to Buyer for use of his own truck.

(b) If shipment is made by Buyer's boat, Seller may allow actual amount he would have paid for like transportation at minimum published tariffs in effect on date of shipment.

(7) Shipment.—Shall be made at least within thirty (30) days from date order is received.

(8) Terms.—Net thirty (30) days, less one per cent (1%) for cash in ten (10) days from date of shipment.

(9) Taxes.—Any tax or other charge imposed by Federal Law upon the production and/or sale and/or shipment of Lead Oxides shall be added to the price to be paid by the Buyer on any transaction to which such charge is applicable.

Article II—Conditions for Sale of Lead Oxides in Lots of at Least Twenty Tons

A. "Sale" or "Order" as used herein refers to any transaction whereby a Seller quotes on or becomes obligated to deliver material.

B. Whatever terminology may be used, the intent and meaning thereof shall conform to the following requirements of sale:

(1) Material.—Dry Oxides of Lead, or mixtures consisting principally thereof, each grade of material to be specifically designated.

(2) Quantity.—As agreed between Buyer and Seller; provided, that each order or release shall be an amount not less than twenty (20) tons to one destination and for account of not more than one Buyer.

(3) Period.—As specified.

2715 (4) Packages.—As agreed between Buyer and Seller. Special packages required by Buyer shall be charged for according to cost.

(5) Price.—(a) Shall be determined by adding a differential, as agreed upon by Buyer and Seller, to the price of common Lead at New York, the Lead price applying to each order to be specified by the Buyer at the time order is placed, as:

(1) The American Smelting & Refining Company's quotation at the close of the market on the day the order is received by Seller

or

(2) The American Smelting & Refining Company's quotation at the close of the market on a future date definitely agreed upon by Buyer and Seller when order is accepted

or

(3) The average quotation, as reported in one of the publications known as the American Metal Market and the Engineering & Mining Journal, for a future period definitely agreed upon by Buyer and Seller when the order is accepted. If the Lead price is determined by the method

herein outlined, Seller must require Buyer to specify before the beginning of the governing period the exact quantity of material to be priced in this manner. Deferred shipments shall be billed on the basis originally applicable thereto. Additional quantities required during the governing period shall be considered as new orders and shall be priced in accordance with (1) or (2) above.

(b) Emergency shipments of smaller quantities may be made on the twenty (20) ton price basis only to a customer for whom the Seller has a twenty (20) ton order on hand for the same material for immediate shipment, or twenty (20) tons en route, to the same destination.

(c) No protection against decline in Seller's price may be given.

(d) Red Lead containing ninety-seven per cent (97%) or ninety-eight per cent (98%) Pb_3O_4 shall be so marked on the package and shall be sold at not less than one-quarter cent (¼¢) and one-half cent (½¢) per pound, respectively, over Seller's price for grades of lower Pb_3O_4 content.

(6) Delivery.—(a) F.O.B. cars Seller's shipping point

or

(b). By truck complete within three (3) days, F.O.B. Buyer's premises.

(7) Transportation Allowance.—(a) Since transportation is included in the Seller's price, the actual freight paid by Buyer shall be allowed as a deduction. No cartage allowance shall be made to Buyer for use of his own truck.

(b) If shipment is made by Buyer's boat, Seller may allow actual amount he would have paid for like transportation at minimum published tariffs in effect on date of shipment.

(8) Shipment.—Shall be made at least within sixty (60) days from,

(a) The date on which the price of pig lead governs the sale,

or

(b) The beginning of the period during which the average price of Pig Lead governs the sale.

(9) Terms.—Net thirty (30) days.

(10) Taxes.—Any tax or other charge imposed by Federal Law upon the production and/or sale and/or shipment of Lead Oxides shall be added to the price to be paid by the Buyer on any transaction to which such charge is applicable.

Article III—Conditions for Sale of Basic Lead Carbonate (Dry White Lead)

A. "Sale" or "Order" as used herein includes any transaction whereby a Member of the Industry makes a quotation on or becomes obligated to sell and deliver material.

B. Whatever terminology may be used, the intent and meaning thereof shall conform to the following requirements of sale:

(1) Quantity.—Any amount as agreed between Buyer and Seller.

2716 (2) Period.—As desired, to be specified.

(3) Packages.—As agreed between Buyer and Seller.

(4) Price—(a) Spot Sales.—Seller's card or quoted price in effect on date order is received.

(b) Contract Sales.—1. Seller's price on date contract is made with protection against advance or decline on the undelivered portion to the end of the current calendar quarter.

2. On contracts extending beyond the current calendar quarter, the price applying to subsequent deliveries shall be seller's price in effect on the first day of the calendar quarter in which they are made, with protection against advance or decline on the undelivered portion to the end of each quarter.

(c) The price for minimum twenty (20) ton lots for one Buyer to one destination, shipped by rail in one carload, or delivered by truck within a period of three (3) days, shall be not more than one-quarter cent (¼¢) per pound less than that charged for smaller quantities.

(d) Emergency shipments of smaller quantities may be made at the twenty (20) ton price only to those customers for whom the Seller has a twenty (20) ton order on hand for the same material for immediate shipment, or a carload (twenty (20) tons) en route, to the same destination.

(5) Delivery.—F.O.B. cars Seller's shipping point, or by truck F.O.B. Buyer's premises.

(6) Transportation Allowance.—Since transportation is included in the Seller's price, the actual freight paid by Buyer shall be allowed as deduction. No cartage allowance shall be made to Buyer for use of his own truck.

(7) Shipment—(a) Spot Sales.—Within thirty (30) days from date order is received.

(b) Contract Sales.—Within the period covered by the contract.

(8) Terms.—Net thirty (30) days, less one per cent (1%) for cash in ten (10) days from date of shipment.

(9) Taxes.—Any tax or other charge imposed by Federal Law upon the production and/or sale and/or shipment of white lead shall be added to the price to be paid by the Buyer on any transaction to which such charge is applicable.

3403 COMMISSION'S EXHIBIT NO. 836.

Memorandum of Facts Covering Production of Lead Pigments at East Chicago, Indiana by International Smelting and Refining Company and Its Predecessors.

The production of dry white lead was begun by the Anaconda Lead Products Company at East Chicago, Indiana, in 1919. The first sales were made on January 15, 1920, and regular production began in February 1920.

The Anaconda Lead Products Company first began to manufacture white lead-in-oil at East Chicago, Indiana in 1931, its first sales of that product being made in March of that year, although regular production did not get underway until December.

In 1919, the Anaconda Copper Mining Company owned 75% of the stock of the Anaconda Lead Products Company. The remaining 25% was acquired in 1936 and on October 31, 1936, it was dissolved and all of its assets and property were transferred to the International Smelting and Refining Company.

Following the acquisition of the assets and property of the Anaconda Lead Products Company in 1936, the International Smelting and Refining Company continued the manufacture of both dry white lead and white lead-
3404 in-oil through its Pigment Division until the latter
part of July, 1946.

On June 1, 1946, the International Smelting and Refining Company addressed a communication to the dry pigment trade (a copy of which is attached hereto, marked "Exhibit A"), stating that, because of shortage of labor and supplies, higher prices for both of these, quotas which reduced volume and automatically increased production costs and restrictions for prices on finished products, it had been decided to discontinue operations permanently.

On June 20, 1946, notice was addressed to the lead-in-oil trade (a copy of which is attached hereto, marked "Exhibit B"), stating that it had been decided to permanently suspend operations at the East Chicago, Indiana plant of the International Smelting and Refining Company and discontinue the business.

Production of dry white lead stopped on July 16, 1946, and that of lead-in-oil on July 23, 1946.

No further orders for dry white lead or white lead-in-oil were accepted after August 1, 1946, and all such materials on hand were shipped to customers by the end of that month.

3405 The Anaconda Sales Company, which is a wholly owned subsidiary of the Anaconda Copper Mining Company, has acted as a sales agency for both the Anaconda Lead Products Company and the International Smelting and Refining Company in selling dry white lead and white lead-in-oil. The International Smelting and Refining Company also sold directly to the trade dry white lead and white lead-in-oil through its Pigment Division.

The International Smelting and Refining Company, Pigment Division, allowed the Anaconda Sales Company one-fourth (¼) of 1% commission on the gross business booked by it.

The Anaconda Copper Mining Company has never engaged in the manufacture or sale of dry white lead or white lead-in-oil.

The principal source of supply of pig lead, which was used in the production of lead pigments, was lead bullion smelted by the International Smelting and Refining Company at Tooele, Utah, and refined at East Chicago, Indiana. A small amount of pig lead was secured through the treatment of secondary lead at East Chicago, which was purchased on the open market.

The territory in which business was solicited, and where most of the sales were made, was generally east of the Mississippi River. Some business was indirectly solicited, mainly through manufacturer's agents, in Kansas City, Dallas, Houston and on the Pacific Coast.

3406 The products in question were shipped direct to customers and also warehoused. Shipments to warehouses were generally in carload quantities, although occasionally less than a carload shipment was made because of an emergency or because of some special reason. The warehouses serviced the territory in their immediate vicinity and were located at various times in the following cities: Boston, Brooklyn, Newark, Philadelphia, Akron, Indianapolis, Detroit, St. Louis, Louisville, Minneapolis, Kansas City, Dallas, Houston, Los Angeles, San Francisco, Oakland, Portland and Seattle. Shipments made direct to customers from East Chicago were made on both written and verbal orders of customers and also on written and verbal instructions from International's agents.

Dry white lead has never been sold under consignment and white lead-in-oil has only been sold under consignment contract in the State of Wisconsin where it was employed to protect the Company under the local laws covering the insolvency of vendors. In other states, sales were made through what was known as a consignment arrangement. By means of this, materials were delivered to dealers and about the 25th of each month a form was sent to them, on which the dealers inserted the amount of white lead-in-oil on hand at the time of the previous re-
3407 port and the amount presently in stock the difference between the two being the amount which had been sold during the preceding 30 days, and the dealers were invoiced for this upon the receipt of the reports, the usual terms being 2% 10 days, net 60. In computing the time on these discounts, the date used was that of the mailing of the invoices to the customer. This dealer arrangement was commenced in November of 1932. A copy of the consignment contract used in Wisconsin is attached hereto marked "Exhibit C."

When the Anaconda Lead Products Company first commenced making and selling white lead-in-oil, there were no price cards or selling information published; neither was there a map dividing the country in zones and it cannot be ascertained when a zone map was first used. The first time that it clearly appears that the present map and differentials were used was at the time of the price change on January 1, 1937. From that date until the International Smelting and Refining Company discontinued the lead pigment business, the various zones, as hereinafter set forth, were used in the sale of white lead-in-oil.

The par zone consisted of the states of Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Pennsylvania, Dela-
3408 ware, Maryland, West Virginia, Ohio, Kentucky (less the western tip), Indiana, Michigan, Illinois (less

the northwestern border) and Wisconsin (less the western edge).

The ⅛¢ over par zone consisted of the states of Virginia (less the western one-third), Minnesota, Iowa, Missouri (less St. Louis and the immediate vicinity) and the western tip of Kentucky, the northwestern border of Illinois and the western edge of Wisconsin. Also included in this zone were the cities of Lincoln, Omaha, Kansas City, Leavenworth and Atchison.

The ¼¢ over par zone consisted of the states of North Dakota, South Dakota, Nebraska (less Lincoln and Omaha), Kansas (less Kansas City, Leavenworth and Atchison), Tennessee and the western one-third of Virginia.

The ½¢ over par zone consisted of Wyoming, Colorado and Oklahoma.

The ¾¢ over par zone consisted of the state of Texas (less the western tip embracing the El Paso District).

The 1¢ over par zone consisted of the state of New Mexico, plus the western tip of Texas embracing the El Paso District.

3409 The pricing in the Pacific Coast area was based on a par territory surrounding San Francisco, with differentials over par for the rest of the state and for the other states in that district. There are hereinafter set forth the states and districts included in those differentials: California: Par territory: San Francisco and south to San Jose, inclusive; Oakland; Berkeley; Richmond to Hayward, inclusive. ¼¢ over par: Stockton; Sacramento; Fresno; Modesto; Los Angeles: metropolitan Los Angeles district, which includes Santa Monica, San Pedro, Wilmington, Long Beach, Pasadena, Glendale, Burbank, North Hollywood and intermediate towns; San Diego. ½¢ over par: Eureka, Bakersfield. Idaho: ¾¢ over par: Boise; Lewiston; Pocatello; Twin Falls. Montana: ¾¢ over par: Anaconda; Kalispell; Butte; Billings; Great Falls; Helena; Missoula. Nevada: ½¢ over par: Reno. Oregon: ¼¢ over par: Portland. Utah: ¾¢ over par: Salt Lake City; Ogden. Washington: ¼¢ over par: Seattle; Tacoma. ½¢ over par: Spokane; Walla Walla; Yakima. (The price bases over par apply only to the terminal points listed. For instance, in Nevada the only terminal point is Reno at ½¢ per pound over par. All other towns in the state of Nevada would be f.o.b. par territory, or ½¢ over par, f.o.b. Reno.)

White lead-in-oil was sold in kegs and cans and there

was a difference in price, in addition to the differen-
3410 tials that apply in the various zones, depending upon
the size of the kegs and cans. For the par territory
using the January 26, 1942 card, this is shown as follows:

Net Weight	Cents per lb.	Price per pkg.
100 lb. keg	10½	$10.50
50 lb. keg	10¾	5.38
25 lb. keg	11	2.75
12½ lb. keg	11¼	1.41
*5 lb. keg	12½	
*1 lb. keg	14	

*Heavy Paste only.

All of the above prices applied to any quantity of the various size containers except carload lots.

International's 5 and 1 pound cans came in heavy paste only. The 5 pound cans were packaged in cartons of 6 and the 1 pound cans were packaged in cartons of either 6 or 12.

The position of International with relation to the total per cent. of white lead-in-oil sold annually by the industry from 1937 through 1945 is hereinafter set forth:

	1937	3.24%
	1938	3.12%
	1939	3.79%
3411	1940	4.03%
	1941	3.82%
	1942	3.78%
	1943	3.08%
	1944	3.20%
	1945	3.8%

Dry white lead was never sold on any zone basis comparable to that used for the sale of white lead-in-oil. All prices for dry white lead were f.o.b. East Chicago, Indiana, or nearest warehouse, with freight or cartage allowed. A discount of ¼¢ per pound was given for carload lots consisting of 20 tons in one delivery and on one invoice.

The first date on which it can be definitely determined that a zone system was used in the sale of dry white lead was on October 1, 1935, and no changes were made in that zone system from then until the time the International Smelting and Refining Company discontinued the lead pigment business. The country was divided into a par zone and the Pacific Coast area. An additional charge of ¼¢

per pound over the par price was made for sales in the Pacific Coast area, which embraced the states of Arizona, California, Colorado, Idaho, Montana, Nevada, New Mexico, Oregon, Utah, Washington and Wyoming.

3412 The position of International with relation to the total per cent. of dry white lead sold annually by the industry from 1937 through 1945 is hereinafter set forth:

1937	19.34%
1938	15.42%
1939	15.52%
1940	14.60%
1941	13.79%
1942	12.56%
1943	10.49%
1944	11.38%
1945	11.9%

The Anaconda Lead Products, the Anaconda Sales Company and the International Smelting and Refining Company have generally adhered to their published and announced prices, terms and conditions of sale on lead pigments. Statistics as to monthly and annual production, stocks and shipments of lead pigments have been furnished to the Lead Industries Association and, in turn, similar information has been received from said Association covering the operations of the industry as a whole.

3413 "Exhibit A."

Letterhead of

International Smelting and Refining Company,
East Chicago, Indiana.

June 1st, 1946

To the Trade:

Our operations at East Chicago have been seriously affected by the troubles with which every concern has to contend. We refer principally to shortages of labor and supplies, higher prices for both of these, quotas which reduce volume and automatically increase production costs and restrictions on prices for finished products.

Because of these conditions operations at East Chicago have been unsatisfactory for some time. Since it appears unlikely that there will be sufficient relief reasonably soon it has been decided that operations will be discontinued permanently.

We expect to fulfill any second quarter obligations to our regular customers that we may have. All available tonnage will be distributed equitably and the regular grades will be furnished to the extent that this is possible.

We appreciate the consideration the trade has shown us during the many years we have been in business. We regret this action is necessary but feel no other course is open to us.

International Smelting and Refining Company

3414 "Exhibit B."

Letterhead of

International Smelting and Refining Company,
East Chicago, Indiana.

June 20, 1946

To the Trade:

It has been decided to permanently suspend operations at the East Chicago Plant of the International Smelting and Refining Company and discontinue the business.

We appreciate the consideration the trade has shown us during the many years we have been in business. We regret this action is necessary but feel no other course is open to us.

International Smelting and Refining Company

3415 "Exhibit C."

Consignment Agreement.

This agreement made this .... day of ...., 193..., by and between the International Smelting and Refining Company, Pigment Division, a corporation, of East Chicago, Indiana, hereinafter referred to as the "Manufacturer" and .... Company having a principal place of business and office at ...., state of ...., hereinafter referred to as the "Consignee":

1. The Manufacturer shall from time to time consign to the Consignee at its place of business on consignment, Anaconda Lead-in-Oil in cans of 100#, 50#, 25#, 12½#, 5#, and/or 1# size, which bear the caption Anaconda

White Lead, in quantities, which shall be desired by the Consignee and agreed to by the Manufacturer, such goods to be billed to the Consignee on memorandum invoice.

2. It is agreed that the Consignee shall exercise due care in maintaining the condition of these goods and that it will be responsible to the Manufacturer for their loss, theft, or damage according to the price schedules at which they were consigned. The Consignee agrees to carry the consigned stock at its own expense and in its regular place of business at the above designated location in such a manner that it can be readily identified as the property of the Manufacturer. The consigned stock shall be at all times until sold by the Consignee the property of the Manufacturer and open to the inspection of its officers and agents.

3. The Consignee is to report to the Manufacturer on the .... day of each month for the merchandise which it holds on consignment and remit to the Manufacturer for the proceeds realized from the sale of consigned merchandise in accordance with the prices and terms as set forth in the price cards which will be furnished by the Manufacturer periodically to the Consignee. The price of the consigned merchandise will be that of the latest price card furnished by the Manufacturer and the Consignee agrees that upon the receipt of notice of change in current prices, it will furnish the Manufacturer with a detailed report of the consigned stocks on hand.

4. It is understood and agreed that the Consignee is not the agent of the Manufacturer and has no power to bind or contract for the Manufacturer in any way whatsoever. All sales made from the consigned stock shall be for the account of the Consignee and not the Manufacturer.

5. This agreement may be terminated by either party on thirty days' notice and at the option of the Manufacturer in the event of the insolvency of the Consignee without prejudice to any rights it may have against the Consignee. Upon the termination of this agreement for any cause, the Manufacturer's merchandise held by the Consignee shall be returned on the demand or request of the Manufacturer.

3416 6. Unless terminated by either party as hereinbefore provided, this agreement shall continue in full force and effect until one year from the date hereof and thereafter from year to year until written notice of termination is given by either of the parties to the other as hereinbefore provided.

7. Should the Consignee herein at any time become insolvent or make an assignment for the benefit of creditors, or a voluntary or involuntary petition in bankruptcy be filed against said Consignee, all goods of the Consignor, then in possession of the Consignee, shall upon demand, be immediately returned to the Consignor.

In Witness Whereof the parties hereto have hereunto set their hands and seals the day and year first above written.

1938	367,791	421,625	546,000	77.2	67.4	9,061
1939	411,269	555,074	667,000	83.2	61.7	10,379
Totals, 1930-1939	3,771,154	4,611,006	5,754,650	80.1	65.5	89,290
1940	451,202	640,000	782,000	81.8	57.7	15,604
1941	460,191	964,000	1,050,000	91.8	43.8	14,293 (a)
1942	491,676		1,000,000		49.2	
1943	456,991		1,100,000		41.5	

(a) January-September only.

In the above table receipts of lead in ore are the annual aggregates of monthly reports, reflecting the lead content computed as recoverable. Shipments ex refineries are also the annual aggregates of the monthly reports. Into those shipments a large quantity of secondary lead has already entered. Consumption computed by industries is as given annually in this Year Book, and is inclusive of soft lead and hard lead, both primary and secondary. Column IV is II ÷ III. Annual variations above and below the 10-year average of 80% are possibly associated with the price for lead, the percentage being minus in the period of low price and plus in the period of higher price. Column V is I ÷ III. The wide range in these annual percentages is associated with plus or minus in stocks of ore, scrap and base bullion. The quantities given in column VI are included in column III and represent manufactures from imported lead on which duty was paid and subsequently refunded. The comments hereinbefore refer to conditions prior to 1940, in which year and subsequently conditions have been confused by the importation into U. S. A. of large tonnages of refined lead from foreign countries, out of which shipments have been made into domestic consumption. Such shipments are included in the second column.

Some American Manufactures of Lead

Year	Litharge (a)	Red Lead (a)	White Lead, Dry (a)	White Lead in Oil (a)	Lead Pipe and Sheet (b)
1934	62,767	24,356	18,555	45,922	31,000
1935	70,953	25,880	22,582	57,589	34,200
1936	78,772	30,860	25,183	60,294	40,000
1937	74,762	32,469	30,563	55,469	45,500
1938	62,014	26,018	21,218	49,912	36,000
1939	78,738	35,520	23,644	51,304	43,000

Totals	488,000	538,900	633,550	678,700	546,000	667,000	782,000	1,050,000	1,000,000	1,100,000

(a) Includes antimonial lead. (b) Exclusive of oxides for storage batteries. (c) Under the head of building is included the lead used in chemical construction, (d) Among "Other Uses" the largest item in recent years has been the manufacture of lead-tetraethyl for tempering gasoline. Also included are lead for brass making, collapsible tubes, lead-lined pipe, lead-headed nails, railway equipment, shipbuilding and many miscellaneous uses. The figures for 1942-43 include lead exported. (e) Included in "Other Uses."

Commission's Exhibit No. 851.

Note.—We estimate that about 75% of the lead that goes into storage batteries returns into production of soft and hard lead, which production is not accounted fully in prior tables owing to omission of most of the secondary smelters. For this reason the totals in the above accounting are in excess of shipments reported ex-primary refineries.

In the accounting for the use of lead in 1941 the allocation to ammunition does not include the use for that purpose in the government arsenals, and also omitted are consignments of refined pig lead for governmental use otherwise. For these reasons the total of the accounting falls short of the computational consumption of lead by difference in the introductory page of this section; and for the same and similar reasons a percentage computation of uses in 1941-43 is omitted.

Use of Lead in the United States by Percentage

Purpose	1931	1932	1933	1934	1935	1936	1937	1938	1939	1940

4577 COMMISSION'S EXHIBIT NO. 852.

Letterhead of Strange, Myers, Hinds & Wight,
New York City.

December 18, 1946.

Joseph S. Wright, Esq.,
Trial Attorney,
Federal Trade Commission,
Washington, D. C.

Dear Mr. Wright:

Re: F. T. C. *vs.* National Lead Co. et al.

As requested in your letter of the 29th, The Glidden Company has prepared, and I enclose herewith, a list of storage battery manufacturers who purchased lead oxides from its Metals Refining Company Division at Hammond, Ind. from Oct. 1, 1941 to Dec. 31, 1941, and at the next hearing I shall be willing to stipulate these facts, subject of course to correction and to objections as to materiality and relevancy, though waiving any objection as to the competency of the evidence.

One of the Glidden employees informs us that Glidden's terms of sale at that time were "f.o.b. Hammond, Ind. freight allowed", and if desired that fact also will be stipulated with the same conditions.

I trust that the foregoing will serve your purpose. If not, please let me know immediately so that if anything further is required I can make an effort to get it for you before the hearing on January 7th.

With kindest regards, I am

Very sincerely yours,

Roger Hinds.

RH:ML
CC: Mr. Duncan,
Mr. Knight.

8-3-N

8-3-N

Dear Dave:

With reference to your letter of December 6, which we acknowledged on December 9, our records at this office indicate only two storage battery manufacturers purchased lead oxides during the last quarter of 1941. The data regarding these purchases is outlined on the attached list.

It is our practice to retain such records for a certain length of time and then destroy them, and in accordance with this practice the Oakland and Seattle records have already been destroyed. The records at the Portland office disclose that no sales of lead oxides were made during the period in question.

Very truly yours,

P. S. Orr

Mr. D. A. Merson
Manager, Oxide Sales
National Lead Company
111 Broadway
New York 6, New York

Dear Mr. Merson:

The answers to the questions in yours of December 6 regarding the Federal Trade Commission are as follows:

(1) Willard Storage Battery Company, Cleveland, Ohio
Carload price basis
Shipped from Philadelphia, Pennsylvania

Electro Battery Manufacturing Company, Cleveland, Ohio
Less-than-five ton price basis
Shipped from Cleveland Warehouse

(2) The Philadelphia-Cleveland carload movement was prepaid. Consequently, our records do not show this rate. We are endeavoring to determine this rate and will forward it to you as soon as possible.

Local cartage rates during the last quarter of 1941 in Cleveland were 9¢ per cwt. or a minimum charge of 45¢.

Sincerely yours,

Ellis Busse

4675 COMMISSION'S EXHIBIT NO. 866.

National Lead Company,
111 Broadway, New York.

May 12, 1931.

To the/
President and Board of Directors of the
Eagle-Picher Lead Company,
Cincinnati, Ohio.

Gentlemen:

I am empowered by the Board of Directors of the National Lead Company to make to you the following propositions:

1. The National Lead Company will buy all of the net assets of every kind and description owned by the Eagle-Picher Lead Company, including lands, plants, inventories, bills receivable, patents, secret processes, good will, investments, and all other properties or interest in properties belonging to the Eagle-Picher Lead Company.

2. This proposition is based upon the annual statement issued by the Eagle-Picher Lead Company as of the date of December 31, 1930, of which a copy has been given to the National Lead Company, and upon which statement the National Lead Company relies as an accurate statement as of that date in making this proposition.

3. The meaning of the term net assets in the first paragraph hereof includes all of said assets, less what is included at that time under the item of current liabilities in said statement.

4. We will pay to you for said properties the sum of ten million dollars ($10,000,000.00), subject to the following adjustments:

(a) All assets (except property described under the heading of "Fixed Assets" in said statement) and current liabilities to be audited and determined as of the date which shall be fixed for the execution of this agreement, if accepted. The inventories to be brought down to such date at the then current market prices for raw materials. Materials in process of manufacture or finished to be invoiced at current market for metal contents, plus actual cost of manufacturing to their present condition.

(b) Value of notes, accounts and bills receivable to be deducted from above purchase price, but collected by National Lead Company without charge and proceeds remitted to you as promptly as collected. Any notes, accounts or bills receivable not collected within three months after the transfer of the property shall be transferred to you for such action as you may desire.

4676 (c) In case the current assets as described in said statement, as so adjusted, are more or less than shown in said statement dated December 31, 1930, or the current liabilities as adjusted are more or less than shown in said statement, then the purchase price above stated shall be adjusted accordingly.

(d) In other words:— If the current assets of the company shall be less than the amount stated in the balance sheet of December 31, 1930, the amount of such decrease in value shall be deducted from the $10,000,000.00 offered for said properties. In like manner, if the current liabilities are more than shown in said statement, then the amount of excess shall be deducted from said $10,000,000.00 purchase price. And, on the contrary, if the assets are more when adjusted as aforesaid, then the amount of such excess value shall be added to the purchase price of $10,000,000.00. If the current liabilities as reported in said statement are less, then the amount of such decrease shall be added to the $10,000,000.00 on the readjustment made on the auditing of the account. The amount of the payment for said properties to be varied by such adjustment, after auditing.

(d) The property described in said statement under the heading "Deferred Items" should be adjusted to conform to the facts on date fixed for the purpose; and in case the item "Purchase Option Deposit" has no present value, it shall be deducted from the purchase price as herein stated.

(e) This proposition shall be accepted and approved by the Board of Directors of the Eagle-Picher Lead Company within one month from the date hereof; and thereafter the transaction shall be submitted to the stockholders of the Eagle-Picher Lead Company, under and pursuant to the laws of the State of Ohio, with such speed as the necessity of complying with the laws and giving the proper notices will permit.

5. Payment for said properties shall be made in cash.

Very respectfully,

(Signed) E. J. Cornish
President.

4704 RESPONDENT'S EXHIBIT NO. 1.

Constitution and By-Laws
Lead Industries Association
Dated as of November 14, 1928

4705 Constitution of the Lead Industries Association

We, the undersigned subscribers, being severally identified with the lead mining, smelting, refining and/or manufacturing industries, mutually agree to form an association for the object, and under the plan, set forth below. By causing our names to be subscribed thereto we agree to the provisions of this

Constitution.

Article 1

Name

The name of this association shall be the Lead Industries Association.

Article 2

Objects

The purpose of the Lead Industries Association shall be:

To collect and publish statistical information relating to the production, distribution, marketing, consumption and use of lead and lead products;

To disseminate accurate information regarding lead products and how they best may be used;

To develop methods for the improvement of the welfare
of those engaged in the lead industries, or in the use
4706 of its product; and for such other purposes as, from
time to time, may be of benefit to the lead industries.

In general to promote the serviceability of the lead industries to the community at large.

Article 3

Limitations

No agreement, understanding, combination or arrangement or any form of concerted action to curtail production, fix prices, suppress competition, or in any other manner to restrain trade or commerce, or to monopolize, or attempt to monopolize any part of the trade or commerce of the country shall be permitted in the Lead Industries Association, nor any other act or acts which may be in contravention of law or good business practice. Each member of the association shall be wholly free to conduct its business without legal or moral accountability to the association or to any member thereof.

Article 4

Inspection of Records

The books and records shall reflect the complete details of all the activities of the Lead Industries Association, and shall be open to inspection at all times by the departments or bureaus of government interested. All reports of general interest distributed to the members shall be furnished to others desiring them for such consideration as may be regularly established by the association.

Article 5

Non-Profit Organization

The affairs of the Lead Industries Association shall not be conducted for profit.

4707

Article 6

Membership

Any individual, company, firm or corporation, engaged in the mining, smelting, refining and/or manufacturing of lead or lead products, or using lead products, is eligible for membership. Acceptance of election to membership shall imply subscription to the provisions of this constitution.

Article 7

Management

The management and control of the Lead Industries Association shall be vested in a board of directors, and in an executive committee of the board of directors empowered to act, ad interim, in accordance with the provisions of the by-laws.

Article 8

Officers

The officers of the Lead Industries Association shall be a president, one or more vice-presidents, and a chairman of the board of directors, all elected by the board of directors, and a secretary and a treasurer appointed by the executive committee. The same person may be both secretary and treasurer. The duties and powers of the officers shall be defined in the by-laws.

Article 9

Expenses

The expenses of the Lead Industries Association shall be borne by contributions from the members apportioned according to the provisions of the by-laws.

4708

Article 10

By-Laws and Amendments

The by-laws of the Lead Industries Association shall provide the rules and regulations governing the management and conduct of the organization not otherwise provided by the constitution. This constitution, and the by-laws, may be amended at any meeting of the board of directors by a majority vote in person or by written consent, provided two (2) weeks' notice of the meeting shall have been given together with a copy of the proposed amendment. Until amended the by-laws shall be of the terms and tenor of the by-laws attached hereto, bearing even date herewith.

In Witness Whereof, we have caused our names to be subscribed hereto, by our respective proper officers thereunto duly authorized, as of the 14th day of November, 1928.

4709

By-Laws of the Lead Industries Association Dated as of November 14th, 1928

Article I

Membership

Section 1. Application for membership shall be in writing on forms provided by the Secretary, duly executed by the applicant, and shall state:

(a) The name of the individual, firm, company or corporation applying;

(b) The branch of the lead mining, smelting, refining and/or manufacturing or consuming industry in which the individual, firm, company or corporation is engaged;

(c) The name of the applicant's representative.

Applications for membership in the Lead Industries Association shall be acted upon, following their receipt, at the next meeting of the board of directors or the executive committee. A majority vote shall elect an applicant
4710 to membership. (The applicant shall signify acceptance of election by subscribing his or its name to the Constitution and By-Laws.)

Sec. 2. Any member may withdraw at any time from membership in the Lead Industries Association by giving formal notice of such withdrawal to the Secretary, and fulfilling all obligations to the association incurred by that member to the time of withdrawal.

Sec. 3. Each member shall have one vote and all members shall have the same status.

Article II

Meetings of Members

Sec. 1. A regular meeting of the members shall be held annually on the third Wednesday in February of each year for the purpose of electing directors and for such other business as shall be placed before the meeting. Special meetings may be called at any time by the President or the Chairman of the board of directors. Notice of the time and place of all meetings shall be given to each member in writing or by telegraph at least ten days before the meeting.

Article III

Board of Directors

Sec. 1. The board of directors of the Lead Industries Association shall consist of representatives of the members elected at the annual meeting and shall not exceed fifteen (15) in number. Representation by proxy is permissible.

4711 Sec. 2. The board of directors shall have power to hold meetings at such times and places as it deems proper. It shall be empowered to elect new members; to appoint an executive committee, and other standing committees, with such duties, consistent with the Constitution and By-Laws, as it may prescribe; to elect officers; and to have such other functions and authority as may be necessary to carry out the purposes of this association.

Sec. 3. Regular meetings of the board of directors shall be held quarterly on the third Wednesday of February, May, August and November of each year. Special meetings may be held upon the call of the Chairman at any time upon the expiration of two days' notice.

Sec. 4. Five (5) members of the board of directors shall constitute a quorum.

Article IV

Executive Committee

Sec. 1. The executive committee shall consist of five (5) directors elected by the board of directors. The executive committee may act on behalf of the association in any matter upon which the board of directors is qualified to act, when the board is not in session. The executive committee shall appoint the Secretary and Treasurer, and such clerks or other assistants required, and may provide in general for the detailed administration of the association. The board of directors in electing members of the executive committee shall designate one such member to serve as chairman of the executive committee.

4712 Sec. 2. Directors who are not members of the executive committee shall have the privilege of attending in person, or by proxy, all meetings of the executive committee, and to join in discussions, but without vote.

Sec. 3. Meetings of the executive committee shall be at the call of the chairman upon at least one day's previous notice.

Article V

Officers

Sec. 1. The duties of the officers shall be those usually pertaining to their respective positions.

It shall be the special duty of the chairman of the board of directors to enforce Article 3 of the constitution.

Sec. 2. The Secretary shall represent the executive committee as an administrative official, and keep a complete

and detailed record of all meetings of the board of directors and executive committee.

Sec. 3. The treasurer may be required to give bond in such sum and with such sureties as the executive committee may require. He shall have custody of and shall receive and disburse all the funds of the association.

Sec. 4. The officers shall be elected annually at the first regular meeting of the board of directors.

Sec. 5. Any vacancy caused by disability, resignation or otherwise, may be filled at any time by the executive committee.

4713

Article VI

Expenses and Assessments

Sec. 1. The expense of conducting the Lead Industries Association shall be apportioned among the members and shall be based upon the lead production or consumption of the members reduced to units of metallic lead. In the case of the mining, smelting and refining branches of the lead industries, the lead produced in ores and concentrates, or lead bullion and pig lead, respectively, shall be the basis of the assessment; in the case of the manufacturing, reselling or consuming branches of the lead industries, the lead consumed, whether virgin or secondary, shall be the basis. A schedule of assessments shall be drawn up based upon the four major divisions represented in the association, i. e., (a) mining, (b) smelting and refining, (c) manufacture of lead product, (d) consumption of lead which is not resold. Assessments shall be apportioned among members in each of the above divisions according to the following ratio per ton: (a) 4, (b) 1, (c) 2, (d) ½. Some members may be assessable in two or more divisions. Foreign production or consumption to be assessed upon the same ratio but given a deduction of 50 per cent from the total assessment. Contributions shall be based upon the previous year's record of production and consumption, and shall be made quarterly.

The minimum fee for membership in the Lead Industries Association shall be $100.00 per year, effective July 1, 1933.

4737 RESPONDENT'S EXHIBIT NO. 6.

Third Meeting

Code Authority Meeting

New York, N. Y. July 27, 1934.

A meeting of the Code Authority for the Lead Industry was held on Friday, July 27, 1934, at 10:00 A. M., in the Board Room of the National Lead Company, 111 Broadway, New York, N. Y.

Present

Members	Alternates
Clinton H. Crane, Chairman	H. M. Brush
F. M. Carter	D. A. Callahan
W. Y. C. Hunt	I. H. Cornell
F. Y. Robertson	Clarence Glass
P. E. Sprague	R. G. McKay
	F. S. Mulock
	E. L. Newhouse, Jr.
	H. Y. Walker

G. W. Farny, Administration Member
Carroll Wetzell, N. R. A. Legal Dept. New York
F. E. Wormser, Secretary, Treasurer.

The minutes of the second meeting of June 18 were approved.

Without objection, the Secretary was instructed to insert in the record Administrative Order No. 442-6, recognizing the members of the Code Authority for the Lead Industry, which appears as Exhibit "A" attached.

Without objection, the Secretary was instructed to insert in the record the following formal notification from the National Recovery Administration, appointing Major George W. Farny Administration Member:

"Kindly be advised that Mr. George W. Farny of Morris Plains, N. J., has been appointed, by Administrative Order, as Administrative member on the Code Authority of the Lead Industry. Mr. Farny is a mining engineer by profession and has a background of both national and international experience, and I believe that he will make a desirable member on the Code Authority.

Signed: W. A. Janssen, Deputy Administrator, Metals and Mining Section, July 3, 1934."

4738 Without objection, the Secretary was instructed to insert in the record the formal notification from the

National Recovery Administration, granting temporary exemption from Section 2 of Article VII, and Schedule "A" of the Lead Code, which appears as Exhibit "B" attached.

Without objection, the Secretary was instructed to insert in the record formal notification from the National Recovery Administration, approving the By-Laws of the Code Authority, as follows:

"The By-Laws of the Code Authority for the Lead Industry submitted by you with your letter of June 14, 1934, have been examined and are hereby approved.

Signed: C. E. Adams, Division Administrator, June 29, 1934."

The Secretary was requested to report the balloting, by letter, for alternates to serve for Code Authority members and he stated that the Mining Division had elected Alternate 1, Mr. A. G. Mackenzie and Alternate 2, Mr. Paul H. Hunt, to serve for Mr. George W. Lambourne, by letter ballot mailed on June 15, eleven out of fourteen ballots having been received.

The Smelting and Refining Division had elected Mr. Clarence Glass alternate for Mr. John A. McCarthy, by letter ballot mailed on June 14, fifteen out of nineteen ballots having been received.

The Pigments Division had elected Alternate 1, Mr. W. E. Maston and Alternate 2, Mr. J. R. MacGregor, to serve for Mr. R. M. Roosevelt, by letter ballot mailed on June 21, eight out of ten ballots having been received.

The Metallic Lead Products Division had elected Mr. E. L. Newhouse, Jr., to serve for Mr. P. E. Sprague, by letter ballot mailed on June 16, twenty out of twenty-nine ballots having been received.

The Secretary was requested to notify the National Recovery Administration of the election of these alternates in order to procure the approval of the Administrator.

The Secretary reported that the investigation of the eight-hour day, as ordered by the Code, was nearing completion and that he expected to make a full report at an early meeting of the Code Authority.

He also stated that the various divisions of the Code were studying the drafting of suitable standards of safety and health for their respective Divisions but that the subject was such a large one that considerable time would yet elapse before any reports could be expected.

4739 The same comment was made with respect to the study of the regional industrial relations boards, at least the Division being confused with the relationship now existing between the newly formed Labor Relations Board and those industrial relations boards which were being set up by various codes. Mr. Callahan suggested that to avoid duplication of effort it would be desirable to obtain from the National Recovery Administration information as to the scope or jurisdiction of the National Labor Relations Board and the Regional Labor Boards to be set up under the Lead Code. The Administration representative said he understood the Labor Advisory Board was considering the situation and the Legal National Recovery Administration representative suggested the matter be laid on the table pending the receipt of further advice from Washington, stating that there would be no question of the extension of time that might be required to perfect the Lead Code labor plans occasioned by the delay."

Whereupon it was regularly moved, seconded and carried, that the Secretary be instructed to communicate with the Administration in order to determine what, if any, change the creation of the newly formed National Labor Relations Board would be brought about in planning for regional industrial relations boards for the Lead Industry and to request, if available, some definition as to the functions of each.

Mr. Sprague presented to the Code Authority the difficulties which the Metallic Lead Products Division encountered in attempting to devise adequate standards of safety and health for the Division, there being an overlap between the Smelting and Refining processes and actual manufacturing processes as conducted by numerous members of the Division. He suggested it might be wise to establish a new arm of the Code Authority to consider specially safety and health problems.

The Secretary was requested to circularize Code Authority members for a definite expression of their views on the safety and health problem. Mr. Walker recommended, and without objection the Chair ruled, that in the meantime each Division continue as it is doing and that ultimately the various Division Chairmen consult with each other on the safety and health program. The Chairman brought up the close inter-relationship between the standards of safety and health for the Lead Industry and the Copper Industry as well as other metal industries.

4740 The Secretary reported that he had circulated labor questionnaires on which members could report overtime under the provisions of Article III, Section 3, or the number of handicapped employees under Article IV, Section 6. These forms are attached as Exhibit "C".

The Secretary also stated that he had distributed questionnaires among the members of the Mining and Smelting and Refining Divisions (Exhibit "D" attached) which were a continuation of the questionnaires sent earlier in the year under the auspices of the Lead Industries Association, in order to obtain fundamental labor statistics for these Divisions. He expressed a desire to have the cooperation of the Chairman of the Pigments, Metallic Lead Products and Foil Divisions in order to devise and circulate suitable labor questionnaires among those Divisions respectively.

A letter from Deputy Administrator Janssen, dated July 21, with reference to amending the Lead Code so as to make assessments under the Code mandatory was presented. (Exhibit "E" attached.) Discussion which ensued indicated that there was much to be said in favor of making the contributions to the Code Authority voluntary and, likewise, on a mandatory basis. As some members desired to give the subject further study action on the letter was put over to the next meeting.

The Chairman presented a request from Deputy Administrator Janssen, dated July 10, urging the Code Authority to establish a Trade Practice Complaints Committee. (Exhibit "F" attached.) The Code Authority, in its discussion, weighed the desirability of constituting a trade practice complaints committee from only those Code Authority members who had a direct interest in the fair trade practices outlined in the Code, or constituting the entire Code Authority a trade practice complaints committee and

It was finally moved, seconded and carried, that the Code Authority for the Lead Industry constitute the Trade Practice Complaints Committee and that the Secretary confer with Mr. Wetzell of the National Recovery Administration to draft a suitable plan in accordance with the instructions provided by Deputy Janssen, circulating this plan among the Code Authority members before submitting it to Washington.

The Chairman presented a petition from the American Metal Co., Ltd., for an exemption from the Lead Code labor provisions for its operations at Carteret, N. J., as

per copy of letters dated July 17 and July 25 (Exhibit
4741 "G" in two pages). Discussion followed relative to the relationship between the American Metal Company's petition and that of the American Smelting & Refining Company, which had previously been endorsed, also the general situation as it affected the similar operations of the members of industry who had to operate under two or more codes. As a similar petition was pending in Washington

It was moved, seconded and carried that the request from the American Metal Co., Ltd., for exemption from the Lead Code labor provisions at its operations at Carteret, N. J., be tabled pending action by the Administrator on a similar petition from the American Smelting and Refining Company.

The Chairman presented a request from the Nassau Smelting and Refining Company, for guidance in handling a Compliance Certificate, as copy of letter of July 18. (Exhibit "H" attached.) The Government representative, Mr. Farny, suggested that the problem be submitted to the National Recovery Administration for assistance. Mr. Glass read a legal opinion which his Company had received in an effort to be helpful.

Whereupon it was suggested that the Code Authority approve a standard Certificate of Compliance, which could be submitted to the National Recovery Administration for its approval. Mr. Wetzell pointed out that the National Recovery Administration would probably be reluctant to become involved in a matter which concerned the P. W. A., or other Government Departments outside the N. R. A. The Secretary was instructed by the Chairman to communicate with Messrs. Earl, Fleming and Wolff to prepare a Certificate of Compliance which would meet the requirements of the Government and yet be adequate for industry.

The Chairman noted a request for an interpretation from the Metals Refining Company, dated July 2, 1934, with relation to Article VIII, Section 1 (i) as follows:

"'A Seller of antimonial lead makes a contract with a Buyer of antimonial lead to supply the Buyer's requirements of antimonial lead of grades specified, said requirements to consist of a minimum of 200 tons and a maximum of 300 tons per month, at a price of $1.00 per ton below the cost of metals contained, using the St. Louis Lead market for the lead and the New York Antimony market for the

balance of weight, the governing markets being those
4742 in effect at Buyer's option, to be declared when orders
are placed, either (a) on date of shipment, or (b)
monthly average for month of shipment.

'Is the tender and completion of the above transaction a violation of the clause quoted?' "

and referred it to Mr. Sprague, as Chairman of the Metallic Lead Products Division.

The Chairman presented a request for information from the Anaconda Lead Products Company, dated June 28, as follows:

"Our men working five days per week frequently decide they would like to work ten days straight and have four days off, or they might work fifteen days straight and have six days off. They would average forty hours per week and simply work this schedule out between themselves so that they could really have a vacation and go some place in the four or six days that they are off. There is no difference in the money involved nor the hours of labor over a reasonable length of time. Of course, this would be provided for under the averaging agreement.

"Naturally we would not pay them overtime on any such an arrangement outlined above. The net result is that the men only suffer, we do not have any more employment and yet we have more friction. Will you please be kind enough to clarify the situation for us?"

The Code Authority saw no objection in the Code to a working schedule being arranged so that an employee might work ten days straight with a four day lay-off immediately following this period of employment, provided not more than 40 hours employment per week be given, but that it would be a violation of the Code to work 15 days straight with 6 days off. The Government representative was inclined to favor this construction of the Code.

The Chairman presented a letter from the Hecla Mining Company, dated June 29, as follows:

"The Lead Code provides for exceptions as to hours under Article III, Section 3 (c):

" 'Nor to employees receiving less than Thirty-Five (35)
Dollars per week in a managerial, executive or super-
4743 visory capacity, or to technical staffs, nor to outside
sales or service employees.

"The question has arisen with us as to whether or not our mine surveyors—men who work in the engineering office—would be classed as part of the technical staff. I will appreciate it if you can give me any information on this point."

It was the sense of the Code Authority that mine surveyors, men who work in the Engineering Office, were to be classed as part of technical staffs under Article III, Section 3 (c) of the Lead Code.

The Chairman next presented a petition from the Bunker Hill and Sullivan Mining and Concentrating Company and the Hecla Mining Company, dated July 10, as follows:

"The undersigned members of the Lead Industry, especially on behalf of certain of their employees, respectfully request an exception from the provisions of Article III of the Code of Fair Competition for the Lead Industry, as approved May 24, 1934, so as to permit these employees to arrange their schedule of work to their better advantage and comfort. The employees referred to are those who are on continuous operations such as running mine pumps, operatives in power houses, etc., some of whom, under the Code, work forty-eight hours per week. These men greatly prefer to work continuously for two or three weeks, then lay off two or three days as the case may be and then resume their work on another shift, but in no instance would they exceed an average of forty or forty-eight hours per week as the case may be during any thirteen weeks-period.

"This is practically the same plan as is embodied in the Copper Code forty hours per week over a three months period; there is no change in the number of hours worked but their distribution is changed to a more convenient and popular plan. To hold these men rigidly down to a forty or forty-eight hour working time in any seven day week is inconvenient, and especially at the request of a number of employees are we making this request. If necessary formal petition for such a change can be had from a large number of our employees and an endorsement of the plan will be made by local labor unions. Bunker Hill & Sullivan Mining & Concentrating Co. By Stanly A. Easton, Pres. Hecla Mining Company, by James F. McCarthy, Pres."

4744 In view of the fact that the exemption requested referred to mine employees on continuous operations, such as powerhousemen and pumpmen, and that the petition was presented at the request of a number of employees of Bunker Hill and Hecla Mining Companies, and that an endorsement of the plan would be made by the local labor unions, the Code Authority approved the aforesaid petition and instructed the Secretary to transmit it to the Administrator with its endorsement.

Mr. Sprague stated that the Solder Section of the Metallic Lead Products Division had met to interpret Article VIII, Section 1 (i) but that opinion had not been unanimous on an interpretation. The Chairman therefore requested that the minutes of the Solder meeting, at which this interpretation was discussed, be distributed to the members of the Code Authority so that the Code Authority could act on this interpretation at the next meeting.

At the suggestion of Major Farny, the Chairman announced that the next meeting of the Code Authority would be held on Monday, August 20, at a time and place to be announced later.

The meeting thereupon adjourned.

Secretary.

4745 Exhibit "B." Third Code Authority Meeting—

July 27, 1934.

Copy

Code of Fair Competition for the Lead Industry.

Order Granting Temporary Exemption from the Trade and Marketing Provisions for the Lead Pigments Division of the Lead Industry.

An application having been duly made by the Members of Industry of the Lead Pigments Division of the Lead Industry for a temporary exemption from the provisions of Section 2 of Article VII, Schedule A, which is a part thereof, of the above described Code of Fair Competition, and the Deputy Administrator having recommended that such application be granted to the extent hereinafter set, and it appearing that the granting of such exemption is necessary to effectuate the policies of Title I of the National Industrial Recovery Act:

Now, Therefore, pursuant to the authority vested in me by Executive Orders of the President and Orders of the Administrator for Industrial Recovery, it is hereby ordered that the Members of Industry of the Lead Pigments Division of the Lead Industry be and hereby are granted an exemption from the provisions of Section 2 of Article VII and Schedule A of said Code of Fair Competition for a period of three months from the date hereof, provided, that such exemption be granted without prejudice to further extension beyond three months if at the end it shall appear to the Administrator that the Industry has been unable to determine upon either the execution of Section 2 of Article VII and Schedule A which is a part thereof or upon the modification thereof.

C. E. Adams,
Division Administrator.

Approval recommended:
W. A. Janssen,
Deputy Administrator.

In Reply Refer To Code No. 442

Lead Industry Code Authority,
Mr. W. E. Wormser, Secretary,
420 Lexington Avenue,
New York, New York

Dear Sir:

There is transmitted herewith certified copy of Administrative Order No. 442-3, granting the Lead Pigments Division of the Lead Industry temporary exemption from the provisions of Section 2 of Article VII, Schedule A of the Code of Fair Competition for the Lead Industry, such Order having been approved on June 27, 1934.

Very truly yours,
H. Rose,
Chief, Code Record Section.

Enclosure:
Copy as above.

4747 UNITED STATES OF AMERICA

(NRA Cut)

National Recovery Administration

To all to whom these presents shall come, Greeting:

By virtue of authority vested in me by an order of The President, dated November 18, 1933, I, Hugh S. Johnson, Administrator for Industrial Recovery, certify that the attached copy of Administrative Order No. 442-3, granting the Lead Pigments Division of the Lead Industry temporary exemption from the provisions of Section 2 of Article VII, Schedule A of the Code of Fair Competition for the Lead Industry,—is a true and correct copy of the original, now in my custody, as approved on the 27th day of June, 1934, pursuant to the provisions of the National Industrial Recovery Act, approved June 16, 1933, Public, No. 67, 73d Congress.

In testimony whereof, I, Hugh S. Johnson, Administrator, have hereunto caused my name to be subscribed and the seal of the National Recovery Administration affixed by the Official Certification Clerk, at the City of Washington, in the District of Columbia, this 16th day of July, 1934.

Hugh S. Johnson,
Administrator for Industrial Recovery.
Winidred A. Evers,
Asst. Official Certification Clerk.

No. 24942

4748 Code of Fair Competition for the Lead Industry

Order No. 442-3

Order Granting Temporary Exemption From the Trade and Marketing Provisions for the Lead Pigments Division of the Lead Industry.

An application having been duly made by the Members of Industry of the Lead Pigments Division of the Lead Industry for a temporary exemption from the provisions of Section 2 of Article VII, Schedule A, which is a part thereof, of the above described Code of Fair Competition, and the Deputy Administrator having recommended that such application be granted to the extent hereinafter set, and it appearing that the granting of such exemption is necessary to effectuate the policies of Title I of the National Industrial Recovery Act;

Now, Therefore, pursuant to the authority vested in me by Executive Orders of the President and Orders of the Administrator for Industrial Recovery, it is hereby ordered that the Members of Industry of the Lead Pigments Division of the Lead Industry be and hereby are granted an exemption from the provisions of Section 2 of Article VII and Schedule A of said Code of Fair Competition for a period of three months from the date hereof, provided, that such exemption be granted without prejudice to further extension beyond three months if at the end it shall appear to the Administrator that the Industry has been unable to determine upon either the execution of Section 2 of Article VII and Schedule A which is a part thereof or upon the modification thereof.

C. E. Adams,
Division Administrator.

Approval recommended:
W. H. Janssen,
Deputy Administrator.

4749 RESPONDENT'S EXHIBIT NO. 8.

Code Authority for the Lead Industry
420 Lexington Avenue
New York, N. Y.

Memorandum No. 8.
June 28, 1934.

To Members of the Code Authority:

Subject: Petition Lead Pigments Division.

We have been advised by Deputy Administrator Janssen, under date of June 27, that the application of the members of the Lead Pigments Division of the Lead Industry, for temporary exemption from Section 2 of Article VII and Schedule A, which is a part thereof, of the Code of Fair Competition for the Lead Industry, has been granted. A copy of the order covering this temporary exemption is attached.

Very truly yours,
F. E. Wormser,
Secretary.

P. S. Request for this exemption was made prior to the formation of our Code Authority and was made through the Lead Industries Association.

F. E. W.

4750 Code of Fair Competition for the Lead Industry

Order Granting Temporary Exemption from the Trade and Marketing Provisions for the Lead Pigments Division of the Lead Industry.

An application having been duly made by the Members of Industry of the Lead Pigments Division of the Lead Industry for a temporary exemption from the provisions of Section 2 of Article VII, Schedule A, which is a part thereof, of the above described Code of Fair Competition, and the Deputy Administrator having recommended that such application be granted to the extent hereinafter set, and it appearing that the granting of such exemption is necessary to effectuate the policies of Title I of the National Industrial Recovery Act:

Now, Therefore, pursuant to the authority vested in me by Executive Orders of the President and Orders of the Administrator for Industrial Recovery, it is hereby ordered that the Members of Industry of the Lead Pigments Division of the Lead Industry be and hereby are granted an exemption from the provisions of Section 2 of Article VII and Schedule A of said Code of Fair Competition for a period of three months from the date hereof, provided, that such exemption be granted without prejudice to further extension beyond three months if at the end it shall appear to the Administrator that the Industry has been unable to determine upon either the execution of Section 2 of Article VII and Schedule A which is a part thereof or upon the modification thereof.

C. E. Adams,
Division Administrator.

Approval recommended:
W. A. Janssen,
Deputy Administrator.

June 27, 1934.

4751 **RESPONDENT'S EXHIBIT NO. 9.**

Fifth Meeting

Code Authority Meeting

New York, N. Y. September 25, 1934.

A meeting of the Code Authority for the Lead Industry was held on Tuesday, September 25, 1934, at 10:00 A. M., in the Board Room of the National Lead Company, 111 Broadway, New York, N. Y.

Present

Members	Alternates.
Clinton H. Crane, Chairman	H. M. Brush
F. M. Carter	F. F. Colcord
W. Y. C. Hunt	I. H. Cornell
R. M. Roosevelt	Clarence Glass
P. E. Sprague	R. G. McKay
	F. S. Mulock

G. W. Farny, Administration Member
F. E. Wormser, Secretary, Treasurer.
By Invitation
W. Hochschild
F. Laist
S. H. Levison

The minutes of the fourth Code Authority meeting of August 20 were approved.

Equitable Wage Adjustment Reports

The Secretary reported the receipt of numerous statements from members setting forth equitable adjustments made by them under the provisions of Article IV, Section 5, but reported that many statements were still outstanding. As some uncertainty existed with reference to the responsibilities and duties of the Code Authority in procuring compliance with Section 5 of Article IV, and as the Code Authority had not had an opportunity to scrutinize the individual reports submitted, without objection the Secretary was instructed to prepare a digest of the reports that had been received, mailing copies of the reports to the Code Authority members and sending letters to those members who had not yet responded, urging them to furnish

their reports at once. The Secretary was also directed to ascertain from counsel the duties of the Code Authority under Article IV, Section 5.

4752 Safety and Health Program

The Secretary reported progress among the various Divisions in comparing Safety and Health Standards, as required by Article V, Section 4.

Eight-Hour Day Report

The report on the Operation of the Eight-Hour Day for the Mining Division, as submitted to the Administrator under date of September 1, and the Supplementary report of September 18, were approved and are attached hereto as Exhibit "A".

Plan for Safe-Guarding Code Authority Funds

The Plan for the Safe-Guarding of Code Authority Funds, as submitted to the Administrator under date of September 18 was approved and appears in these minutes as Exhibit "B", together with correspondence on the budget with Deputy Administrator Janssen, letters being dated as follows:

Exhibit B-1 W. A. Janssen's letter—July 27, 1934
Exhibit B-2 F. E. Wormser's letter—Aug. 2, 1934, with enclosure
Exhibit B-3 W. A. Janssen's letter—Aug. 10, 1934.

Petition for Exemption—Lead Pigment Division

As the Lead Pigments Division was desirous of procuring an extension of exemption from the provisions of Section 2, Article VII and Schedule A, the Secretary reported the submission to the Administrator, under date of September 18, of a formal request for such extension. The letter mailed the National Recovery Administration under date of September 18, on behalf of the Pigments Division, was formally approved by the Code Authority and appears as follows:

"Under date of June 27, 1934, an order granting temporary exemption from the trade and marketing provisions for the Lead Pigments Division of the Lead Industry, particularly in reference to the provisions of Section 2 of Article VII and Schedule A was granted by the Adminis-

trator for a period of three months from that date, pro-
vided 'that such exemption be granted without prejudice
to further extension beyond three months if at the end it
shall appear to the Administrator that the Industry
4753 has been unable to determine upon either the execu-
tion of Section 2 of Article VII and Schedule A, which
is a part thereof or upon modification thereof.'

"Inasmuch as the Lead Pigments Division has not yet been unable to determine upon the modification of Article VII, Section 2 it desires, a further extension for a period of at least three months granting temporary exemption from the provisions of Section 2, Article VII and Schedule A is respectfully requested."

Industrial Relations Board Plan Overtime Reports

The letter from Deputy Administrator Janssen, dated August 31, granting an extension of time for the submission of an Industrial Relations Board Plan and outlining the policy of the National Recovery Administration, with regard to Overtime Reports, was inserted in the record as follows:

"Receipt is acknowledged of a copy of the Minutes of the Fourth Meeting of your Code Authority, held August 20, 1934, and of your letter dated August 23, regarding reports on overtime. There are no objections to referring these reports to the Administration Member for his review. This, however, is not necessary and has not been required in view of the policy to divorce administration members from as much detail work as possible.

"I note on page 2 of the Minutes that the Code Authority requests an extension of time to November 4, 1934, for the submission of a plan for Regional Industrial Relations Boards. In view of the fact that a detailed procedure for handling labor complaints and labor disputes has not yet been developed, it will be satisfactory to delay the submission of this plan until such time as our policies in this regard are more definite."

Definition of "Week"

The Secretary reported the receipt of and read a letter from Deputy Administrator Janssen on the meaning of "week" and inasmuch as this was a matter which some Code Authority members desired to give further study, consideration was postponed to a subsequent meeting.

4754 **Trade Practice Complaints Committee Plan**

A Trade Practice Complaints Committee Plan, as prepared by the Code Authority Members especially interested, was presented by the Chairman for consideration. Formal action upon the Plans was deferred to a later meeting.

Certificates of Compliance

Two forms of Certificates of Compliance, which had been circulated among Code Authority Members, were presented for consideration and are attached herewith as Exhibit "C". The Chairman reported that the Code Authority had been advised by two members of the committee of three as counsel to study the subject, that only the longer form of Certificate complied with the President's Order but that this did not, however, prejudice members against the use of any form of certificate which they felt served their requirements.

Status of Antimonial Lead

The Chairman of the Metallic Lead Products Division, having requested an official interpretation of the status of antimonial lead, as follows, Code Authority members present were invited to express their views:

"Article II, Section 6, Paragraph (c) of the Code defines lead smelting and refining, Paragraph (d) defines antimonial pig lead, and Paragraph (f) defines metallic lead products.

"We have all along been proceeding on the assumption that manufacturers of antimonial pig lead were properly included in the Metallic Lead Products Division, and, as you know, we have set up within that Division a Section devoted to antimonial lead, the leading members of which are the manufacturers of antimonial pig lead rather than manufacturers of extruded, rolled, or otherwise fabricated lead products.

"The more I study the terminology of the Code above referred to, the more it appears to me that antimonial pig lead properly is included in and belongs under the Lead Smelting and Refining Division and not under the Metallic Lead Products Division.

"Would you please ask the Code Authority to interpret the following point, therefore:

"Are manufacturers of antimonial pig lead included in the Metallic Lead Products Division of the Code?"

Signed: P. E. Sprague.

4755 The Secretary read a letter from Deputy Administrator Janssen, dated September 13, on the subject, as follows:

"This comes as an acknowledgment to your Memorandum No. 38, under date of September 8, asking for an interpretation of the status of antimonial pig lead.

"Antimonial pig lead is a product of the Lead Smelting and Refining Division and logically comes under that Division and not under the Metallic Lead Products Division.

"The Metallic Lead Products Division was meant to cover finished or semi-finished products of Industry rather than such 'raw materials' as pig lead or 'antimonial lead'".

It was pointed out, however, that the answer to the problem was not simple because there were really two kinds of antimonial lead involved, one a crude antimonial lead produced by the primary smelters of antimony bearing materials and the other a finished antimonial product produced to exact specification for the storage battery manufacturers.

The Chairman requested Mr. Sprague, representing the Metallic Lead Products Division, and Mr. H. M. Brush, representing the Smelting and Refining Division, to act as a Committee to draft a definition of Antimonial Lead for submission to the Code Authority at its next meeting.

Executive Order No. 6767.

With reference to the letter from Mr. Leon Henderson, Director of Division of Research and Planning of the National Recovery Administration, dated September 17, inquiring as to the effects of Executive Order No. 6767, which is attached as Exhibit "D", the Secretary was instructed to advise Mr. Henderson that as the Lead Code had no pricing provisions in it that were in effect today, that no information could be supplied in answer to his inquiry.

Speakers' Bureau.

The Chairman read a communication from the Speakers' Bureau, as follows, requesting assistance in furnishing speakers on behalf of the National Recovery Administration:

4756 "I have been asked by Mr. Charles F. Horner, Public Relations Director of the NRA, to organize a Speakers' Bureau in the City of New York, to be composed of representatives from all local Code Authorities.

"This Speakers' Bureau will function as the Educational

Advisory Group of the NRA in the State of New York and it will be the duty of these speakers to accept assignments to speak before business groups, civic groups and philanthropic groups. We are naturally anxious to have men and women who understand the purposes of the NRA and who, at the same time, are equipped to talk about their particular industry.

"Will you therefore, give this your very serious consideration, and advise me at the earliest possible moment the name of the person whom you wish to designate on this Speakers' Bureau."

Signed: Lawrence Craner,
Publicity Director.

Major Farny volunteered his services to assist the Speakers' Bureau.

The meeting adjourned to reconvene on Tuesday, October 23, 1934.

Secretary.

4759 RESPONDENT'S EXHIBIT NO. 11.

Seventh Meeting.

Code Authority Meeting.

New York, N. Y. November 16, 1934.

A meeting of the Code Authority for the Lead Industry was held on Friday, November 16, 1934, at 10:00 A. M., in the Board Room of the National Lead Company, 111 Broadway, New York, N. Y.

Present.

Members	Alternates
Clinton H. Crane, Chairman	W. C. Beschorman
F. M. Carter	H. M. Brush
W. Y. C. Hunt	F. F. Colcord
R. M. Roosevelt	Clarence Glass
P. E. Sprague	R. G. McKay

G. W. Farny, Administration Member
F. E. Wormser, Secretary-Treasurer.
By Invitation
S. H. Levison

The minutes of the sixth meeting of the Code Authority of October 26th were approved.

Vacancy—Chairman, Smelting & Refining Division.

There being a vacancy on the Code Authority due to the death of Mr. John A. McCarthy, Chairman of the Smelting and Refining Division, the Secretary was authorized to hold an election, by letter ballot or by formal meeting of the Members of the Smelting and Refining Division, to choose a successor to serve as Chairman of the Smelting and Refining Division and, ipso facto, a member of the Code Authority, and further to elect an alternate or alternates for the Chairman of the Smelting and Refining Division.

Equitable Wage Adjustment Reports.

The Secretary presented Supplementary Report No. 2 on Equitable Wage Adjustments, furnished by Members of Industry, and without objection, the report was inserted in the record as per Exhibit "A" attached.

4760 Application for Exemption From Lead Code Provisions.

Westinghouse Electric and Manufacturing Company.

The application of the Westinghouse Electric and Manufacturing Company, for exemption from the provisions of the Lead Code, was read, as per Exhibit "B" attached and after discussion

It was moved, seconded and carried that the application of the Westinghouse Electric and Manufacturing Company, for exemption from the provisions of the Lead Code, be transmitted to the Administrator with the endorsement of the Code Authority, provided that the Westinghouse Company maintains its manufacturing operations at its present size, with respect to the production of products defined by the Lead Code.

Posting of Labor Provisions.

The posting of labor provisions of the Lead Code was tabled for consideration at a later meeting.

Interpretation of Article III, Section 1 on Change of Shifts.

The Chairman presented a request for an interpretation of Article III, Section 1 on Change of Shifts, by the Eagle-Picher Lead Company, which appears as Exhibit "C" attached. In this connection, the Secretary read some correspondence on the subject he had had with

Deputy Administrator Janssen, which is made a part of said Exhibit.

In view of the necessity of giving careful consideration to all phases of the problem, and to make sure that the Administration would not misconstrue the reasons for an interpretation as to changes of shifts, the Code Authority unanimously decided to prepare a letter setting forth its attitude, to be approved and transmitted to the Administrator at a subsequent meeting.

Trade Practice Complaints Committee.

The Chairman requested information as to whether any trade practice complaints had been received by the Chairmen of the manufacturing divisions of the Lead Code, and there having been none, the Trade Practice Complaints Committee Plan was deferred for a subsequent meeting. At this point Major Farny stated that he believed action should be taken to perfect a plan for handling trade practice complaints.

4761 Report of the Secretary-Treasurer.

The Secretary-Treasurer requested the advice of the Code Authority in sending out requests for subscriptions to the support of the Code Authority, together with the forms essential to procure the labor data on which the Code Authority subscriptions would be based. As a result of these suggestions, it was decided to eliminate clerical help data from the employment information required for subscription purposes. The Treasurer's letter and the resulting labor forms appear as Exhibit "D" attached.

Standards of Safety and Health.

The Chairman noted that as a result of a conference between representatives of the Copper Code Authority and the Lead Code Authority, a tenative draft of proposed Safety and Health Standards had been prepared for the consideration of both Code Authorities. After considerable discussion, the draft was amended to read as in Exhibit "E" attached, but some members feeling the need of giving the subject further study.

It was moved, seconded and carried that the Secretary circulate the latest revised draft of Standards of Safety and Health among Members of the Code Authority, requesting their suggestions within ten days and immediately thereafter circulating a new draft, with the suggestions submitted, in the meantime notifying the Administrator that the complete draft of the Safety and Health Standards is nearly ready for submission and requesting an extension of time beyond November 24, the date upon which the report on Safety and Health Standards becomes due.

Consideration of Action of Paint Recovery Board to Procure Transfer of Lead-In-Oil to Paint Code.

The Code Authority next considered the action which had been taken by the Paint Recovery Board, to secure a transfer of white lead-in-oil from the jurisdiction of the Lead Code to the Paint Code. Knowledge of this action had been obtained from Mr. Carter, who had been advised by Mr. Trigg that the Paint Recovery Board was making a move, through the National Recovery Administration, to procure jurisdiction over white lead-in-oil. Copy of Mr. Trigg's letter appears later in the minutes. The Code Authority, being unanimously of the opinion that the action of the Paint Recovery Board should be opposed, passed the following resolution:

4762 Whereas the Code Authority for the Lead Industry has been informed that the Paint Recovery Board has requested an interpretation from the National Recovery Administration as follows:

"All manufacturers of lead-in-oil are governed by the provisions of the Code of Fair Competition for the Paint, Varnish and Lacquer Manufacturing Industry".

Be It Hereby Resolved that the Code Authority for the Lead Industry is strongly opposed to said interpretation and that the Secretary be instructed to write a letter of protest to the National Recovery Administration and to prepare a brief in support of the position of the Code Authority for the Lead Industry, to be used as necessary.

The Code Authority thereupon composed the following letter which the Secretary was authorized to transmit to the National Recovery Administration:

November 19, 1934.

"The Paint Industry Recovery Board, which is the Code Authority for the Paint Industry, has requested your interpretation to the effect that 'All manufacturers of lead-in-oil are governed by the provisions of the Code of Fair Competition for the Paint, Varnish and Lacquer Manufacturing Industry.'

"We wish, at this time, to enter an emphatic protest against the Paint Industry Recovery Board's interpretation as the Code of Fair Competition for the Lead Industry already specially provides, under the provisions of Article II, Section 6 (e), a place for white lead-in-oil.

"The Paint Code contains an elaborate 'Selling Below Cost' provision. The Lead Code contains no cost or price-fixing provisions and the present attempt of the Paint Industry to have white lead-in-oil transferred to its own Code, if successful, would bring white lead-in-oil under the strict costing provisions of the Paint Code and thereby force upward the price of white lead-in-oil.

4763 "The white lead-in-oil labor provisions are more stringent, therefore, more favorable to labor than the corresponding provisions in the Paint Code. The wages being the same, obviously this is not an issue.

"The original decision of the N.R.A. was equitable to labor, consumer and the white lead industries and, therefore, in the light of the above, we are sure that you will reaffirm the fact that white lead-in-oil belongs in the Code of Fair Competition for the Lead Industry, where it was originally placed by the Administrator, and refuse to entertain the interpretation of the Paint Recovery Board."

Major Farny stated that he had written a letter to Deputy Administrator Janssen, dated October 31, 1934, on the subject, as follows:

"Mr. F. E. Wormser submitted to me a great deal of information in regard to the Paint Industry Recovery Board's desire to have lead-in-oil subjected to its Code of Fair Competition.

"A letter of Mr. E. T. Trigg, President of the Paint Industry Recovery Board, to Mr. F. N. Carter, President of the National Lead Company, a copy of which has been sent to you, states that the Board has submitted to the National Recovery Administration an interpretation to the effect that 'All manufacturers of lead-in-oil are governed by the provisions of the Code of Fair Competition for the Paint, Varnish and Lacquer Manufacturing Industry.'

"In the light of the information submitted to me, I see no reason whatever why such interpretation be considered and I strongly endorse the point of view taken by the National Recovery Administration that lead-in-oil belongs under the Code of Fair Competition for the Lead Industry."

The Secretary stated he had notified Mr. Janssen of the Paint Recovery Board's action with respect to white lead-in-oil as follows:

4764 October 29, 1934.

"I am enclosing copy of a letter written by Mr. Ernest T. Trigg, President of the Paint Industry Recovery Board, dated October 27, to Mr. F. M. Carter, President of the National Lead Company, one of our members, in which he states that he is submitting to the National Recovery Administration an interpretation (presumably of the Paint Code) to the effect that 'All manufacturers of lead-in-oil are governed by the provision of the Code of Fair Competition for the Paint, Varnish and Lacquer Manufacturing Industry.'

"This is the communication about which I spoke to you on the phone this afternoon."

* * * * *

October 27, 1934.

Mr. F. M. Carter, President
National Lead Company
New York, N. Y.

Dear Mr. Carter:

In view of our numerous conversations, we are today submitting to the National Recovery Administration an Interpretation to the effect that "all manufacturers of lead-in-oil are governed by the provisions of the Code of Fair Competition for the Paint, Varnish and Lacquer Manufacturing Industry."

Before submitting this, I discussed it with our Deputy Administrator who has advised this course, looking to a definite, and I hope, final clarification of this situation.

Yours very truly,

Signed: E. T. Trigg, President.

* * * * *

Study of Code Administration.

Without objection, a letter from Deputy Administrator Janssen, dated November 7, with reference to a study of Code Administration, was inserted in the record and is attached as Exhibit "F", and the Chairman's reply follows:

4765 November 7, 1934.

"I have your letter of November 7 in regard to a survey of local code administration as conducted by Local Code Authority Agencies, and this will advise that we will cooperate with the various people any way we can."

Planning and Adjustment Activities.

Without objection a letter from Deputy Administrator Janssen, dated November 12, with reference to planning and adjustment activities was included in the record and is attached as Exhibit "G". The Code Authority was of the opinion that a complete report on all activities was being currently furnished the Administrator in the minutes of the Code Authority meetings.

The meeting adjourned at 12:00 A. M. to reconvene on Monday, December 10, 1934.

Secretary.

Approved Code No. 71

Code of Fair Competition for the Paint, Varnish, and Lacquer Manufacturing Industry as Approved on October 31, 1933 by President Roosevelt.

Executive Order

An application having been made, pursuant to and in full compliance with the provisions of Title I of the National Industrial Recovery Act, approved June 16, 1933, for my approval of a Code of Fair Competition for the Paint, Varnish, and Lacquer Manufacturing Industry, and hearings having been held thereon and the Administrator having rendered his report containing an analysis of the said code of fair competition together with his recommendations and findings with respect thereto, and the Administrator having found that the said code of fair competition complies in all respects with the pertinent provisions of Title I of said Act and that the requirements of clauses (1) and (2) of subsection (a) of Section 3 of the said Act have been met:

Now, Therefore, I, Franklin D. Roosevelt, President of the United States, pursuant to the authority vested in me by Title I of the National Industrial Recovery Act, approved June 16, 1933, and otherwise, do adopt and approve the report, recommendations, and findings of the Administrator and do order that the said code of fair competition be and it is hereby approved.

Franklin D. Roosevelt.

Approval Recommended:
Hugh S. Johnson,
Administrator.
The White House,
October 31, 1933.

29937—296-171—34 (169)

4769 October 27, 1933.

The President,
The White House.

Sir: This is a report of the hearing on the Code of Fair Competition for the Paint, Varnish, and Lacquer Manufacturing Industry conducted in Washington on the 26th of September, 1933, in accordance with the provisions of the National Industrial Recovery Act.

Economic Effect of the Code

Paint is a manufactured product used in part for new production of industrial and consumers goods, and in part as a maintenance material. The quantity required for the former purpose bears a positive relation to general manufacturing activity. For the latter purpose, where the need may be deferred, the current financial condition of the owner of the property has considerable bearing upon the quantity of paint used. For this latter purpose also the cost of the paint is a factor of considerable importance.

The quality of paint in general may be judged by the effectiveness of the covering produced, either as protection or appearance, or both, and the life of that covering. These qualities are not only a function of the ingredients of the paint, but also are a function of the method of preparation of the ingredients and their mixing. It is possible, therefore, to produce paint of varying degrees of quality through a wide scale of costs, and the public is not necessarily in a position to judge quality other than by price. As a consequence of this condition, many practices involving the sale of cheap paint have grown up in the Industry, which, coupled with the financial situation of the last few years, has tended to cause demoralization.

The Code, as submitted herewith, contains in Part Two an unusual number of trade practices which are considered detrimental to the Industry and consequently are prohibited. In the form in which they now stand they meet the approval of the Consumers' Advisory Board.

The provisions contained in this Code as to minimum wages and maximum hours are generally in line with approved codes employing labor of the same quality and under similar conditions.

The reduction in the number of hours from 47.5 of June, 1933, to a maximum of 41.2 average for a six months' period provided by the Code will mean an increase in employment of approximately 25 percent. It is estimated that at the low point of employment there were approximately 18,000 workers in early 1933, and that the provisions of this Code, even under present conditions, should increase the number employed to nearly 25,000.

The wages set up in the Code will increase the pay of only about 20 percent of the workers in the Northern 4770 area and 30 percent of the workers in the Southern area, but the resulting increase in purchasing power, when coupled with the increase in number of workers in the Industry, will be material.

Findings

The Administrator finds that—

(a) The Code as recommended complies in all respects with the pertinent provisions of Title I of the Act, including, without limitation, subsection (a) of Section 7 and subsection (b) of Section 10 thereof; and that

(b) The applicant group imposes no inequitable restrictions on admission to membership therein and is truly representative of the Paint, Varnish, and Lacquer Manufacturing Industry; and that

(c) The Code as recommended is not designed to promote monopolies or to eliminate or oppress small enterprises and will not operate to discriminate against them and will tend to effectuate the policy of Title I of the National Industrial Recovery Act.

It is recommended, therefore, that this Code be immediately adopted.

Respectfully,
Hugh S. Johnson,
Administrator.

4771

Code of Fair Competition for the Paint, Varnish, and Lacquer Manufacturing Industry

Article I—Purpose.

For the purpose of effectuating the policy of Title I of the Act of June 16, 1933, known as the National Industrial Recovery Act, the following provisions are established as a Code of Fair Competition for the Paint, Varnish, and Lacquer Manufacturing Industry.

Article II—Definitions.

The term "The Industry" means all persons in the continental United States engaged in the manufacture of paint, kalsomine and water paint, varnish, including shellac varnish lacquer, and kindred products, including putty, semifinished base materials for lacquers, thinners, and diluents (when such semifinished base materials are sold or offered for sale in competition with the finished products of this Industry), liquid and plastic roof coatings and roof cements, and artists' colors; and/or such branches or subdivisions thereof as may from time to time be included under the provisions of this Code, provided that if any member of the Industry also manufactures products of any other industry, the provisions of this Code shall apply only to that part of his business which is included in this Code. The term "Export Trade" means any business transacted with any purchaser for shipment of products of the Industry outside of the continental United States.

The term "employee" as used herein includes any person engaged in any phase of the Industry in any capacity in the nature of employee irrespective of the method of payment of his compensation. The term "employer" as used herein includes anyone for whose benefit such an employee is so engaged. The term "member of The In-

dustry" includes any manufacturer who shall be subject to this Code. The term "member of the Code" includes any member of The Industry who shall expressly signify assent to this Code. The term "Association" herein means the American Paint and Varnish Manufacturers' Association, Inc., and the National Paint Oil and Varnish Association, Inc., or their successor or successors. The term "Association Headquarters" means the office maintained jointly by the Associations at 2201 New York Avenue, NW., Washington, D. C. The term "Trade Sales" as used herein means all sales to jobbers, dealers, painters, automotive refinishing shops, and sales made directly to the consumer, with the exception of such sales as are hereinafter defined as "Industrial Sales." The term "Industrial Sales" as used herein means all sales to the following classes of buyers, covering products of The Industry used by such buyers on their products or for the finishing of
their equipment and for the painting, upkeep, and
4772 maintenance of their plants, equipment, tenements,
and for any other purpose.

Industrial plants of all kinds (such as automobile manufacturers, implement manufacturers, furniture manufacturers, etc., etc.).

Transportation companies (including street railways, bus, and air transportation companies).

Car and locomotive builders.

Public service companies.

Oil refineries and pipe-line companies.

Packing houses.

Steel manufacturers and those who fabricate their own products.

Bridge builders and bridges.

Coal or other mining operations.

Steamship lines, shipyards, wharves, and docks.

All departments of any State, County, Municipal, or other political subdivisions, but only for the following products: traffic paint; road paint; products used on bridges, trucks, and machinery; automobile license tag coatings; or materials for finishing furniture, or any other products manufactured in prisons or reformatories. All other business from State, County, Municipal, and other political subdivisions, such as products used on buildings, institutions, etc., to be classified as "Trade Sales."

All Departments of the United States Government, regardless of usage.

Article III—Industry Law and Effective Date.

On and after the fifteenth calendar day after the President of the United States shall have approved this Code, the provisions hereof shall constitute standards of fair competition for The Industry and shall be automatically binding upon all members of The Industry, except that all articles of this Code which are included in Part 2 hereof shall not apply to export trade.

Article IV—Collective Bargaining.

In accordance with Section 7 (a) of the Act of June 16, 1933, known as the National Industrial Recovery Act, it is agreed: (1) that employees shall have the right to organize and bargain collectively through representatives of their own choosing, and shall be free from interference, restraint, or coercion of employers of labor or their agents, in the designation of such representatives or in self-organization or in other concerted activities for the purpose of collective bargaining or other mutual aid or protection; (2) that no employee and no one seeking employment shall be required as a condition of employment to join any company union or to refrain from joining, organizing, or assisting a labor organization of his own choosing; and (3) that employers shall comply with the maximum hours of labor, minimum rates of pay, and other conditions of employment approved or prescribed by the President.

4773

Article V—Minimum Wages and Maximum Hours.

(a) No employee engaged in accounting, clerical, office, or delivery service in any office or in any other place or manner, excepting employees in retail stores and excepting outside salesmen, shall work or be permitted to work in excess of 40 hours per week for 20 weeks and 48 hours per week for 6 weeks in any 26-week period.

(b) No factory or mechanical worker or artisan shall work or be permitted to work more than 40 hours in one week nor more than 8 hours in any one day; provided, however, that during any 6 weeks of a 26-week period (the first period to begin on the effective date of this Code) employees may work not more than 45 hours a week nor more than 9 hours in any one day, with the exception of (1) supervisory staff (including foremen), (2) maintenance workers, engineers, and firemen, which excepted employees may not work in excess of the maximum hours stated above except by payment of one and one-third rate for overtime if such employees are compensated on an hourly basis. Each week during any 26-week period shall be considered as a complete unit of employment for the purpose of paying for overtime to excepted employees. If an excepted employee on an hourly basis works more than 40 hours and not more than 45 hours in any one week, the employer shall compensate him at the end of said week for the hours worked in excess of 40 hours at the extra rate or shall declare to the employee that such week will be considered as one of the 6 weeks in which a maximum of 45 hours is permitted. This does not, however, mean that an excepted employee, when necessary, may not work more than 45 hours at the extra compensation. If such excepted employees are paid by the week, month, or on a yearly basis and enjoy vacation periods, sick leaves, and other benefits granted to salaried workers they shall not be paid an additional amount for any reasonable overtime work.

(c) The maximum hours fixed in the foregoing Paragraphs (a) and (b) shall not apply to watchmen, janitors, or other caretakers; nor to employees in a managerial, executive, or other capacity who receive $35.00 per week or more; provided that with respect to the exceptions in this Paragraph and in Paragraphs (a) and (b) of this Article there shall be no evasion of this Code by reclassification of the function of workers. A worker shall not be included in any one of the above exceptions unless the identical functions which he performs were identically classified on June 16, 1933.

(d) The provisions for maximum hours set forth in Paragraphs (a) and (b) of this Article establish a maximum number of hours of labor per 26-week period for each employee so that under no circumstances shall any employee knowingly be employed or permitted to work for one or more employers in The Industry in the aggregate in excess of the prescribed number of hours.

(e) Employers in The Industry, subject to the exception provided in Paragraph (h) of this Article, shall not pay any of the classes of employees covered by Paragraph (a) less than $15.00 per week in any city of over 500,000 population, or in the immediate trade area of such city; nor less than $14.50 per week in any city between 250,000

and 500,000 population, or in the immediate trade area of such city; nor less than $14.00 per week in any city or town of less than 250,000 population, or in the im-
4774 mediate trade area of such city or town; provided that employers in The Industry may pay to any class of employees covered by Paragraph (a) who perform the work of office boys and office girls not less than 80 per cent of the minimum wage designated by this Paragraph, provided that the number so excepted shall not exceed 5 per cent of the total employees of the employer and provided, further, that each employer may have at least one such employee. Population for the purposes of this Code shall be determined by reference to the 1930 Federal Census.

(f) Employers in The Industry, subject to the exception provided in Paragraph (h) of this Article, shall not pay any employee of the classes covered by Paragraph (b), or employees excepted therein, namely, supervisory staff (including foremen), maintenance workers, engineers, and firemen, less than 40 cents per hour to male employees, or less than 35 cents per hour to female employees. The foregoing distinction in minimum rates between male and female employees is not a discrimination by reason of sex but because of a difference in the work done. Where female employees do the same kind and amount of work as male employees they shall receive the same wages. It is agreed that this Paragraph establishes a guaranteed minimum rate of pay regardless of whether the employee is compensated on the basis of a time rate or on piecework performance.

(g) The provisions of Paragraphs (e) and (f) of this Article shall not apply to any employee partially incapacitated through are or otherwise, who has served not less than 10 years in the continuous employment of the employer, provided that the number so excepted shall not exceed 5 per cent of the total employees of the employer, and provided that each employer may have at least one such employee, and provided further that the minimum wage paid to such employee shall not be less than 30 cents per hour.

(h) Employers in The Industry shall not pay less than 90 per cent of the minimum wages provided in Paragraphs (e) and (f) of this Article, to employees in the Southern states. For the purpose of this Article, the Southern states are defined as—

Alabama
Arkansas
Florida
Georgia
Kentucky
Louisiana
Mississippi
North Carolina
Oklahoma
South Carolina
Tennessee
Texas
Virginia

(i) No person under the age of 16 shall be employed in The Industry.

Article VI—Presidential Authority.

As required by Section 10 (b) of Title I of the National Industrial Recovery Act, the following provision is contained in this Code: The President may from time to time cancel or modify any order, approval, license, rule, or regulation issued under Title I thereof.

4775

Article VII—Monopolies.

No provision in this Code shall be interpreted or applied in such a manner as to: (1) Promote monopolies; (2) Permit or encourage unfair competition; (3) Eliminate, oppress, or discriminate against small enterprises.

Article VIII—State Laws.

Within each state, members of The Industry shall comply with any laws of such state imposing more stringent requirements, regulating the age of employees, wages, hours of work, or general working conditions, than under this Code.

Article IX—Reports.

The Paint Industry Recovery Board, through Association Headquarters, shall collect and provide all reports required by the Administrator under the National Industrial Recovery Act. Every member of The Industry shall furnish such reports as are required pursuant to such requirements.

In addition to information required to be submitted through the Paint Industry Recovery Board, there shall be furnished to government agencies such statistical information as the Administrator may deem necessary for the purpose recited in Section 3(a) of the National Industrial Recovery Act.

Article X—Administration.

After this Code shall have been approved by the President of the United States, it shall be administered through the Association by a board to be immediately created and to be known as the "Paint Industry Recovery Board."

This Board shall be composed of the following members: Not more than 3 members without voting power to be appointed by the President, the 8 members of the present General Code Committee, 20 members, representing commodity groups, 20 members representing communities.

The members of the Board representing commodity groups shall be elected as follows: 5 members to be elected by paint manufacturers, 5 members to be elected by varnish manufacturers, 5 members to be elected by lacquer manufacturers, 5 members to be elected by kalsomine and water-paint manufacturers.

Provided that each of these groups shall contain 2 members from the Eastern States, 1 member from the States in or west of the Rocky Mountains and 2 members from the remaining States. Nominations for election to the Board for said Commodity groups shall be made by members of The Industry at large, regardless of membership in any association, and the nominations so made shall be submitted to a mail vote of all members of The Industry throughout the United States and those receiving the highest number of votes in each Group shall be declared to have been elected to represent the Commodity groups. The members of the Board representing communities shall be elected in the following manner: 1 each to be elected by the members of The Industry doing business in the logical trading areas of the following cities, which manufacturers shall be called together for the purpose of
4776 election by the President of the Local Paint Club,
or local paint manufacturers' association if any such exists:

Atlanta-New Orleans
Baltimore
Boston
Buffalo
Chicago
Cincinnati
Cleveland
Dallas-Houston
Denver
Detroit
Kansas City
Los Angeles
Louisville
Minneapolis-St. Paul
New York
Philadelphia
Pittsburgh
St. Louis
San Francisco
Seattle-Tacoma-Portland

No person shall be eligible for membership on this Board who is not directly engaged in the manufacture of products of The Industry, except the members to be appointed by the President of the United States. Furthermore, no company or group of affiliated companies shall have more than one representative on this Board. Vacancies which may occur in the Board for any reason whatsoever shall be filled by election in the same manner as hereinbefore provided. This Board, subject to the approval of the Administrator, shall elect its own Chairman, adopt its own rules of procedure (not in conflict with any other provisions herein contained), appoint such committees as may to it seem necessary from time to time, and may delegate its authority to such committees. A majority of the Board shall have the power to recommend to the Administrator for his approval the addition of representatives of other groups or communities to its membership; provided that such additional members shall be elected in the same manner as above described.

The staff, Association Headquarters, and other facilities of the Association shall be employed in carrying out the work of the Paint Industry Recovery Board. Such funds as may be required for the work of this Board shall be subject to appropriation by the Budget and Finance Committee of the Association. All members of the Industry or groups thereof who qualify as such under this Code are eligible to membership in the American Paint & Varnish Manufacturers' Association, Inc., or its successor, without payment of initiation fee, which has been temporarily waived. If group membership, such groups shall pay into the Treasury of the American Paint and Varnish Manufacturers' Association, Inc., a total amount equal to the dues of each member of such group as if each member were a direct member of the American Paint and Varnish Manufacturers' Association, Inc. If for any reason an eligible manufacturer does not desire to join this Association he may, nevertheless, receive all of its benefits, including participation in this Code, by paying a fee to its Treasurer equal to the dues, provided that should any member of this Code desire not to become a member of the Association and desire not to pay to its Treasurer a sum equal to the dues, he shall nevertheless pay his proportionate share of the amounts required to pay the cost of assembly, analysis and publication of necessary reports and data and of the maintenance of this administrative

authority and its activities and the Paint Industry Recovery Board shall assess each such member of the Industry with his proportionate share based upon the
4777 value of sales or otherwise as the Paint Industry Recovery Board may prescribe subject to the approval of the Administrator.

The Paint Industry Recovery Board shall have full responsibility for its expenditures within the limits of such appropriations as are made from time to time, provided that no traveling or other expenses of Board members shall be paid out of the Association funds when attending Board meetings, but actual expenses of members of the Board when engaged in the business of the Board, other than attendance at Board meetings, may be paid out of such funds provided prior authority for such expenditure or expenditures has been given by the Board.

Article XI—Amendments.

Such of the provisions of this Code as are not required to be included therein by the National Industrial Recovery Act of June 16, 1933, may, with the approval of the President, be modified or eliminated as changes and circumstances may indicate. It is contemplated that from time to time supplementary provisions to this Code will be submitted for the approval of the President to prevent unfair competition in price and other unfair and destructive competitive practices and to effectuate the other purposes and policies of Title I of the National Industrial Recovery Act, consistent with the provisions hereof. Members of The Industry or a local paint manufacturers' association, if any such exists, shall submit desired amendments of this Code to the Paint Industry Recovery Board through Association Headquarters. By agreement of a majority of the Board, an amendment, so received or one initiated by the Board itself, shall be referred to The Industry in the following manner: those members of the Board who represent the commodity groups shall submit the proposed amendment to their respective groups, if in their opinion it is germane to the interests of such groups; those members of the Board who represent manufacturers from the several cities shall call meetings of the manufacturers in their communities. The several Board members shall then submit individual reports to Association Headquarters, which shall collate them and submit a full report to the

Board. Thereafter the Board shall vote on submitting the Amendment to the Government and shall so submit it if at least two-thirds of the Board vote to do so, provided that the proponent of any amendment shall have the right to submit such amendment direct to the National Recovery Administration for its consideration.

By presenting this Code the members of The Industry do not thereby consent to any modifications thereof and reserve the right to object individually or jointly to any such modifications.

Part 2—Trade Practices.

Article XII—Misbranding, Mislabelling, and False Advertising.

Misbranding, mislabelling, and false, deceptive, and misleading advertising are prohibited by this Code.

4778 Article XIII—Gifts to Employees of Another

It shall be a violation of this Code for any person engaged in The Industry, to offer or give—or to permit any representative of his to offer or give—any commission, gratuity, or other thing of substantial value to employees of his customers or prospective customers, except in the case of payments made with the consent of the employer for a definite service rendered.

Article XIV—Manufacturing Restrictions.

It shall be a violation of this Code for any manufacturer to fail ~~to~~ abide by the manufacturing restrictions as set out in Schedule A which is attached hereto and made a part of this Code, provided that this Article shall not apply to export trade and provided further that Paragraphs 2, 4, 5, and 6 of Schedule A shall not apply to products commonly known as 5-, 10-, and 25-cent merchandise which is sold at retail to the consumer at not more than 25 cents per package.

Article XV—Exchange of Goods.

The practice of taking in exchange for one's own goods, Industry products of another manufacturer, distributor, or dealer, is unethical, unfair, and is hereby prohibited. It shall be a violation of this Code for any manufacturer in the Industry to take or allow to be taken in exchange for his own products, any product of the Industry, or to give or permit the giving of any advice or assistance in facilitating such exchange or replacement, or to make or permit to be made any concessions, allowances, or gifts of any kind to promote or facilitate such exchange.

Every member of the Industry is required to enter into a written agreement with his jobbers and/or distributors whereby such jobbers and/or distributors agree to refrain from the practice prohibited by this Article. It shall be a violation of this Code for any member of the Industry to deal or continue to deal with any jobber and/or distributor who shall have acted contrary to such agreement, provided that no member of the Industry shall be held responsible for such dealings as he may have engaged in prior to the time he has received notice of the breach of such agreement by a jobber and/or distributor, and provided that no member of the Industry shall be held responsible for such dealings after the Paint Industry Recovery Board has given approval for further dealings with a jobber and/or distributor who may have violated such an agreement. The Paint Industry Recovery Board may require each member of the Industry to file a copy of each agreement which he may make with a jobber and/or distributor.

Article XVI—Standard Terms of Cash Discount.

On and after the effective date the terms granted by manufacturers, excluding export trade, shall not exceed: Trade sales accounts, 2 per cent for cash in 10 days, net 60 days; industrial sales accounts, 1 per cent for cash in 10 days, net 30 days; except that the discount to 4779 trade sales accounts may be extended to the 10th day of the month following purchase and the discount to industrial sales accounts may be extended to the 20th day of the month following purchase to customers who regularly discount in the month following purchase, and provided that no discount shall be allowed after the discount date.

Article XVII—Datings.

Except as specifically provided by this Article, members of The Industry shall not grant any datings on the sales of any Industry products.

(a) Spring Stock Orders.—Datings on orders to established dealer and/or jobber accounts, excluding export trade, shall be limited to datings on Spring Stock Orders shipped at the manufacturer's convenience after October 15, with an April 1 dating and regular terms; one order to an account.

(b) New Accounts.—The maximum dating on trade sales stock orders (initial stock order only) to new dealer and/or jobber accounts, excluding export trade, shall be limited to four months from the date of shipment and with standard terms, provided that orders shipped between October 15 and December 1 in any year may be with an April 1 dating and with regular terms.

(c) Roof Coatings and Cements.—A maximum dating of four months may be given on a carload of not less than 40,000 lbs. of liquid and plastic roof coatings and/or roof cements, not including other products, whenever the lowest published less-than-carload freight rate (by rail or water) is more than 50 cents per cwt.

(d) Anticipated Discount.—If any dating shall be permitted under this Article, an anticipated discount may be allowed to the extent of one-half of one per cent a month.

Article XVIII—Guarantees.

(a) Price Guarantees.—Guarantees against price decline shall be prohibited except in the case of an order on which a dating has been allowed under Article XVII, when such a price guarantee may be given for a time not to exceed the dating period granted.

(b) Time Guarantee—Definite time guarantees on the life and/or service of the products of The Industry are hereby prohibited.

Article XIX—Consignment.

The practice of supplying accounts on consignment and/or trust certificate agreements, except as hereinafter provided, is prohibited. This also includes consignments which are sometimes made under so-called "warehouse agreements" but does not prohibit manufacturers from carrying a stock of their goods in a public or private warehouse at their own expense in any section of the United States, provided that such stocks must not be warehoused with or for the account of any person, firm, or corporation dealing in or handling (as a merchant) or using (as a painter) products of the industry. Every manufacturer who has any such consignment stocks in the hands of buyers on the effective date of this Code may continue the same but he shall file a detailed list of such accounts within 60 days of the effective date of this Code with Association Headquarters and/or the office of a local paint manufacturers' association, if any such exists, where reference may be made to it at any reasonable time by interested parties. Until such time as an account as listed above is discontinued, such accounts may be similarly supplied by any manufacturer in the Industry. The Paint Industry Recovery Board shall, subject to the approval of the Administrator, develop such plans as will effectuate the ultimate elimination of consignments from the Industry. This Article shall not apply to export trade.

Article XX—Free Deals.

Except as otherwise provided herein, free deals in or connected with Industry products are prohibited. "Free deals" for the purpose of this Code means all forms of marketing devices, including the gift or loan of spraying or other valuable equipment, whether the full cost thereof or only a part of said cost is borne by the manufacturer, whereby the said manufacturer furnishes goods of any kind other than such of his own products as have been contracted for on his usual terms: Provided that the term "Free Deals" shall not apply to the furnishing of advertising accessories of small value, such as the usual circulars, color cards, window displays, display racks, and posters which accompany paint and varnish products as a description thereof, nor shall it apply to novelties of small value such as caps, yardsticks, paddles, etc.

Furthermore, the term "Free Deals" shall not be construed to include any advertising allowance which is made for a definite service rendered and for which there is a proper accounting that is auditable as a direct charge for cooperative advertising.

Illustrative of the practices which are prohibited are included the following;

(a) Premiums (gifts of unrelated merchandise) such as blankets, articles of furniture, etc.

(b) Prizes and awards. This does not refer to prizes and awards given within a manufacturer's own organization.

(c) Free Goods (extra amounts of one's own products).

(d) Merchandising practices of the type commonly known as "One-cent sales."

(e) Free Samples. (But the term "Free Deals" does not apply to samples given for test purposes; neither does it apply to trade-sale samples given for demonstration purposes, provided that no size larger than 5-lb. samples of water-paint goods in dry form or 1/32 gallons of other industry products shall be so used and that such samples are plainly labeled "Samples.")

(f) The sale of alcohol, turpentine, linseed oil, or any other products not manufactured by The Industry at prices less than the resale market price.

Article XXI—Discontinuance of Shades and Colors.

When it becomes necessary and advisable for any manufacturer to discontinue certain shades or colors in any trade-sales line, he shall give his dealer and/or jobber customers who purchase such lines six months' ad-
4781 vance notice prior to discontinuing the manufacture
of such shades or colors, providing that this Article shall not apply to export trade.

Article XXII—Selling Below Cost.

Products of The Industry shall not be sold at less than cost as herein defined:

(1) The cost of Lacquer Thinners in full tank cars or tank wagons containing not less than one thousand-gallon quantity, when sold and delivered to one purchaser, shall be not less than the sum total of the current market replacement price of each and every ingredient in the completed Thinner.

The cost of all other products shall include the following:

(2) The seller's total market replacement cost of raw materials (based on cost furnished monthly, or oftener if necessary, by authority of the Paint Industry Recovery Board through Association Headquarters, subject to approval by the Administrator); and if any raw materials are used (such as varnishes, japans, driers, etc., purchased in finished form by the seller) for which costs are not furnished monthly or oftener, as herein provided, the cost used for such item or items shall be the seller's total current delivered replacement cost.

(3) Containers and/or packages.

(4) Cost of Processing.—To include all direct costs (such as power and labor), depreciation figured in accord-

ance with provisions of the Federal Income Tax laws, plus a proper proportion of all indirect factory expenses (excepting interest on investment), in accordance with the share each product should bear, provided that the distribution of indirect factory expense per unit of production shall be on the basis of the average rate of utilization of plant facilities of profit making producers during the years 1928 to 1932 inclusive, and provided that such average rate shall not include any plants not in operation.

(5) There shall also be included in the cost a proportion of the general and administrative expenses, such proportion to be determined and to be recommended by the Paint Industry Recovery Board to the Administrator for approval.

(6) Transportation charges when goods are sold f.o.b. destination.

In the case of any complaint by an interested party that a manufacturer is violating the above cost provisions the burden of proof of compliance shall rest upon the accused manufacturer. If the Code Authority or the Administrator is not satisfied by the proof furnished by the defendant manufacturer the matter is to be referred to the Federal Trade Commission who shall audit the cost accounting of the defendant and review his allocation of burden; and the report of that Commission shall be final regarding the costs of the defendant manufacturer.

Article XXIII—Competitive Relations.

**(a) Inducing Breach of Contract.—No manufacturer
either directly or indirectly or through his salesmen,
4782 representatives, or agents shall encourage any pur-
chaser of the products of The Industry to disregard
or fail to live up to his commitment to another member of
The Industry.**

(b) Disparagement of Competitors.—The use of or participation in the publishing or the disseminating of any false statement, representation or insinuation which disparages the business of a competitor, or attacks the reputation, goods, prices, service, or advertising of any competitor or of any other industry, is an unfair and uneconomic practice and is prohibited.

(c) Enticing Employees.—Members of The Industry shall recognize the right of employees to use all honorable and reasonable efforts to better their conditions, but shall refrain from directly or indirectly soliciting or bidding

for the services of the employee of another member. Only when such an employee takes the initiative shall a member of The Industry have the right to negotiate with him about prospective employment.

Article XXIV—Returned Goods.

No member of The Industry shall accept the return of merchandise from any customer without having given prior consent to the return thereof. On such goods as are accepted for return a reasonable charge shall be made and the freight charges must be charged to the shipper returning the merchandise, except in the case of defective products or where in some other way the manufacturer may be responsible.

Approved Code No. 71.
Registry No. 619/1/03.

4783

Schedule A.

Manufacturing Restrictions.—Industry products, excepting those for export trade, shall not be manufactured for the purpose of marketing them as trade sales goods in containers of sizes and types prohibited by this rule, nor shall they be produced in tints or shades to a greater number than allowed by this rule, subject to Article XXII hereof, provided that Paragraphs 2, 4, 5, and 6 hereof shall not apply to products commonly known as 5-, 10-, and 25-cent merchandise which is sold to the consumer at not more than 25 cents per package.

1. (a) No two-pound cans in any line, except floor wax.
(b) No three-pound cans in any line.

2. (a) No sizes less than quarter-gallon in barn and roof paint.
(b) No sizes less than gallon cans in shingle stain.

3. No half-gallon cans in the following products: Aluminum paints, barn paints, roof paints, auto-top dressing, wagon and carriage paints and enamels, oil stains, spirit stains, and varnish stains.

4. No half-pint cans in first-grade house paints.

5. No half-pint cans in first-grade flat paints.

6. No quarter-pint cans in all house paint and flat paint.

7. No oblong or square varnish cans in sizes smaller than one-half gallon for any product, excepting shellac varnishes, carriage and automotive finishes (clear and colors), lacquers, lacquer thinners, liquid wax, liquid polish, varn-

ish remover, bronzing liquid, Japan and Liquid driers, penetrating stains and spirit stains.

8. No shades or tints in excess of the following maximum numbers for each brand and/or color card:

Interior floor paints and floor enamels	10
House Paints	32
Flat Wall Paints	20
Enamels	18
Porch Paints	8
Roof and Barn Paints	4
Shingle Stains	14
Wagon and Carriage Paints or Enamels	10
Oil Stains	10
Varnish Stains	8
Spirit and Penetrating Stains	14
(All the foregoing exclusive of black and white.)	
Oil Colors	32
(Including black, but counting the several shades of a single color as one color.)	

8. (a) The maximum number of grades for the following products shall be:

Architectural and Marine Varnishes (Interior and exterior.)	10
Other Varnishes (Including all not previously specified, such as Japan Driers, Asphaltum, etc.)	28

9. No oil colors in other than liquid measure or in other than three sizes, namely, gallons, quarts, and half-pints, with the exception of tubes, and excepting also glass jars when sold as a part of a sales unit with white base paint to be tinted with such colors in oil in glass jars to standard colors, which sales unit has been especially developed for this purpose by the manufacturer.

4784 Manufacturing Restrictions for Kalsomine and Water Paints.—No shades or tints in excess of the following numbers for each color card:

*Kalsomine (Hot Water)	20
*Kalsomine (Cold Water)	20

---

* Means material commonly known and described by this term:

Water Paint, interior non-washable	White only
Exterior water-mixed paints washable paste and powder form	20

Interior Water-Mixed Paints washable paste and powder form	20
Fresco or Positive, Art or Deep Colors	20
Plastic Paints	8
Cement and/or Lime Water Mixed Paint	16

11. Kalsomine (Hot or Cold) in the following sizes only: Barrels weighing not less than 300 lbs. net, except for the Pacific Coast, where the 280 lb. barrel is authorized; kegs containing 100 lbs. net weight; 25 lb. net weight packages; 5 lb. net weight containers.

(Existing contracts covering Kalsomine in containers differing in weight content from standards covered herein shall be completed prior to December 31, 1933, provided that should a purchaser, now under contract with a manufacturer extending beyond that date, decline to accept a readjustment of his contract to bring the packages into line with these provisions, the manufacturer party to the contract shall refer the matter to the Paint Industry Recovery Board prior to December 31, 1933, for such amicable adjustments as the Board may be able to work out with the parties at interest.)

12. Interior Cold Water Paint, powder form, nonwashable. Barrels weighing not less than 350 lbs. net, 25 and 100 lb. containers, 5 lb. net weight containers; to be made in White only.

13. Plastic or Texture Paints (Dry), in the following sizes only: 5, 10, 25, 50, and 100 lb. net weight containers and not less than 300 lb. net weight barrels.

Paste form in same size containers as First Grade Flat Paints.

14. Patching Plaster to be sold in sizes as now marketed.

15. Interior and Exterior Water-Mixed Paints, Washable, in the following sizes only:

(a) Dry Powder Form.—5 lb., 25 lb., and 100 lb. containers; barrels of 300 lbs. net, or more.

(b) Paste Form.—1 quart, 1 and 5 gallon cans and 30 gallon drums.

16. Cement and/or lime Bound Water Mixed Paints in the following sizes only: 5 and 10 lb. containers, 50 and 100 lb. containers, barrels of 300 lbs. net, or more.

17. Fresco Colors (Positive, Deep, or Art Colors) to be packed in the following sizes only:

(a) Powder Form.—1 lb. cartons or cans, 25 and 100 lb. containers, barrels of 300 lbs. net or more.

(b) Paste Form.—To be packed in ½ pint, quart, and 1 gallon cans only.

18. Dry Sizes, Water-Mixed. To be packed in the following sizes only: 1 lb. cartons, 100 lb. containers, and 300 lb. net barrels, or more.

4785 RESPONDENT'S EXHIBIT NO. 13.

Eleventh Meeting
(Informal)

(No Official Status)

Code Authority Meeting

New York, N. Y. June 11, 1935.

A meeting of the members of the former Code Authority for the Lead Industry was held on Tuesday, June 11, 1935, at 2:00 P.M., in the Board Room of the National Lead Company, 111 Broadway, New York, N. Y.

Present

Members	Alternates
Clinton H. Crane, Chairman	W. C. Beschorman
F. H. Brownell	H. M. Brush
F. M. Carter	D. A. Callahan
W. Y. C. Hunt	F. F. Colcord
P. E. Sprague	F. S. Mulock
F. E. Wormser, Secretary	

The Chairman announced that this was an informal and unofficial meeting of the members of the former Code Authority for the Lead Industry to consider the status of the Code Authority's affairs.

Communications from Deputy Administrator Janssen, dated June 3 and June 7, as attached to these minutes, were read.

The Treasurer was requested to report on the financial status of the Code Authority, as of June 1, and submitted his report, as attached to these minutes.

It was thereupon moved, seconded and unanimously carried that the Treasurer be directed to wind up the financial affairs of the Code Authority, paying obligations owing the Lead Industries Association as advanced for operating expense, and paying the underwriters the credit balances due them respectively on the books of the Code Authority as of June 1.

It was also moved, seconded and carried that the Chairman be authorized to have an independent audit made of the books of the Code Authority, to be paid for from the funds remaining in the Treasury.

It was furthermore moved, seconded and carried that in compliance with the recommendation of Deputy
4786 Administrator Janssen of June 7, the Secretary return to each member of industry, respectively, the labor statistics furnished from time to time at the request of the Code Authority.

The meeting thereupon adjourned.

Secretary.

4787 National Recovery Administration

Washington, D. C.

June 3, 1935.
In Reply Refer to Basic
Materials Division.

Mr. F. E. Wormser,
420 Lexington Avenue,
New York, N. Y.

Dear Mr. Wormser:

We give you herein our judgment concerning certain consequences of the Schechter case in regard to code authorities. This reflects our desire to assist code authorities in their present circumstances as far as consistent with the legal limitations imposed by the Schechter case. In our judgment:

1. Code authorities no longer have any official status or official existence. Their past actions taken in good faith under an innocent misconception concerning the validity of the law, leave certain legal questions of relationship and responsibility which must be adjusted. We think you should rely upon guidance of private legal counsel in this connection.

2. No further disbursements of code authority funds should be made except in accordance with advice of counsel.

3. Steps should be taken to work out, with the advice of counsel, an orderly and equitable plan for the liquidation of funds on hand. In the ordinary case, such a plan would presumably involve either submission to and ap-

proval by a court of competent jurisdiction, or consent by parties in interest, or both.

You will receive such further advices as seem appropriate from time to time.

Very truly yours,
W. A. Janssen (Signed)
Deputy Administrator
Mining Section.

4788 National Recovery Administration
Washington, D. C.

June 7, 1935.

Mr. F. E. Wormser,
420 Lexington Avenue,
New York, N. Y.

Dear Mr. Wormser:

If the records of the Code Authority for the Lead Industry contain confidential information, that was submitted by industry members in accordance with any provision of the Code, it is important that the confidential nature of this information should be preserved.

It is, therefore, recommended that the original records, together with any copies or reports in which such information is contained in identifiable form, be promptly sent by express, collect, to the Chief Clerk of the National Recovery Administration, Department of Commerce Building, Washington, D. C. If any special conditions were placed on the information submitted by any industry member, we should be so advised in order that these conditions may be respected.

If there is good reason why the above recommendation cannot be followed, it is suggested as an alternative that all such information be returned directly to the industry members who submitted it or sent to the National Recovery Administration by express, collect, in bulk form, in order that the National Recovery Administration may return it to the various industry members.

Yours very truly,
W. A. Janssen (Signed)
Deputy Administrator.

4946 RESPONDENT'S EXHIBIT 50.

Page 7

Numerous suggestions for an appropriate reply having been received, the Secretary was finally instructed to dispatch the following answer:

October 2, 1935.

Mr. L. C. Marshall, Director
Division of Review
National Recovery Administration
Washington, D. C.

Dear Sir:

Pursuant to your letter of August 27, I have conferred with the members of the former Code Authority for the Lead Industry and submit the following information which I hope will be useful to you in your survey.

At the time the National Industrial Recovery Act was adopted, the lead industry was in a depressed condition due almost wholly to the greatly reduced consumption of lead and lead products by the consuming industries. The price of lead was low, due to the fact that lead is a basic world commodity and the price of lead in the United States follows the world lead price with a differential determined by the United States tariff on lead. The world price for lead was likewise low, due to decreased world consumption of lead and lead products. In the domestic market, price cutting, unfair trade practices, etc., were either absent or of relatively little importance.

Some lead mines in the United States felt compelled to shut down, due to the low price of lead. Certain other companies continued to operate at reduced rates of production in order to give employment to their employees, even though this continuation of operations resulted in the tying up of large amounts of money in stocks of refined lead which could not be marketed. The employees in general appreciated this action on the part of these companies and there was little or no unrest among employees, the principal complaint heard being of the fact that they could not work full time. Wages, while below the 1929 peak, were on a reasonable and fair basis. Conditions in the manufacturing divisions of the industry were quite similar to those in the mining division.

In general, the members of the lead industry were not of the opinion that a code under the National Industrial Recovery Act would materially help the lead industry but pursuant to urgent representations by National Recovery Administration officials, steps were taken to draft a code for the industry. While this code was being drafted, the President's Reemployment Agreement was promulgated and this Agreement as modified for the lead industry, was subscribed to by most of the members of the lead industry. The Lead Code as finally approved was essentially an enlargement of the President's Re-employment Agreement as modified for the lead industry with fair trade practices included for three of the manufacturing divisions of the industry, namely, the Pigment, Metallic Lead Products and Foil Divisions.

No difficulties were met in organizing for the drafting of the code, in organizing for code administration or in financing code administration. There were practically no complaints of code violation and the principal duty of the Code Authority was in connection with the interpretation of code provisions and in attempting to secure Na-

4947 Page 8.

tional Recovery Administration approval of such interpretations as were in line with long standing usages in the lead industry.

The concensus of opinion of the former Code Authority members, who obviously reflect the opinions of the members of the lead industry, is that the lead code under the National Industrial Recovery Act accomplished little or nothing of value for the lead industry. On the contrary, it increased costs of production of lead and lead products, making for decreased consumption of these materials. Such statistics as were collected by the Lead Code Authority under the National Industrial Recovery Act were of no value to the lead industry, the industry being adequately served by the Lead Industries Association, a voluntary, non-profit organization composed of producers and consumers, by government organizations such as the United States Bureau of Mines, United States Geological Survey, etc., and by the American Bureau of Metal Statistics.

The lead code was essentially a labor code but the effect of the code on labor was relatively small, wages in the industry having in general been above the N.R.A. minima for similar employments and hours in general within eight per day. While some employees in the industry were on a seven-day schedule prior to the N.I.R.A., the great majority had been on part time. Not only did the latter remain on part time after the adoption of the lead code but in addition, the possible working time of many of these part time employees was further cut by various rules and regulations of the National Recovery Administration. In the attempt to fit all industries into much the same mold as far as labor regulations were concerned, the National Recovery Administration made restrictions, rules and interpretations which violated established customs in the industry, which customs were accepted and desired by the employees and were satisfactory to the employers, thus causing a certain amount of dissatisfaction and unrest among employees without doing any good to anyone.

With the above facts in mind, the former members of the Lead Code Authority feeling that neither labor nor industry benefited through the operation of the lead code, would not be favorably inclined to the formation of a new code or the continuance of the old.

Yours very truly,
Signed: F. F. Wormser,
Secretary.

Correspondence—Committee to Report on Changes in Labor and Trade Practice Standards

The Chairman also reported the receipt of a letter from the Committee to Report on Changes in Labor and Trade Practice Standards of the N.R.A., dated September 28, 1935, as follows:

4950 Page 11.

October 1, 1935.

Mr. W. A. Janssen
Hotel Occidental
Washington, D. C.

Dear Mr. Janssen:

Answering your telephone query as to the reason for the suspension in the operation of Section 2 of Article VII of the Lead Code, you will recall the history of this particular section.

The Pigments Division had mixed feelings from the start about the advisability, or need, of incorporating an open price provision in the Code. The Section was included only, I think it fair to state, at the insistence of N.R.A., which strongly endorsed the proposal. Upon approval of the Code, however, the Pigments Division felt that the lukewarmness of some members made it desirable to postpone the establishment of this practice and to request a suspension, until full agreement had been reached.

Very truly yours,

Signed: F. E. Wormser,
Secretary.

October 1, 1935.

Mr. W. A. Janssen
Hotel Occidental
Washington, D. C.

Dear Mr. Janssen:

In response to your telephonic request, as to the value of certain lead products produced in the United States during 1933, specifically (1) pig lead, (2) lead pigments, (3) metallic lead products and (4) metallic foil products, as defined by the Lead Code, I am pleased to give you the following data:

Value of Production.

1933	Pig Lead (Primary and Secondary)*		$34,552,000
1933	Lead Pigments (White lead, Basic lead sulphate, litharge, red lead, orange mineral)**		20,820,000
1931	Metallic Lead Products:		22,620,000
	Antifriction Bearings	$ 3,783,000	
	Solder	10,166,000	
	Type Metal	3,538,000	
	Sheet Lead	2,227,000	
	Lead Pipe	2,906,000	
1931	Metallic Foil Products (Lead, tin, aluminum and composition)		12,226,000

* From American Bureau of Metal Statistics and Lead Industries Association data.

** From data of U. S. Bureau of Mines.

5125 RESPONDENT'S EXHIBIT NO. 77.

Executive Committee Meeting.

New York, N. Y. July 28, 1933.

A meeting of the Executive Committee of the Lead Industries Association was held in the Board Room of the American Smelting and Refining Company, New York City, on July 28, 1933 at 10:00 A. M.

Present	Representing
Mr. Clinton H. Crane, Chairman	St. Joseph Lead Co.
F. H. Brownell	American Smelting & Refining Co.
H. Y. Walker	American Smelting & Refining Co.
W. C. Beschorman	National Lead Co.
F. M. Carter	National Lead Co.
I. H. Cornell	St. Joseph Lead Co.
Fred Laist	United Metals Selling Co.
J. A. McCarthy	United Metals Selling Co.
F. F. Colcord	United States Smelting Refining & Mining Co. Inc.
F. Y. Robertson	
F. E. Wormser, Secretary.	

The Chairman stated that a great number of replies had been received to telegrams which were sent members as authorized at the meeting of July 24th and that compliance with the President's suggested form of agreement would work hardship on many members. After discussion it appeared to be the feeling of the Executive Committee that it was preferable for the Lead Industries Association to submit its own code to the National Recovery Administration, if it could be done.

It was thereupon moved, seconded and carried that the Executive Committee proceed with the drafting of its own code.

5126 The Chairman submitted a Tentative Draft of a Master Code as approved by the Lead Pigments Division of the Lead Industries Association which was then studied article by article until satisfactory to the Executive Committee.

As this Code mainly dealt with wages and hours of employment, it was regularly moved, seconded and carried that

Based upon the data available to the Lead Industries Association, the Code specify 40 hours as a maximum in Article VI for all divisions.

(Mr. R. M. Roosevelt was unavoidably absent in Washington and if present would have voted for a 42 hour maximum so as not to run the risk of any interference with the Zinc Code which specified 42 hours.)

It was also regularly moved, seconded and carried that 35¢ an hour be adopted as a minimum wage for each division of the Lead Industries Association under Article VII.

The Secretary was authorized to submit this Code to Washington to the Recovery Administration, after writing each member requesting authorization to append their signatures to the Code and provided sufficient support from the membership was obtained.

Applications for membership having been received from the following companies, and each one qualifying, it was regularly moved, seconded and carried that they be admitted to membership and that the Secretary advise them of this action:

National Recovery Administration.

Proposed Code of Fair Competition for the Lead Industry as submitted on August 31, 1933.

(NRA Cut)

The Code for the Lead Industry in its present form merely reflects the proposal of the above-mentioned industry, and none of the provisions contained therein are to be regarded as having received the approval of the National Recovery Administration as applying to this industry.

United States Government Printing Office.
Washington: 1933.

For sale by the Superintendent of Documents,
Washington, D. C. . . . . Price 5 cents

5128 Submitted by

Lead Industries Association

(II)

5128 Code of Fair Competition for the Lead Industries

The subscribers to this code, submitted by the Lead Industries Association for its members, represent 90 percent of the active lead mining, 90 percent of the lead smelting and refining, 100 percent of the lead pigments, and more than 85 percent of the metallic lead products, and 100 percent of the metallic lead and tin foil products industries by tonnage in the United States of America. The Lead Industries Association affirms that it imposes no inequitable restrictions on admission to membership and participation in its activities, and that it is truly representative as a national trade association of the lead industry in its several branches.

Article I—Purpose

The declared purpose of this code is to effectuate the policy of Title I of the National Industrial Recovery Act, during the period of the emergency, by reducing and relieving unemployment in the lead industries, by improving the standards of labor therein, by eliminating destructive competitive practices, and by maintaining a reasonable balance between production and consumption of the products of these industries.

Article II—Definitions.

(a) "Lead industries" as used herein is defined to mean all those engaged in the mining, smelting, and refining of lead and lead scrap, and in the manufacture of lead pigments, metallic lead products, allied products defined under "metallic lead products", and metallic foil products.

(b) "Lead ore and Ore Concentrates" as used herein is defined to mean ore containing lead as the principal commercially recoverable constituent.

(c) "Lead mining" as used herein is defined to mean the mining and concentrating of ore containing lead and other treatment to the time of shipment to the smelters.

(d) "Lead smelting and refining" as used herein is defined to mean the processing of lead ore, concentrates, lead scrap, and other lead-bearing material into pig lead or antimonial lead.

(e) "Lead pigments" as used herein defined to mean basic carbonate white lead, basic lead sulphate, litharge, red lead, orange mineral, and other lead oxides with or without metallic lead content.

(f) "Metallic lead products" as used herein is defined to mean extruded, rolled, cast, or otherwise worked lead or lead alloy products, or metallic tin, tin alloy, or other metal or metal alloy products which are produced by the members of the Lead Industries Association on the same type of machinery and under similar labor conditions.

5129 (g) "Metallic foil products" as used herein is defined to mean lead, tin, aluminum, zinc, or their alloys or combinations, rolled to a thickness of .006 in. or less; or other metals or their alloys or combinations rolled on similar machinery to the same thickness, or less; whether attached or affixed to other materials or not.

(h) "Persons" as used herein includes any individual, firm, partnership, or corporation.

(i) "Employees" as used herein shall include all persons employed in the conduct of the respective operations, except executives and their immediate assistants, supervising, technical, maintenance, and engineering staffs.

(j) "Division" as used herein refers to the several sections of the lead industries as enumerated below:

1. Lead-mining division.
2. Lead-smelting and refining division.
3. Lead-pigments division.
4. Metallic lead-products division.
5. Metallic foil-products division.

Article III—Effective Date.

This code shall be in effect beginning the second Monday after its approval by the President.

Article IV—Labor Provisions.

Employers in the lead industries engaged in the production and manufacture of lead and lead products shall comply with the requirements of the National Industrial Recovery Act as follows: "(1) That employees shall have the right to organize and bargain collectively through representatives of their own choosing, and shall be free from the interference, restraint, or coercion of employers of labor, or their agents, in the designation of such representatives or in self-organization or in other concerted activities for the purpose of collective bargaining or other mutual aid or protection; (2) that no employee and no one seeking employment shall be required as a condition of employment to join any company union or to refrain from joining, organizing, or assisting a labor organization of his own choosing; and (3) that employers shall comply with the maximum hours of labor, minimum rates of pay, and other conditions of employment, approved or prescribed by the President.

Article V—Minimum Age.

On and after the effective date, employers shall not employ any person under the age of 16 years, engaged directly or indirectly in production.

Article VI—Hours of Labor.

On and after the effective date of this code employers in the several divisions of the lead industry shall not operate on a schedule of hours of labor for their employees exceeding the equivalent of the number of hours per week listed below when averaged over the period from the effective date of this code until October 1, 1933, or over any of the successive thirteen-week periods ending, respectively, December 31, 1933, April 1, 1934, and July 1, 1934, etc., nor a total of more than 520 hours in any of these thirteen-week periods.

	Hours
1. Lead mining division	40
2. Lead smelting and refining division.....	40
3. Lead pigments division	40
4. Metallic lead products division	40
5. Metallic foil products division	40

Such maximum working hours shall not apply in the case of accidents or emergencies where the safety of the men or the preservation of the property necessitates temporarily longer hours; nor in the case of the mining division shall it apply to hoistmen, power-house men or pump men. It is also recognized that in various divisions there are individual circumstances which may call for special consideration and the working of a greater number of hours than herein specified which shall be permitted on approval by the National Recovery Administration.

Article VII—Minimum Wages.

The minimum wage for each division shall be as follows:

		Per Hour
1. Lead mining division	cents	35
2. Lead smelting and refining division	cents	35
3. Lead pigments division	cents	35
4. Metallic lead products division	cents	35
5. Metallic foil products division	cents	35

unless the hourly rate for the same class of work on July 15, 1929, was less than thirty-five cents (35¢) per hour, in which latter case not to be less than the hourly rate of July 15, 1929, and in no event less than thirty cents (30¢) per hour; except for cleaners, watchmen, and outside labor, whose minimum wage shall be at the rate of thirty cents (30¢) per hour, but in no case shall the number of cleaners, watchmen, and outside labor in the above classes exceed five percent (5%) of the total number of employees.

Article VIII—Administration.

Lead Industries Association is hereby designated the agency for administering, supervising, and promoting the performance of the provisions of this code by the members of the lead industries. The Association shall be divided into five division as defined in Ar. II. Each division is to function as a separate unit, and shall be self-governing, and may draft a supplementary code of fair competition not inconsistent with this agreement. The Executive Committee, together with each division chairman, the Secretary of the Lead Industries Association, and such representatives of the Administrator as he may care to appoint, are designated to cooperate with Administrator in the administering of this code with respect to the several divisions.

5130

Article IX—Reports.

To inform the President as to the observance of the provisions of this code by its subscribers and as to the steps the lead industries are taking to effectuate the declared policy of the National Industrial Recovery Act, each person engaged in the industry shall provide certified statements at the end of each period referred to under Article 6 to the effect that the employer has complied with the maximum hours and minimum rates of wages prescribed herein.

Article X—Fees.

Each subscriber to this code shall pay his proportionate share of the cost of conducting the Lead Industries Association as prescribed in the Constitution and By-Laws, as amended, of that Association.

Article XI—Cancellation or Modification.

This code or any of its provisions shall be cancelled or modified and any approved rule issued thereunder shall be ineffective to the extent necessary to conform to any action by the President under Section 10 (b) of the National Industrial Recovery Act in cancellation or modification of any order, approval, license, rule, or regulation pertaining thereto.

Article XII—Monopolies.

(a) This code is not designed to promote monopolies and shall not be availed of for that purpose.

(b) The provisions of this code shall not be so interpreted or administered as to eliminate or oppress small enterprises or to discriminate against them.

Article XIII—Additions of Amendments.

Additions or amendments to this code, or supplemental codes affecting or pertaining to the several divisions of the lead industries may be submitted to the Executive Committee of the Lead Industries Association, and, upon approval by the Committee, after two weeks notice to the members, may be submitted to the Administrator of the National Industrial Recovery Act and will become a part of this code and have the same force and effect as any other provision of this code when approved by the Administrator.

5162 **RESPONDENT'S EXHIBIT NO. 81**

Executive Committee Meeting.

New York, N. Y. September 21, 1933.

A meeting of the Executive Committee of the Lead Industries Association was held on Thursday, September 21, 1933, at 2:30 P.M. at the offices of the St. Joseph Lead Company, 250 Park Avenue, New York City.

Present	Representing
Clinton H. Crane, Chairman	St. Joseph Lead Company
E. A. Behr	American Smelting & Refining Co.
F. M. Carter	National Lead Company
C. M. Chapin, Jr.	St. Joseph Lead Company
I. H. Cornell	St. Joseph Lead Company
F. Y. Robertson	United States Smelting Refining & Mining Co. Inc.

F. E. Wormser, Secretary.

Mr. Clinton H. Crane occupied the chair.

The Chairman called the attention of the Executive Committee to a letter received from the Administration as follows:

"In conversation with you on September 11, it was our understanding that you would file supplemental codes to the Basic Lead Code, not later than September 16.

"We beg to advise that, up to this date, we have not received these supplementals and are asking that you give this your prompt attention.

"By direction of H. O. King, Deputy Administrator.
Signed: C. F. Elliott,
Special Assistant."

The Chairman felt that in replying to this letter a question of policy was involved with respect to the filing of Supplementary Codes, which the Committee, as a whole, should act upon. After discussion it was agreed that the following letter should be sent by the Secretary to the N. R. A.:

5163 "Acknowledging your letter of September 18th: Although we are not ready yet with our Supplementary Codes, we do not wish to delay the final hearing on our Master Code as it has been filed with you and are anxious to expedite matters by an early hearing.

"We have been working steadily and intensively on the Supplementary Codes of the Basic Lead Code and regret exceedingly that they have not yet been perfected to a point where they are suitable for submission to the N. R. A."

The Chairman stated that inasmuch as the newly formed Foil Division of the Lead Industries Association had no representation on either the Directorate or on the Executive Committee, it was only fair that some provision immediately be made to remedy this situation.

Accordingly, the Chairman proposed, with the concurrence of the Executive Committee, to call a Special Meeting of the Members for the purpose of electing a member of the Foil Division to the Board.

Mr. Carter outlined the serious conflict of interest between the Paint Code and the position of the White Lead-in-Oil industry which desired to operate under the Code of the Lead Industries Association and felt that later on this conflict of interest might require urgent attention on the part of the Lead Industries Association.

The Secretary stated that he had made a practice of distributing the minutes of the meetings of the various Divisions and Committees to all the members in the group
in question, whether a representative of the Company
5164 attended the meeting in person or not, and requested
the advice of the Executive Committee as to this procedure, particularly as some members felt that only those who attended the meetings in person should receive a copy of the minutes. The action of the Secretary was approved.

The meeting adjourned at 4:00 P.M.

Clinton H. Crane,
Chairman,
F. E. Wormser,
Secretary.

5170 RESPONDENT'S EXHIBIT NO. 83

Executive Committee Meeting.

New York, N. Y. November 22, 1933.

A meeting of the Executive Committee of the Lead Industries Association was held on Wednesday, November 22, 1933 at 3:15 P.M. in the Board Room of the National Lead Company, 111 Broadway, New York City.

Present	Representing
Clinton H. Crane, Chairman	St. Joseph Lead Co.
F. H. Brownell	American Smelting & Refining Co.
R. M. Roosevelt	Eagle-Picher Lead Co.
W. C. Besehorman	National Lead Co.
F. M. Carter	National Lead Co.
E. J. Cornish	National Lead Co.
W. Y. C. Hunt	Reynolds Metals Co.
I. H. Cornell	St. Joseph Lead Company
J. A. McCarthy	United Metals Selling Co.
F. F. Colcord	United States Smelting Refining & Mining Co.
G. W. Metcalfe	
F. E. Wormser, Secretary.	

Mr. Clinton H. Crane occupied the chair.

The Chairman presented a draft of the Code of Fair Competition for the Lead Industry which the Secretary brought back with him from Washington after consultation with Deputy Administrator Janssen, who had recommended a great many changes and additions to the Basic Code. Copy of this Code is attached (Exhibit "A").

The Executive Committee agreed to proceed with a
consideration of the Code for the purpose of revising it so
as to retain the form in which the Administration desired
the Code to be submitted, and so as to embody the
5171 combined views of the Committee. Accordingly, the
Code was considered paragraph by paragraph and
finally drafted as Exhibit "B" attached hereto.

Meeting adjourned at 5:00 P. M.

Clinton H. Crane,
Chairman,
F. E. Wormser,
Secretary.

5172 Exhibit "A".

Code "D"

The Code of Fair Competition for the Lead Industries.

Article I.

Purposes.

To effect the policies of Title I of the National Industrial Recovery Act, this Code is submitted as a Code of Fair Competition for the Lead Industries and upon approval by the President, its provisions shall be the standards of fair competition for such Industry and shall be binding upon every member thereof.

Article II.

Definitions.

The terms "President", "Act", and "Administrator" shall mean respectively the President of the United States, the National Industrial Recovery Act, and the Administrator of said Act.

The term "Industry" means and includes the business of producing and selling in the United States any or all industry products.

The terms "Member" and/or "Member of the Industry" means and includes any person, firm, association, or corporation engaged in the business of the Industry as defined herein.

The term "Employee" means and includes anyone engaged in the industry in any capacity receiving compensation for his services, irrespective of the nature or method of payment of such compensation.

The term "Employer" means and includes anyone by whom any such employee is compensated or employed.

The term "Apprentice" means a person, usually a minor, who agrees to serve an employer for a certain stated period of time at predetermined wages for the period in order to learn the trade.

The term "Learner" means an employee without previous mechanical experience engaged to become competent on one or more machine operations but who shall not be so classified after ninety days' experience.

The term "Industry Products" means and includes all products as hereinafter enumerated and defined under

"Divisions", and such other products as may be enumerated and defined in divisional supplemental codes which are or may be attached to and made a part of this code.

5173 (a) "Lead Industries" as used herein is defined to mean all those engaged in mining, smelting, and refining of lead and lead scrap, and in the manufacture and sale of lead pigments, metallic lead products, alloid products defined under "Metal Lead Products", and "Metallic Foil Products".

(b) "Lead Ore and Lead Concentrates" as used herein is defined to mean ore and the concentrates thereof, containing lead as the principal commercially recoverable constituent.

(c) "Lead Mining", as used herein is defined to mean the mining and concentrating of ore containing lead and any further beneficiation thereto prior to the shipment to the smelter.

(d) "Lead Smelting and Refining", as used herein is defined to mean metallurgical and/or chemical treatment of lead ore, lead concentrates, lead scrap, and any other lead bearing material into "Pig Lead", and/or "Antimonial Pig Lead".

(e) "Lead Pigments" as used herein is defined to mean basic carbonate white lead (dry or in oil), basic lead sulphate (dry or in oil), litharge, red lead (dry or in oil), orange mineral or any other lead oxides, with or without metallic lead content.

(f) "Metallic Lead Products" as used herein is defined to mean extruded, rolled, cast or otherwise fabricated lead or lead alloy products, or kindred products of metallic tin, tin alloy or other metal or metal alloy products, which are produced by members on the same type of machinery and under similar labor and fabricating conditions.

(g) "Metallic Foil Products", as used herein is defined to mean lead and/or tin or their alloys or combinations thereof rolled to a thickness of .006 of an inch or less, whether attached or affixed to the materials or not.

(h) The term "Divisions" means and includes the several parts of the Industry which are (or may be) established, and are (or may be) defined in the divisional supplemental codes.

"Division" as used herein refers to the several sections of the lead industries as enumerated below:

1. Lead mining division.
2. Lead smelting and refining division.
3. Lead pigments division.
4. Metallic lead products division.
5. Metallic foil products division.

5174 (i) The term "Lead Industries Association" as used herein shall mean an association of members of the Lead Industry who represent 90% of the active mining, 90% of the lead smelting and refining, 100% of the lead pigments and more than 85% of the metallic lead products and 90% of the metallic lead allied foil products industry by tonnage in the U. S.

(j) The term "Executive Committee" as used herein shall mean the Executive Committee of the Lead Industries Association, duly elected and qualified to serve under the by-laws of such association, organized in New York City, New York, Nov. 14, 1928.

Article III.

Hours of Labor.

Maximum Hours.

Section 1.

On and after the effective date of this Code employers in the several divisions of the lead industry shall not operate on a schedule of hours of labor for their employees exceeding the equivalent of the number of hours per week listed below when averaged over the period from the effective date of this code until October 1, 1933 or over any of the successive thirteen-week periods ending, respectively, December 31, 1933, April 1, 1934, and July 1, 1934, etc., nor a total of more than 520 hours in any of these thirteen-week periods.

1. Lead mining division	40 hours
2. Lead smelting and refining division	40 hours
3. Lead pigments division	40 hours
4. Metallic lead products division	40 hours
5. Metallic foil products division	40 hours

Such maximum working hours shall not apply in the case of accidents, or emergencies where the safety of the men or the preservation of the property necessitates temporarily longer hours; nor in the case of the mining division shall it apply to hoistmen, power-house men or pump men who are paid $35.00 a week or more. It is also recognized that in various divisions there are individual circumstances which may call for special consideration and the working of a greater number of hours than herein specified which shall be permitted on approval by the National Recovery Administration.

Hours for Clerical and Office Employees.

Section 2.

No employer shall work any accounting, clerical, office,
inside sales, or other employee not provided for in
5175 this Article III, who receives less than $35.00 per
week, more than an average of 40 hours per week
during a six months' period, nor more than 48 hours per
week in any one week.

Exceptions as to Hours.

Section 3.

The limitation as to hours of labor in any 24 hours shall not apply to very special cases where restriction of hours of labor of highly skilled workers in continuous processes would unavoidably reduce production, provided, however, that employees in such cases shall not work more than 48 hours in any one week.

Standard Week.

Section 4.

The limitation as to hours of labor shall not apply (a) to outside sales or sales-service men, technicians (highly skilled factory workers are not to be classed as technicians), nor to persons in a managerial, executive, or supervisory capacity who receive more than $35 per week (foremen regularly engaged in manual labor shall not be considered to be in such supervisory capacity), nor (b) to employees engaged in emergency maintenance or repair work necessary because of breakdowns or involving danger to life and property, providing that such emergency overtime work in excess of 48 hours in any one week shall be paid for at the rate of time and one third.

To care for requirements peculiar to certain divisions of the lead industry, the Code permits maximum hours to be averaged over a six months' period, also for an allowance (above 48 hours maximum) of not more than six hours per week in the time worked by the operating class of employees.

Article IV.

Wages.

Minimum.

The minimum wage for each division shall be as follows:

	Cents per Hour
1. Lead mining division	35
2. Lead smelting and refining division	35
3. Lead pigments division	35
4. Metallic lead products division	35
5. Metallic foil products division	35

unless the hourly rate for the same class of work on July
15, 1929, was less than thirty-five cents (35¢) per
5176 hour, in which latter case not to be less than the
hourly rate of July 15, 1929, and in no event less
than thirty cents (30¢) per hour; except for cleaners, watchmen, and outside labor, whose minimum wage shall be at the rate of thirty cents (30¢) per hour, but in no case shall the number of cleaners, watchmen, and outside labor in the above classes exceed five per cent (5%) of the total number of employees.

Piecework Compensation—Minimum Wages.

Section 2.

This article establishes a minimum rate of pay which shall apply, irrespective of whether an employee is actually compensated on a time rate, piecework, or other basis.

Minimum Wage Rates by Locality/Occupation.

Section 3.

After the approval of this Code, the Code authority may present for approval to the Administrator, after notice and hearing, recommendations as to upward adjustments in minimum wages for specified localities or occupations, in order to effectuate the purposes of the Act.

Wages Above Minimum.

Section 4.

There shall be an equitable adjustment of all wages above the minimum after the effective date, if such adjustment has not already been made, and to that end, within (............ days or months) from the approval of this Code, the Code Authority may review the existing wage rates and submit for the approval of the Administrator a proposal for adjustment in wages. Upon approval by the Administrator, after such hearing as he may prescribe, such proposal shall become binding as a part of this Code, provided, however, that in no event shall hourly rates of pay be reduced.

Female Employees.

Section 5.

Female employees, if, as and when performing substantially the same work as male employees shall receive the same rate of pay as male employees.

Handicapped Persons.

Section 6.

A person whose earning capacity is limited because of age or physical or mental handicap may be employed 5177 on light work at a wage below the minimum established by this Code if the employer obtains from the State authority designated by the United States Department of Labor a certificate authorizing his employment at such wages and for such hours as shall be stated in the certificate. Each employer shall file with the Code Authority a list of all such persons employed by him.

Article V.

General Labor Provisions.

Child Labor.

Section 1. No person under sixteen (16) years of age shall be employed in the Industry. No person under eighteen (18) years of age shall be employed at operations or occupations which are hazardous in nature or dangerous to health. The Code Authority shall submit to the Administrator before .... (date) a list of such operations or occupations. In any State an employer shall be deemed to have complied with this provision as to age if he shall have on file a certificate or permit duly signed by the Authority in such State empowered to issue employment or age certificates or permits showing that the employee is of the required age.

Provisions From the Act (Inclusion obligatory).

Section 2. In compliance with Section 7(a) of the Act it is provided:

(a) That employees shall have the right to organize and bargain collectively through representatives of their own choosing, and shall be free from the interference, restraint, or coercion of employers of labor, or their agents, in the designation of such representatives or in self-organization or in other concerted activities for the purpose of collective bargaining or other mutual aid or protection.

(b) That no employee and no one seeking employment shall be required as a condition of employment to join any company union or to refrain from joining, organizing, or assisting a labor organization of his own choosing, and

(c) That employers shall comply with the maximum hours of labor, minimum rates of pay, and other conditions of employment approved or prescribed by the President.

Reclassification of Employees.

Section 3. No employer shall reclassify employees or duties of occupations performed or engage in any other subterfuge for the purpose of defeating the purposes or provisions of the Act or of this Code.

5178 Exhibit "A".

Standards for Safety and Health.

Section 4. Every employer shall make reasonable provision for the safety and health of his employees at the place and during the hours of their employment. (Provision may be inserted requiring the Code Authority to submit proposed minimum standards for safety and health of employees).

State Laws.

Section 5. No provision in this Code shall supersede any State or Federal Law which imposes on employers more stringent requirements as to age of employees, wages, hours of work, or as to safety, health, sanitary or general working conditions, or insurance, or fire protection, than are imposed by this Code.

Posting.

Section 6. All employers shall post complete copies of this Code in conspicuous places accessible to employees.

Article VI.

Organization, Powers and Duties of the Code Authority—Organization and Constitution.

Lead Industries Association is hereby designated the agency for administering, supervising, and promoting the performance of the provisions of this Code by the members of the lead industries. The Association shall be divided into five divisions as defined in Article II. Each division is to function as a separate unit, and shall be self-governing, and may draft a supplementary code of fair competition not inconsistent with this agreement. The Executive Committee, together with each division chairman, The Secretary of the Lead Industries Association, and such representatives of the Administrator as he may care to appoint, are designated as code authority to cooperate with the Administrator in the administering of this code with respect to the several divisions.

Section 1. There shall be forthwith constituted a Code Authority consisting of .... persons to be selected in the following manner:

(Here shall be stated the manner in which the members of the Code Authority shall be elected. Provision should be made so that the Code Authority will be truly representative of the various majority, minority, and other interests in the industry. If, however, by reason of conditions peculiar to the industry, selection by the industry is impossible, it may be provided that appointment shall be by the Administrator.)

5179 Section 2. In addition to membership as above provided, there may be .... members, without vote, to be appointed by the Administrator, to serve for term of .... months from the date of appointment.

Section 3. Each trade or industrial association directly or indirectly participating in the selection or activities of the Code Authority shall

(1) impose no inequitable restrictions on membership, and (2) submit to the Administrator true copies of its articles of association, by-laws, regulations, and any amendments when made thereto, together with such other

information as to membership, organization, and activities as the Administrator may deem necessary to effectuate the purposes of the Act.

Section 4. In order that the Code Authority shall at all times be truly representative of the industry and in other respects comply with the provisions of the Act, the Administrator may prescribe such hearings as he may deem proper; and thereafter if he shall find that the Code Authority is not truly representative or does not in other respects comply with the provisions of the Act, may require an appropriate modification in the method of selection of the Code Authority.

Section 5. Members of the industry shall be entitled to participate in and share the benefits of the activities of the Code Authority and to participate in the selection of the members thereof by assenting to and complying with the requirements of this Code and sustaining their reasonable share of the expenses of its administration. Such reasonable share of the expenses of administration shall be determined by the Code Authority, subject to review by the Administrator, on the basis of volume of business and/or such other factors as may be deemed equitable.

Section 6. Nothing contained in this Code shall constitute the members of the Code Authority partners for any purpose. Nor shall any member of the Code Authority be liable in any manner to anyone for any act or any other member, officer, agent, or employee of the Code Authority. Nor shall any member of the Code Authority, exercising reasonable diligence in the conduct of his duties hereunder, be liable to anyone for any action or omission to act under this Code, except for his own willful misfeasance or nonfeasance.

Powers and Duties.

Section 7. The Code Authority shall have the following further powers and duties, the exercise of which shall be reported to the Administrator and shall be subject to his
right, on review, to disapprove or modify any action
5180 taken by the Code Authority.

(a) To insure the execution of the provisions of this Code and provide for the compliance of the industry with the provisions of the Act.

(b) To adopt by-laws and rules and regulations for its procedure and for the administration and enforcement of the Code.

(c) To obtain from members of the industry such information and reports as are required for the administration of the Code and to provide for submission by members of such information and reports as the Administrator may deem necessary for the purposes recited in Section 3(a) of the Act, which information and reports shall be submitted by members to such administrative and/or government agencies as the Administrator may designate; provided that nothing in this Code shall relieve any member of the industry of any existing obligations to furnish reports to any government agency. No individual reports shall be disclosed to any other member of the industry or any other party except to such governmental agencies as may be directed by the Administrator.

(d) To use such trade associations and other agencies as it deems proper for the carrying out of any of its activities provided for herein, provided that nothing herein shall relieve the Code Authority of its duties or responsibilities under this Code and that such trade associations and agencies shall at all times be subject to and comply with the provisions hereof.

(e) To make recommendations to the Administrator of the coordination of the administration of this Code with such other codes, if any, as may be related to the industry.

(f) To secure from members of the industry an equitable and proportionate payment of the reasonable expenses of maintaining the Code Authority and its activities.

(g) To cooperate with the Administrator in regulating the use of any N. R. A. insignia solely by those members of the industry who have assented to, and are complying with this Code.

(h) To recommend to the Administrator further fair trade practice provisions to govern members of the industry in their relations with each other or with other industries and to recommend to the Administrator measures for industrial planning, including stabilization of employment.

(i) "The Code Authority shall have power on its own initiative or on the complaint of any member of the Code to investigate any destructive price competition," and for the purpose of investigation thereof, to require such member to furnish such information concerning the cost of manufacturing such product as the Code Authority

5181 shall deem necessary or proper for such purposes.

If the Code Authority after such investigation shall determine that such price is an unfair price for such product and that the maintenance of such unfair price may result in unfair competition in the industry, the Code Authority may require that the member of the code file a new list showing a fair price for such product which fair price shall become immediately effective upon the filing thereof.

Article VII.

Trade Practices.

For all purposes of this Code the following described acts as well as those elsewhere enumerated in this Code shall be deemed unfair competition and shall constitute a violation of this Code.

Rule 1. Inaccurate Advertising.

No member of the Industry shall publish advertising (whether printed, radio, display or of any other nature), which is misleading or inaccurate in any material particular, nor shall any member in any way misrepresent any goods, (including but without limitation its use, trademark, grade-quality, quantity, origin, size, substance, character, nature, finish, material, content or preparation) or credit terms, values, policies, services, or the nature or form of the business conducted.

Rule 2. False Billing.

No member of the industry shall knowingly withhold from or insert in any quotation or invoice any statement that makes it inaccurate in any material particular.

Rule 3. Inaccurate Labelling.

No member of the industry shall brand or mark or pack any goods in any manner which is intended to or does deceive or mislead purchasers with respect to the brand, grade, quality, quantity, origin, size, substance, character, nature, finish, material content or preparation of such goods.

Rule 4. Inaccurate References to Competitors, etc.

No member of the industry shall publish advertising which refers inaccurately in any material particular to any competitors or their goods, prices, values, credit terms, policies or services.

Rule 5. Selling Below Cost.

(Provisions may be inserted against selling below cost based upon principles of costing formulated by the Code Authority and approved by the Administrator. Such
5182 provisions should be applicable to the individual industry and should take into consideration the necessity of selling below cost to meet competition, to dispose of distress merchandise, etc.)

Rule 6. Threats of Law Suits.

No member of the industry shall publish or circulate unjustified or unwarranted threats of legal proceedings which tend to or have the effect of harassing competitors or intimidating their customers. Failure to prosecute in due course shall be evidence that any such threat is unwarranted or unjustified.

Rule 7. Secret Rebates.

No member of the industry shall secretly directly offer or make any payment or allowance of a rebate, refund, commission, credit, unearned discount or excess allowance, whether in the form of money or otherwise, nor shall a member of the industry secretly offer to extend to any customer any special service or privilege not extended to all customers of the same class, for the purpose of influencing a sale.

Rule 8. Selling on Consignment.

No member of the industry shall ship goods on consignment except under circumstances to be defined by the Code Authority, where peculiar circumstances of the industry require the practice.

Rule 9. Bribing Employees.

No member of the industry shall give, permit to be given or directly offer to give, anything of value for the purpose of influencing or rewarding the action of any employee, agent or representative of another in relation to the business of the employer of such employee, the principal of such agent or the represented party, without the knowledge of such employer, principal or party.

Rule 10. Interference with Another's Contracts.

No member of the industry shall attempt to induce a breach of an existing contract between a competitor and his employee of customer or source of supply; nor shall any such member interfere with or obstruct the performance of such contractual duties or services.

Rule 11. Coercion.

No member of the industry shall require that the purchase or lease of any goods be a prerequisite to the purchase or lease of any other goods.

5183 Rule 12. Blacklisting.

No member of the industry shall join or participate with other members of the industry who with such member constitute a substantial number of members of the industry or who together control a substantial percent of the business in any specific product or products of the industry, in any transaction known in law as a black list, including any practice or device (such as a white list), which accomplishes the purpose of a black list.

Article VIII.

Trade Practice Rules for Lead Pigments Division.

The trade practice rules outlined in Article VII in a general way are of particular application to divisions number 1, 2, 4 and 5 of the lead industries. Because of the very nature of the product of division 3 "Lead Pigments" of the lead industry, a separate set of trade practice rules for this division is noted in this Article VIII.

Unfair Trade Practices.

The following shall be considered unfair trade practices and are violations of this code with particular reference to Division 3 (Lead Pigments).

(a) Misbranding or misrepresentation of lead pigments.

(b) Making or promising to any purchaser or prospective purchaser of lead pigments, or to any officer, employee, agent or representative of any such purchaser or prospective purchaser, any commission, gratuity, or other payment or remuneration, directly or indirectly, except in the case of payments made with the consent of the employer for a definite service rendered.

(c) Inducing or in any manner attempting to induce a breach, default or cancellation of a contract between a competitor and his customer during the term of such contract.

(d) Guaranteeing for a definite time the life and/or service of lead pigments.

(e) Making false or derogatory statements with respect to the prices, policies, products, practices, business or credit of any competitor.

(f) Exchanging the products of a member for those of another.

(g) No merchandise shall be sold at a concession in price, or used as an inducement, to influence the sale of any lead products, nor shall any concession be given in the price or terms of a lead product to influence the sale of any other merchandise.

Returned Goods.

No member of the Code shall accept the return of merchandise without first giving consent for its return. 5184 On such goods as are accepted for return, a reasonable charge shall be made and freight charges must be prepaid by the shipper returning the merchandise, except in the case of defective products or where in some other way the manufacturer may be responsible.

Price Lists.

Each member of the Code shall file with the Secretary within ten (10) days after the effective date of this Code, his price list, together with terms and conditions of sale. Any change in the said list or terms shall be reported to the Secretary in writing within twenty-four (24) hours after the effective date of such change. After December 31, 1933, any member making a sale or quotation at variance with his price list or terms on file at the time said sale or quotation is made, shall notify the Secretary concerning the variation by letter, mailed within twenty-four (24) hours. The information, as reported, shall be reissued to the members at such time, and in such manner as may be determined by them.

Uniform Sales Contracts.

Uniform sales contracts specifically designed for use in selling Dry White Lead and Lead Oxides shall be developed as soon as practicable, and thereafter used by all members after said contract forms shall have been adopted by a two-thirds vote of members manufacturing the products to which the contracts apply and after the uniform contract forms have received the approval of the Administrator. From time to time, changes in the uniform sales contracts can be made by a two-thirds vote of members manufacturing such products, subject to the approval of the Administrator.—All sales shall conform to the conditions set forth in the uniform contract forms.

Article IX.

Export Trade.

Section 1. No provision of this Code relating to prices or terms of selling, shipping or marketing, shall apply to export trade or sales or shipments for export trade.

Section 2. Subject to the approval of the Code Authority, the exceptions established by this section shall apply also to sales or shipments of materials actually used in manufacture for export trade.

A provision may be introduced into the administrative section of the Code providing that questions relating to production for export and sale for export, not enumerated in the above section, may be submitted by any member of the industry for the consideration of the Code Authority, and that its decision thereon shall be submitted to the Administrator and shall not be effective unless and until approved by him. 5185

Article X.

Cancellation or Modification.

This code or any of its provisions shall be cancelled or modified and any approved rule issued thereunder shall be ineffective to the extent necessary to conform to any action by the President under Section 10 (b) of the National Industrial Recovery Act in cancellation or modification of any order, approval, license, rule, or regulation pertaining thereto.

Article XI.

Monopolies.

(a) This Code is not designed to promote monopolies and shall not be availed of for that purpose.

(b) The provisions of this Code shall not be so interpreted or administered as to eliminate or oppress small enterprises or to discriminate against them.

Article XII.

Additions or Amendments.

Additions or amendments to this Code, or supplemental codes affecting or pertaining to the several divisions of the lead industries may be submitted to the Executive Committee of the Lead Industries Association, and, upon approval by the Committee, after two weeks notice to the members, may be submitted to the Administrator of the National Industrial Recovery Act and will become a part of this Code and have the same force and effect as any other provision of this Code when approved by the Administrator.

Article XIII.

Reports.

To inform the President as to the observance of the provisions of this Code by its subscribers and as to the steps the lead industries are taking to effectuate the declared policy of the National Industrial Recovery Act, each person engaged in the industry shall provide certified statements at the end of each period referred to under Article VI to the effect that the employer has complied with the maximum hours and minimum rates of wages prescribed herein.

5186

Article XIV.

Fees.

The Lead Industries Association having been constituted the agency to administer this Code, all persons in the lead industry covered by this Code, shall pay an equitable pro-rata share of the expenses of administration of said Association, as assessed by the Executive Committee.

Article XV.

Effective Date.

This Code shall be in effect beginning the second Monday after its approval by the President.

5187 Exhibit "B".

Code "E".

The Code of Fair Competition for the Lead Industries.

Article I.

Purposes.

To effect the policies of Title I of the National Industrial Recovery Act, this Code is submitted as a Code of Fair Competition for the Lead Industries and upon approval by the President, its provisions shall be the standards of fair competition for such Industry and shall be binding upon every member thereof.

Article II.

Definitions.

The terms "President", "Act", and "Administrator" shall mean respectively the President of the United States, the National Industrial Recovery Act, and the Administrator of said Act.

The term "Industry" means and includes the business of producing and selling in the United States any or all industry products.

The terms "Member" and/or "Member of the Industry" means and includes any person, firm association, or corporation engaged in the business of the Industry as defined herein.

The term "Employee" means and includes anyone engaged in the industry in any capacity receiving compensation for his services, irrespective of the nature or method of payment of such compensation.

The term "Employer" means and includes anyone by whom any such employee is compensated or employed.

The term "Apprentice" means a person, usually a minor, who agrees to serve an employer for a certain stated period of time at predetermined wages for the period in order to learn the trade.

The term "Learner" means an employee without previous mechanical experience engaged to become competent on one or more machine operations but who shall not be so classified after ninety days' experience.

5188 The term "Industry Products" means and includes all products as hereinafter enumerated and defined under "Divisions", and such other products as may be enumerated and defined in divisional supplemental codes which are or may be attached to and made a part of this code.

(a) "Lead Industries" as used herein is defined to mean all those engaged in mining, smelting, and refining of lead and lead scrap, and in the manufacture and sale of lead pigments, metallic lead products, allied products defined under "Metal Lead Products", and "Metallic Foil Products".

(b) "Lead Ore and Lead Concentrates" as used herein is defined to mean ore and the concentrates thereof, containing lead as the principal commercially recoverable constituent.

(c) "Lead Mining" as used herein is defined to mean the mining and concentrating of lead ore and any further beneficiation thereto prior to the shipment to the smelter.

(d) "Lead Smelting and Refining" as used herein is defined to mean metallurgical and/or chemical treatment of lead ore, lead concentrates, lead scrap and any other lead bearing material into "Pig Lead", and/or "Antimonial Pig Lead".

(e) "Lead Pigments" as used herein is defined to mean basic carbonate white lead (dry or in oil), basic lead sulphate (dry or in oil), litharge, red lead (dry or in oil), orange mineral or any other lead oxides, with or without metallic lead content.

(f) "Metallic Lead Products" as used herein is defined to mean extruded, rolled, cast or otherwise fabricated lead or lead alloy products, or kindred products of metallic tin, tin alloy or other metal or metal alloy products, which are produced by members on the same type of machinery and under similar labor and fabricating conditions.

(g) "Metallic Foil Products" as used herein is defined to mean lead and/or tin or their alloys or combinations thereof rolled to a thickness of .006 of an inch or less, whether attached or affixed to the materials or not.

(h) The term "Divisions" means and includes the several parts of the Industry which are (or may be) established, and are (or may be) defined in the divisional supplemental codes.

"Division" as used herein refers to the several sections of the lead industries as enumerated below.

1. Lead mining division.
2. Lead smelting and refining division.

3. Lead pigments division.
4. Metallic lead products division.
5. Metallic foil products division.

(i) The term "Lead Industries Association" as used herein is an association of members of the Lead Industry who represent approximately 90% of the active mining,
90% of the lead smelting and refining, 100% of the
5189 lead pigments and more than 85% of the metallic lead
products and 90% of the metallic lead allied foil products industry by tonnage in the United States.

(j) The term "Executive Committee" as used herein shall mean the Executive Committee of the Lead Industries Association, duly elected and qualified to serve under the by-laws of such association, organized in New York City, November 14, 1928.

Article III.

Hours of Labor.

Maximum Hours.

Section 1. On and after the effective date of this Code employers in the several divisions of the lead industry shall not operate on a schedule of hours of labor for their employees exceeding the equivalent of the number of hours per week listed below when averaged over the period from the effective date of this code until October 1, 1933, or over any of the successive thirteen-week periods ending, respectively, December 31, 1933, April 1, 1934, and July 1, 1934, etc., nor a total of more than 520 hours in any of these thirteen-week periods.

1.	Lead mining division	40	hours
2.	Lead smelting and refining division	40	"
3.	Lead pigments division	40	"
4.	Metallic lead products division	40	"
5.	Metallic foil products division	40	"

Such maximum working hours shall not apply in the case of accidents, or emergencies where the safety of the men or the preservation of the property necessitates temporarily longer hours; nor in the case of the mining division shall it apply to hoistmen, power-house men or pump men. It is also recognized that in various divisions there are individual circumstances which may call for special consideration and the working of a greater number of hours than herein specified which shall be permitted on approval by the National Recovery Administration.

Hours for Clerical and Office Employees.

Section 2. No employer shall work any accounting, clerical, office, inside sales, or other employee not provided for otherwise in this Article III, who receives less than $35.00 per week, more than an average of 40 hours per week during a six months' period, nor more than 48 hours per week in any one week.

5190 Exceptions as to Hours.

Section 3. Any limitation as to hours of labor shall not apply to very special cases where restriction of hours of labor of highly skilled workers in continuous processes would unavoidably reduce production, provided, however, that employees in such cases shall not work more than 48 hours in any one week.

Standard Week.

Section 4. The limitation as to hours of labor shall not apply (a) to outside sales or sales-service men, technicians (highly skilled factory workers are not to be classed as technicians), nor to persons in a managerial, executive, or supervisory capacity who receive more than $35.00 per week, nor (b) to employees engaged in emergency maintenance or repair work necessary because of break-downs or involving danger to life and property, nor (c) shall it apply to truckmen.

To care for requirements peculiar to certain divisions of the lead industry, the code shall permit maximum hours to be averaged over a six months' period, also for an allowance (above 48 hour maximum) of not more than six hours per week in the time worked by the operating class of employees.

Article IV.

Wages.

Minimum.

Section 1. The minimum wage for each division shall be as follows:

	Cents per hour
1. Lead mining division	35
2. Lead smelting and refining division .	35
3. Lead pigments division	35
4. Metallic lead products division	35
5. Metallic foil products division	35

unless the hourly rate for the same class of work on July 15, 1929 was less than thirty-five cents (35¢) per hour, in which latter case, not to be less than the hourly rate of July 15, 1929, and in no event less than thirty cents (30¢) per hour; except for cleaners and watchmen, whose minimum wage shall be at the rate of thirty cents (30¢) per hour, but in no case shall the number of cleaners and watchmen in the above classes exceed five per cent (5%) of the total number of employees.

5191 Piecework Compensation—Minimum Wages.

Section 2. This article established a minimum rate of pay which shall apply, irrespective of whether an employee is actually compensated on a time rate, piece-work, or other basis.

Handicapped Persons.

Section 3. A person whose earning capacity is limited because of age or physical or mental handicap may be employed on light work at a wage below the minimum established by this Code if the employer obtains from the State authority designated by the United States Department of Labor a certificate authorizing his employment at such wages and for such hours as shall be stated in the certificate. Each employer shall file with the Code Authority a list of all such persons employed by him.

Article V.

General Labor Provisions.

Child Labor.

Section 1. On and after the effective date, no person under eighteen (18) years of age shall be employed in the lead industry except in clerical, office, sales, service, technical and engineering departments, or as outside labor, and no person under sixteen (16) years of age shall be employed in any capacity.

Provisions from the Act.

Section 2. In compliance with section 7 (a) of the Act, it is provided:

(a) That employees shall have the right to organize and bargain collectively through representatives of their own choosing, and shall be free from the interference, restraint, or coercion of employers of labor, or their agents, in the designation of such representatives or in self-organization or in other concerted activities for the purpose of collective bargaining or other mutual aid or protection.

(b) That no employee and no one seeking employment shall be required as a condition of employment to join any company union or to refrain from joining, organizing, or assisting a labor organization of his own choosing, and

(c) That employers shall comply with the maximum hours of labor, minimum rates of pay, and other conditions of employment approved or prescribed by the President.

5192 Reclassification of Employees.

Section 3. No employer shall reclassify employees or duties of occupations performed or engage in any other subterfuge for the purpose of defeating the purposes or provisions of the Act or of this Code.

Standard for Safety and Health.

Section 4. Every employer shall make reasonable provision for the safety and health of his employees at the place and during the hours of their employment.

State Laws.

Section 5. No provision in this Code shall supersede any State or Federal Law which imposes on employers more stringent requirements as to age of employees, wages, hours of work, or as to safety, health, sanitary or general working conditions, or insurance, or fire protection, than are imposed by this Code.

Posting.

Section 6. All employers shall post complete copies of this Code in conspicuous places accessible to employees.

Article VI.

Organization, Powers and Duties of the Code Authority—Organization and Constitution.

Section 1. Lead Industries Association is hereby designated the agency for administering, supervising, and promoting the performance of the provisions of this Code by the members of the lead industries. The Association shall be divided into five divisions as defined in Article II. Each division is to function as a separate unit, and shall be self-governing, and may draft a Supplementary Code of fair competition not inconsistent with this agreement.

Section 2. The Executive Committee, together with each division chairman, the Secretary of the Lead Industries Association, and such representatives of the Administrator as he may care to appoint, are designated as code authority to cooperate with the Administrator, without cost to the industry, in the administering of this code with respect to the several divisions.

5193 Section 3. The Lead Industries Association shall

(a) impose no inequitable restrictions on membership and

(b) submit to the Administrator true copies of its articles of association, by-laws, regulations, and any amendments when made thereto, together with such other information as to membership, organization, and activities as the Administrator may deem necessary to effectuate the purposes of the Act.

Section 4. In order that the Code Authority shall at all times be truly representative of the industry and in other respects comply with the provisions of the Act, the Administrator may prescribe such hearings as he may deem proper; and thereafter if he shall find that the Code Authority is not truly representative or does not in other respects comply with the provisions of the Act, may require an appropriate modification in the method of selection of the Code Authority.

Section 5. Members of the industry shall be entitled to participate in and share the benefits of the activities of the Code Authority and to participate in the selection of the members thereof by assenting to and complying with the requirements of this Code and sustaining their reasonable share of the expenses of its administration. Such reasonable share of the expenses of administration shall be determined by the Code Authority, subject to review by the Administrator, on the basis of volume of business and/or such other factors as may be deemed equitable.

Section 6. Nothing contained in this Code shall constitute the members of the Code Authority partners for any purpose. Nor shall any member of the Code Authority be liable in any manner to anyone for any act of any other member, officer, agent, or employee of the Code Authority. Nor shall any member of the Code Authority, exercising reasonable diligence in the conduct of his duties hereunder, be liable to anyone for any action or omission to act under this Code, except for his own willful misfeasance or non-feasance.

Powers and Duties.

Section 7. The Code Authority shall have the following further powers and duties, the exercise of which shall be reported to the Administrator and shall be subject to his right, on review, to disapprove any action taken by the Code Authority.

(a) To insure the execution of the provisions of this Code and provide for the compliance of the industry with the provisions of the Act.

5194 (b) To adopt by-laws and rules and regulations for its procedure and for the administration and enforcement of the Code.

(c) To obtain from members of the industry such information and reports as are required for the Administration of the Code and to provide for submission by members of such information and reports as the Administrator may deem necessary for the purposes recited in Section 3 (a) of the Act, which information and reports shall be submitted by members to such administrative and/or government agencies as the Administrator may designate; provided that nothing in this Code shall relieve any member of the industry of any existing obligations to furnish reports to any Government Agency.

(d) To use such trade associations and other agencies as it deems proper for the carrying out of any of its activities provided for herein, provided that nothing herein shall relieve the Code Authority of its duties or responsibilities under this Code and that such trade associations and agencies shall at all times be subject to and comply with the provisions hereof.

(e) To make recommendations to the Administrator for the coordination of the administration of this Code with such other codes, if any, as may be related to the industry.

(f) To secure from members of the industry an equitable and proportionate payment of the reasonable expenses of maintaining the Code Authority and its activities.

(g) To cooperate with the Administrator in regulating the use of any N. R. A. insignia solely by those members of the industry who have assented to, and are complying with, this Code.

(h) To recommend to the Administrator further fair trade practice provisions to govern members of the industry in their relations with each other or with other industries and to recommend to the Administrator measures for industrial planning, production control, including stabilization of employment.

Article VII.

Trade Practice Rules for Lead Pigments Division.

Section 1. The following described acts shall be deemed unfair competition for Division 3 (Lead Pigments), and shall constitute a violation of this Code.

(a) Misbranding or misrepresentation of lead pigments.

(b) Making or promising to any purchaser or prospective purchaser of lead pigments, or to any officer, employee, agent or representative of any such purchaser or prospective purchaser, any commission, gratuity, or
5195 other payment or remuneration, directly or indirectly,
except in the case of payments made with the consent of the employer for a definite service rendered.

(c) Inducing or in any manner attempting to induce a breach, default or cancellation of a contract between a competitor and his customer during the term of such contract.

(d) Guaranteeing for a definite time the life and/or service of lead pigments.

(e) Making false or derogatory statements with respect to the prices, policies, products, practices, business or credit of any competitor.

(f) Exchanging the products of a member for those of another.

(g) No merchandise shall be sold at a concession in price, or used as an inducement, to influence the sale of any lead products, nor shall any concession be given in the price or terms of sale of a lead product to influence the sale of any other merchandise.

Returned Goods.

Section 2. No member of the Code shall accept the return of merchandise without first giving consent for its return. On such goods as are accepted for return, a reasonable charge shall be made and freight charges must be prepaid by the shipper returning the merchandise, except in the case of defective products or where in some other way the manufacturer may be responsible.

Price Lists.

Section 3. Each member of the Code shall file with the Secretary within ten (10) days after the effective date of this Code, his price list, together with terms and conditions of sale. Any change in the said list or terms shall be reported to the Secretary in writing within twenty-four (24) hours after the effective date of such change. After December 31, 1933, any member making a sale or quotation at variance with his price list or terms on file at the time said sale or quotation is made, shall notify the Secretary concerning the variation by letter, mailed within twenty-four (24) hours. The information, as reported, shall be reissued to the members at such time, and in such manner as may be determined by them.

Uniform Bases for Sale.

Section 4. Uniform bases for sale specifically designed for use in selling Dry White Lead and Lead Oxides shall be developed as soon as practicable, and thereafter used by all members after said bases shall have been adopted by a two-thirds vote of members manufacturing the 5196 products to which the uniform bases for sale apply, and after the uniform bases for sale have received the approval of the Administrator. From time to time, changes in the uniform bases for sale may be made by a two-thirds vote of members manufacturing such products, subject to the approval of the Administrator. All sales shall conform to the conditions set forth in the uniform bases for sale.

Article VIII.

Export Trade.

Section 1. No provision of this Code relating to prices or terms of selling, shipping or marketing, shall apply to export trade or sales or shipments for export trade.

Section 2. Subject to the approval of the Code Authority, the exceptions established by this section shall apply also to sales or shipments of materials actually used in manufacture for export trade.

A provision may be introduced into the administrative section of the Code providing that questions relating to production for export and sale for export, not enumerated in the above section, may be submitted by any member of the industry to the consideration of the Code Authority, and that its decision thereon shall be submitted to the Administrator and shall not be effective unless and until approved by him.

Article IX.

Cancellation or Modification.

This Code shall be subject to the provisions of Section 10(b) of the Act, as follows:

"The President may, from time to time, cancel or modify any order, approval, license, rule or regulation issued under this title; and each agreement, code of fair competition, or license, approved, prescribed, or issued under this title, shall contain an express provision to that effect."

Article X.

Monopolies.

(a) This Code is not designed to promote monopolies and shall not be availed of for that purpose.

(b) The provisions of this Code shall not be so interpreted or administered as to eliminate or oppress small enterprises or to discriminate against them.

5197

Article XI.

Additions or Amendments.

Additions or amendments to this Code, or supplemental codes affecting or pertaining to the several divisions of the Lead Industries shall be initiated by the Division affected or interested and then may be submitted to the Executive Committee of the Lead Industries Association, and, upon approval by the Committee, after two weeks notice to the members, may be submitted to the Administrator of the National Industrial Recovery Act and will become a part of this Code and have the same force and effect as any other provision of this Code when approved by the Administrator.

Article XII.

Reports.

To inform the President as to the observance of the provisions of this Code by its subscribers and as to the steps the lead industries are taking to effectuate the declared policy of the National Industrial Recovery Act, each person engaged in the industry shall provide certified statements at the end of each period referring to under Article VI to the effect that the employer has complied with the maximum hours and minimum rates of wages prescribed herein.

Article XIII.

Fees.

The Lead Industries Association having been constituted the agency to administer this Code, all persons in the lead industry covered by this Code, shall pay an equitable prorata share of the expenses of administration of said Association, as assessed by the Executive Committee.

Article XIV.

Constitutional Rights.

Nothing contained in this Code shall be construed to be a waiver of constitutional rights by any of those assenting hereto.

Article XV.

Modification.

By presenting this Code, those assenting hereto do not thereby consent to any modification thereof.

5198

Article XVI.

Termination.

This Code and all Supplementary Provisions thereto shall expire on June 30, 1934, or on the earliest date prior thereto on which the President shall by proclamation, or the Congress shall by Joint Resolution, declare that the emergency recognized by Title I of the Act has ended; provided, that in the absence of such proclamation or declaration, the Executive Committee may prescribe that the Code and any or all Supplementary Provisions thereto may be continued in effect beyond June 30, 1934 but not later than June 16, 1935.

Article XVII.

Effective Date.

This Code shall be in effect beginning the second Monday after its approved by the President.

5237 RESPONDENT'S EXHIBIT NO. 85.

Executive Committee Meeting.

New York, N. Y. February 6, 1934.

A meeting of the Executive Committee of the Lead Industries Association was held on Tuesday, February 6, 1934, at 2:00 P. M., in the Board Room of the National Lead Company, 111 Broadway, New York, N. Y.

Present	Representing
R. M. Roosevelt,	Eagle-Picher Lead Company
Chairman	American Metal Co., Ltd.
Heath Steele	American Smelting & Refining Co.
H. Y. Walker	Federated Metals Corp.
E. L. Newhouse, Jr.	National Lead Company
W. C. Beschorman	National Lead Company
F. M. Carter	Reynolds Metals Co.
R. G. McKay	St. Joseph Lead Co.
Andrew Fletcher	St. Joseph Lead Co.
I. H. Cornell	United Metals Selling Co.
J. A. McCarthy	United States Smelting Refining &
F. S. Mulock	Mining Co., Inc.
F. E. Wormser, Secretary	

Vice President R. M. Roosevelt presided.

The Chairman stated that in order to provide a status in the Lead Industries Association for members not eligible under the change made by the Board of Directors on January 19, in membership qualifications, it would be desirable to modify the provision passed by the Board on January 19, establishing associate memberships. Accordingly, the following resolution was proposed:

Any individual, company, firm or corporation or other form of enterprise, producing or using lead or lead products, which is ineligible, under the terms of this Article, for full membership, is eligible for associate membership. Associate members shall have all the rights and privileges of other members except the right to vote.

as a substitute for the following:

Any individual, company, firm or corporation using lead products, or manufacturing lead products not otherwise specified in this Article, is eligible for associate membership.

Associate members shall have all the rights and privileges of other members except the right to vote.

5238 Motion carried.

The Chairman stated that an invitation had been received from Mr. Cleveland Dodge, to meet with the copper labor committee at the offices of the Phelps Dodge Corporation, on February 7, to confer on common code matters, an invitation extended also to the American Zinc Institute.

It was moved and seconded that a Committee be appointed to confer with the labor committee of the Copper Companies, with a view to presenting a united front on code labor matters.

Motion was lost.

The Secretary was requested to read the telegrams he had received from the Utah and Idaho mining companies, favoring proceeding with the adoption of the Lead Code without reference to the copper and zinc codes.

Without objection, and as a courtesy to the Copper Code Labor Committee, the Chairman appointed the Secretary as a representative of the Lead Industries Association, to explain the status of the Lead Code.

The new draft of the Code, dated February 6, was then read so far as all changes made from the previous draft of January 27 were concerned. All the changes made were approved by the Committee with Mr. McCarthy voting "No" on the changes in Article IV, Wages and Article VI, Code Authority, Section 6 (a), and Article XII, Modification, Section 2.

Mr. Steele did not vote.

In view of the common interest of copper, lead and zinc in the new Article XI "Application of the Code to Operations Wherein Other Metals are Produced", the Chairman appointed Messrs. Walker, McCarthy and the Secretary to confer with the copper interests, from whose proposed code the article had been lifted.

It was then regularly moved and seconded that the entire code, with the exception of Article XI, as represented by the draft of February 6, be approved.

Unanimously carried.

The National Recovery Administration, having requested a resolution from the Lead Industries Association, authorizing the presentation of its Code, the following resolution was presented and carried:

5239 Resolved That the submission to the National Recovery Administration of the Proposed Code of Fair Competition for the Lead Industries by the Secretary on August 1, 1933, as authorized in the Minutes of the Executive Committee Meeting in New York City on July 28, 1933, and the successive submission of revised drafts of said Code, dated November 25, 1933 and December 8, 1933 respectively, together with the submission of the draft of said Code dated December 13, 1933, for presentation at a public hearing, together with the post-hearing revised drafts of January 6 and February 6, 1934, be hereby approved and

Be It Further Resolved That the President, or Vice President, or the Secretary of this Association be and they are hereby authorized to treat with the Administration in the conduct of the negotiations with the National Recovery Administration and to finally approve the Code of Fair Competition for the Lead Industries, as written in draft of February 6, 1934.

Meeting adjourned at 5:00 P. M.

F. E. Wormser,
Secretary.

5240 Code "H" January 27, 1934.

Code of Fair Competition for the Lead Industries.

Article I.

Purposes.

To effectuate the policies of Title I of the National Industrial Recovery Act, this Code is submitted as a Code of Fair Competition for the Lead Industries and upon approval by the President, its provisions shall be the standards of fair competition for such Industry and shall be binding upon every member thereof.

Article II.

Definitions.

Wherever used in this code, or any supplement appertaining thereto, the terms enumerated in this Article shall have the meanings herein defined unless the context shall otherwise clearly indicate.

Section 1. The terms "President," "Act," and "Administrator" shall mean respectively the President of the

United States, the National Industrial Recovery Act, and the Administrator of Title I of said Act.

Section 2. The term "Member of Industry" includes all those engaged in the industry either as an employer or on his or its own behalf.

Section 3. The term "Employee" means and includes anyone engaged in the industry in any capacity receiving compensation for his services, irrespective of the nature or method of payment of such compensation, except a member of the industry.

Section 4. The term "Employer" means and includes anyone by whom any such employee is compensated or employed.

Section 5. The term "Apprentice" as used herein means an individual (usually a minor), bound by indenture executed in compliance with the laws of the State where the service provided for therein is to be performed to serve an employer for a term of years at a predetermined wage for the period of the indenture in order to learn a trade, art or profession.

Section 6: The term "Industry" as used herein includes the mining of lead ore and/or the concentrating thereof, the smelting of lead ore and/or lead concentrates and/or lead bearing scrap, the refining of lead and/or lead bearing scrap and/or drosses, the manufacturing of pig lead, antimonial pig lead, lead pigments, metallic antimony, metallic lead products, allied products defined hereinafter as "metallic lead products" and/or "Metallic foil products", and the original sale of such products by the member of industry producing or manufacturing the same either directly or indirectly through subsidiary and/or affiliated companies.

5241 (a) "Lead Ore and Lead Concentrates" as used herein is defined to mean ore and the concentrates thereof, containing lead as the principal commercially recoverable constituent.

(b) "Lead Mining", as used herein is defined to mean the mining and concentrating of lead ore and any further beneficiation thereto prior to the shipment to the smelter.

(c) "Lead Smelting and Refining" as used herein is defined to mean metallurgical and/or chemical treatment of lead ore, lead concentrates, lead bearing scrap, and/or drosses and/or any other lead bearing material into "Pig Lead", and/or "Antimonial Pig Lead."

(d) "Antimonial Pig Lead"—Inasmuch as antimony is a common constituent of most lead ores and a by-product of Lead Mining and Smelting and Refining—metallic antimony and antimonial alloy products (antimonial pig lead) shall be included within the provisions of this Code.

(e) "Lead Pigments" as used herein is defined to mean basic carbonate white lead (dry or in oil), basic lead sulphate (dry or in oil), litharge, red lead (dry or in oil), orange mineral or any other lead oxides, with or without metallic lead content.

(f) "Metallic Lead Products" as used herein is defined to mean extruded, rolled, cast or otherwise fabricated lead or lead alloy products (except storage battery plates and lead covered cable), kindred products of metallic tin and tin alloy or other metal or metal alloy products, which are produced by members of industry on the same type of machinery and under similar labor and fabricating conditions.

(g) "Metallic Foil Products" as used herein is defined to mean lead and/or tin and/or zinc or their alloys or combinations thereof rolled to a thickness of .006 of an inch or less, whether attached or affixed to other materials or not.

Section 7. The term "Division" as used herein includes respectively the several parts of the industry as enumerated below:

1. Lead mining division
2. Lead smelting and refining division
3. Lead pigments division
4. Metallic lead products division
5. Metallic foil products division

and such other and further divisions as may hereafter be created pursuant to the provisions of this Code.

Section 8. The term "Association" as used herein includes the "Lead Industries Association," an unincorporated membership society organized under the laws of the State of New York and having its principal office at 420 Lexington Avenue, New York City, and such other trade association as may hereafter participate in the activities under this code or in the selection of the code authority.

5242 Section 9. The term "Executive Committee" as used herein shall mean the Executive Committee of the Lead Industries Association.

Section 10. The term "Secretary" as used herein shall mean the Secretary of the Code Authority, who also shall be the Secretary of the Lead Industries Association.

Section 11. The term "Southern District" as used herein shall include the States of Texas, Mississippi, Alabama, Louisiana, and Florida.

Article III.

Hours of Labor.

Maximum Hours—Section 1.

Effective on and after the second Monday following the effective date of this Code, no employee shall be permitted to work in any division of the industry in excess of 40 hours in any one week or in excess of 8 hours in any 24 hour period except as herein otherwise provided.

Hours for Clerical and Office Employees—Section 2.

No person employed in clerical or office work shall be permitted to work in excess of 40 hours in any one week, except that during any one week in a one month period such employee shall be permitted to work a maximum of 48 hours in any such week. A normal day shall not exceed 8 hours.

Exceptions as to Hours—Section 3.

The limitation as to hours of labor as specified in Sections 1, 2 and 4 of this Article III shall not apply to the following:

(a) To employees engaged in emergency maintenance, or emergency repair work, involving breakdown or protection of life or property; provided that in such special cases not less than one and one-half times the normal wage rate for any employee so employed shall be paid for all hours worked in excess of 40 hours in any one week; provided that this overtime provision shall not apply in case of catastrophies involving loss of life. Such special cases, however, shall be reported to the Code Authority.

(b) Nor in the case of the Mining Division shall it apply to hoist men, power house men, or pump men, provided the total working hours of such employees shall not exceed 48 hours in any one week.

(c) Nor to outside sales or sales service men, nor to persons in a managerial, executive or supervisory capacity, who receive more than $35.00 per week.

(d) Watchmen, according to the nature of their responsibilities, may be permitted to work either 84 hours in any two-week period, or 48 hours in any one-week period, provided that such employees shall have at least one day's rest in each seven day period.

5243 (e) There may be a tolerance of 10% additional hours over the 40 hours in any one week for employees engaged in the preparation, care and maintenance of machinery and production facilities, stock and shipping clerks and truck men engaged in outside delivery and pick-up service; provided, however, that at least one and one half times the normal wage rate for any employee so employed shall be paid for all hours worked in excess of 40 hours in any one week.

(f) The limitation as to maximum hours of work shall not apply to very special cases where restriction of hours of labor of skilled workers in continuous processes would unavoidably reduce or interrupt production because of demands inherent and peculiar within the process itself, provided, however, that such employees in such special cases shall not work more than forty-eight (48) hours in any one week, and provided that in such special cases at least one and one half times the normal wage rate shall be paid to any employee so employed, for hours worked above 40 hours per week. Such special cases, however, shall be reported to the Code Authority. Such special cases do not apply where one employee is acting in temporary relief for a fellow employee in continuous processes.

(g) During any period in which a concentrated demand upon any division of the industry, except mining, shall place an unusual and temporary burden for production work upon its facilities or to meet seasonal peak requirements or emergencies, an employee of any such division may be permitted to work not more than forty-eight (48) hours per week and not more than eight (8) hours in any one day in not more than eight (8) weeks in the first or last six (6) months of any calendar year.

Standard Week—Section 4.

No employee shall be permitted to work more than six days in any seven day period.

Employment by Several Employers—Section 5.

No employer shall knowingly permit any employee to work for any time which when totalled with that already performed with another employer or employers in this industry exceeds the maximum permitted herein.

Article IV.

Wages.

Minimum—Section 1.

The minimum wage for each division of this industry shall be as follows:

		Cents per Hour
1.	Lead mining division	40
2.	Lead smelting and refining division	35
3.	Lead pigments division	40
4.	Metallic lead products division	35
5.	Metallic foil products division	35

5244 provided that, as to the Smelting and Refining Division, in the Southern District, the minimum hourly rate shall be 30¢ per hour. Provided, however, that minimum wages in effect on July 1, 1933, which were above the minimum specified, shall in no case be reduced.

The minimum rates provided for hereinabove shall be considered as hiring rates applying to totally unskilled labor ~~or~~ common labor above ground in the Mining Division and totally unskilled labor or common labor in the other divisions of the industry. In the Mining Division, the minimum hiring rate for underground common labor shall be not less than 45¢ per hour. Other classes of labor shall be compensated at rates above such minimums.

Clerical and Office Employees—Section 2.

No accounting, clerical, office, sales, or service employees working on a weekly basis in any office shall be paid less than at the rate of $15.00 per week; provided, however, that office boys and girls and messengers shall be paid at a rate not less than 80% of the minimum hereinabove specified, and provided further that the number of such boys and girls and messengers so paid shall constitute not more than 5% of the total number of such employees ~~of any one office of~~ any one employer, but in any case such employer shall be entitled to one ~~such employee.~~

Piecework Compensation-Minimum Wages—Section 3.

This article establishes a minimum rate of pay which shall apply, irrespective of whether an employee is actually compensated on a time rate, piecework, or other basis.

Female Employees—Section 4.

Female employees performing substantially the same work as male employees shall receive the same rate of pay as male employees.

Wages Above Minimum—Section 5.

If an equitable adjustment of wages above the minimum fixed in this Code has not been made since July 1, 1933, there shall then be an equitable adjustment made within 60 days from date of the approval of this Code. Such equitable adjustment shall mean that the differentials existing prior to the formulation of this Code shall be maintained for employees other than persons engaged in managerial, executive or supervisory capacity who receive more than $35.00 per week, provided, however, that in no event shall hourly rates of pay be reduced. If such equitable adjustment has not been made, the Code Authority shall submit for the approval of the Administrator a proposal for adjustment of wages above the minimum. Upon the approval by the Administrator, after such hearing as he may prescribe, such adjustments shall become effective.

5245 Handicapped Persons—Section 6.

A person whose earning capacity is limited because of age or physical or mental handicap may be employed on light work at a wage below the minimum established by this Code if the employer obtains from the State Authority designated by the United States Department of Labor a certificate authorizing his employment as such wages and for such hours as shall be stated in the certificate; such authority shall be guided by the instructions of the U. S. Department of Labor in issuing such certificates; each employer shall file with the Code Authority a list of all such persons employed by him.

Apprentices—Section 7.

The use of apprentices shall be permitted where they are apprenticed to an employer by an indenture made pursuant to the laws of the state in which such service is to be performed, under any apprentice system established and maintained by such employer, provided such indenture agreements are filed with the Code Authority. Employers shall not be allowed to have apprentices in number exceeding 5% of the total number of skilled craftsmen of their special class, except that each employer shall be entitled to employ at least one such employee and in no case shall they be paid less than the minimum wage provided in Section 1 of Article IV.

Payments—Section 8.

An employer shall make payment of all wages due in lawful currency or by negotiable check therefor, payable on demand. These wages shall be exempt from any payments for pensions, insurance or sick benefits other than those voluntarily paid by the wage earners or required by the State laws. Wages shall be paid at least semimonthly and salaries at least at the end of every month. No employer shall withhold wages.

Article V.

General Labor Provisions.

Child Labor—Section 1.

On and after the effective date, no person under 18 years of age shall be employed in the Lead Industry except in clerical, office, sale, service, technical and engineering department, and no person under 16 years of age shall be employed in any capacity.

Provisions From the Act—Section 2.

(a) Employees shall have the right to organize and bargain collectively through representatives of their own choosing, and shall be free from the interference, restraint, or coercion of employers of labor, or their agents, in the designation of such representatives or in self-organization or in other concerted activities for the purpurpose of collective bargaining or other mutual aid or protection.

5246 (b) No employee and no one seeking employment shall be required as a condition of employment to join any company union or to refrain from joining, organizing, or assisting a labor organization of his own choosing, and

(c) Employers shall comply with the maximum hours of labor, minimum rates of pay, and other conditions of employment approved or prescribed by the President.

Reclassification of Employees—Section 3.

No employer shall reclassify employees or duties of occupations performed or engage in any other subterfuge for the purpose of defeating the purposes or provisions of the Act or of this Code.

Standards for Safety and Health—Section 4.

Every employer shall make reasonable provision for the safety and health of his employees at the place and during the hours of their employment. Standards of safety and health for each division of the industry shall be submitted to the Administrator within six (6) months after approval of the Code.

State Laws—Section 5.

No provision in this Code shall ~~supersede any~~ State or Federal Law which imposes on employers more stringent requirements as to age of employees, wages, hours of work, or as to safety, health, sanitary or general working conditions, or insurance or fire protection, than are imposed by this Code.

Posting—Section 6.

All employers shall keep posted complete copies of this Code and all amendments thereto in conspicuous places accessible to employees.

Company Town and Stores—Section 7.

Employees other than maintenance or supervisory men, or those necessary to protect property, shall not be required as a condition of employment, to live in homes rented from the employer. No employee shall be required as a condition of employment, to trade at the store owned or specified by an employer.

Labor Agreements—Section 8.

Labor agreements now in force between members of the Industry and their employees shall be affected only by such provisions in this Code as may prescribe higher wages and shorter hours than are provided for in such agreements.

Dismissal for Complaint—Section 9.

No employee shall be dismissed by reason of making a complaint or giving evidence with respect to a violation of a code.

5247

Article VI.

Organization, Powers and Duties of the Code Authority.

Organization and Constitution—Section 1.

A Code Authority to administer this Code is hereby established and shall consist of the members of the Executive Committee of the Lead Industries Association, the Secretary of said Association, and such division chairmen who have respectively been elected to such office by such divisions in an equitable manner, approved by the Administrator, so as to be truly representative of such divisions respectively, and who are not members of the Executive Committee; in addition to membership as provided there may be one to three members, without vote and without expense to the industry, to be appointed by the Administrator to serve for terms of six or twelve months from the date of appointment. On the effective date of this Code the voting members of the Code Authority shall consist of eleven members but such number is subject to variation due to the contents of the foregoing provision. It is contemplated that supplementary codes of fair competition not inconsistent with this Basic Code will be adopted for each division of the industry. When and if such supplementary codes are submitted and approved they shall contain provisions for a sub-code authority selected in an equitable manner so as to be truly representative of such division of the industry subject to the approval of the Administrator, to administer the provisions of this Basic Code and the provisions of such supplementary code, and in addition this Basic Code Authority may delegate such of its powers and duties as it deems necessary to such division code authority of such supplementary code, provided, however, that any interested party shall have a right of appeal from any act or decision of such sub-code authority to the code authority of this Basic Code.

Section 2. Each trade or industrial association directly or indirectly participating in the selection or activities of the Code Authority shall (1) impose no inequitable restrictions on membership and (2) submit to the Administrator true copies of its Articles of Association, By-Laws, Regulations and any amendments when made thereto, together with such other information as to membership, organization and activities as the Administrator may deem necessary to effectuate the purposes of the Act.

Section 3. In order that the Code Authority shall at all times be truly representative of the industry and in other respects comply with the provisions of the Act, the Administrator may prescribe such hearings as he may deem proper; and thereafter if he shall find that any basic Code Authority or Sub-Code Authority is not truly representative or does not in other respects comply with the provisions of the Act, may require an appropriate modification in the method of selection of such Code Authority.

Section 4. Members of the Industry shall be entitled to participate in and share the benefits of the activities of the Code Authority and to participate in the selection of the members thereof by assenting to and complying with the requirements of this Code and sustaining their reasonable share of the expenses of its administration. Such reasonable share of the expenses of administration shall be determined by the Code Authority, subject to review by the Administrator, on the basis of volume of business and/or such other factors as may be deemed equitable.

5248 Section 5. Nothing contained in this Code shall constitute the members of the Code Authority partners for any purpose. Nor shall any member of the Code Authority be liable in any manner to anyone for any act of any other member, officer, agent or employee of the Code Authority. Nor shall any member of the Code Authority exercising reasonable diligence in the conduct of his duties hereunder, be liable to anyone for any action or omission to act under this Code, except for his own wilful misfeasance or non-feasance.

Powers and Duties—Section 6.

The Code Authority shall have the following further powers and duties, the exercise of which shall be reported to the Administrator and shall be subject to his right, on review, to disapprove or modify, after such hearing as he may prescribe, any action taken by the Code Authority. Subsequently if the Administrator shall determine that any action of a Code Authority or any agency thereof is unfair or unjust or contrary to the public interest, the Administrator may require that such action be suspended for a period of not to exceed thirty (30) days to afford an opportunity for investigation of the merits of such action and further consideration by such code authority or agency pending final action, which shall be taken only upon approval by the Administrator.

(a) To insure the execution of the provisions of this Code and to provide for the compliance of the industry with the provisions of the Act. To receive complaints of violations of this Code and disputes arising thereunder, except as otherwise hereinafter provided for in subdivision (h) of this section, make investigations thereof, provide hearings thereon, adjust such complaints and make such decisions as are necessary thereon and to interpret the provisions of the Code and to bring violations of this Code to the attention of the Administrator for prosecution, recommendation and other action.

(b) To adopt by-laws and rules and regulations for its procedure and for the administration and enforcement of the Code.

(c) To obtain from members of the industry such information and reports as are required for the administration of the Code and to provide for submission by members of such information and reports as the Administrator may deem necessary for the purposes recited in Section 3 (a) of the Act, which information and reports will be submitted by members to such administrative and/or government agencies as the Administrator may designate; provided that nothing in this Code shall relieve any member of the industry of any existing obligations to furnish reports to any Government agency. No individual reports submitted to the Administrator and/or such Government agencies as the Administrator may designate, shall be disclosed to any other member of the industry or any other party except to such Government agencies as may be directed by the Administrator.

(d) To use such trade associations and other agencies as it deems proper for the carrying out of any of its activities provided for herein, provided that nothing herein shall relieve the Code Authority of its duties or responsibilities under this Code and that such trade associations and agencies shall at all times be subject to and comply with the provisions hereof.

5249 (e) To make recommendations to the Administrator for the coordination of the administration of this Code with such other codes, if any, as may be related to the industry.

(f) To cooperate with the Administrator in regulating the use of any N. R. A. insignia solely by those members of the industry who have assented to, and are complying with, this Code.

(g) To call meetings of any division of the Lead Industries to consider control of production through voluntary agreement, and to recommend to the Administrator such measures as have been voluntarily agreed upon covering fair trade practices, industrial planning, and production control, including stabilization of employment and conservation of natural resources.

(h) Within ninety days after the effective date of this Code the Code Authority shall submit to the Administrator for his approval a plan for the establishment of a National Industrial Relations Board for the industry, consisting of an equal number of representatives of employers and employees. Provision shall be made in such plan for division of the country into districts and the creation of regional industrial relations board to comprise an equal number of representatives of employers and employees truly representative of such districts. The creation and functioning of these boards, including the selection of representatives of employees, shall be in accordance with Section 7 of the Act. Provision shall also be made for the appointment of an impartial person on each board, national and regional, to vote only where such board is unable to render a majority decision. This plan shall provide that the regional boards shall have the authority to hear and adjudicate all complaints and disputes arising out of Articles III, IV and V of the Code, and the National Industrial Relations Board shall pass on all appeals from the regional boards solely on the basis of the record as certified by the Regional Boards to the National Industrial Relations Board. Before any such plan is approved, it shall be submitted to the Labor Advisory Board of the National Recovery Administration for their consideration and recommendations. The Administrator shall have the right, after such notice and hearing as he may specify, to review, disapprove or modify such plan and the plan shall become effective as a part of this Code when and as approved by him.

Article VII.

General Trade Practice Provisions.

The Code Authority shall take all steps necessary to prevent any member of the industry engaging in any unfair trade practice; however, due to the nature of the industry, unfair trade practices have not constituted a problem in the past except as to certain divisions of the industry. Therefore, in Articles VII, IX and X hereof, there are established trade practice rules for the Lead Pigments Division, Metallic Lead Products Division and Metallic Foil Products Division respectively, and it is contemplated that trade practice rules applicable to the industry as a whole and separate rules for other divisions of the industry will later be established by amendment as hereinafter provided.

5250

Article VIII.

Trade Practice Rules for Lead Pigments Division.

Section 1. The following described acts shall be deemed unfair competition for Division 3 (Lead Pigments), and shall constitute a violation of this Code:

(a) Misbranding or misrepresentation of lead pigments.

(b) No member of the industry shall give, permit to be given, or directly offer to give, anything of value for the purpose of influencing or rewarding the action of any employee, agent, or representative of another in relation to the business of the employer of such employee, the principal of such agent or the represented party, without the knowledge of such employer, principal or party. This commercial bribery provision shall not be construed to prohibit free and general distribution of articles commonly used for advertising, except, so far as such articles are actually used for commercial bribery as herein above defined.

(c) Inducing or in any manner attempting to induce a breach, default or cancellation of a contract between a competitor and his customer during the term of such contract.

(d) Guaranteeing for a definite time the life and/or service of lead pigments.

(e) Making false or derogatory statements with respect to the prices, policies, products, practices, business or credit of any competitor.

(f) No merchandise shall be sold at a concession, or used as an inducement, to influence the sale of any lead products, nor shall any concession be given in the price or terms of sale of a lead product to influence the sale of any other merchandise.

Returned Goods—Section 2.

No member of the industry shall permit the return of merchandise without first giving consent for its return. On such goods as are accepted for return, a reasonable charge shall be made and freight charges must be prepaid by the shipper returning the merchandise, except in the case of defective products or where in some other way, the manufacturer may be responsible.

Price Schedules—Section 3.

Each member of the industry engaged in the manufacture and sale of lead pigments shall file with the Secretary within ten (10) days after the effective date of this Code, a list of the prices at which his products will be sold and a memorandum of any of his conditions of sale at variance with those set forth in Schedule "A" attached. Any change in prices or conditions of sale shall be reported to the Secretary in such manner as to reach his office
5251 within twenty-four (24) hours after the effective
date of such change. Any member making a sale or quotation, which does not conform to the bases he then has on file, shall notify the Secretary in detail by letter mailed within twenty-four (24) hours. The information supplied the Secretary shall be re-issued immediately to the reporting members.

Reports—Section 4.

Each member of the Lead Pigments Industry, as defined in Article II, shall submit promptly to the Secretary the following periodic reports for compilation and re-issuance in such manner as may be determined by the Division.

(a) Monthly reports of total production.

(b) Stocks on hand of finished merchandise at the beginning of each month.

(c) Monthly reports of total shipments.

Article IX.

Trade Practice Rules for Metallic Lead Products Division.

Section 1. The following described acts shall be deemed unfair competition for Division 4 (Metallic Lead Products), and shall constitute a violation of this Code.

(a) No member of the Industry shall give, permit to be given, or directly offer to give, anything of value for the purpose of influencing or rewarding the action of any employee, agent or representative of another in relation to the business of the employer of such employee, the principal of such agent or the represented party, without the knowledge of such employer, principal or party. This commercial bribery provision shall not be construed to prohibit free and general distribution of articles commonly used for advertising, except so far as such articles are actually used for commercial bribery as herein above defined.

(b) Giving excessive entertainment or making allowance for sales promotion and advertising in excess of actual amount expended.

(c) Misbranding or misrepresenting the percentage or quality of various metals in any products.

(d) Giving of secret rebates or refunds of any kind.

(e) Accepting orders guaranteed against a decline in price.

(f) Making false or derogatory statements with respect to competitors' prices, policies, products, practices, business or credit.

(g) Giving any other product at a concession in price or giving it away free, in order to influence the sale of any lead product.

(h) Changing prices after the award of a contract.

(i) Contracting for unspecified quantities at a fixed price or giving options at fixed prices for unspecified quantities.

5252 (j) Inducing or in any manner attempting to induce a breach, default or cancellation of a contract between a competitor and his customer during the term of such contract.

(k) Taking back obsolete or damaged material at any value other than its value as secondary material.

(l) To cancel any undelivered portion of a contract for the purpose of effectuating a new contract with the buyer.

Section 2. The following unfair trade practices apply to the Type Metal Business only:

(a) Attaching drum tags to competitors' dross drums without receiving authority to do so from the prospect or customer.

(b) Failing to return competitors' drums to their owner within a period not exceeding thirty days from time of their receipt.

Article X.

Trade Practice Rules for Metallic Foil Products Division.

Section 1. The following described acts shall be deemed unfair competition for Division 5 (Metallic Foil Products) and shall constitute a violation of this Code:

(a) No member of the Division shall publish untruthful advertising nor shall any member in any way misrepresent any goods or credit terms.

(b) No member of the Division shall knowingly withhold from or insert in any quotation or invoice any statement that makes it inaccurate in any particular.

(c) No member of the Division shall secretly offer to make any payment or allowance of a rebate, refund, commission, credit, unearned discount or excess allowance, whether in the form of money or otherwise.

Article XI.

Export Trade.

No provision of this Code relating to prices or terms of selling, shipping or marketing shall apply to export trade or sales or shipments for export trade.

Article XII.

Modification.

Section 1. This Code and all the provisions thereof are expressly made subject to the right of the President, in accordance with the provisions of sub-section (b) of Section 10 of the Act, from time to time to cancel or modify any order, approval, license, rule or regulation issued under said Act.

5253 Section 2. This Code, except as to provisions required by the Act, may be modified on the basis of experience or changes in circumstances, such modifications to be based upon application to the Administrator and such notice and hearing as he shall specify, and to become effective upon the approval of the Administrator.

Section 3. Additions or amendments to this Code, or supplemental Codes affecting or pertaining to the several divisions of the lead industries, may be proposed by any interested party and shall be referred to the Division affected or interested, which shall pass upon the said proposal in accordance with the rules established for said Division. Should the Division approve of the said proposed amendment or addition to the Code, it shall be then forwarded by the said Division to the Executive Committee of the Lead Industries Association, which shall give two weeks' notice to its members of a hearing. Thereafter, if the proposed addition or amendment is approved by the said Executive Committee by a vote of the entire Committee, with not more than one member dissenting or absent, the proposed addition or amendment shall be submitted to the Administrator and after such notice and hearing as the Administrator may prescribe and when approved by him, such additions or amendments shall become a part of this Code and have the same force and effect as any other provision of this Code. Nothing in this section shall be construed to prevent the right of any interested party to appeal directly to the Administrator for a modification of this Code.

Article XIII.

Monopolies.

No provision of this Code shall be so applied as to permit monopolies or monopolistic practices, or to eliminate, oppress, or discriminate against small enterprises.

Article XIV.

Effective Date.

This Code shall be in effect beginning ten (10) days after its approval by the Administrator.

5254 Schedule "A".

Article I. Standard Conditions for Sale of Lead Oxides.

A. "Sale" or "Order" as used herein includes any transaction whereby a member of the industry makes a quotation on, or becomes obligated to sell and deliver material.

B. Whatever terminology may be used, the intent and meaning thereof shall conform to the following requirements of sale.

(1) Material—Dry Oxides of lead, or mixtures consist-

ing principally thereof, each grade of material to be specifically designated.

(2) Quantity—Any amount as agreed between buyer and seller.

(3) Packages—As agreed between buyer and seller.

(4) Price—

(a) Seller's card or quoted price in effect on date order is received with allowances as follows:

(1) Not more than ½¢ per pound for minimum shipment of 5 tons for one buyer at one time to one destination.

(2) Not more than ¾¢ per pound for minimum shipment of 20 tons for one buyer to one destination by:

(A) Rail in one carload.

(B) Truck within a period of three days.

(b) These allowances may also be applied to emergency shipments of smaller quantities only when seller has an order on hand for five (5) tons or twenty (20) tons for immediate shipment, or such quantity en route to the same destination.

(c) No protection against decline in Seller's price may be given.

(d) Red Lead containing 97 per cent or 98 per cent Pb_3O_4 shall be so marked on the package and shall be sold at ⅛¢ and ⅜¢ per pound, respectively, over Seller's price for grades of lower Pb_3O_4 content.

(5) Delivery—F. O. B. cars Seller's shipping point, or by truck, F. O. B. Buyer's premises.

(6) Transportation Allowance—

(a) Since transportation is included in the Seller's price, the actual freight paid by Buyer shall be allowed as a deduction. No cartage allowance shall be made to Buyer for use of his own truck.

(b) If shipment is made by Buyer's boat, Seller may allow actual amount he would have paid for like transportation at minimum published tariffs in effect on date of shipment.

5255 (7) Shipment—Shall be made at least within thirty (30) days from date order is received.

(8) Terms—Net thirty days, less 1 per cent for cash in ten days from date of shipment.

(9) Taxes—Any tax or other charge imposed by Federal Law upon the production and/or sale and/or shipment of lead oxides shall be added to the price to be paid by the Buyer on any transaction to which such charge is applicable.

5256 Article II. Standard Conditions for Sale of Basic Lead Carbonate (Dry White Lead).

A. "Sale" or "Order" as used herein includes any transaction whereby a member of the industry makes a quotation on or becomes obligated to sell and deliver material.

B. Whatever terminology may be used, the intent and meaning thereof shall conform to the following requirements of sale.

(1) Quantity—Any amount as agreed between buyer and seller.

(2) Period—As desired, to be specified.

(3) Packages—As agreed between buyer and seller.

(4) Price—

(a) Spot Sales—Seller's card or quoted price in effect on date order is received.

(b) Contract Sales—

(1) Seller's price on date contract is made with protection against advance or decline on the undelivered portion to the end of the current calendar quarter.

(2) On contracts extending beyond the current calendar quarter, the price applying to subsequent deliveries shall be seller's price in effect on the first day of the calendar quarter in which they are made, with protection against advance or decline on the undelivered portion to the end of each quarter.

(c) The price for minimum 20 ton lots for one buyer to one destination, shipped by rail in one carload, or delivered by truck within a period of three days, shall be ¼¢ per pound less than that charged for smaller quantities.

(d) Emergency shipments may be made at the 20 ton price only to those customers for whom the Seller has a 20 ton order on hand for the same material for immediate shipment or a carload (20 tons) en route to the same destination.

(5) Delivery—F. O. B. cars Seller's shipping point, or by truck, F. O. B. Buyer's premises.

(6) Transportation Allowance—Since transportation is included in the Seller's price, the actual freight paid by the Buyer shall be allowed as deduction. No cartage allowance shall be made to Buyer for use of his own truck.

5257 (7) Shipment—

(a) Spot Sales—Within thirty days from date order is received.

(b) Contract Sales—Within the period covered by the contract.

(8) Terms—Net thirty days, less 1 per cent for cash in ten days from date of shipment.

(9) Taxes—Any tax or other charge imposed by Federal Law upon the production and/or sale and/or shipment of lead oxides shall be added to the price to be paid by the Buyer on any transaction to which such charge is applicable.

5258 Code "I" February 6, 1934.

Code of Fair Competition for the Lead Industries.

Article I.

Purposes.

To effectuate the policies of Title I of the National Industrial Recovery Act, this Code is established as a Code of Fair Competition for the Lead Industries and its provisions shall be the standards of fair competition for such Industry and shall be binding upon every member thereof.

Article II.

Definitions.

Wherever used in this code, or any supplement appertaining thereto, the terms enumerated in this Article shall have the meanings herein defined unless the context shall otherwise clearly indicate.

Section 1. The terms "President", "Act", and "Administrator" shall mean respectively the President of the United States, the National Industrial Recovery Act, and the Administrator of Title I of said Act.

Section 2. The term "Member of Industry" includes all those engaged in the industry either as an employer or on his or its own behalf.

Section 3. The term "Employee" means and includes any one engaged in the industry in any capacity receiving compensation for his services, irrespective of the nature or method of payment of such compensation except a member of the industry.

Section 4. The term "Employer" means and includes anyone by whom any such employee is compensated or employed.

Section 5. The term "Apprentice" as used herein means an individual (usually a minor), bound by indenture executed in compliance with the laws of the State where the service provided for therein is to be performed to serve an employer for a term of years at a predetermined wage for the period of the indenture in order to learn a trade, art or profession.

Section 6. The term "Industry" as used herein includes the mining of lead ore and/or the concentrating thereof, the smelting of lead ore and/or lead concentrates and/or lead bearing scrap, the refining of lead and/or lead bearing scrap and/or drosses, the manufacturing of pig lead, antimonial pig lead, lead pigments, metallic antimony, metallic lead products, allied products defined hereinafter as "metallic lead products" and/or "metallic foil products," and the original sale of such products by the member of industry producing or manufacturing the same either directly or indirectly through subsidiary and/or affiliated companies.

(a) "Lead Ore and Lead Concentrates" as used herein is defined to mean ore and the concentrates thereof, containing lead as the principal commercially recoverable constituent.

5259 (b) "Lead Mining", as used herein is defined to mean the mining and concentrating of lead ore and any further beneficiation thereto prior to the shipment to the smelter.

(c) "Lead Smelting and Refining" as used herein is defined to mean metallurgical and/or chemical treatment of lead ore, lead concentrates, lead bearing scrap, and/or drosses and/or any other lead bearing material into "Pig Lead", and/or "Antimonial Pig Lead."

(d) "Antimonial Pig Lead"—Inasmuch as antimony is a common constituent of most lead ores and a by-product of Lead Mining and Smelting and Refining—metallic antimony and antimonial alloy products (antimonial pig lead) shall be included within the provisions of this Code.

(e) "Lead Pigments" as used herein is defined to mean basic carbonate white lead (dry or in oil), basic lead sulphate (dry or in oil), litharge, red lead (dry or in oil), orange mineral or any other lead oxides, with or without metallic lead content.

(f) "Metallic Lead Products" as used herein is defined to mean extruded, rolled, cast or otherwise fabricated lead or lead alloy products, (except storage battery plates and lead covered cable) kindred products of metallic tin and tin alloy or other metal or metal alloy products, which are produced by members of industry on the same type of machinery and under similar labor and fabricating conditions.

(g) "Metallic Foil Products" as used herein is defined to mean lead and/or tin and/or zinc or their alloys or combinations thereof rolled to a thickness of .006 of an inch or less, whether attached or affixed to other materials or not.

Section 7. The term "Division" as used herein includes respectively the several parts of the industry as enumerated below:

1. Lead mining division.
2. Lead smelting and refining division.
3. Lead pigments division.
4. Metallic lead products division.
5. Metallic foil products division

and such other and further divisions as may hereafter be created pursuant to the provisions of this Code.

Section 8. The term "Association" as used herein includes the "Lead Industries Association", an unincorporated membership society organized under the laws of the State of New York and having its principal office at 420 Lexington Avenue, New York City, and such other trade associations as may hereafter participate in the activities under this code or in the selection of the code authority.

Section 9. The term "Executive Committee" as used herein shall mean the Executive Committee of the Lead Industries Association.

Section 10. The term "Secretary" as used herein shall mean the Secretary of the Code Authority, who also shall be the Secretary of the Lead Industries Association.

5260 Section 11. The term "Southern District" as used herein shall include the states of Texas, Mississippi, Alabama, Louisiana, and Florida.

Article III.

Hours of Labor.

Maximum Hours—Section 1.

Effective on and after the second Monday following the effective date of this Code, no employee shall be permitted to work in any division of the industry in excess of 40 hours in any one week or in excess of 8 hours in any 24 hour period except as herein otherwise provided.

Hours for Clerical and Office Employees—Section 2.

No person employed in clerical or office work shall be permitted to work in excess of 40 hours in any one week, except that during any one week in a one month period such employee shall be permitted to work a maximum of 48 hours in any such week. A normal day shall not exceed 8 hours.

Exceptions as to Hours—Section 3.

The limitation as to hours of labor as specified in Sections 1, 2 and 4 of this Article III shall not apply to the following:

(a) To employees engaged in emergency maintenance, or emergency repair work, involving breakdown or protection of life or property; provided that in such special cases not less than one and one-half times the normal wage rate for any employee so employed shall be paid for all hours worked in excess of 40 hours in any one week; provided that this overtime provision shall not apply in case of catastrophies involving loss of life. Such special cases, however, shall be reported to the Code Authority.

(b) Nor in the case of the Mining Division shall it apply to hoist men, power house men, or pump men, provided the total working hours of such employees shall not exceed 48 hours in any one week.

(c) Nor to outside sales or sales service men, nor to persons in a managerial, executive or supervisory capacity, who receive $35.00 per week or more.

(d) Watchmen, according to the nature of their responsibilities, may be permitted to work 56 hours in any one-week period, provided that such employees shall have at least one day's rest in each seven day period.

(e) There may be a tolerance of 10% additional hours over the 40 hours in any one week for employees engaged in the preparation, care and maintenance of machinery and production facilities, stock and shipping clerks and truck men engaged in outside delivery and pick-up service; provided, however, that at least one and one-half times the normal wage rate for any employee so employed shall be paid for all hours worked in excess of 40 hours in any one week.

5261 (f) The limitation as to maximum hours of work shall not apply to very special cases where restriction of hours of labor of skilled workers in continuous processes would unavoidably reduce or interrupt production because of demands inherent and peculiar within the process itself, provided, however, that such employees in such special cases shall not work more than forty-eight (48) hours in any one week, and provided that in such special cases at least one and one-half times the normal wage rate shall be paid to any employee so employed for hours worked above 40 hours per week. Such special cases, however, shall be reported to the Code Authority. The limitation of hours does not apply where one employee is acting in temporary relief for a fellow employee in continuous processes.

(g) During any period in which a concentrated demand upon any division of the industry, except mining, shall place an unusual and temporary burden for production work upon its facilities or to meet seasonal peak requirements or emergencies, an employee of any such division may be permitted to work not more than forty-eight (48) hours per week and not more than eight (8) hours in any one day in not more than six (6) weeks in six (6) months of any calendar year, provided that not less than time and one-half the normal rate shall be paid to any employee so employed for hours worked above forty (40) hours per week or eight (8) hours per day. All such overtime worked shall be reported to the Code Authority.

Standard Week—Section 4.

No employee shall be permitted to work more than six days in any seven day period.

Employment by Several Employers—Section 5.

No employer shall knowingly permit any employee to work for any time which when totalled with that already performed with another employer or employers in this industry exceeds the maximum permitted herein.

Article IV.

Wages.

Minimum—Section 1.

The minimum wage for each division of this industry shall be as follows:

	Cents per hour
1. Lead mining division	Surface—40 Underground—45
2. Lead smelting and refining division	35
3. Lead pigments division	40
4. Metallic lead products division	35
5. Metallic foil products division	35

provided that, as to the Smelting and Refining Division, in the Southern District, the minimum hourly rate shall be 30¢ per hour. Minimum wages in all divisions of the industry in effect on July 1, 1933, which were above the minimum specified, shall in no case be reduced.

5262 The minimum rates provided for hereinabove shall be considered as hiring rates applying to totally unskilled labor or common labor above ground in the Mining Division and totally unskilled labor or common labor in the other divisions of the industry. In the Mining Division, the minimum hiring rate for underground common labor shall be not less than 45¢ per hour. Other classes of labor shall be compensated at rates above such minimums.

Clerical and Office Employees—Section 2.

No accounting, clerical, office, sales, or service employees working on a weekly basis in any office shall be paid less than at the rate of $15.00 per week; provided, however, that office boys and girls and messengers shall be paid at a rate not less than 80% of the minimum hereinabove specified, and provided further that the number of such boys and girls and messengers so paid shall constitute not more than 5% of the total number of such employees of any one office of any one employer, but in any case each employer shall be entitled to one such employee.

Piecework Compensation—Minimum Wages—Section 3.

This article establishes a minimum rate of pay which shall apply, irrespective of whether an employee is actually compensated on a time rate, piecework, or other basis.

Female Employees—Section 4.

Female employees performing substantially the same work as male employees shall receive the same rate of pay as male employees.

Wages Above Minimum—Section 5.

If an equitable adjustment of wages above the minimum fixed in this Code has not been made since July 1, 1933, there shall then be an equitable adjustment made within 60 days from date of the approval of this Code. Such equitable adjustment shall mean that the differentials existing prior to the formulation of this Code shall be maintained for employees other than persons engaged in managerial, executive or supervisory capacity who receive $35.00 per week or more, provided, however, that in no event shall hourly rates of pay be reduced. If such equitable adjustment has not been made, the Code Authority shall submit for the approval of the Administrator a proposal for adjustment of wages above the minimum. Upon the approval by the Administrator, after such hearing as he may prescribe, such adjustments shall become effective.

Handicapped Persons—Section 6.

A person whose earning capacity is limited because of age or physical or mental handicap may be employed on light work at a wage below the minimum established by this Code if the employer obtains from the State Authority designated by the United States Department of Labor a certificate authorizing his employment at such wages and for such hours as shall be stated in the certificate; such authority shall be guided by the instructions of the U. S. Department of Labor in issuing such certificate; each employer shall file with the Code Authority a list of all such persons employed by him.

5263 Apprentices—Section 7.

The use of apprentices shall be permitted where they are apprenticed to an employer by an indenture made pursuant to the laws of the state in which such service is to be performed, under any apprentice system established and maintained by such employer, provided such indenture agreements are filed with the Code Authority. Employers shall not be allowed to have apprentices in number exceeding 5% of the total number of skilled craftsmen of their special class, except that each employer shall be entitled to employ at least one such employee and in no case shall they be paid less than the minimum wage provided in Section 1 of Article IV.

Payments—Section 8.

An employer shall make payment of all wages due in lawful currency or by negotiable check therefor, payable on demand. These wages shall be exempt from any payments for pensions, insurance or sick benefits other than those voluntarily paid by the wage earners or required by the State laws. Wages shall be paid at least semimonthly and salaries at least at the end of every month. No employer shall withhold wages.

Article V.

General Labor Provisions.

Child Labor—Section 1.

On and after the effective date, no person under 18 years of age shall be employed in the Lead Industry except in clerical, office, sale, service, technical and engineering departments, and no person under 16 years of age shall be employed in any capacity. In any State, an employer shall be deemed to have complied with this provision as to age of employees if he shall have on file a certificate or permit duly signed by the Authority in such State empowered to issue Employment or Age Certificates or permits showing that the employee is of the required age.

Provisions From the Act—Section 2.

(a) Employees shall have the right to organize and bargain collectively through representatives of their own choosing, and shall be free from the interference, restraint, or coercion of employers of labor, or their agents, in the designation of such representatives or in self-organization or in other concerted activities for the purpose of collective bargaining or other mutual aid or protection.

(b) No employee and no one seeking employment shall be required as a condition of employment to join any company union or to refrain from joining, organizing, or assisting a labor organization of his own choosing, and

(c) Employers shall comply with the maximum hours of labor, minimum rates of pay, and other conditions of employment approved or prescribed by the President.

5264 Reclassification of Employees—Section 3.

No employer shall reclassify employees or duties of occupations performed or engage in any other subterfuge for the purpose of defeating the purposes or provisions of the Act or of this Code.

Standards for Safety and Health—Section 4.

Every employer shall make reasonable provision for the safety and health of his employees at the place and during the hours of their employment. Standards of safety and health for each division of the industry shall be submitted to the Administrator within six (6) months after approval of the Code.

State Laws—Section 5.

No provision in this Code shall supersede any State or Federal Law which imposes on employers more stringent requirements as to age of employees, wages, hours of work, or as to safety, health, sanitary or general working conditions, or insurance or fire protection, than are imposed by this Code.

Posting—Section 6.

All employers shall keep posted complete copies of this Code and all amendments thereto in conspicuous places accessible to employees.

Company Town and Stores—Section 7.

Employees other than maintenance or supervisory men, or those necessary to protect property, shall not be required as a condition of employment, to live in homes rented from the employer. No employee shall be required as a condition of employment, to trade at the store owned or specified by an employer.

Dismissal for Complaint—Section 8.

No employee shall be dismissed by reason of making a complaint or giving evidence with respect to a violation of a code.

Article VI.

Organization, Powers and Duties of the Code Authority.

Organization and Constitution—Section 1.

A Code Authority to administer this Code is hereby established and shall consist of the members of the Executive Committee of the Lead Industries Association, the Secretary of said Association, and such division chairmen who have respectively been elected to such office by such divisions in an equitable manner, approved by the Administrator, so as to be truly representative of such divisions respectively, and who are not members of the Executive Committee; in addition to membership as above provided there may be one to three members, without vote and without expense to the industry, to be appointed by 5265 the Administrator to serve for terms of six or twelve months from the date of appointment. On the effective date of this Code the voting members of the Code Authority shall consist of eleven members but such number if subject to variation due to the contents of the foregoing provision. It is contemplated that supplementary codes of fair competition not inconsistent with this Basic Code will be adopted for each division of the industry. When and if such supplementary codes are submitted and approved they shall contain provisions for a Divisional Code Authority selected in an equitable manner so as to be truly representative of such division of the industry subject to the approval of the Administrator, to administer the provisions of this Basic Code and the provisions of such supplementary code, and in addition this Basic Code authority may delegate such of its powers and duties as it deems necessary to such division code authority of such supplementary code, provided, however, that any interested party shall have a right of appeal from any act or decision of such Divisional Code Authority to the code authority of this Basic Code.

Section 2. Each trade or industrial association directly or indirectly participating in the selection or activities of the Code Authority shall (1) impose no inequitable restrictions on membership and (2) submit to the Administrator true copies of its Articles of Association, By-Laws, Regulations and any amendments when made thereto, together with such other information as to membership, organization and activities as the Administrator may deem necessary to effectuate the purpose of the Act.

Section 3. In order that the Code Authority shall at all times be truly representative of the industry and in other respects comply with the provisions of the Act, the Administrator may prescribe such hearings as he may deem proper; and thereafter if he shall find that any basic Code Authority or Divisional Code Authority is not truly representative or does not in other respects comply with the provisions of the Act, may require an appropriate modification in the method of selection of such Code Authority.

Section 4. Members of the Industry shall be entitled to participate in and share the benefits of the activities of the Code Authority and to participate in the selection of the members thereof by assenting to and complying with the requirements of this Code and sustaining their reasonable share of the expenses of its administration. Such reasonable share of the expenses of the administration shall be determined by the Code Authority, subject to review by the Administrator, on the basis of volume of business and/or such other factors as may be deemed equitable.

Section 5. Nothing contained in this Code shall constitute the members of the Code Authority partners for any purpose. Nor shall any member of the Code Authority be liable in any manner to anyone for any act of any other member, officer, agent or employee of the Code Authority. Nor shall any member of the Code Authority exercising reasonable diligence in the conduct of his duties hereunder, be liable to anyone for any action or omission to act under this Code, except for his own wilful misfeasance or non-feasance.

5266 Powers and Duties—Section 6.

The Code Authority shall have the following further powers and duties, the exercise of which shall be reported to the Administrator and shall be subject to his right, on review, to disapprove, after such hearing as he may prescribe, any action taken by the Code Authority. Subsequently if the Administrator shall determine that any action of a Code Authority or any agency thereof is unfair or unjust or contrary to the public interest, the Administrator may require that such action be suspended for a period of not to exceed thirty (30) days to afford an opportunity for investigation of the merits of such action and further consideration by such code authority or agency pending final action, which shall be taken only upon approval by the Administrator.

(a) Subject to such rules and regulations as may be issued by the Administrator to insure the execution of the provisions of this Code and provide for the compliance of the industry with the provisions of the Act; and receive complaints of violations of this Code and disputes arising thereunder, except as otherwise hereinafter provided for in subdivision (h) of this section, make investigations thereof, provide hearings thereon, adjust such complaints and make such decisions as are necessary thereon and to interpret the provisions of the Code and to bring violations of this Code to the attention to the Administrator for prosecution, recommendation and other action.

(b) To adopt by-laws and rules and regulations for its procedure and for the administration and enforcement of the Code.

(c) To obtain from members of the industry such information and reports as are required for the administration of the Code and to provide for submission by members of such information and reports as the Administrator may deem necessary for the purposes recited in Section 3(a) of the Act, which information and reports shall be submitted by members to such administrative and/or government agencies as the Administrator may designate; provided that nothing in this Code shall relieve any member of the industry of any existing obligations to furnish reports to any Government agency. No individual reports submitted to the Administrator and/or such Government agencies as the Administrator may designate, shall be disclosed to any other member of the industry or any other party except to such Government agencies as may be directed by the Administrator.

(d) To use such trade associations and other agencies as it deems proper for the carrying out of any of its activities provided for herein, provided that nothing herein shall relieve the Code Authority of its duties or responsibilities under this Code and that such trade associations and agencies shall at all times be subject to and comply with the provisions hereof.

(e) To make recommendations to the Administrator for the coordination of the administration of this Code with such other codes, if any, as may be related to the industry.

5267 (f) To cooperate with the Administrator in regulating the use of any N.R.A. insignia solely by those members of the industry who have assented to, and are complying with, this Code.

(g) To call meetings of any division of the Lead Industries to consider control of production through voluntary agreement, and to recommend to the Administrator such measures as have been voluntarily agreed upon covering fair trade practices, industrial planning, and production control, including stabilization of employment and conservation of natural resources.

(h) Within ninety days after the effective date of this Code the Code Authority shall submit to the Administrator for his approval a plan for the establishment of a National Industrial Relations Board for the industry, consisting of an equal number of representatives of employers and employees. Provision shall be made in such plan for division of the country into districts and the creation of regional industrial relations boards to comprise an equal number of representatives of employers and employees truly representative of such districts. The creation and functioning of these boards, including the selection of representatives of employees, shall be in accordance with Section 7 of the Act. Provision shall also be made for the appointment of an impartial person on each board, national and regional, to vote only where such board is unable to render a majority decision. This plan shall provide that the regional boards shall have the authority to hear and adjudicate all complaints and disputes arising out of Articles III, IV and V of the Code, and the National Industrial Relations Board shall pass on all appeals from the regional boards solely on the basis of the record as certified by the Regional Boards to the National Industrial Relations Board. Before any such plan is approved, it shall be submitted to the Labor Advisory Board of the National Recovery Administration for their consideration and recommendations. The Administrator shall have the right, after such notice and hearing as he may specify, to review, disapprove or modify such plan and the plan shall become effective as a part of this Code when and as approved by him.

Article VII.

Trade Practice Rules for Lead Pigments Division.

Section 1. The following described acts shall be deemed unfair competition for Division 3 (Lead Pigments), and shall constitute a violation of this Code:

(a) Misbranding or misrepresentation of lead pigments.

(b) No member of the industry shall give, permit to be given, or directly offer to give, anything of value for the purpose of influencing or rewarding the action of any employee, agent or representative of another in relation to the business of the employer of such employee, the principal of such agent or the represented party, without the knowledge of such employer, principal or party. This commercial bribery provision shall not be construed to prohibit free and general distribution of articles commonly used for advertising, except, so far as such articles are actually used for commercial bribery as hereinabove defined.

5268 (c) Inducing or in any manner attempting to induce a breach, default or cancellation of a contract between a competitor and his customer during the term of such contract.

(d) Guaranteeing for a definite time the life and/or service of lead pigments.

(e) Making false or derogatory statements with respect to the prices, policies, products, practices, business or credit of any competitor.

(f) No merchandise shall be sold at a concession, or used as an inducement, to influence the sale of any lead products, nor shall any concession be given in the price or terms of sale of a lead product to influence the sale of any other merchandise.

Section 2. Each member of the industry engaged in the manufacture and sale of lead pigments shall file with the Secretary within ten (10) days after the effective date of this Code, a list of the prices at which his products will be sold and a memorandum of any of his conditions of sale at variance with those set forth in Schedule "A" attached. Any change in prices or conditions of sale shall be reported to the Secretary in such manner as to reach his office within twenty-four (24) hours after the effective date of such change. Any member making a sale or quotation, which does not conform to the basis he then has on file, shall notify the Secretary in detail by letter mailed within twenty-four (24) hours. The information supplied the Secretary shall be re-issued immediately to the reporting members.

Section 3. Each member of the Lead Pigments Industry, as defined in Article II, shall submit promptly to the Secretary the following periodic reports for compilation and re-issuance in such manner as may be determined by the Division.

(a) Monthly reports of total production.

(b) Stocks on hand of finished merchandise at the beginning of each month.

(c) Monthly reports of total shipments.

Article VIII.

Trade Practice Rules for Metallic Lead Products Division.

Section 1. The following described acts shall be deemed unfair competition for Division 4 (Metallic Lead Products), and shall constitute a violation of this Code:

(a) No member of the Industry shall give, permit to be given, or directly offer to give, anything of value for the purpose of influencing or rewarding the action of any employee, agent or representative of another in relation to the business of the employer of such employee, the principal of such agent or the represented party, without the knowledge of such employer, principal or party. This commercial bribery provision shall not be construed to prohibit free and general distribution of articles commonly used for advertising, except so far as such articles are actually used for commercial bribery as hereinabove defined.

5269 (b) Making allowance for sales promotion and advertising in excess of actual amount expended, or making excessive expenditures on behalf of or for the benefit of a customer.

(c) Misbranding or misrepresenting the percentage or quality of various metals in any products.

(d) No member of the Division shall secretly offer or make any payment or allowance of a rebate, refund, commission, credit, unearned discount or excess allowance, whether in the form of money or otherwise.

(e) Accepting orders guaranteed against a decline in price.

(f) Making false or derogatory statements with respect to competitors' prices, policies, products, practices, business or credit.

(g) Giving any other product at a concession in price or giving it away free, in order to influence the sale of any lead product.

(h) Changing prices after the award of a contract.

(j) Inducing or in any manner attempting to induce a breach, default or cancellation of a contract between a competitor and his customer during the terms of such contract.

(i) Contracting for unspecified quantities at a fixed price or giving options at fixed prices for unspecified quantities.

(k) Taking back obsolete or damaged material at any value other than its value as secondary material.

(l) To cancel any undelivered portion of a contract for the purpose of effectuating a new contract with the buyer.

Section 2. The following unfair trade practices apply to the Type Metal Business only:

(a) Attaching drum tags to competitors' dross drums without receiving authority to do so from the prospect or customer.

(b) Failing to return competitor's drums to their owner within a period not exceeding thirty days from time of their receipt.

Article IX.

Trade Practice Rules for Metallic Foil Products Division.

Section 1. The following described acts shall be deemed unfair competition for Division 5 (Metallic Foil Products) and shall constitute a violation of this Code:

(a) No member of the Division shall publish untruthful advertising nor shall any member in any way misrepresent any goods or credit terms.

5270 (b) No member of the Division shall knowingly withhold from or insert in any quotation or invoice any statement that makes it inaccurate in any particular.

(c) No member of the Division shall secretly offer or make any payment or allowance of a rebate, refund, commission, credit, unearned discount or excess allowance, whether in the form of money or otherwise.

Article X.

Export Trade.

No provision of this Code relating to prices or terms of selling, shipping or marketing, shall apply to export trade or sales or shipments for export trade.

Article XI.

Application of Code to Operations Wherein Other Metals Are Produced.

Section 1. If any member of the industry is also a member of any other industry, provisions of this Code can apply only to that portion of its business which is a part of the lead industry.

Section 2. Where there is any question as to whether lead is the major production from the operations which do or which might produce lead, zinc, copper, gold, silver or other materials, then in any and every such event the question as to which Code of Fair Competition shall govern such operations of any such member of this industry, shall be referred to a Coordination Committee. This Coordination Committee shall be composed of two members to be appointed by each of the Code Authorities for such industries as may be involved in each particular question. In the event such Committee is unable to reach a majority conclusion, then either the Committee shall elect an additional impartial member or upon their failure so to agree on such additional impartial member, the Administrator then may appoint such additional impartial committee member. Any member of the industry, the operations of which may raise such a question, shall file a statement of fact with the Code Authority for its industry, and such statement shall contain a statement of its preference as to the Code it would prefer to have such operations be governed by, and such preference shall be granted unless such Coordination Committee shall find that the granting thereof would be unfair in view of the rights of others or that it would have a tendency contrary to the effectuation of the policies of the Act.

Section 3. Within ten (10) days after the effective date of this Code, any member of this industry may file such a statement of fact and preference as to being governed by any of such other Codes which may at that time be in effect. Thereafter upon any such other Code becoming effective, such statement may then be filed; provided, however, that until any such statement is filed and decision is made thereon by such Coordination Committee, such operation of such member of this industry shall be governed by the provisions of this Code.

5271 Section 4. From time to time thereafter if conditions change, members of this industry shall be entitled to file such statements of fact and preference as to change of a portion of their operations from the jurisdiction of one Code to the jurisdiction of another, and in such event they shall be handled in the same manner as provided for above.

Article XII.

Modification.

Section 1. This Code and all the provisions thereof are expressly made subject to the right of the President or delegated agent, in accordance with the provisions of subsection (b) of Section 10 of the Act, from time to time to cancel or modify any order, approval, license, rule or regulation issued under said Act, and specifically, but without limitation, to the right of the President to cancel or modify his approval of this Code, or any conditions imposed by him upon his approval hereof.

Section 2. Such of the provisions of this Code as are not required to be included therein by the Act may, with the approval of the Administrator, be modified or eliminated in such manner as may be indicated by the needs of the public, by changes in circumstances, or by experience; all the provisions of this Code, unless so modified or eliminated, shall remain in effect until June 16, 1935.

Section 3. An amendment to this Code or any codes supplemental thereto affecting or pertaining to the several divisions of the Lead Industries may be proposed by any interested party either to the Divisional Code Authority, the Basic Code Authority, or directly by or to the Administrator. All such proposed amendments shall be referred to the Division affected or interested and then shall be submitted by said Division to the Basic Code Authority who shall give members of the Industry an opportunity to be heard thereon, and thereafter the Code Authority may make such recommendations thereon as are deemed proper; provided, however, that when approved by the Administrator as necessary to effectuate the policies of the Act, after such notice and hearing as he may prescribe, any proposed amendment shall thereupon become effective as a part of this Code.

Article XIII.

Monopolies.

No provision of this Code shall be so applied as to permit monopolies or monopolistic practices, or to eliminate, oppress, or discriminate against small enterprises.

Article XIV.

Effective Date.

This Code shall be in effect beginning ten (10) days after its approval by the Administrator.

5272 ## Schedule "A."

Code of Fair Competition for the Lead Industries.

Article I—Standard Conditions for Sale of Lead Oxides.

A. "Sale" or "Order" as used herein includes any transaction whereby a member of the industry makes a quotation on, or becomes obligated to sell and deliver material.

B. Whatever terminology may be used, the intent and meaning thereof shall conform to the following requirements of sale:

(1) Material—Dry Oxides of lead, or mixtures consisting principally thereof, each grade of material to be specifically designated.

(2) Quantity—Any amount as agreed between buyer and seller.

(3) Packages—As agreed between buyer and seller.

(4) Price—

(a) Seller's card or quoted price in effect on date order is received with allowances as follows:

(1) Not more than ½¢ per pound for minimum shipment of 5 tons for one buyer at one time to one destination.

(2) Not more than ¾¢ per pound for minimum shipment of 20 tons for one buyer at one time to one destination by:

(a) Rail in one carload.

(b) Truck within a period of three days.

(b) These allowances may also be applied to emergency shipments of smaller quantities only when seller has an order on hand for five (5) tons or twenty (20) tons for immediate shipment, or such quantity enroute to the same destination.

(c) No protection against decline in Seller's price may be given.

(d) Red Lead containing 97 per cent or 98 per cent Pb_3O_4 shall be so marked on the package and shall be sold at not less than ⅛¢ and ⅜¢ per pound, respectively over Seller's price for grades of lower Pb_3O_4 content.

(5) Delivery—F.O.B. cars Seller's shipping point, or by truck, F.O.B. Buyer's premises.

(6) Transportation Allowance—

(a) Since transportation is included in the Seller's price, the actual freight paid by Buyer shall be allowed as a deduction. No cartage allowance shall be made to Buyer for use of his own truck.

(b) If shipment is made by Buyer's boat, Seller may allow actual amount he would have paid for like transportation at minimum published tariffs in effect on date of shipment.

5273 (7) Shipment—Shall be made at least within within thirty (30) days from date order is received.

(8) Terms—Net thirty days, less 1 per cent for cash in ten days from date of shipment.

(9) Taxes—Any tax or other charge imposed by Federal Law upon the production and/or sale and/or shipment of lead oxides shall be added to the price to be paid by the Buyer on any transaction to which such charge is applicable.

5274 Article II—Standard Conditions for Sale of Basic Lead Carbonate (Dry White Lead).

A. "Sale" or "Order" as used herein includes any transaction whereby a member of the industry makes a quotation on or becomes obligated to sell and deliver material.

B. Whatever terminology may be used, the intent and meaning thereof shall conform to the following requirements of sale:

(1) Quantity—Any amount as agreed between buyer and seller.

(2) Period—As desired, to be specified.

(3) Packages—As agreed between Buyer and Seller.

(4) Price—

(a) Spot Sales—Seller's card or quoted price in effect on date order is received.

(b) Contract Sales—

(1) Seller's price on date contract is made with protection against advance or decline on the undelivered portion to the end of the current calendar quarter.

(2) On contracts extending beyond the current calendar quarter, the price applying to subsequent deliveries shall be seller's price in effect on the first day of the calendar quarter in which they are made, with protection against

advance or decline on the undelivered portion to the end of each quarter.

(c) The price for minimum 20 ton lots for one buyer to one destination, shipped by rail in one carload, or delivered by truck within a period of three days, shall be not more than ¼¢ per pound less than that charged for smaller quantities.

(d) Emergency shipments may be made at the 20 ton price only to those customers for whom the Seller has a 20 ton order on hand for the same material for immediate shipment or a carload (20 tons) enroute to the same destination.

(5) Delivery—F.O.B. cars Seller's shipping point, or by truck, F.O.B. Buyer's premises.

(6) Transportation Allowance—Since transportation is included in the Seller's price, the actual freight paid by Buyer shall be allowed as deduction. No cartage allowance shall be made to Buyer for use of his own truck.

(7) Shipment—

(a) Spot Sales—Within thirty days from date order is received.

(b) Contract Sales—Within the period covered by the contract.

5275 (8) Terms—Net thirty days, less 1 per cent for cash in ten days from date of shipment.

(9) Taxes—Any tax or other charge imposed by Federal Law upon the production and/or sale and/or shipment of white lead shall be added to the price to be paid by the Buyer on any transaction to which such charge is applicable.

5318 RESPONDENT'S EXHIBIT NO. 92.

Executive Committee Meeting.

New York, N. Y. November 22, 1935.

A meeting of the Executive Committee of the Lead Industries Association was held on Friday, November 22, 1935, at 12:30 P. M., at the Down Town Association, New York City.

Present	Representing
Clinton H. Crane, Chairman	St. Joseph Lead Company
F. H. Brownell	American Smelting & Refining Co.
W. C. Beschorman	National Lead Company
F. M. Carter	National Lead Company
F. Y. Robertson	United States Smelting Refining & Mining Co. Inc.
Directors Present	
B. N. Zimmer	American Metal Co. Ltd.
Clarence Glass	Anaconda Sales Company
W. E. Maston	Eagle-Picher Lead Company
F. E. Wormser, Secretary.	

Mr. Clinton H. Crane occupied the chair.

The Chairman brought to the attention of the Committee a letter of November 7, 1935 from Mr. George L. Berry, giving details of a Washington conference scheduled for December 9, from which it appeared that the conference would be conducted in a manner different from that originally indicated by Mr. Berry's letter of October 9, and also that the machinery set up for conducting the conference was such as possibly to place the lead industry in a position whereby it might sponsor a movement to which it was opposed. Telegrams and letters from various members on the subject were read.

It also developed that the United States Copper Association had taken a strong stand in opposition to the conference and had declined the invitation to attend.

After discussion, it was regularly moved, seconded and unanimously carried that the following resolution be forwarded to Mr. Berry:

Whereas, the Lead Industries Association was invited, under date of October 9, 1935, to attend a conference in

Washington, called by Mr. George L. Berry, Coordinator for Industrial Cooperation, "for the purpose of conferring upon the advisability of developing a permanent structure contemplating the furtherance of prosperity and stability in our industrial life," and "for consideration of the best means of accelerating industrial recovery, eliminating unemployment and maintaining business and labor standards"; and

Whereas, the Lead Industries Association in reply declared itself as opposed to the aforesaid governmental conference at this time as tending to confuse and disturb industry, although indicating a willingness to send a representative if desired; and

5319 Whereas, Mr. Berry's letter of November 7, 1935, giving details of the conference, undisclosed by the invitation of October 9, from which it appears that the meeting will be so conducted that representatives of the Lead Industries Association might be held to have committed the industry and its members to a program adopted at the conference because of participation in it; and

Whereas, majority action upon matters placed before the conference might by implication bind an unwilling minority; and

Whereas, the Lead Industries Association basically represents a natural resource industry, producing diversified lead products from mine to finished material, with mining and smelting operations generally conducted in remote localities under operating conditions dissimilar to those usually found in other industries, and with problems peculiarly its own; and

Whereas, the lead industry has made greater progress out of the depression from the standpoint of both employer and employee since the termination of N. R. A. than it did before;

Now, Therefore, Be It Resolved, that it is undesirable for the lead industry as a unit to send a representative to the meeting called by Mr. George L. Berry, to be held in Washington on December 9, 1935.

The Chairman then called upon the Committee to consider the budget for 1936, and upon explanation of the Secretary, the following budget was presented and unanimously adopted:

Ordinary Budget 1936.

Furniture, Fixtures and Equipment	$ 500
Salaries	25,000
Rent and Light	2,650
Telephone and Telegraph	900
Books and Subscriptions	250
Printing	7,700
Mailing	6,000
Illustration	500
Traveling Expenses	1,500
Medical Research	2,000
Office Expense Miscellaneous	1,500
Technical Research	1,500
	$50,000

The Secretary stated that owing to the expected cash balance which the Lead Industries Association would have at the end of the year 1935, it would not be necessary to draw upon the membership for the full amount of the proposed budget but that $10,000.00 could be appropriated from the expected balance remaining on January 1, 1936 of about $20,000.00.

It was moved, seconded and carried that the Secretary's salary cut be restored, effective as of December 1, 1935.

5320 A letter from Mr. Manfred Bowditch, Director of the Division of Occupational Hygiene, Department of Labor and Industries, of the State of Massachusetts, dated November 20, 1935, referring to the use of lead for painting children's toys was inserted in the record as follows, and the Secretary was authorized to assist Mr. Bowditch in discouraging the use of white lead, or any lead paint in painting children's toys and furniture:

"You may recall our contact and exchange of correspondence in 1933 in connection with the clause relative to infant lead poisoning in the painting code of this department.

"We have recently run across a manufacturer of toys in greater Boston, who is using lead colors in painting the toys. We have pointed out to him the hazard involved, but are apparently unable to make much impression on him. Is the Lead Industries Association willing to take any sort of hand in such a situation? The statement embodied in the second paragraph of your letter to me of April 28, 1933, leads me to believe that it may be. I hope that some form of cooperation may be possible in this situation.

"I enclose for your information a recent statement relative to the work of this newly formed division, which you will note is advisory rather than of an enforcement nature."

The meeting adjourned at 2:00 P. M.

F. E. Wormser,
Secretary.

5699B First Meeting.

Code Authority Meeting.

June 7, 1934.

New York, N. Y.

A meeting of the Code Authority for the Lead Industry was held on Thursday, June 7, 1934, at 10:30 A. M., in the Board Room of the National Lead Company, 111 Broadway, New York, N. Y.

Present:

F. M. Carter, Clinton H. Crane, F. Y. Robertson, R. M. Roosevelt, P. E. Sprague, F. H. Brownell by H. M. Brush, James F. McCarthy by D. A. Callahan, W. Y. C. Hunt by R. G. McKay. Also: I. H. Cornell, F. S. Mulock, F. E. Wormser, Secretary.

Mr. Clinton H. Crane occupied the chair as temporary Chairman and Mr. F. E. Wormser acted as Secretary.

The Chairman read the following telegram from Deputy Administrator Walter A. Janssen, and the Secretary was ordered to make it a part of the minutes of this meeting:

"The plan of election and the selection of Members of the Code Authority for the Lead Industries, together with the minutes of the meetings meets with the approval of the Administrator."

The Chairman then requested from the Secretary certified copies of the Minutes of the meeting of members of the Lead Industries Association as of June 5, 1934, at which a representative Board of Directors was elected. He also requested certified copies of the Minutes of the Meeting of the Board of Directors of the Lead Industries Association held on June 5, 1934 at which an Executive Committee was elected. He also requested certified copies of the minutes of the Smelting and Refining, Lead Pigments, Metallic Lead Products and Metallic Foil Products Divisions' meetings held on June 5 and certified copies of the minutes of the Mining Division held on June 7, at which Chairmen were elected for each Division respectively. These appear as Exhibit A-1 to A-7 attached.

5700 The Chairman stated that, inasmuch as the Code of Fair Competition for the Lead Industry in Article VI, Section 1 provided for the composition of the Code Authority to consist of the Executive Committee of the Lead Industries Association and five Division Chairmen, the Code Authority nominees as detailed in the minutes of the Board of Directors of the Lead Industries Association, and in the minutes of the five divisions of the Lead Industries noted above, and approved by the Administrator would constitute the Code Authority for the Lead Industry, as follows:

Executive Committee: Clinton H. Crane, F. H. Brownell, F. M. Carter, F. Y. Robertson, James F. McCarthy.

Division Chairmen: G. W. Lambourne, Mining Division; John A. McCarthy, Smelting & Refining; R. M. Roosevelt, Lead Pigments Div.; P. E. Sprague, Metallic Lead Products; W. Y. C. Hunt, Metallic Foil Products.

F. E. Wormser, Secretary and Treasurer.

The Chairman next proposed that the Code Authority proceed to the election of officers, whereupon Mr. Clinton H. Crane was nominated as Chairman, F. H. Brownell and F. M. Carter as Vice Chairmen, respectively, and F. E. Wormser as Secretary and Treasurer.

There were no further nominations and the officers as nominated were elected without dissenting vote.

The Chairman stated that, in accordance with Article VI, Section 6 (b), it was one of the duties of the Code Authority, "To adopt By-Laws and rules and regulations for its procedure * * *" and requested the Secretary to distribute to Code Authority members a draft which had been prepared, with the aid of counsel, as suitable for the Code Authority. After detailed examination had been made of the draft submitted and numerous changes suggested,

It Was Regularly Moved, and seconded and carried that the By-Laws of the Code Authority for the Lead Industry, as shown in Exhibit B attached to these minutes be adopted and submitted to the Administrator for his approval.

The next order of business was the preparation of a budget to cover the Code Authority expenses during the ensuing twelve months. Several members of the Code Authority expressed the view that a budget large enough to insure adequate funds for the thorough administration of the Code should be provided for all of the numerous industries embraced by the Lead Code and

5701 It was regularly moved, seconded and carried that a Code Authority budget for the Lead Industry, as shown in Exhibit C attached to these minutes, in the total sum of $40,000, be submitted to the Administrator for his approval.

It was further resolved that the Code Authority select a man-shift basis for the basis of assessment to be used in obtaining code authority funds.

It was further resolved that Code Authority members be entitled to their actual transportation expenses in attending Code Authority meetings, plus a per diem allowance of $5.00 a day for subsistence while absent from the city in which their headquarters ar located.

Motion carried.

It was next moved and seconded that the Secretary apply to the National Recovery Administration for permission to distribute N. R. A. insignia to members of industry covered by the Code of Fair Competition for the Lead Industry.

Motion carried.

The Chairman called attention to the numerous investigations ordered by the Code, the first one being as outlined in Article III, Section 1 as follows:

"No employee shall be permitted to work in any division of the Industry in excess of forty (40) hours per week, or in excess of eight (8) hours in any twenty-four (24) hour period except as herein otherwise provided. A normal work day shall not exceed eight (8) hours.

"The interpretation of the eight (8) hour provision for the Mining Division in each state shall be in accordance with any laws of such state pertaining to the eight (8) hour day on mining operations.

"The Code Authority shall study the operation of the eight (8) hour provision for the Mining Division and not later than ninety (90) days from the effective date shall report fully to the Administrator the results of such study. The administrator may, at his discretion, appoint an impartial investigator who shall review the conditions in the Mining Division of the Industry concerning the op-
5702 eration of the eight (8) hour provision and shall report thereon to the Administrator not later than ninety (90) days from the effective date and forward a copy of such report to the Code Authority."

It was moved, seconded and carried that the Chairman refer the study of the operation of the eight-hour provision mentioned in the above extract from the Lead Code to the Chairman of the Mining Division, with authority to select his own committee for the purpose and to report the results of his investigation to the Code Authority.

Inasmuch as Article V, Section 4, requires the submission to the Administrator, by the Code Authority, of standards of safety and health for each Division,

It was regularly moved, seconded and carried that the Chairman be authorized to appoint Committees from the five Divisions to prepare a report under the provisions of Section 4 of Article V on Standards for Safety and Health.

With reference to the duties of the Code Authority under Article VI, Section 6 (h) requiring them to submit a plan for the establishment of the National Industrial Relations Board for the Industry, to the Administrator,

It was regularly moved, seconded and carried that the chair be authorized to call a special meeting of the Code Authority to consider this subject after the approval of the Administrator of the By-Laws of the Code Authority.

The Secretary noted the receipt of a telegram dated June 1 from O. N. Friendly of the Park Utah Consolidated Mines Company with reference to the labor provisions of the Lead Code and a letter from Mr. H. P. Henderson, President of the Texas Mining and Smelting Company on the inclusion of antimony, asking for exemptions from, exceptions to, or modification of the Lead Code.

It was moved that the Secretary be authorized to circularize these communications among the Code Authority for consideration at the next meeting.

It was further moved that the Secretary communicate with the American Mining Congress, asking them for information as to their knowledge of the Texas Mining and Smelting Company, and its operations.

Motions seconded and carried.

5708 The Chairman presented a lead sales allocation agreement, as per Exhibit D, attached hereto, which he had prepared under the provisions of Code Article VI, Section 6 (g) and stated that he desired to have the opinion of the consumer members of the Code Authority on this plan which was designed to stabilize the lead market and to carry out the purposes of Title I of the National Industrial Recovery Act.

The meeting thereupon adjourned.

Secretary.

5798 RESPONDENT'S EXHIBIT NO. 134.

Lead Pigments Division.

July 19, 1933.

New York, N. Y.

A meeting of the Lead Pigments Division of the Lead Industries Association was held at the Lawyers Club, New York City, on Wednesday, July 19, 1933, at 10:30 A. M. The following were present:

Present:	Representing:
F. M. Carter, Chairman	National Lead Company
F. O. Case	Anaconda Lead Products Company
A. E. Bendelari	Eagle-Picher Lead Company
R. M. Roosevelt	Eagle-Picher Lead Company
T. H. Zappert	Euston Lead Company
R. M. Evans	Evans Lead Company
W. Parmer Fuller, Jr.	W. P. Fuller & Company
Wm. Wilke, Jr.	Hammond Lead Products, Inc.
P. E. Sprague	Metals Refining Company
W. C. Beschorman	National Lead Company
E. J. Cornish	National Lead Company
H. J. Hain	Sherwin-Williams Company
A. P. Wetherill	Wetherill & Bro.
F. E. Wormser, Secretary.	

Mr. F. M. Carter occupied the chair.

The Chairman stated that the purpose of the meeting was to draft a Code of Fair Competition which would meet the requirements of the Lead Pigments Division of the Lead Industries Association and stated that the Secretary had prepared a Tentative Draft of a Code, purely with the idea of presenting something for the members as a basis to work upon.

The Tentative Draft was read paragraph by paragraph, changes being made wherever they represented the unanimous expression of those present, so that finally the Code appeared as attached copy.

It was regularly moved and seconded.

That forty-two hours of employment, as averaged over a 13 week period, be adopted by the Lead Pigments Division of the Lead Industries Association as the maximum hours of employment to appear in their Supplementary

Code, or in the Master Code opposite their Division, together with a minimum wage rate of 35¢ per hour for common labor.

Unanimously carried.

It was regularly moved and seconded.

That the basic code as presented herewith be adopted by the Lead Pigments Manufacturers of the Lead Industries Association and be referred to the Executive Committee for reconcilement with the codes of the other divisions.

5799 Motion carried.

It was further moved and seconded

That the action on the Supplementary Code, so far as it related to lead products, or any other subject other than labor or wages in the Lead Pigments Industries, be postponed pending the accumulation of data on the items properly to be included.

A recess was declared at 5:00 P. M., until 9:30 A. M. July 20, 1933.

F. M. Carter,
Chairman,
F. E. Wormser,
Secretary.

5800 Supplementary Code of Fair Competition for the Lead Pigments Division of the Lead Industries Association.

As provided in Art. XIII of the Code of Fair Competition for the Lead Industries hereinafter termed the "Master Code" this supplementary code is hereby made a part of said Master Code with the same force and effect as any provisions thereof, except that it shall be applicable only to the Lead Pigments Division of the Lead Industries as defined in Art. II of said Master Code; i.e., the manufacture of basic carbonate white lead, dry or in oil, basic lead sulphate, dry or in oil, litharge, red lead, dry or in oil, orange mineral and other lead oxides with or without metallic lead content.

Price Lists.

Art. I—Members of the Lead Pigments Division shall file with the Secretary their price lists together with terms and conditions of sale. Any change in the said lists and terms shall be reported promptly to the Secretary. Upon making a sale or quotation at variance with the previously reported price list or terms, each member shall notify the Secretary in writing promptly concerning the variation.

Uniform Sales Contracts.

Art. II—Uniform sales contracts specifically designed for use in selling Dry White Lead and Lead Oxides shall be developed as soon as practicable and thereafter used by all members after said contract forms shall have been adopted by a two-thirds vote of members manufacturing the products to which the contracts apply. From time to time changes in the uniform sales contracts can be made by a two-thirds vote of members manufacturing such products. All sales shall conform to the conditions set forth in the uniform contract forms.

Unfair Trade Practices.

Art. III—The following shall be considered unfair trade practices and are violations of this Code.

(a) Misbranding, mislabeling, and false advertising—Transactions known to the law as misbranding, mislabeling and false advertising are specifically prohibited by this Code, and, after the effective date, shall be punishable as a violation thereof in addition to any other penalties imposed by any other law.

(b) Guaranteeing Paint Jobs—Definite time guarantee on the life and/or service of the products of the Industry is hereby prohibited.

(c) Gifts to Employees of Another—It shall be a violation of this Code for any person engaged in the Industry to offer or give—or permit any representative of his to offer or give—any commission, gratuity, or other thing of substantial value to employees of his customers or prospective customers, except in the case of payments made with the consent of the employer for a definite service rendered.

(d) Exchange of Goods—No manufacturer shall exchange his goods for those of another.

5801 (e) Inducing Breach of Contracts—No manufacturer either directly or indirectly or through his salesmen, representatives, or agents, shall encourage any purchaser of the products of the Industry to disregard or fail to live up to his commitment to another member of the Industry.

(f) Disparagement of Competitors—The use of or participation in the publishing or the disseminating of any false statement, representation or insinuation which disparages the business of a competitor, or attacks the reputation, goods, prices, credit, service or advertising of any competitor or of any other industry, is an unfair and uneconomic practice and is prohibited.

(g) No product shall be sold at a concession in price in order to influence the sale of any lead product.

Returned Goods.

Art. IV—No merchandise shall be returned without first securing the consent of the manufacturer. On such goods as are accepted for return, a reasonable charge shall be made and freight must be prepaid by the shipper returning the merchandise, except in the case of defective products or where in some other way the manufacturer may be responsible.

Taxes.

Art. V—Any sales tax uniformly applicable upon all sellers shall be for buyer's account and shall be added to the selling price and paid by the buyer.

Production and New Capacity.

Art. VI—It is the consensus of opinion in the Lead Pigments Division of the Lead Industries Association that for the purpose of effectuating the policy of Title I of the National Industrial Recovery Act existing capacities for the production of lead pigments as defined in Art. II of the Master Code and reenumerated in the preamble hereof, should not be increased until such time as the fullest possible use of such existing facilities shall have proven inadequate to satisfy the demand for such pigments. Accordingly, unless and until this Supplementary Code shall have been so amended as to permit it, no present or prospective manufacturer of lead pigments shall construct or install any additional plant or equipment for such manufacture beyond that existing at the date of approval of this Supplementary Code by the President. The President may, however, at any time, suspend the operation of the provisions of this article.

Selling Below Cost and Dumping.

Art. VII—It is further the consensus of opinion in the Lead Pigments Division of the Lead Industries Association that the sale of the product of any manufacturer of lead pigments, as defined in Art. II of the Master Code and reenumerated in the preamble hereof, in competition with the product of other manufacturers of such pigments, at a price less than actual cost of production, such cost of production to include a fairly apportioned share of total general overhead, selling and administrative expense, is subversive to the best interests of the industry as a whole and of the purpose of Title I of the N. I. R. A. Accordingly, unless and until this Supplementary Code shall have been so amended as to permit it, no present or prospective manufacturer of lead pigments shall sell or offer for sale, in competition with the product of other manufacturers of such pigments, any part of his product at a price less than actual cost of production as hereinabove defined. The provisions of this Article shall apply
5802 to all persons whose manufacture of lead pigments
is incidental to the manufacture of other products not embraced within the Lead Industries, as well as to those primarily engaged in the manufacture and sale of lead pigments. The President may, however, at any time suspend the operation of the provisions of this Article.

5803 RESPONDENT'S EXHIBIT NO. 135.

Lead Pigments Division,
Dry Products Committee.

New York, N. Y. August 9, 1933

A meeting of the Dry Products Committee of the Lead Pigments Division of the Lead Industries Association was held at the Lawyers Club, New York, N. Y., on Wednesday, August 9, 1933 at 10:15 A.M. The following were present:

Present:	Representing:
Harold Rowe, Chairman	National Lead Company
J. R. MacGregor	Eagle-Picher Lead Company
W. E. Maston	Eagle-Picher Lead Company
P. E. Sprague	Euston Lead Company
T. H. Zappert	Euston Lead Company
F. M. Carter	National Lead Company
J. G. McNair	National Lead Company
S. B. Coolidge, Jr.	Sherwin-Williams Company
R. L. Ziegfeld, Assistant Secretary.	

Mr. Harold Rowe occupied the chair.

Dry White Lead.

The following paragraphs were tentatively adopted for inclusion in a Code of Fair Competition.

1. Contracts shall be made for a definite amount and to terminate at the end of each calendar quarter, with protection against decline on undelivered portions of contracts, to be billed at the expiration date; buyer to have the privilege of making spot purchases at the old price in the event of a price rise for an amount to be ordered and billed immediately on regular terms and shipped within 30 days from date of order.

2. No product shall be sold at a concession in price in order to influence the sale of any lead product.

3. Terms shall be 1% 10 days, net cash 30 days. Discount date may be extended to the 10th prox.

4. A list of consignment accounts shall be filed with the Secretary of the Lead Industries Association.

5. Off-grade dry white lead shall not be sold.

Nos 9, 11, 14, 15, 16, 17, 18, 19 and 20 as adopted for oxides and reported in the August 8 minutes shall also apply to dry white lead.

It was decided that differential contracts and sale of Grinders' Lead-In-Oil should be discussed at a later meeting when the names of differential customers would be submitted.

5804 The question of mixed cars carrying carload prices on small quantities was put over until it could be determined how this question would be treated by manufacturers of ZnO, lithopone, etc. It was felt that the practice should be eliminated.

Meeting adjourned at 2:30 P. M.

Harold Rowe,
Chairman,
Robert L. Ziegfeld,
Assistant. Secretary.

5805 RESPONDENT'S EXHIBIT NO. 136.

Dry Products Committee,

Lead Pigments Division.

New York, N. Y. September 6, 1933.

A meeting of the Dry Products Committee of the Lead Pigments Division of the Lead Industries Association was held at the Commodore Hotel, New York City, on Wednesday, September 6, 1933 at 5:30 P. M.

Present:	Representing:
Harold Rowe, Chairman	National Lead Co.
F. O. Case	Anaconda Lead Products Co.
J. R. MacGregor	Eagle-Picher Lead Co.
W. E. Maston	Eagle-Picher Lead Co.
F. W. Potts	Eagle-Picher Lead Co.
T. H. Zappert	Euston Lead Co.
P. E. Sprague	Metals Refining Co.
J. G. C. McNair	National Lead Co.
F. M. Carter	National Lead Co.
S. B. Coolidge, Jr.	Sherwin-Williams Co.
A. P. Wetherill	Wetherill & Bro.
F. E. Wormser, Secretary.	

Mr. Harold Rowe occupied the chair.

In order to facilitate matters, the Chairman suggested that the Committee study the unfair trade practices listed in the Paint Code and also those approved by the White Lead-In-Oil Committee so as to select the ones desirable to include in a Code of Fair Competition for the Dry Products Committee group.

It was agreed to adopt the provisions accepted by the White Lead-In-Oil Committee on September 6 as follows: Guaranteeing Paint Jobs; Misbranding, mislabeling and false advertising; Gifts to Employees of Another; Exchange of Goods; Inducing Breach of Contracts; Disparagement of Competitors; Returned Goods.

On motion duly made, seconded and carried, it was agreed to adopt the Price List paragraph accepted by the White Lead-In-Oil Committee on September 6 as follows:

The members of this group shall file with the Secretary their price lists together with terms and conditions of sale. Any change in the said lists and terms shall be reported promptly to the Secretary. Upon making a sale or quotation at variance with the previously reported price list or terms, each member shall notify the Secretary in writing promptly concerning the variation.

It was also agreed that the following interpretation should apply to the foregoing article on price lists:

5806 (1) On Dry White Lead differential contracts now in existence, the names only of customers, not the differentials, are to be reported to the Secretary. Any such contracts that may be made from this date forward are to be reported fully to the Secretary.

(2) Exceptions to the card prices are to be filed with the Secretary.

(3) New business would be reported immediately after the adoption of the above paragraphs.

It was also regularly moved, seconded and carried that the following paragraph on Sales Contracts be adopted for a Code of Fair Competition.

Uniform sales contracts specifically designed for use in selling Dry White Lead and Lead Oxides shall be developed as soon as practicable and thereafter used by all members after said contract forms shall have been adopted by a two-thirds vote of members manufacturing the products to which the contracts apply. From time to time changes in the uniform sales contracts may be made by a two-thirds vote of members manufacturing such products. All sales shall conform to the conditions set forth in the uniform sales contract forms.

Meeting adjourned at 8:00 P. M.

F. M. Carter,
Division Chairman.

Harold Rowe,
Committee Chairman,
F. E. Wormser,
Secretary.

5807 RESPONDENT'S EXHIBIT NO. 137.

Lead Oxide Committee,

Lead Pigments Division.

Chicago, Illinois. December 14 and 15, 1933.

A meeting of the Lead Oxide Committee of the Lead Pigments Division of the Lead Industries Association was held at the Stevens Hotel, Chicago, on December 14 and 15, 1933.

Present:	Representing:
Harold Rowe, Chairman	National Lead Co.
J. R. MacGregor	Eagle-Picher Lead Co.
E. H. Butzow	Hammond Lead Products, Inc.
Erwin Wilke	Hammond Lead Products, Inc.
Wm. Wilke	Hammond Lead Products, Inc.
P. E. Sprague	Metals Refining Co.
W. P. Carroll	National Lead Co.
S. B. Coolidge	Sherwin-Williams Company

F. E. Wormser, Secretary.

Mr. Harold Rowe occupied the chair.

After considerable discussion, it was agreed that ninety day contracts should be discontinued because it had become a general practice in the trade not to enforce delivery and on that account they were really only options to buy. It was decided that an outline for the sale of oxides on the basis of manufacturer's card price should be drawn up including certain conditions agreeable to all concerned. In this connection some of the points considered were:

(1) Additional price for red leads containing 95%, 97% and 98% Pb_3O_4.

(2) Protection against decline on orders for shipment within thirty days.

(3) Allowance for deliveries to one destination in 5-ton and in 20-ton lots.

It was the opinion of all present that the practice of selling oxides at a differential over pig lead had spread to such an extent that it had become one of the most serious abuses in the trade. It was voted to have presented at the next meeting a basis for sale at the card price and also one at differentials over lead, one of the conditions of the latter to be that spot sales shall be based on pig lead at the close of the market on the date they are made.

5808 Pending the adoption of our code, it was decided that no new commitments would be made:

(1) On card price beyond February 28, 1934.

(2) On differential basis beyond 60 days. (After January 1, 1934, the limit becomes February 28.)

....
Chairman,
F. E. Wormser,
Secretary.

5809 RESPONDENT'S EXHIBIT NO. 138.

Lead Oxide Committee,

Lead Pigments Division.

Chicago, Illinois. December 27-28, 1933.

A meeting of the Lead Oxide Committee of the Lead Pigments Division of the Lead Industries Association was held at the Stevens Hotel, Chicago, on December 27 and 28, 1933.

Present:	Representing:
Harold Rowe, Chairman	National Lead Company
R. M. Evans	Evans Lead Company
J. R. MacGregor	Eagle-Picher Lead Company
E. H. Butzow	Hammond Lead Products, Inc.
Wm. Wilke	Hammond Lead Products, Inc.
J. G. McGreevy	Metals Refining Company
P. E. Sprague	Metals Refining Company
W. P. Carroll	National Lead Company
S. B. Coolidge	Sherwin-Williams Company

Mr. Harold Rowe occupied the chair.

There was further discussion of the advisability of making quarterly contracts with small buyers. It was decided that these should be eliminated. The basis for sale at card price was submitted and approved in the form attached. Consideration was given to the question of establishing zones in the West and South where manufacturers would make a uniform addition of their base prices to compensate for the high freight rates. It was suggested that all members investigate this matter so that action might be taken at the next meeting.

Regarding the clause in the code covering filing of price schedules, etc., it was agreed that exceptions reported to the Secretary should include all details and that in re-issuing the information to members of the group he shall give only the names of the buyer and the seller.

A basis for sale at differentials over lead was agreed upon but it was felt that there was no need of filing it with the code because all buyers in that classification would be considered as exceptions.

Harold Rowe,
Chairman,
F. E. Wormser,
Secretary.

5810 Schedule "A." January 6, 1934.

Outline of Basis for Sale of Lead Oxides.

A. "Sale" or "Order" as used herein refers to any transaction whereby a member of the industry quotes on, or becomes obligated to sell and deliver material.

B. Whatever terminology may be used, the intent and meaning thereof shall conform to the following requirements of sale:

(1) Material—Dry oxides of lead, or mixtures consisting principally thereof, each grade of material to be specifically designated.

(2) Quantity—Any amount as agreed between buyer and seller.

(3) Packages—As agreed between buyer and seller.

(4) Price—Seller's card or quoted price in effect on date order is received with allowance as follows:

(a) ½¢ per pound for minimum shipment of 5 tons at one time to one destination.

(b) ¾¢ per pound for minimum shipment of 20 tons to one destination by

(1) Rail in one carload.

(2) Truck within a period of three days.

Protection against decline in Seller's price may be given on less than five ton deliveries only, and shall not extend beyond the date of shipment.

Red Lead containing 97 per cent or 98 per cent Pb_3O_4

shall be so marked on the package and shall be sold at ⅛¢ and ⅜¢ per pound, respectively, over Seller's price for grades of lower Pb_3O_4 content.

(5) Delivery—F.O.B. cars Seller's shipping point, or by truck, F.O.B. Buyer's premises.

(6) Transportation Allowance—The actual freight paid by Buyer. No cartage allowance shall be made to Buyer for use of his own truck.

If shipment is made by Buyer's boat, Seller may allow actual amount he would have paid for like transportation at published rates in effect on date of shipment except that such allowance shall not exceed 40¢ per 100 pounds.

(7) Shipment—Within thirty days from date order is received.

(8) Terms—Net thirty days, less 1 per cent for cash in ten days from date of invoice.

(9) Taxes—Any tax or other charge imposed by Federal law upon the production and/or sale and/or shipment of lead oxides shall be added to the price to be paid by the Buyer on any transaction to which such charge is applicable.

TABLE 3.—PRODUCTS, BY CLASS, QUANTITY, AND VALUE, FOR THE UNITED STATES: 1925 TO 1931—Continued

[See note at head of this table]

CLASS	1931	1929	1927	1925
Paints, varnishes, and related products—Con.				
Pigments (colors) made for sale—Con.				
Whiting:				
Pounds	152,324,924	202,207,936	221,137,263	236,483,656
Value	$1,088,751	$1,513,634	$1,669,874	$1,979,964
Other dry colors (including barytes):

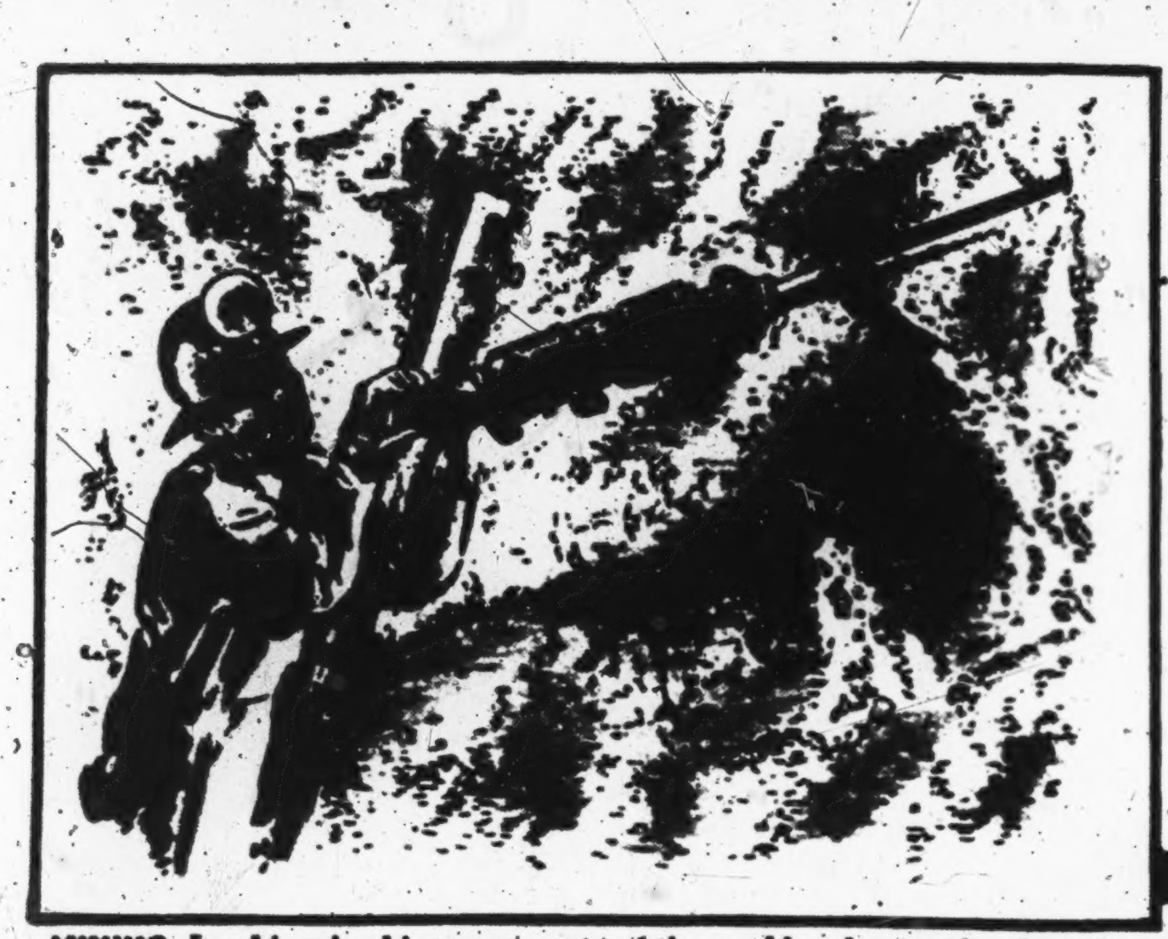
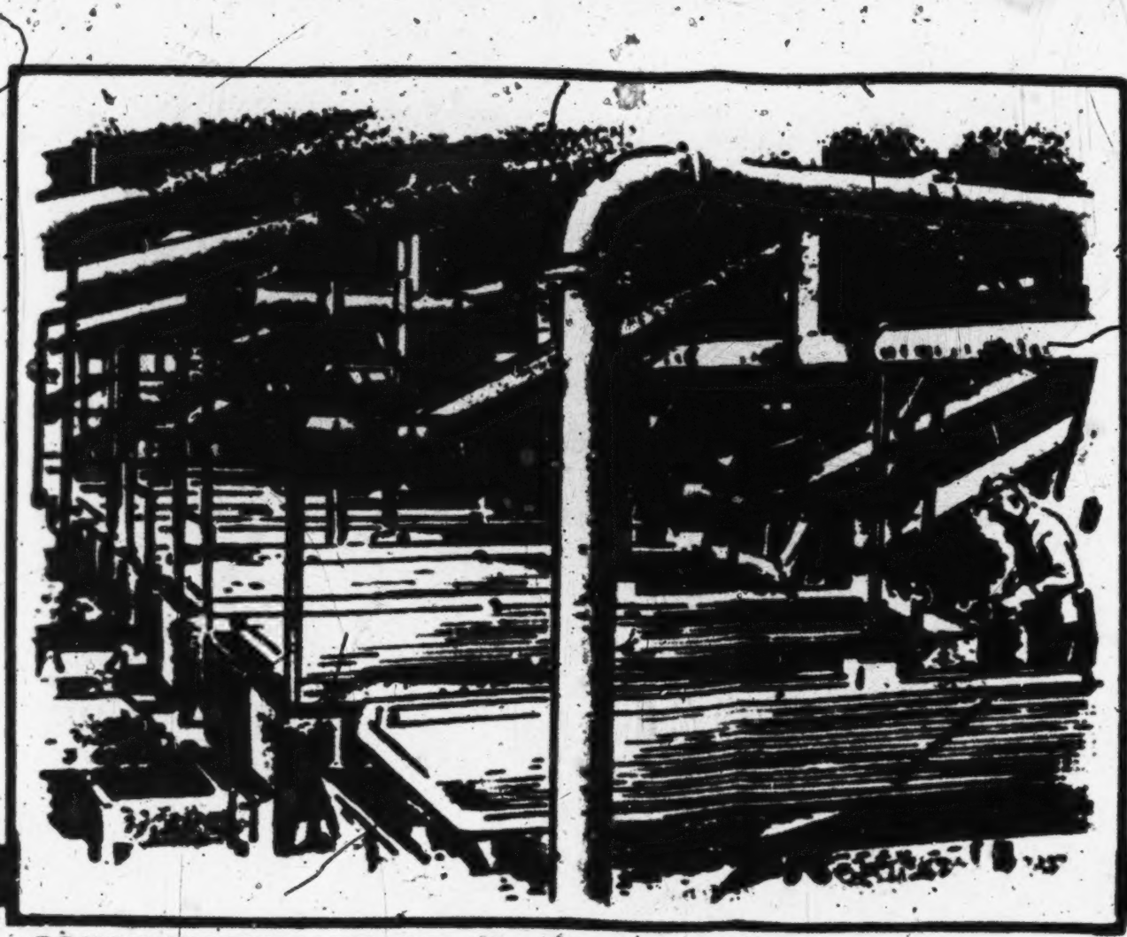
HOW WHITE LEAD AND RED LEAD ARE MANUFACTURED

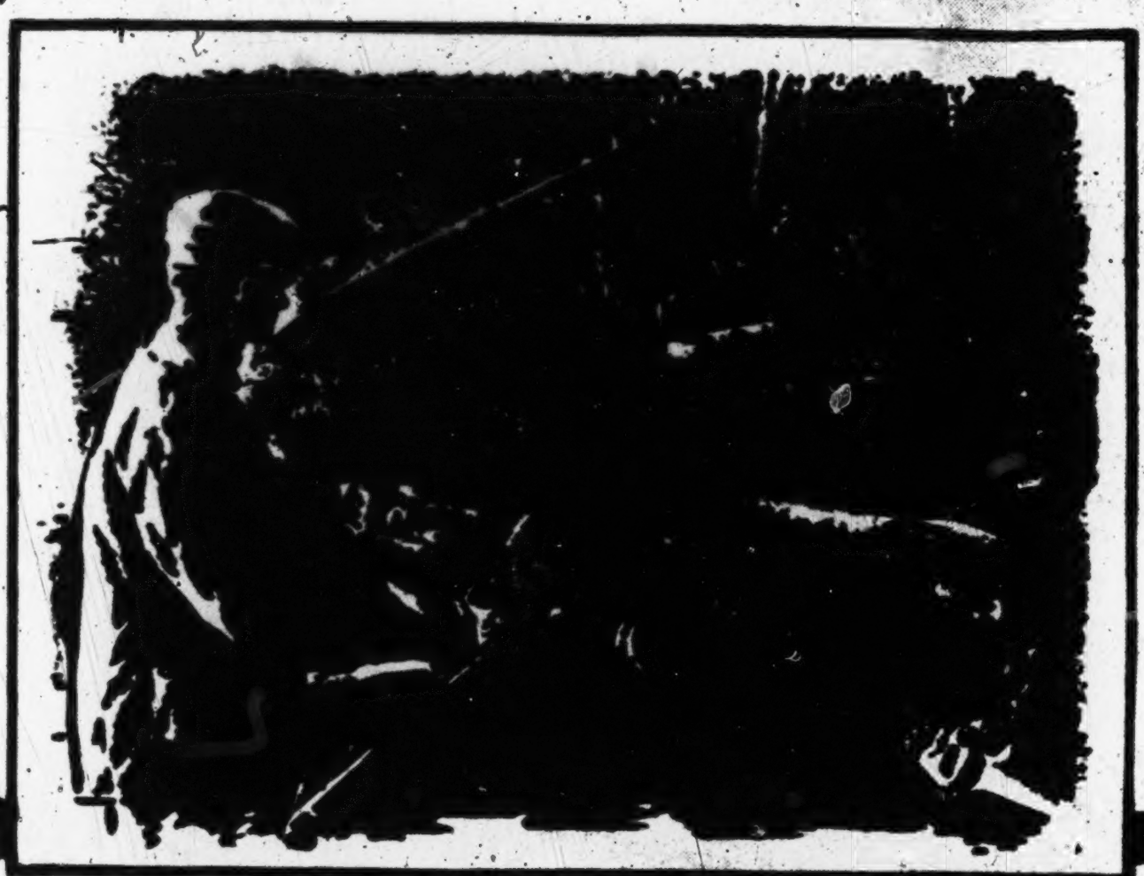
Respondent's Exhibit No. 156.



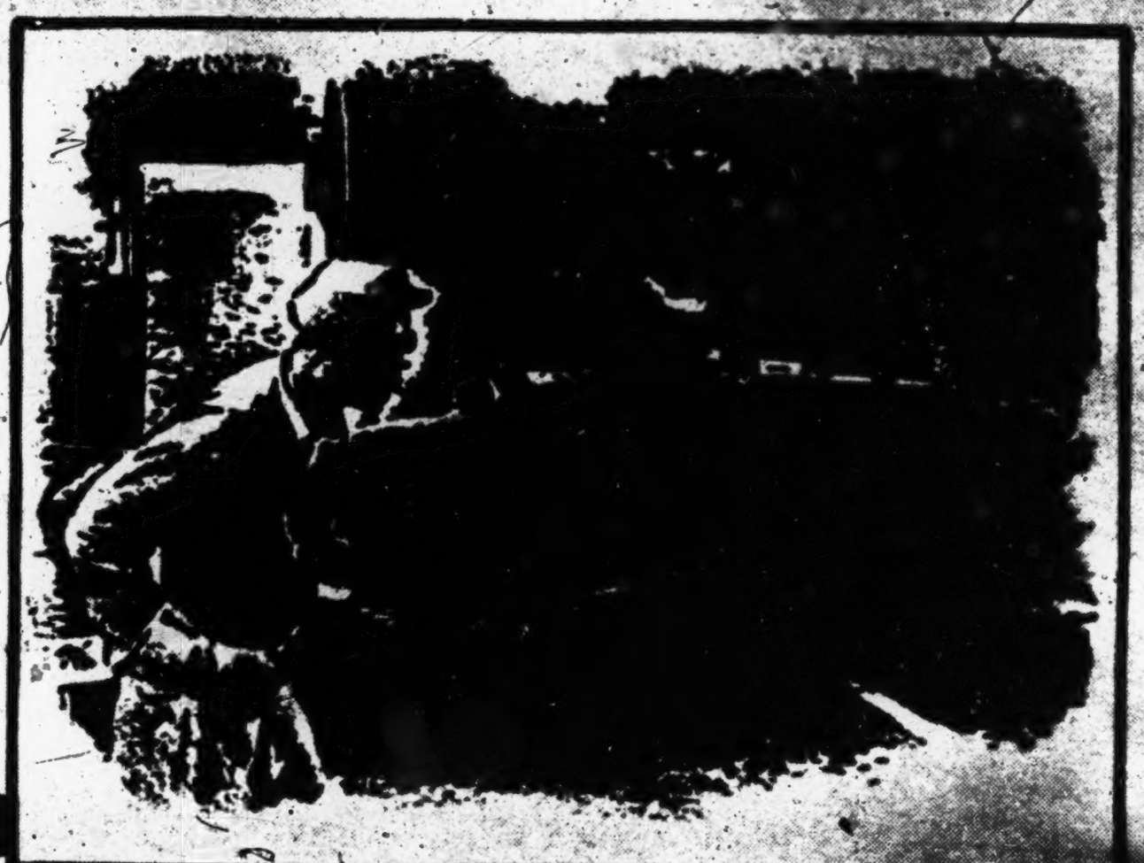
MINING: Lead is mined in many parts of the world and extensive deposits exist in this country, Canada, Mexico and South America. Chiefly, lead ore is found in the form of galena (lead sulphide) and is frequently associated with silver and zinc ores. Most of the lead mines are deep and only in a few is the ore located near the surface.



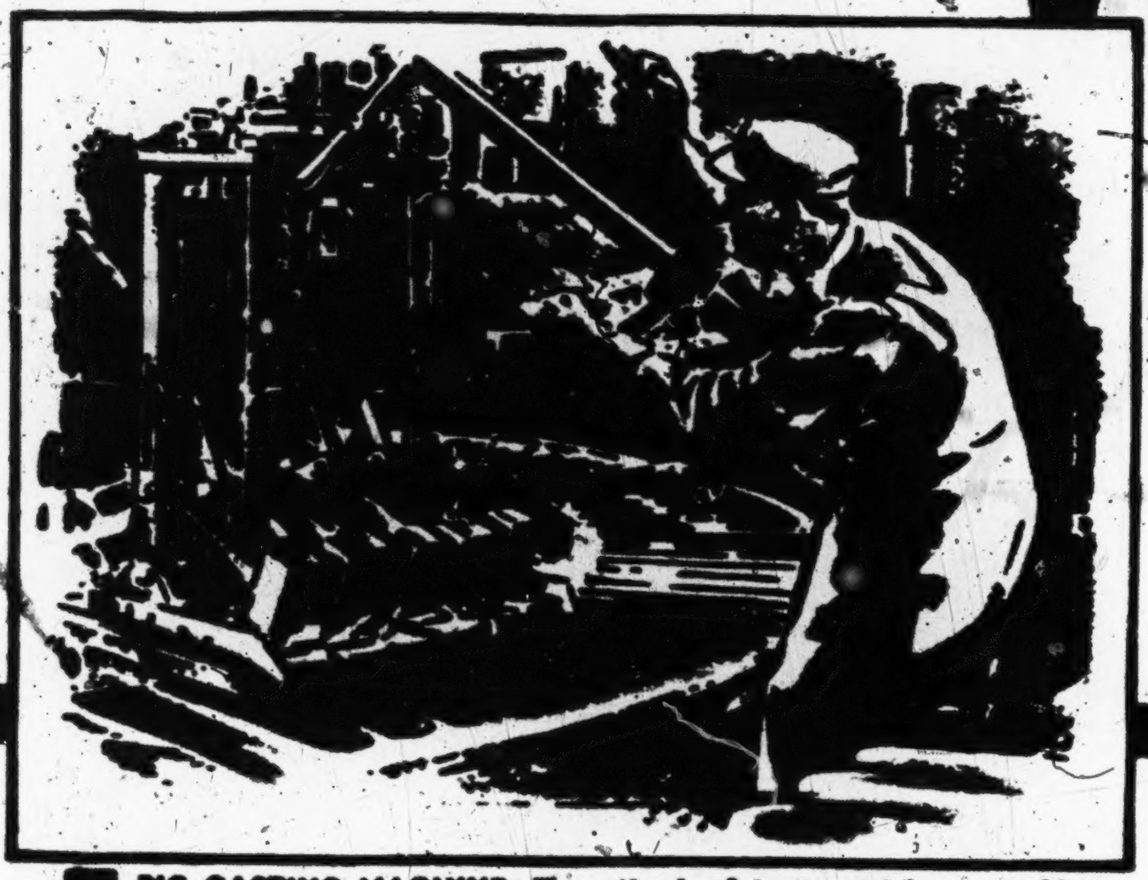
CONCENTRATION SYSTEM: After the ore is mined in chunks of various sizes it is broken up in huge crushers. When about the size of coarse sand the ore is mixed with water and placed on a riffle table like those shown above. The table vibrates with a jerky motion and is so constructed that the flowing water combined with the motion brings about the separation of the heavy lead-bearing particles and the lighter rock.



SMELTING: The concentrate is placed in a furnace where the sulphur is burned out, then charged into a blast furnace and reduced to a molten state. This separates the lead from the slag or worthless residue and the former can be poured out into a huge wheeled pot, as shown above.



DESILVERIZING KETTLE: The molten lead is transferred to this large kettle where slabs of zinc are thrown in. The zinc quickly melts, alloys with the silver and floats to the top where the alloy is skimmed off. After further refining the lead is ready for the next and final step.



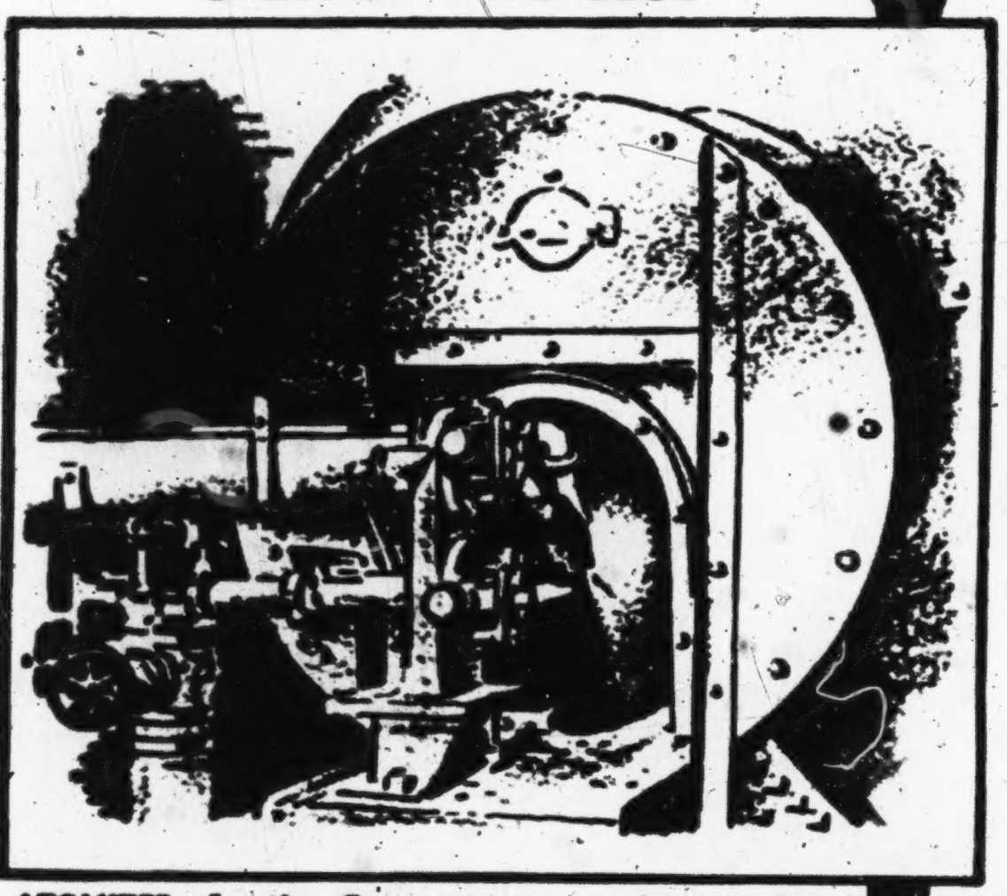
PIG CASTING MACHINE: Here the lead is poured into moulds to cool and form blocks about 4 by 5 by 22 inches and weighing about 90 pounds each. These pigs are the smelter's finished product and it is in this form that lead goes to the various manufacturers of lead products.

WHITE LEAD MANUFACTURE

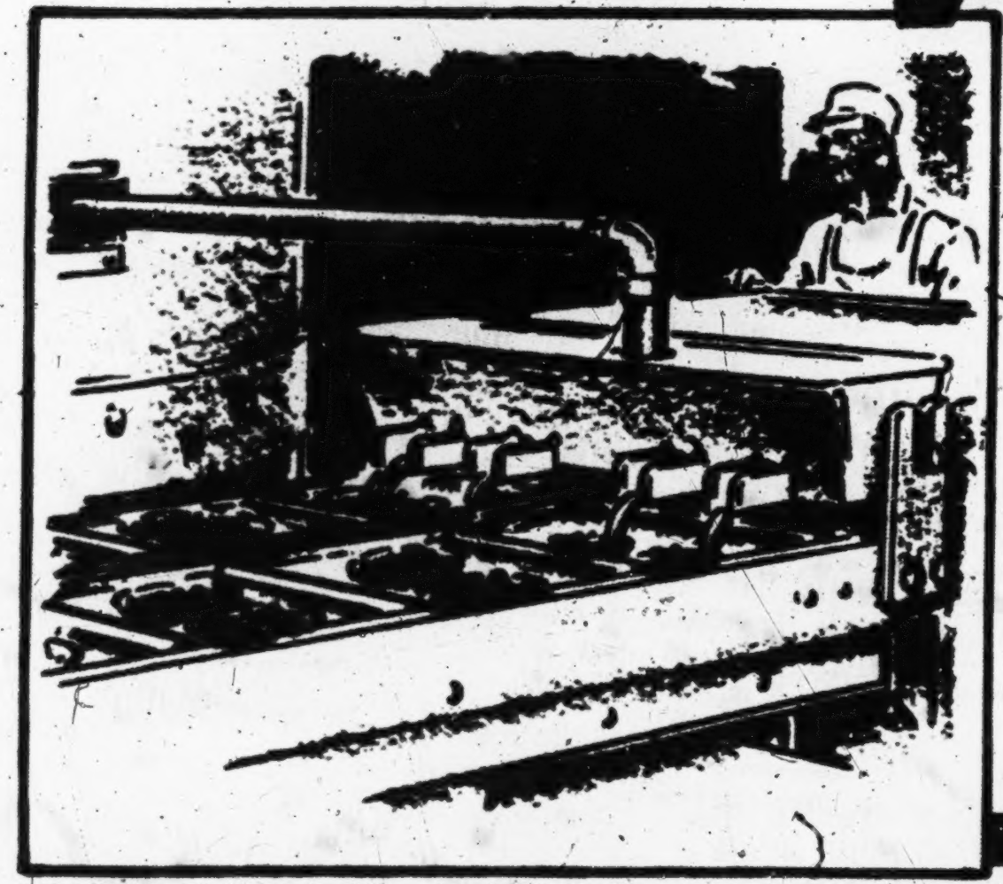
CARTER PROCESS

DUTCH PROCESS

RED LEAD MANUFACTURE

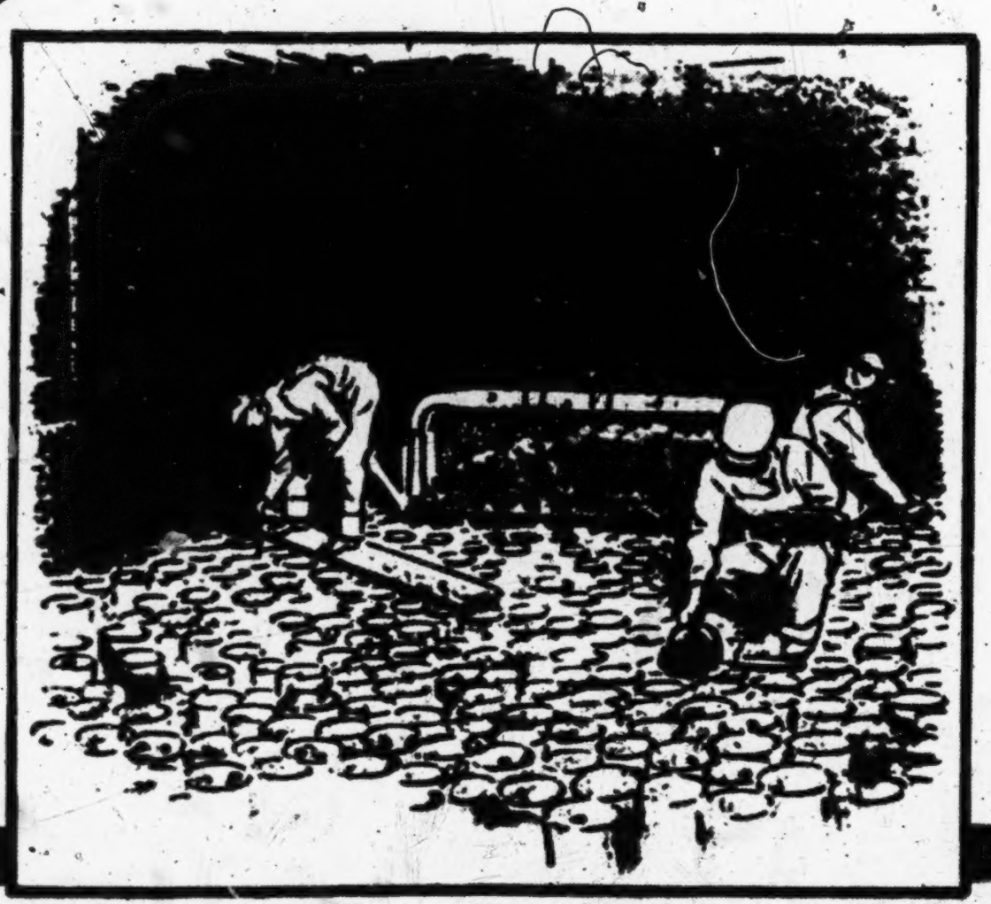


ATOMIZER: In the Carter process molten lead is atomized to very small particles by allowing it to flow through a nozzle into an air stream formed by compressed air. The finely powdered lead particles are then placed on the bottom of a cylinder.

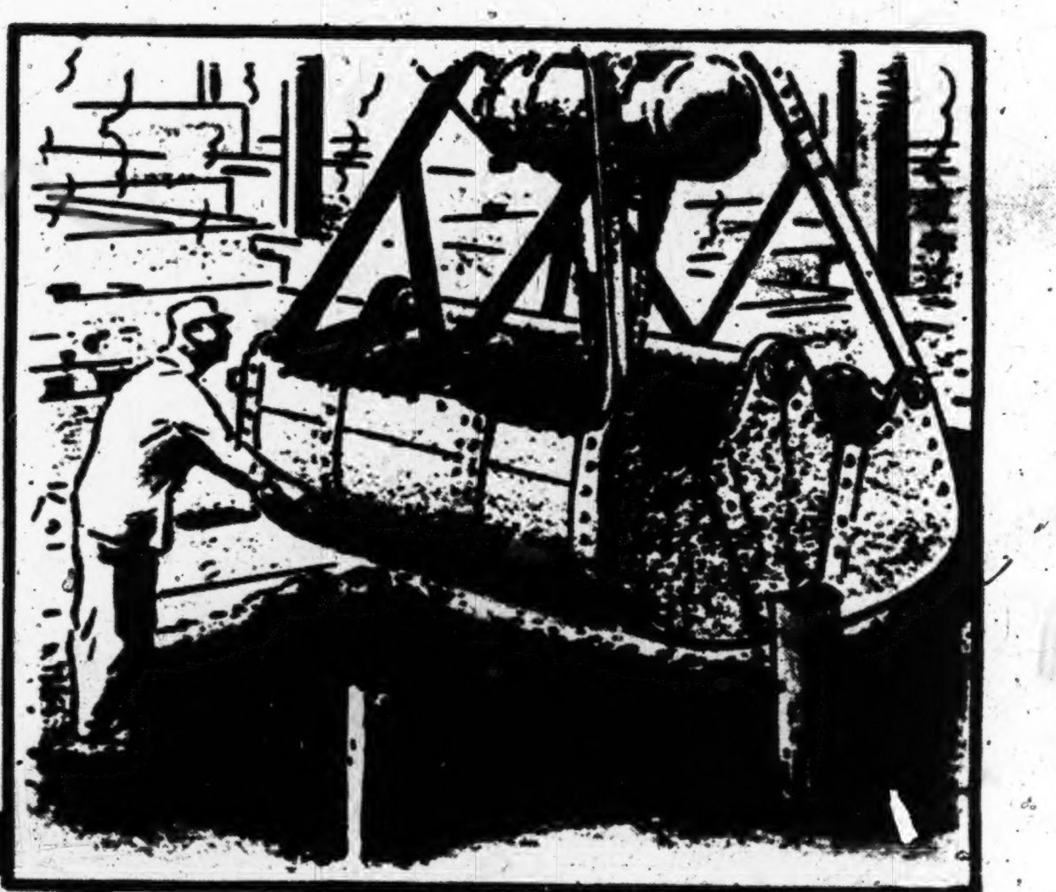


CASTING BUCKLES: The pig lead is first cast into buckles.* This is done in molds linked together in an endless chain. As the molds pass under spouts they are filled with molten lead which quickly solidifies so that the finished buckle is ejected from the mold as it passes over the pulley for the return trip.

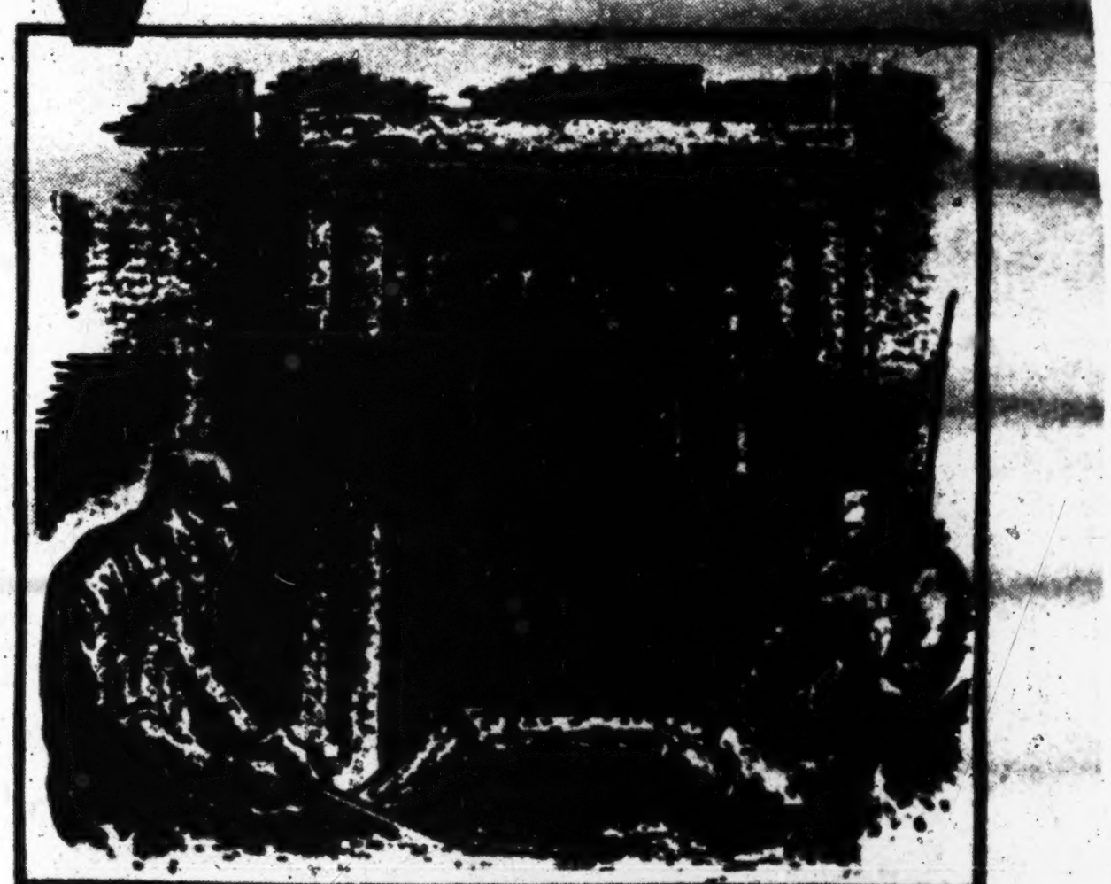
*Originally so named because of their fancied resemblance to the shoe buckles of Colonial times.



BUILDING A STACK: The metallic lead buckles are placed in a corroding stack about 20 feet square. The corrosion takes place in earthenware pots which have a well in the bottom to hold about a half pint of weak acetic acid and a shoulder above the well to support from 10 to 14 buckles. A layer of pots filled as

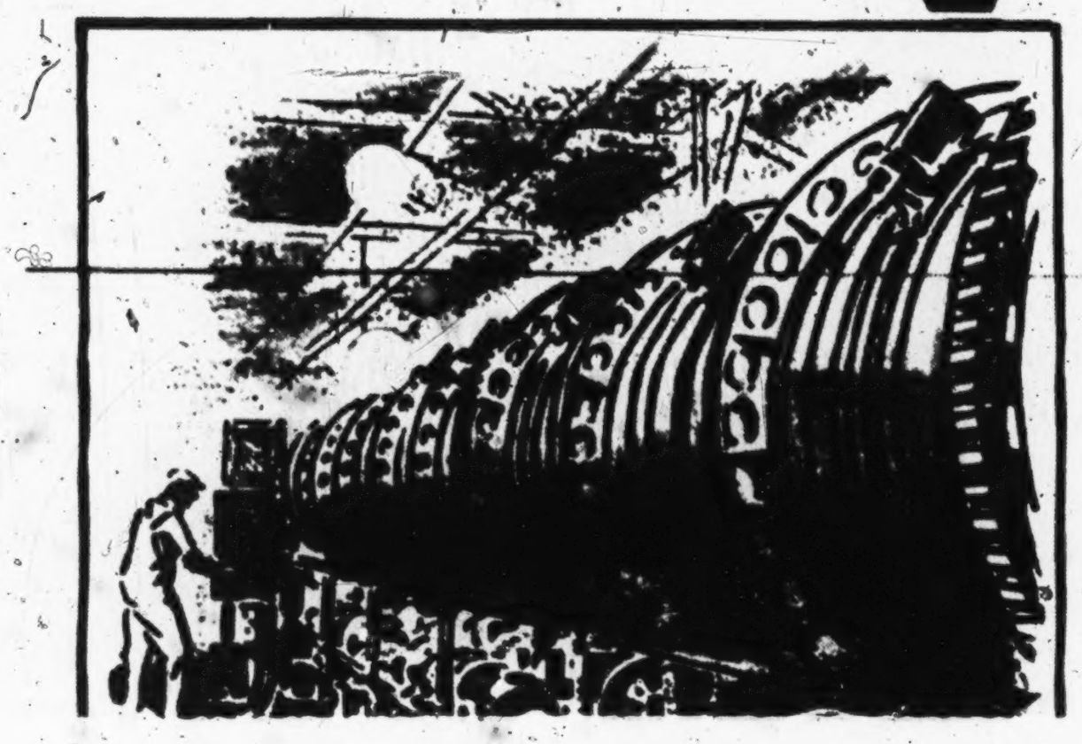


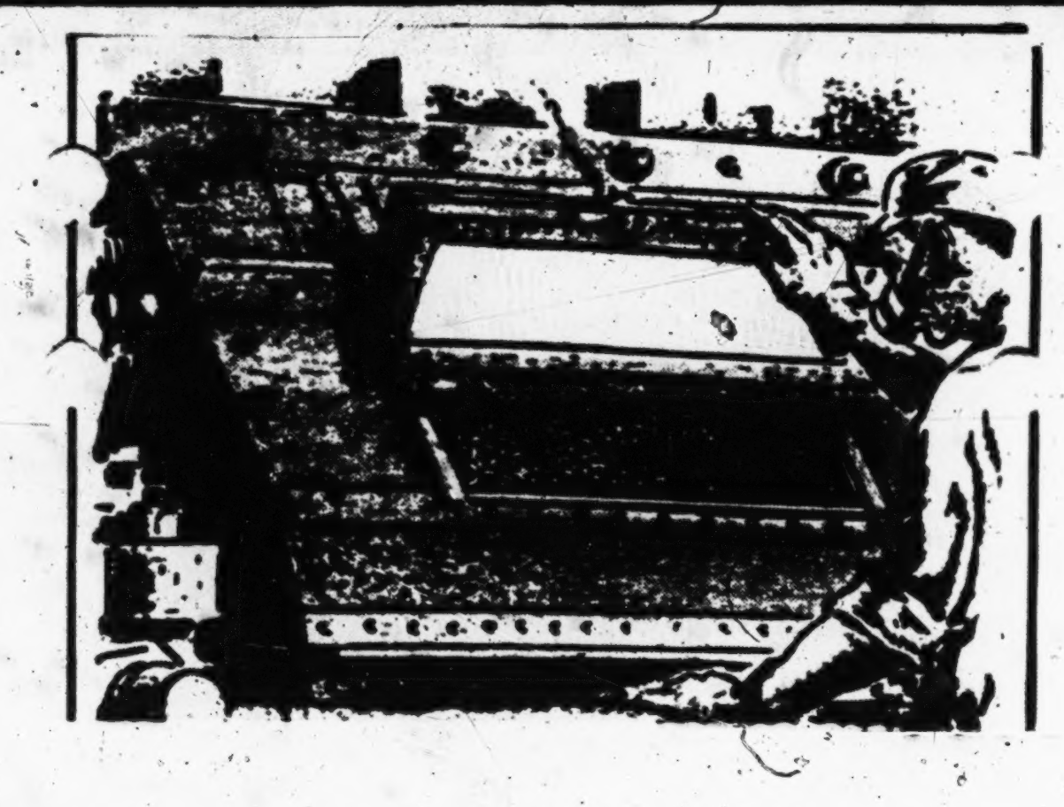
described is placed on a layer of tanbark. Then a layer of planks and another layer of tanbark, a layer of pots and so on to a height of about 30 feet. A flue connecting each layer runs up through the stack for the escape of fumes. The heat generated (160°-180° F.) volatizes the acid and in from 100 to 120 days the metallic lead becomes white lead (basic lead carbonate).

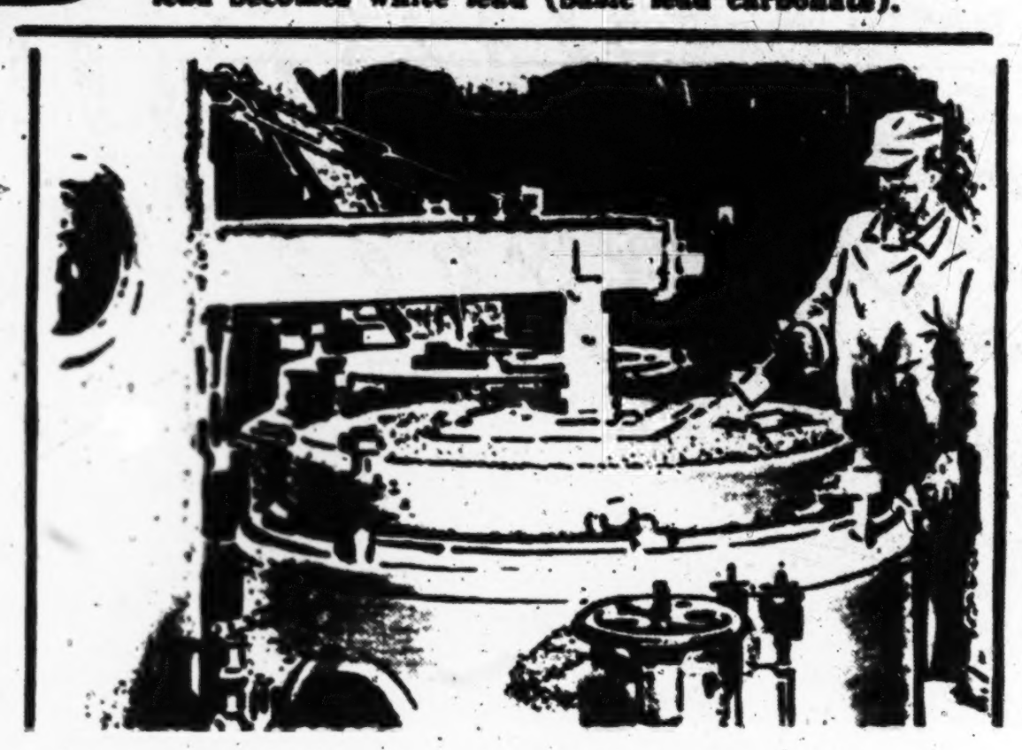


FURNACE: Pure metallic lead is heated to a high temperature in the presence of air which changes it to litharge (PbO).* This yellowish material is finely ground and reintroduced into the furnace. With further heating and oxidation it turns to red lead (Pb_3O_4).

*Large quantities of litharge are used in the plates of electric storage batteries.







ATOMIZER: In the Carter process molten lead is atomized to very small particles by allowing it to flow through a nozzle into an air stream formed by compressed air. The finely powdered lead particles are then placed on the bottom of a cylinder.

CASTING BUCKLES: The pig lead is first cast into buckles.* This is done in molds linked together in an endless chain. As the molds pass under spouts they are filled with molten lead which quickly solidifies so that the finished buckle is ejected from the mold as it passes over the pulley for the return trip.

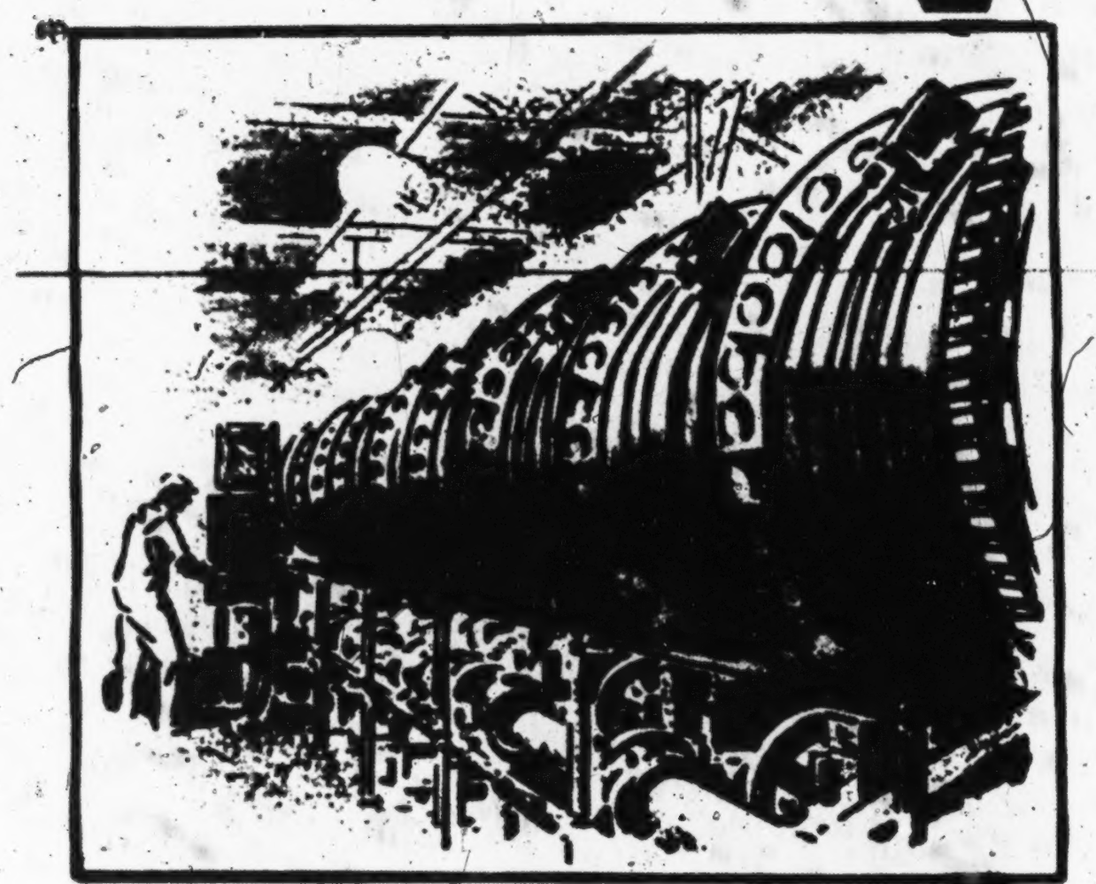
*Originally so named because of their fancied resemblance to the shoe buckles of Colonial times.

BUILDING A STACK: The metallic lead buckles are placed in a corroding stack about 20 feet square. The corrosion takes place in earthenware pots which have a well in the bottom to hold about a half pint of weak acetic acid and a shoulder above the well to support from 10 to 14 buckles. A layer of pots filled as

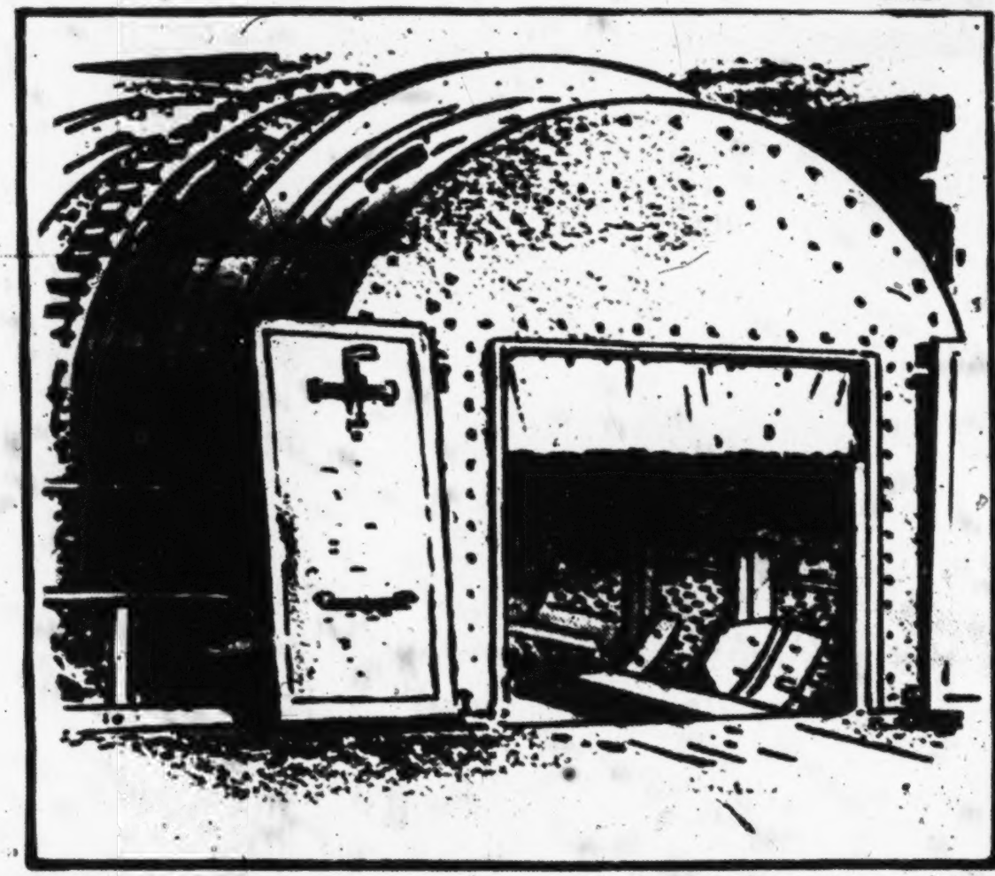
described is placed on a layer of tanbark. Then a layer of planks and another layer of tanbark, a layer of pots and so on to a height of about 30 feet. A flue connecting each layer runs up through the stack for the escape of fumes. The heat generated (160°-180° F.) volatizes the acid and in from 100 to 120 days the metallic lead becomes white lead (basic lead carbonate).

FURNACE: Pure metallic lead is heated to a high temperature in the presence of air which changes it to litharge (PbO).* This yellowish material is finely ground and reintroduced into the furnace. With further heating and oxidation it turns to red lead (Pb_3O_4).

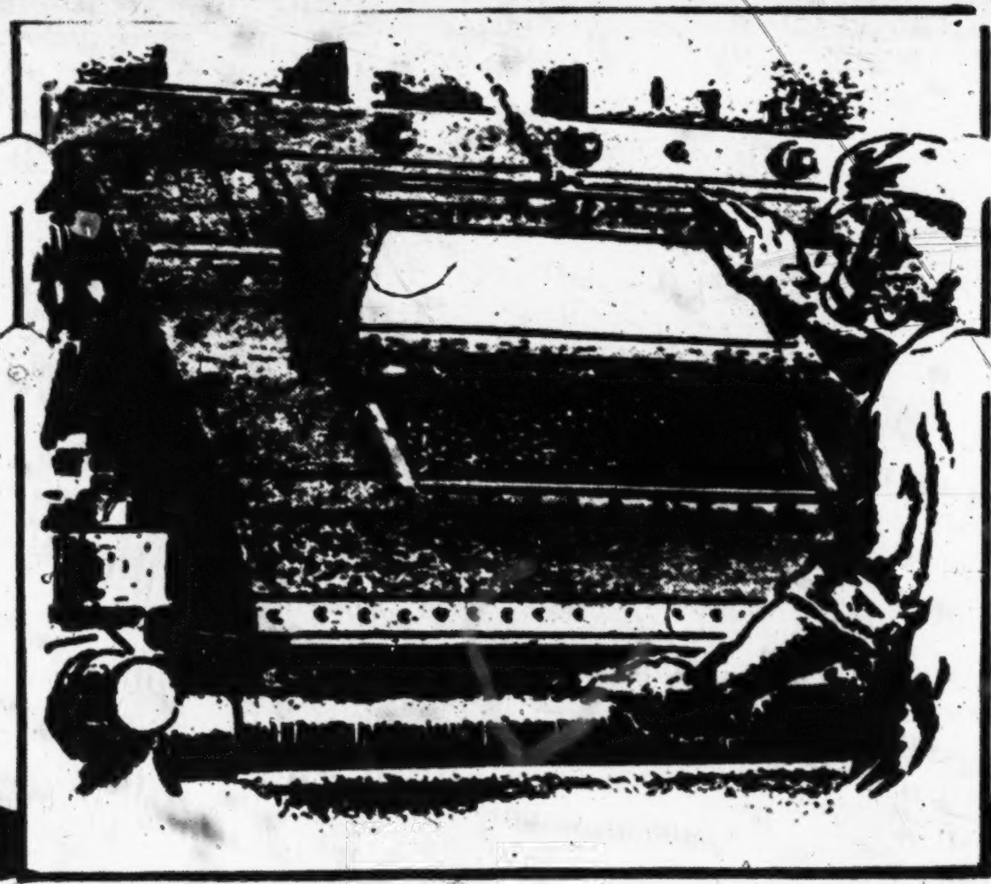
*Large quantities of litharge are used in the plates of electric storage batteries.



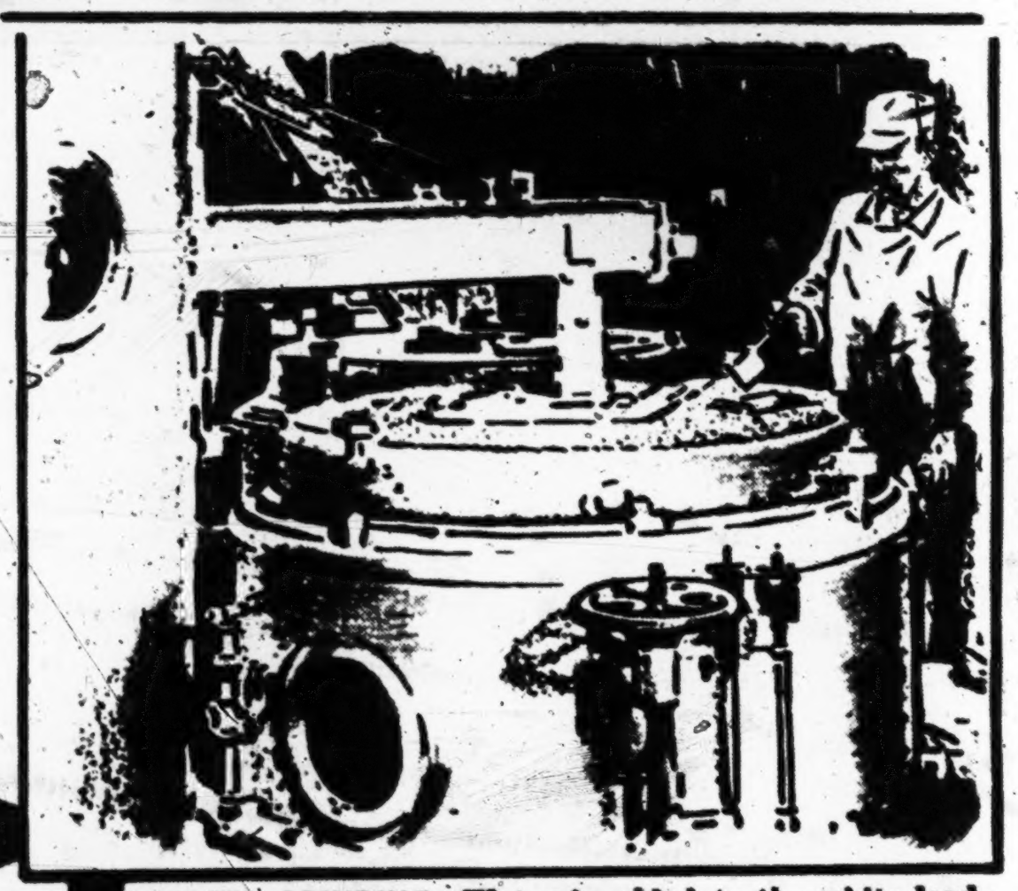
CARTER CYLINDER: This is a slowly revolving wooden drum equipped with water and acetic acid sprays and connections for circulating carbon dioxide gas through the entire cylinder. The combination of acid and gas converts the lead to white lead ($2PbCO_3 \cdot Pb(OH)_2$—basic lead carbonate) in about 10 days. The white lead then goes to the drag box.



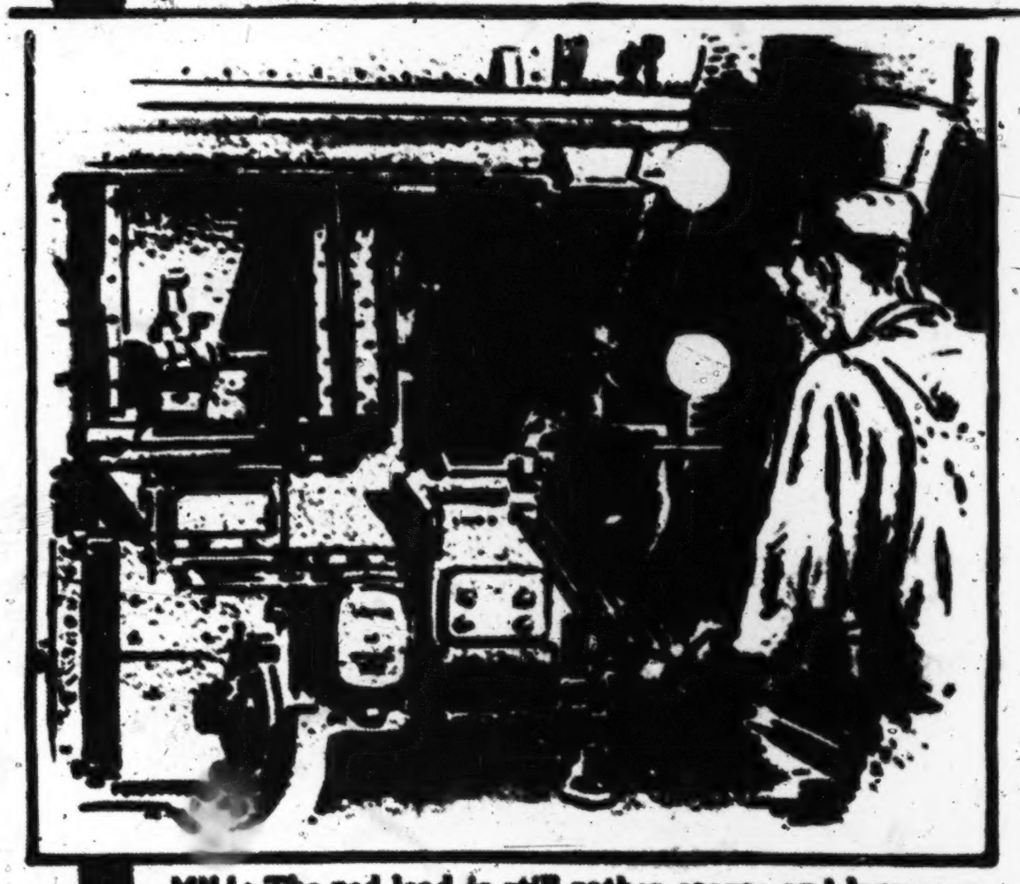
BUCKLE BEATER: When the stack is dismantled the buckles have become white and very brittle. Placed in the buckle beater—a large revolving cylindrical screen—they are broken up and any large pieces of uncorroded lead separated out.



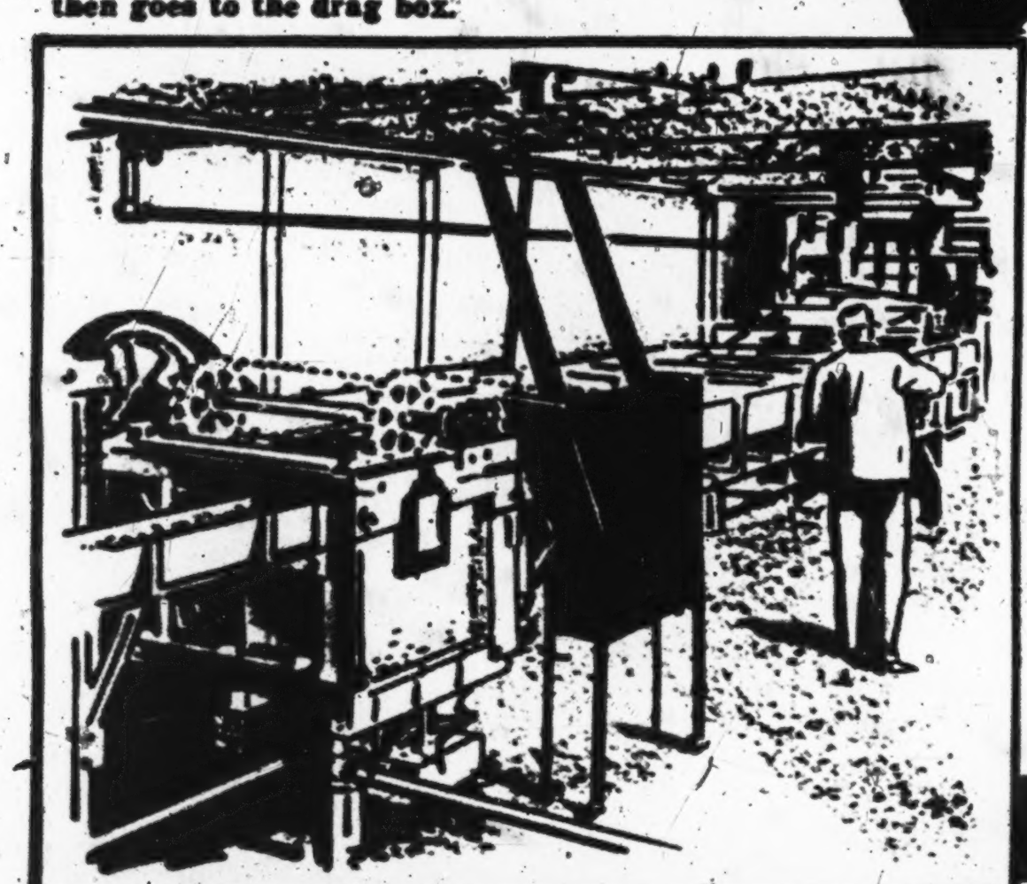
CRUSHER: From the buckle beater the corroded particles go into a crushing mill to be further reduced in size and then into a series of cylindrical screens for sifting out whatever metallic lead remains. At this stage the white lead is about like fine white sand, but not nearly fine enough for paint.



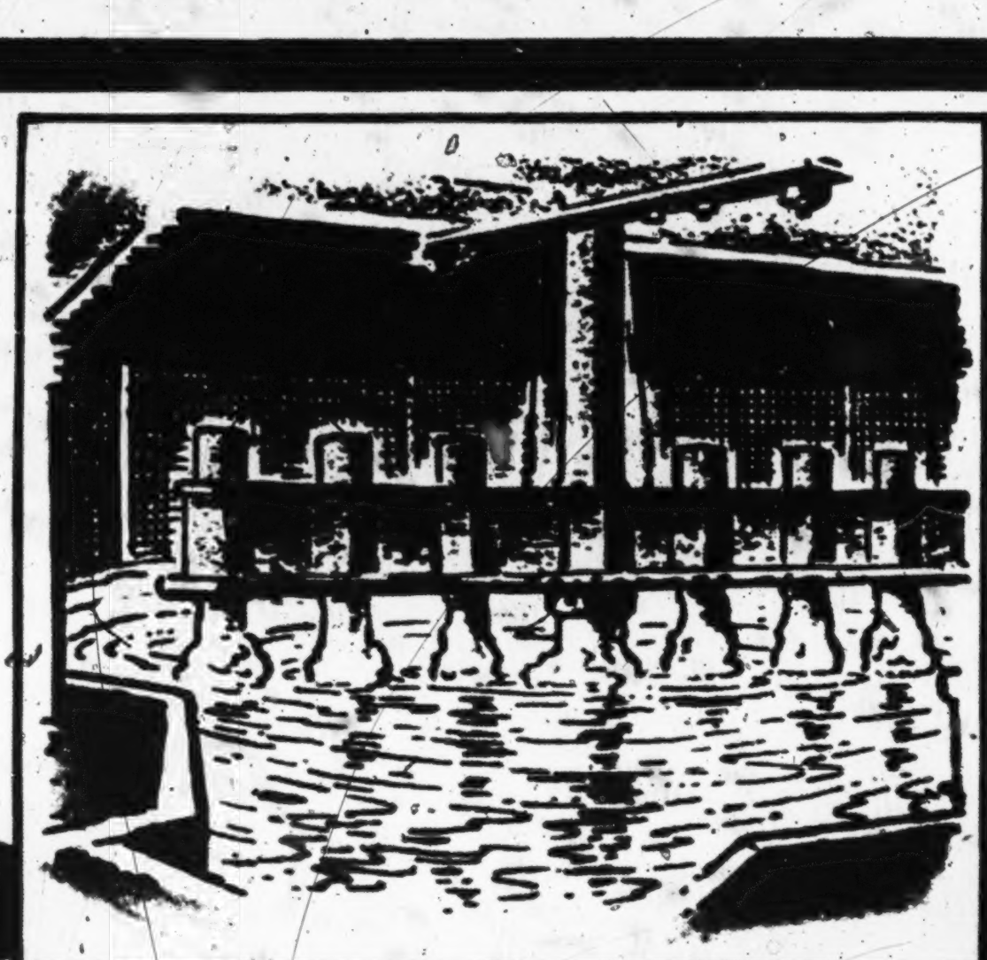
WATER GRINDING: Water is added to the white lead and the mixture is passed between heavy revolving stones. These stones reduce the particle size still further until most of the white lead is fine enough for use in paint. The coarse particles must be separated out and for this the mixture first goes to the drag box.



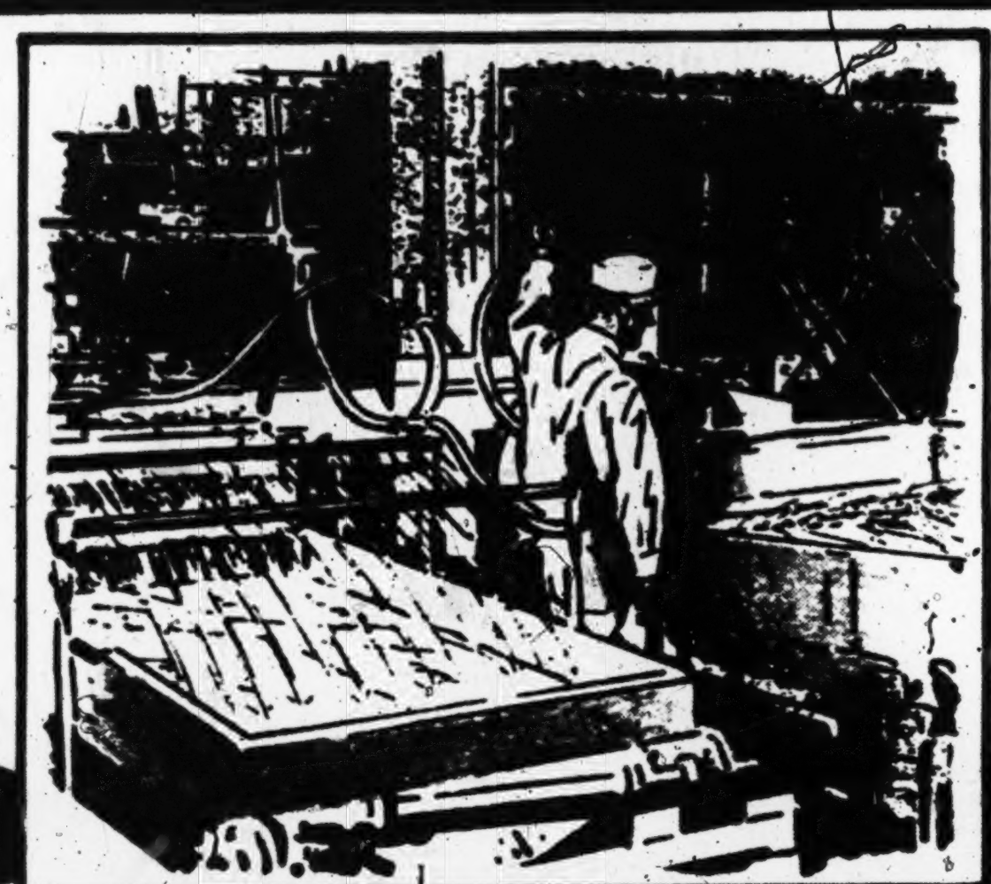
MILL: The red lead is still rather coarse and lumpy so the next step is thorough milling followed by screening.



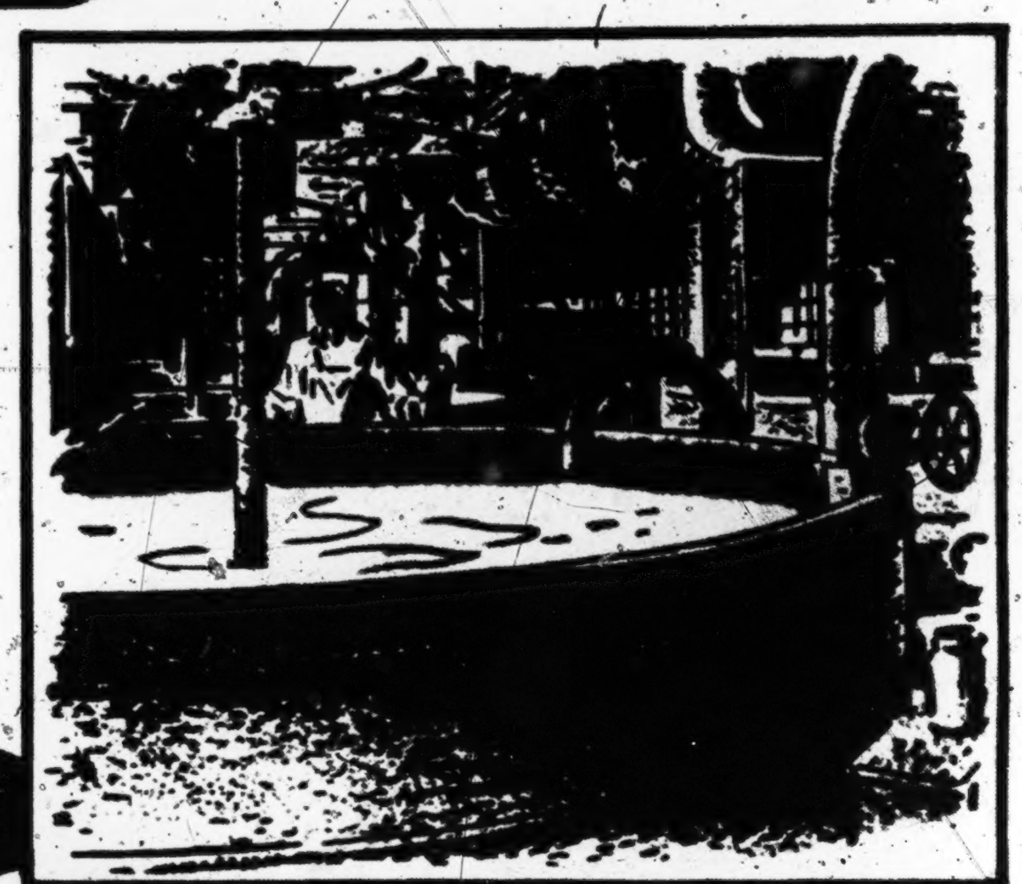
DRAG BOX: This is a water-tight oblong tank about 25 feet long. The bottom is inclined so the mixture flows down to one end where the smaller and lighter particles overflow. The remaining mixture, mostly coarse particles, is dragged back up by cleats fastened on two endless chains. This separating process continues until particles too large for use are finally discarded.



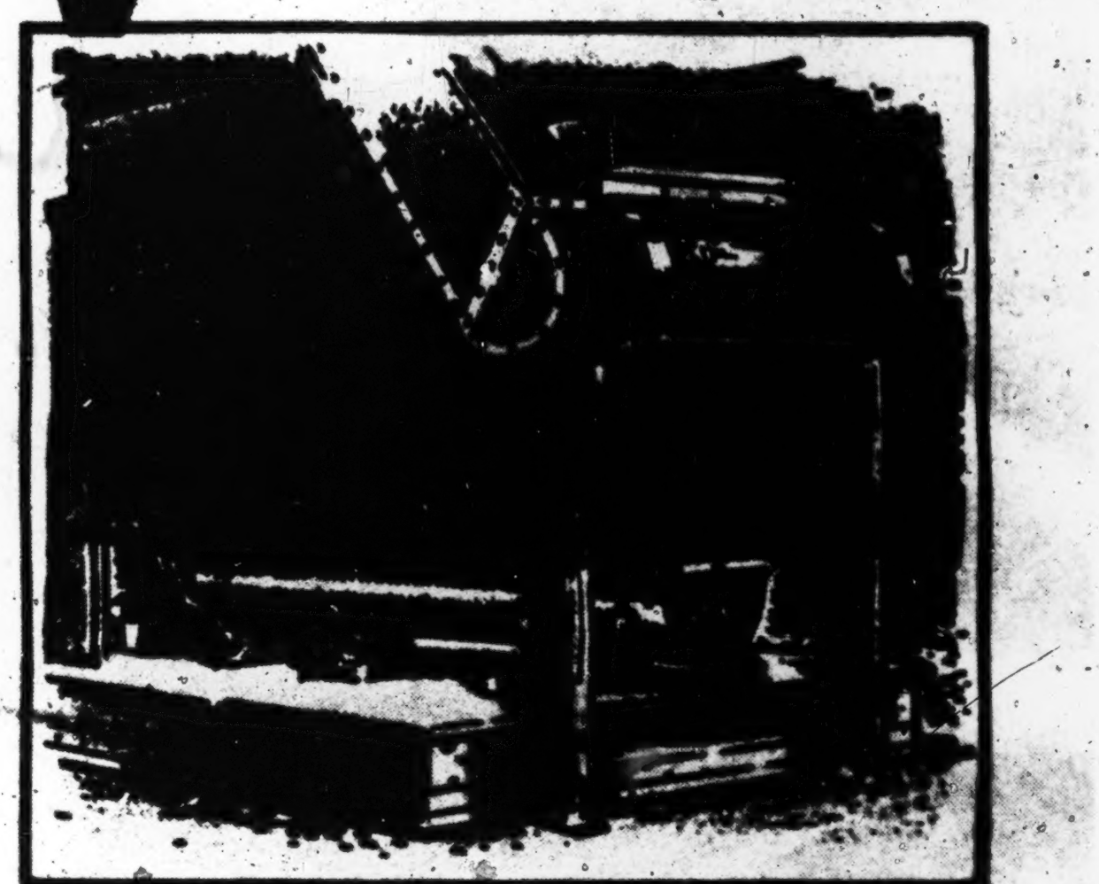
RAKE TUB: The milky mixture, or slurry, coming from the lower end of the drag box is put in a large tank equipped with a revolving rake-like stirrer. As the slurry is agitated the heavier and larger particles work down to the bottom for later removal and grinding. The finest particles float to the top and are drawn off to the shaker screen.



SHAKER SCREEN: Made of silk bolting cloth so finely woven that there are 27,000 openings to the square inch. Only the white lead particles that pass through these vibrating screens are fine enough to make paint. This watery mixture is now put in the settling tub.

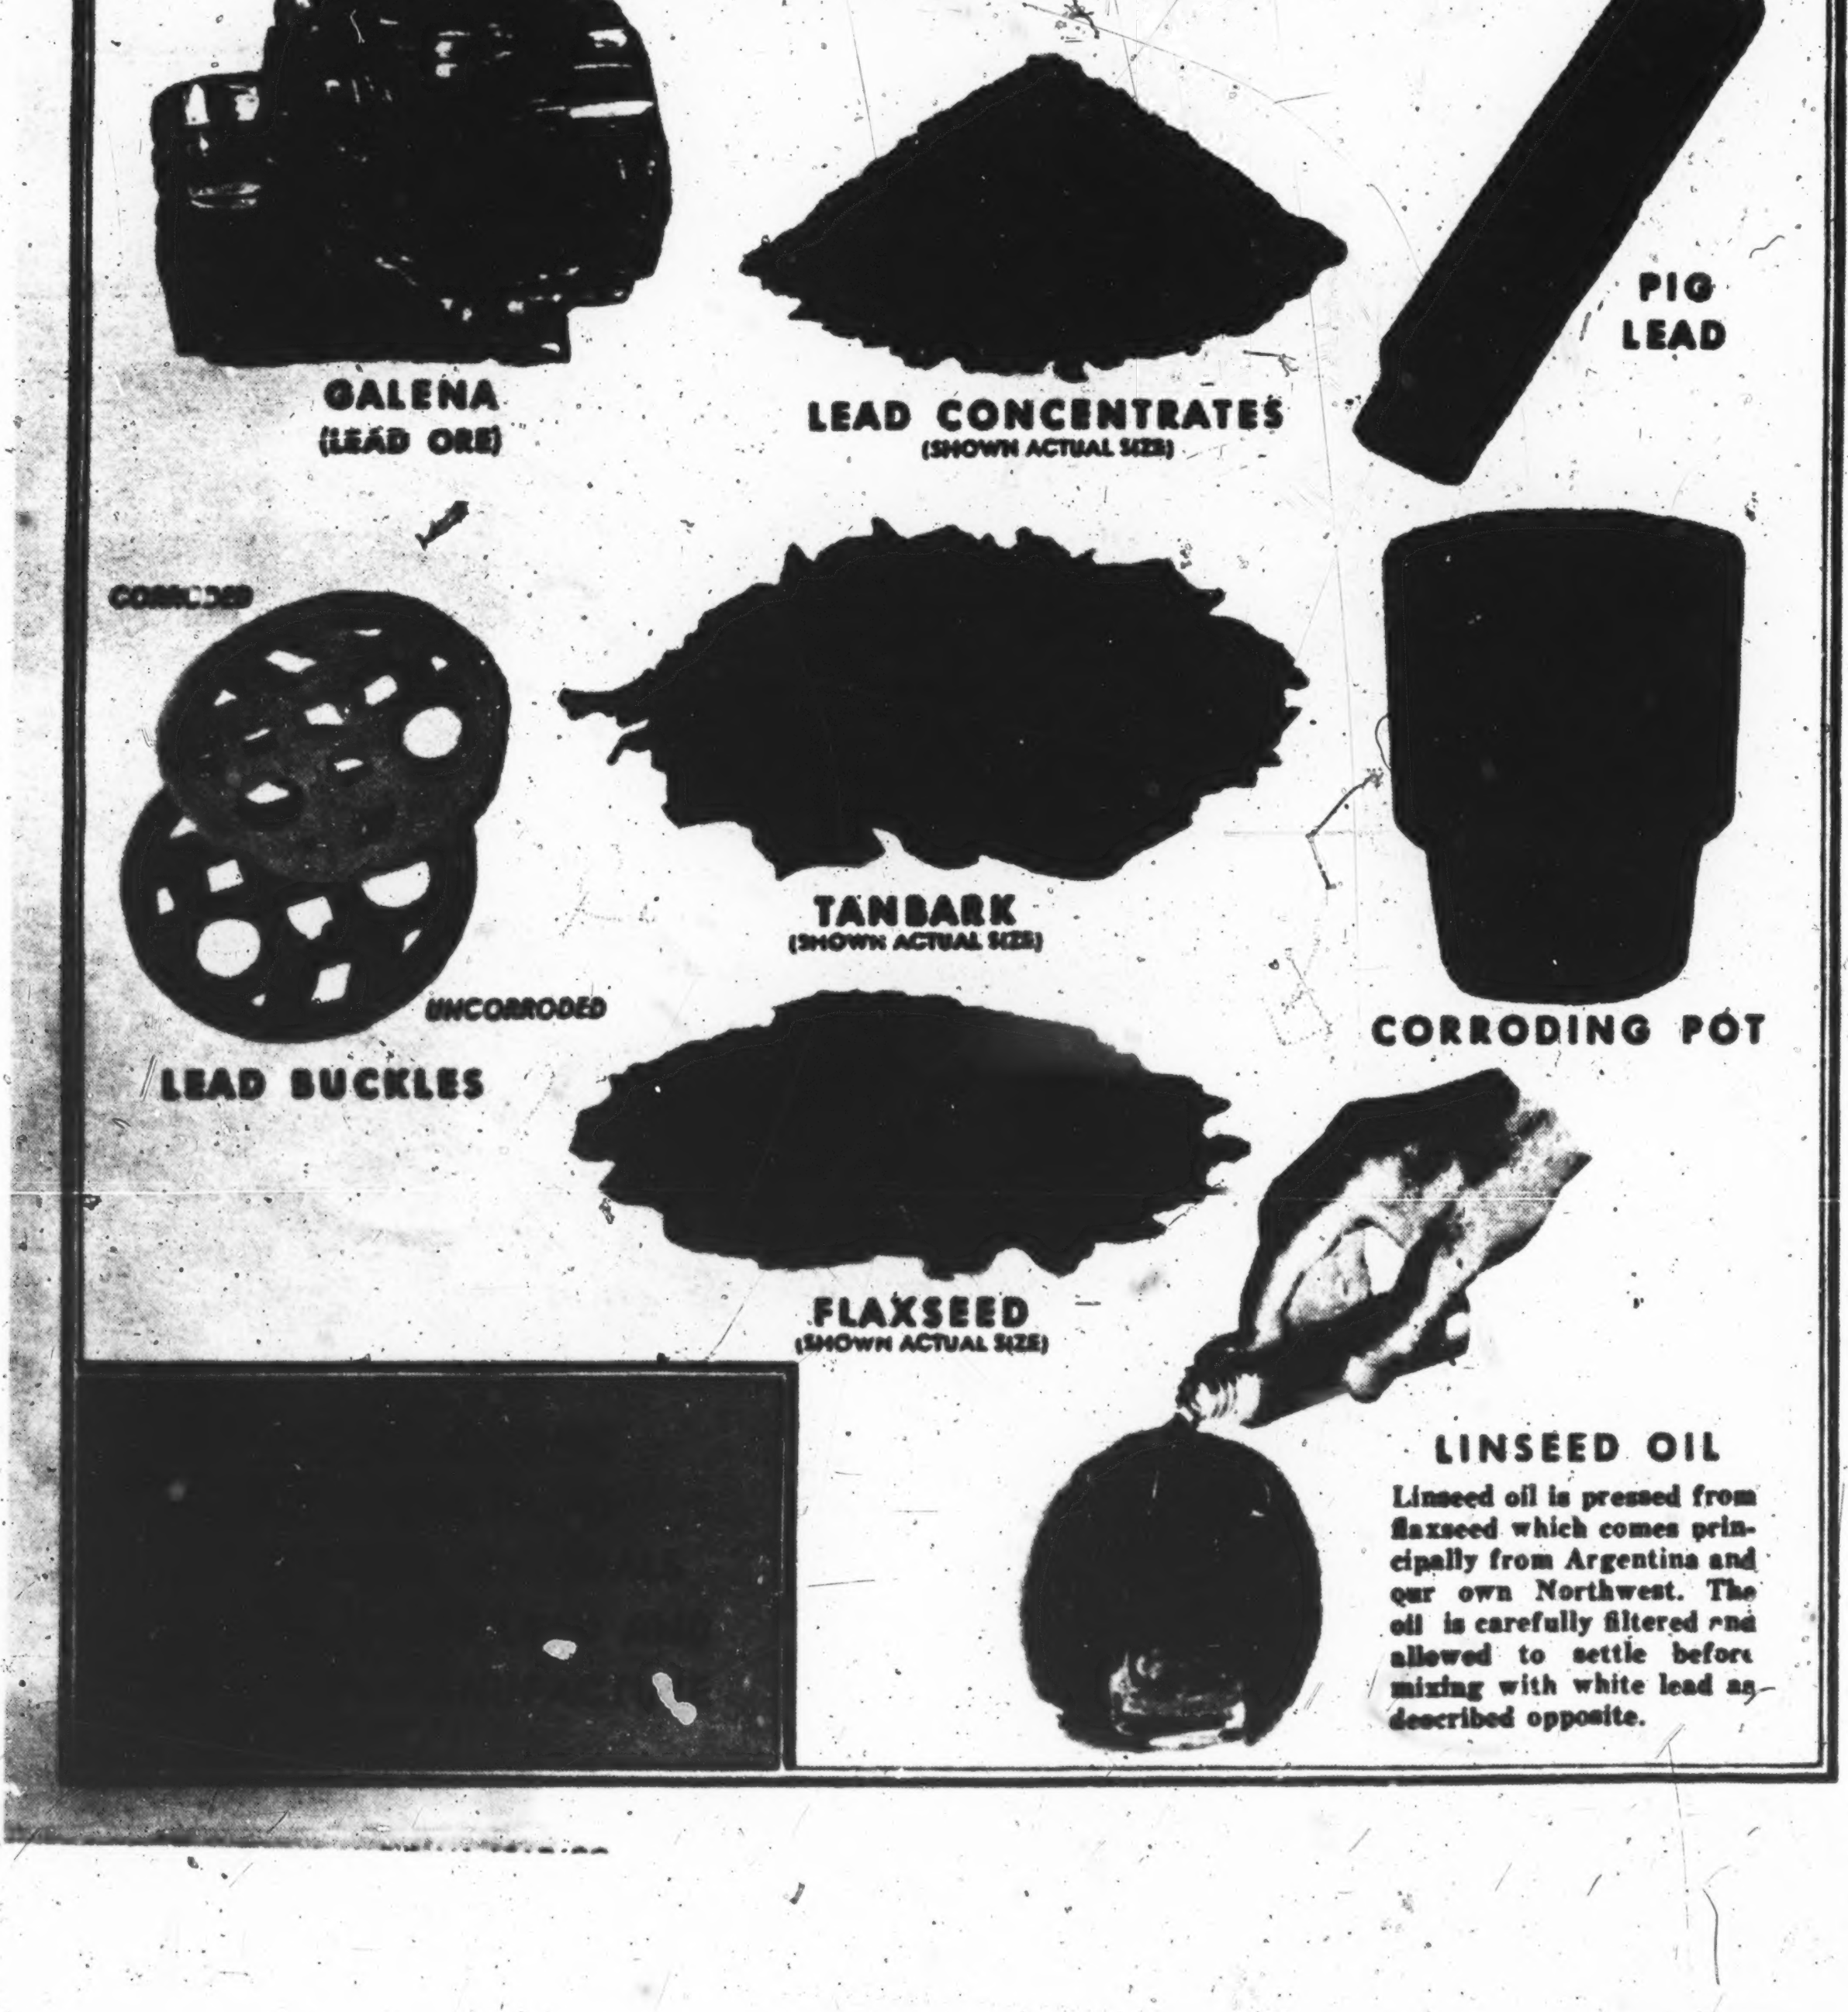


SETTLING TUB: Here the white lead settles gradually, after which most of the water can be siphoned off from the top. The pulpy mass remaining still contains water, however, and to remove this it is put through the pulping machine.



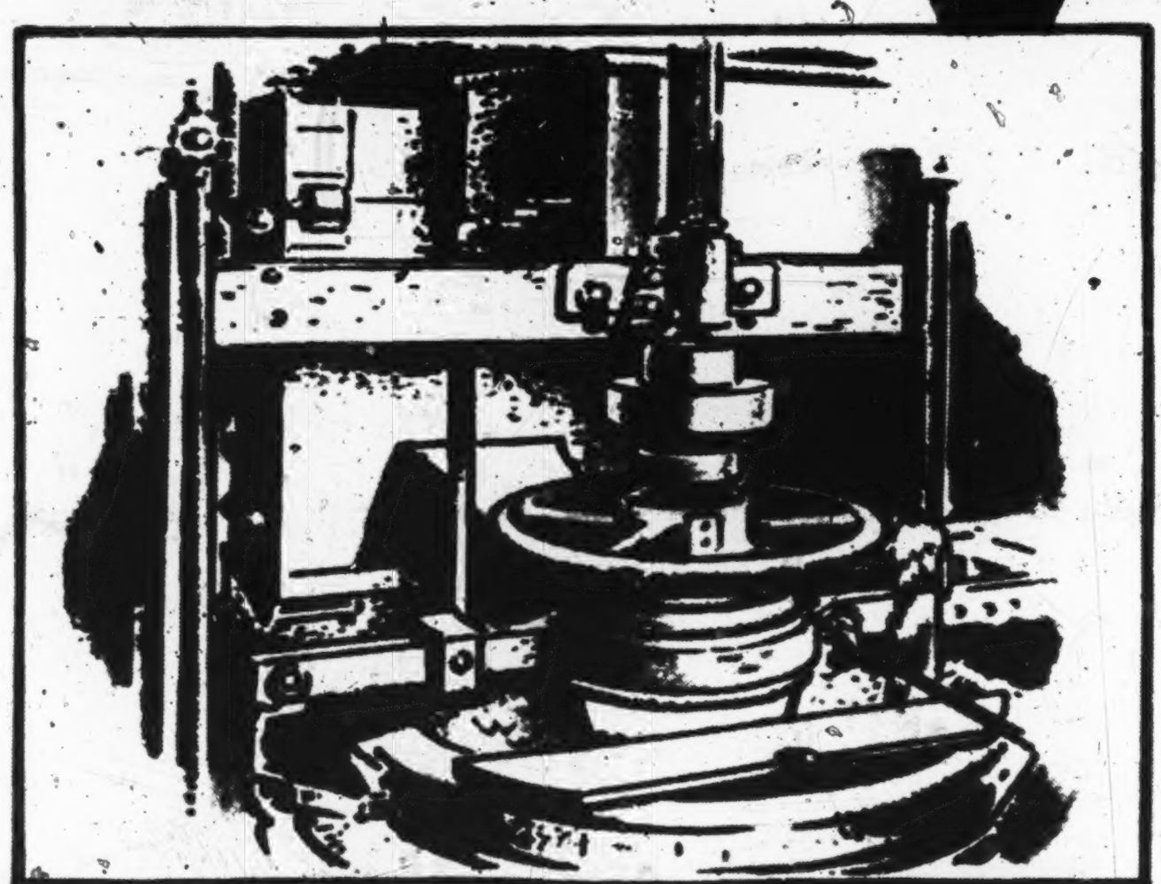
SCREENING: This step takes out all the lumps from the dry red lead. Some of the red lead goes directly to market in this form to be used for paint and for storage batteries. Other paint users prefer their red lead in paste or paint form and for this trade the dry red lead is ground in oil by placing it in a chaser.

MATERIALS

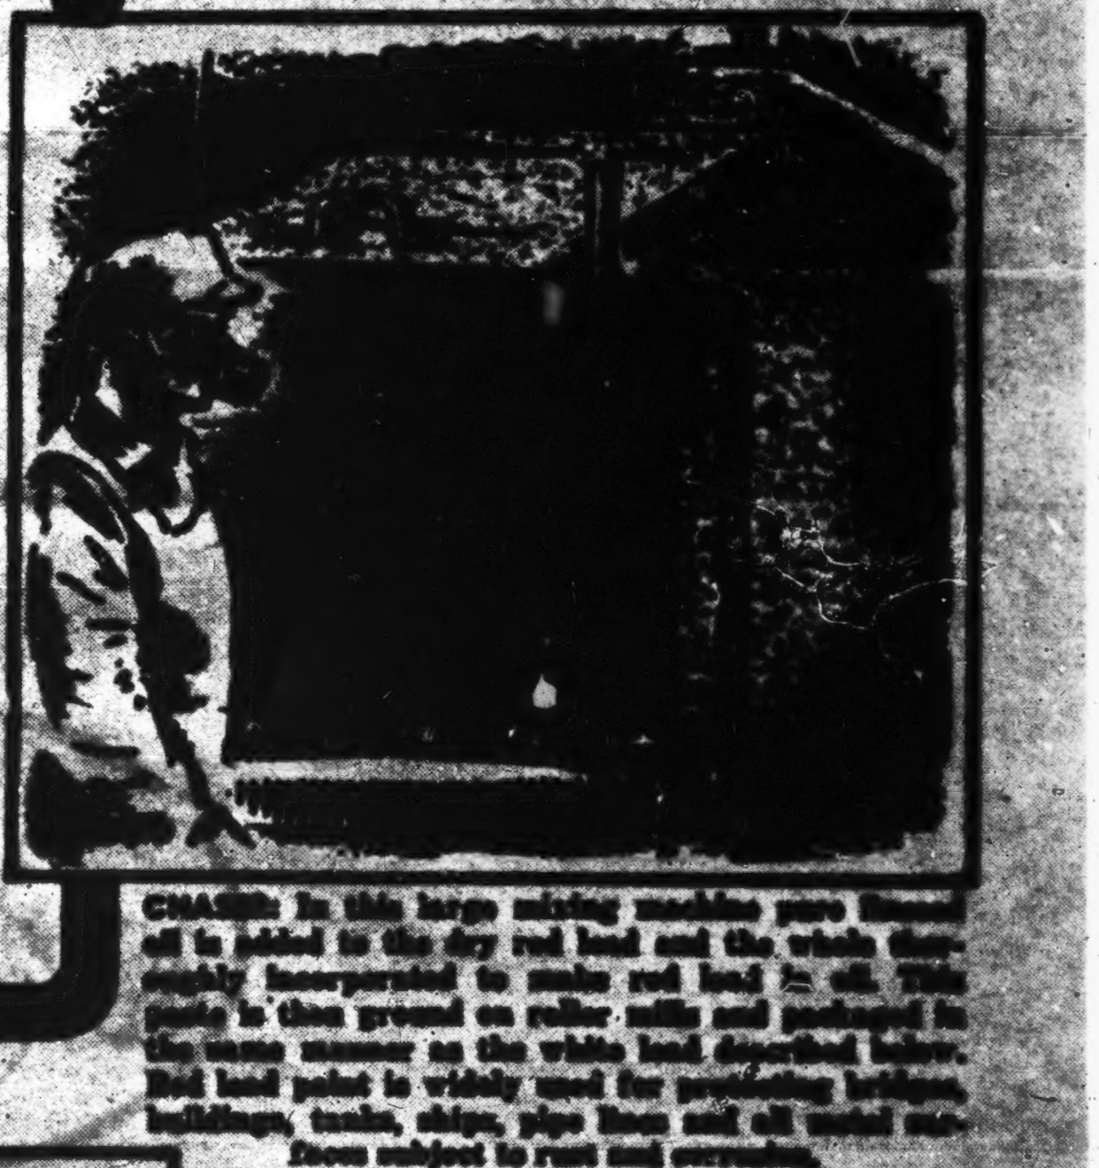


LINSEED OIL

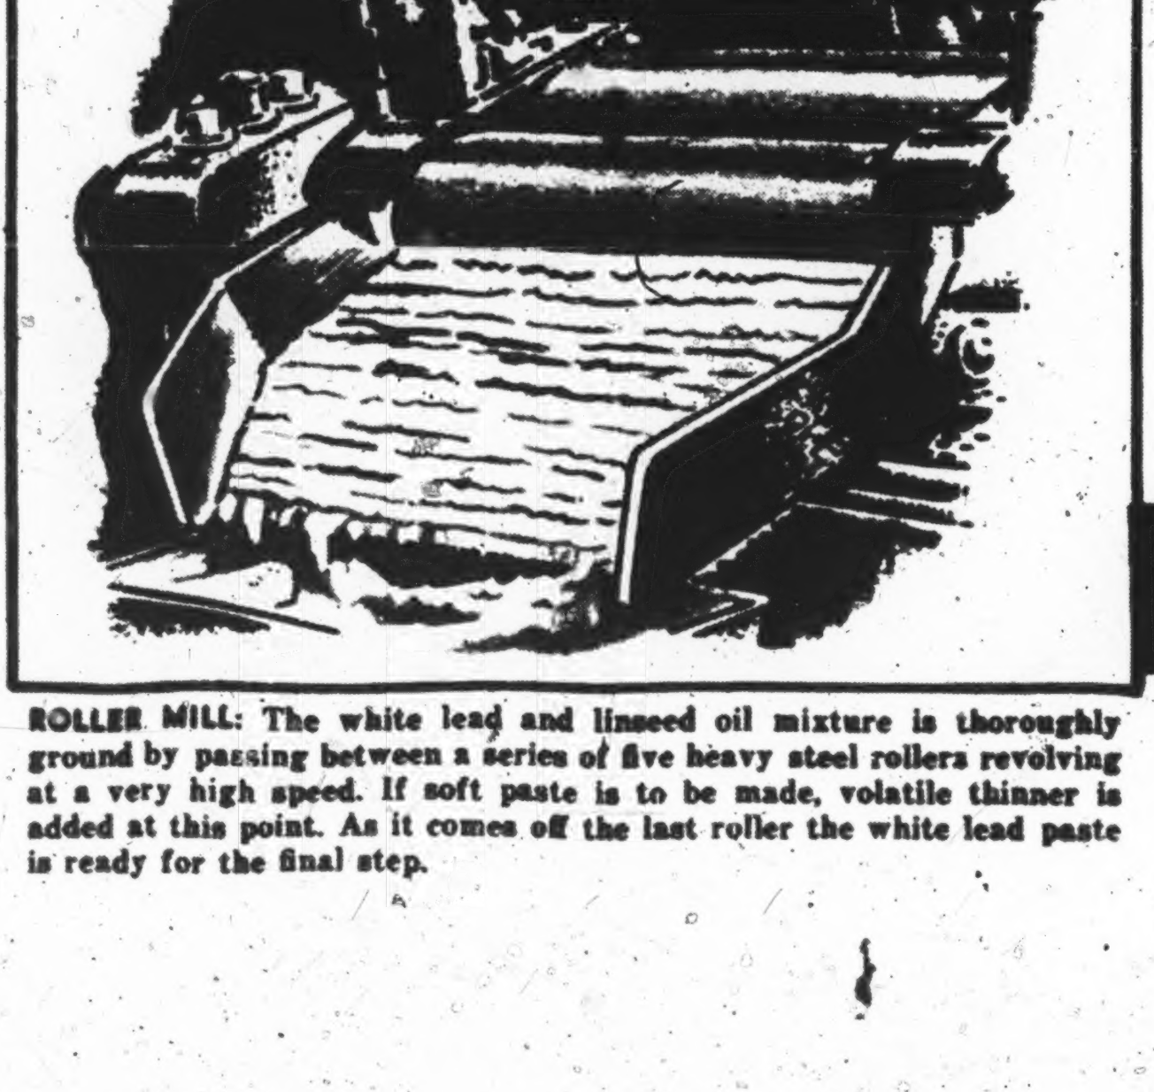
Linseed oil is pressed from flaxseed which comes principally from Argentina and our own Northwest. The oil is carefully filtered and allowed to settle before mixing with white lead as described opposite.



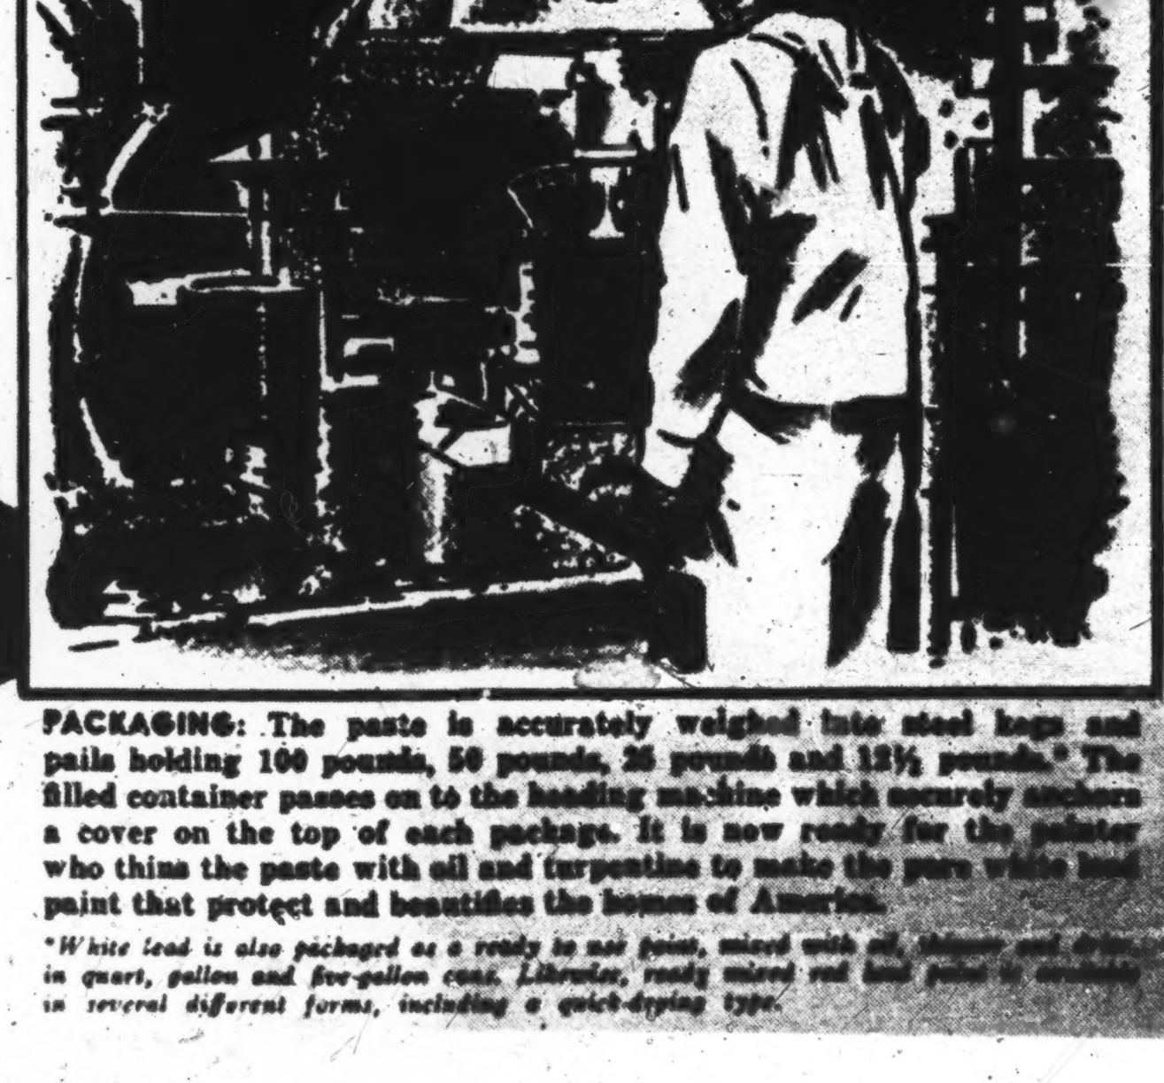
PULPING MACHINE: A measured weight of white lead pulp, containing water, is fed into the top of a cylindrical tank, about 5 feet in diameter and 15 feet high. A carefully measured quantity of pure linseed oil is added. The mass is then steam heated and thoroughly agitated with large paddles. As this goes on each white lead particle unites with linseed oil so closely the water is driven out, comes to the top and is drawn off.



CHASER: In this large mixing machine pure linseed oil is added to the dry red lead and the whole thoroughly incorporated to make red lead in oil. This paste is then ground on roller mills and packaged in the same manner as the white lead described below. Red lead paint is widely used for protecting bridges, buildings, tanks, ships, pipe lines and all metal surfaces subject to rust and corrosion.

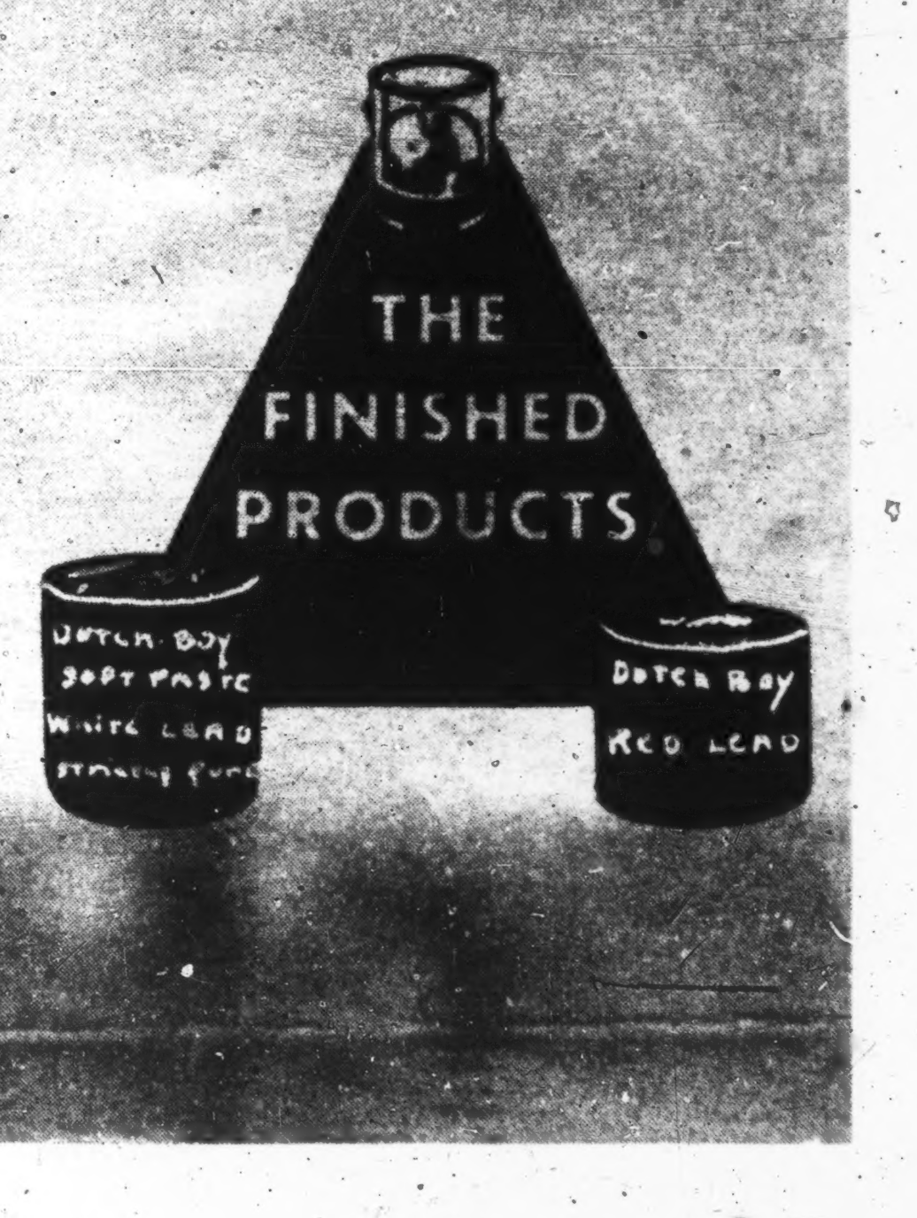


ROLLER MILL: The white lead and linseed oil mixture is thoroughly ground by passing between a series of five heavy steel rollers revolving at a very high speed. If soft paste is to be made, volatile thinner is added at this point. As it comes off the last roller the white lead paste is ready for the final step.



PACKAGING: The paste is accurately weighed into steel kegs and pails holding 100 pounds, 50 pounds, 25 pounds and 12½ pounds.* The filled container passes on to the heading machine which securely anchors a cover on the top of each package. It is now ready for the painter who thins the paste with oil and turpentine to make the pure white lead paint that protect and beautifies the homes of America.

*White lead is also packaged as a ready to use paint, mixed with oil, thinner and drier, in quart, gallon and five-gallon cans. Likewise, ready mixed red lead paint is available in several different forms, including a quick-drying type.



Respondent's Exhibit No. 154.

IN THE MATTER OF NATIONAL LEAD
DATE 6-11-47 WITNESS McKAIG
REPORTER Groner
ELECTROREPORTER INC OFFICIAL REPORTER

NATIONAL LEAD COMPANY
111 BROADWAY
NEW YORK

June 9, 1934.

TO ALL BRANCH MANAGERS:

Please refer to our general letter of May 11th to which was attached Conditions for Sale, etc., of Oxides and Dry White Lead. Since that date the zone differentials for oxides in the territory served by the Pacific Coast have been determined and a change has been made in New Mexico, Colorado, Wyoming and Montana applying to less carload lots.

On dry white lead there has also been a change from our original instructions, in that a differential of 1/4¢ a pound has been added to the par price in those four states.

The new zone schedules are as follows -

OXIDES

For lots of less than 20 tons add differentials as shown to par card prices

1/4¢ per pound in Florida, Georgia, Alabama, Mississippi, Louisiana, Arkansas, Texas, Oklahoma. California and west of Cascade Mountains in Oregon and Washington.

1/2¢ per pound in New Mexico, Colorado, Wyoming and Montana.

3/4¢ per pound in Arizona, Idaho, Nevada, Utah and east of Cascade Mountains in Oregon and Washington.

change has been made in New Mexico, Colorado, Wyoming and Montana applying to less carload lots.

On dry white lead there has also been a change from our original instructions, in that a differential of 1/4¢ a pound has been added to the par price in those four states.

The new zone schedules are as follows -

OXIDES

For lots of less than 20 tons add differentials as shown to par card prices

1/4¢ per pound in Florida, Georgia, Alabama, Mississippi, Louisiana, Arkansas, Texas, Oklahoma. California and west of Cascade Mountains in Oregon and Washington.

1/2¢ per pound in New Mexico, Colorado, Wyoming and Montana.

3/4¢ per pound in Arizona, Idaho, Nevada, Utah and east of Cascade Mountains in Oregon and Washington.

For 20-ton lots add 1/4¢ per pound in Florida, Georgia, Alabama, Mississippi, Louisiana, Arkansas, Texas, Oklahoma, New Mexico, Colorado, Wyoming, Montana. Idaho, Utah, Arizona, Nevada and east of Cascade Mountains in Oregon and Washington.

DRY WHITE LEAD

For lots of 20 tons and for smaller quantities add 1/4¢ per pound in New Mexico, Colorado, Wyoming, Montana, Arizona, Utah, Idaho, Nevada, California, Oregon and Washington.

We appreciate that the whole zone set-up is very confusing, particularly in view of the fact that there is a different arrangement for oxides, dry white lead and white lead-in-oil. Fortunately you are only concerned with the states in your territory. It seems important, however, that you should have full information available in your office. In the hope that it will help to simplify this complicated matter we are planning to make up colored maps for each product which will be sent to you as soon as they can be completed.

[redacted]

Yours very truly,

Harold Rowe 9

RH

Please be particularly careful that this information is not given to any one in the trade before May 21st.

NATIONAL LEAD COMPANY
111 BROADWAY
NEW YORK

FEDERAL TRADE COMMISSION
Docket No. 5253 Respondent's Exhibit No. 159-B

May 11, 1934.

TO BRANCH MANAGERS:

Enclosed herewith are copies of the Conditions for Sale of Lead Oxides and Dry White Lead which have been included in the Lead Code as finally submitted to the N. R. A. for approval. We have postponed putting the oxide schedules into effect for several weeks in the hope that our code would be signed. Rather than wait any longer we have decided to adopt them for orders taken after May 31st. The necessary changes in the Conditions for Sale of Dry Lead were made on January 1st.

It is planned to have those branches which issue oxide price cards send out on May 21st a notice similar to the one attached. (On such notices as are sent to customers in states carrying the extra 1/4¢ differential all prices listed will be 1/4¢ higher.) In many cases it probably will be advisable to notify customers by letter or through your salesmen.

The most important changes are -

(1) The requirement of 20 tons in one lot to obtain a differential price

and (2) The adoption of a price for 5-ton lots.

We appreciate that the new basis will not be entirely satisfactory to every buyer of oxides, but we believe it to be more reasonable and fair than the practices of the past which have led us into many inequitable arrangements

the oxide schedules into effect for several weeks in the hope that our code would be signed. Rather than wait any longer we have decided to adopt them for orders taken after May 31st. The necessary changes in the Conditions for Sale of Dry Lead were made on January 1st.

It is planned to have those branches which issue oxide price cards send out on May 21st a notice similar to the one attached. (On such notices as are sent to customers in states carrying the extra 1/4¢ differential all prices listed will be 1/4¢ higher.) In many cases it probably will be advisable to notify customers by letter or through your salesmen.

The most important changes are -

(1) The requirement of 20 tons in one lot to obtain a differential price

and (2) The adoption of a price for 5-ton lots.

We appreciate that the new basis will not be entirely satisfactory to every buyer of oxides, but we believe it to be more reasonable and fair than the practices of the past which have led us into many inequitable arrangements

for which the only justification was that they were forced on us by competition. Buying on differential, originally limited to the largest accounts, has spread to such an extent as to include some customers whose tonnage would scarcely amount to a carload a year. The 5-ton price is being introduced to take care of the medium sized buyer who is unable to meet the 20-ton requirement, but who is entitled to something better than the occasional user of a single barrel.

Along with this letter we are sending you interpretations of several of the clauses in "Schedule A", and some instructions which we hope will answer the questions that naturally will arise. If you are in doubt on any points please write us at once.

Orders may be taken between May 21st and 31st on the present basis for shipment up to June 30th. The new conditions of sale will apply to all orders received on and after June 1st.

Yours very truly,

EH
Encls.

Respondent's Exhibit No. 159.

FEDERAL TRADE COMMISSION
Docket No. 2943 Respondent's Exhibit No. 159

GENERAL INSTRUCTIONS

On Carload & L C L Lots

No change will be made in existing contracts until they expire. In cases where buyers have old contracts with competitors, not calling for all of their requirements, you are privileged to quote on the same basis, but do not do so without first taking the matter up with this office

Bona fide trial lots may be supplied at buyer's usual quantity price bas-

Special arrangements may be made with agents handling oxides for re-sale, but must include an understanding that they will not quote below our schedule. Please advise us before entering into any new agreements of that sort.

If any shipments are made on consignment the price applying to withdrawals shall be that for the quantity taken out of stock at one time.

On direct sales of small packages to industrial accounts you may use as a minimum basis the barrel price applying on the quantity shipped at one time plus the following differentials:

100# kegs............	1/2¢ per lb.
50# "	3/4¢ " "
25# "	
12½# "	1¢ " "

On such sales terms shall be 30-1-10.

Prices to railroads will be the same as for other buyers except that freight will be allowed from our nearest factory point to the nearest point on buyer's line. No decision has been made as yet regarding contracts for the third quarter

In the case of steamship lines delivery will be to dock with no further freight allowance.

Notices will be sent to you later regarding prices for federal, state, municipal governments, etc.

FEDERAL TRADE COMMISSION
Docket No. 5253 Respondent's Exhibit No. 159-D

(REFERRING TO SCHEDULE "A" - 1 - - - LOTS OF LESS THAN TWENTY TONS)

In the following states the card prices will be 1/4¢ a pound higher than those shown on the card enclosed:

Florida, Georgia, Alabama, Mississippi, Louisiana, Arkansas, Texas, Oklahoma, New Mexico, Colorado, Wyoming and Montana. (Schedules for states served by Pacific Coast not yet determined.)

All sellers have agreed to discontinue the old 90-day card price contracts. Firm orders will be accepted for shipment up to 30 days. Any customer wishing to protect himself on a definite commitment for a longer period may do so with the understanding that

(a) Total quantity unshipped after 30 days will be billed on standard terms at the price in effect on the date of purchase, shipment to be made at buyer's convenience. Unless it is agreed that all deliveries will be in 5-ton lots the price applying should be that for smaller quantities with the understanding that 1/2¢ a pound allowance will be made for any shipments of 5 tons at one time.

or (b) After 30 days from date of order interest will be added to the selling price at the rate of 1/2% per month up to date of shipment.

(4) Price - (c). You will note that no protection against decline may be given. This is a point on which there was a great deal of discussion and it was finally decided to make a definite rule which is intended to mean that the price to apply on any order is that "in effect on date order is received".

(5) Delivery and (6) Transportation Allowance should be considered together and simply mean that all prices are on a delivered basis. Please note particularly that no cartage allowance may be made to a buyer for use of his own truck.

(7) Shipment. The words "at least" were put in at the request of the N. R. A., which is also responsible for some of the other phraseology in the schedules. Any order taken at the prevailing price must be for shipment within 30 days.

(8) Terms. Cash discount may be allowed to buyers who make a practice of paying bills on the 10th or 15th proximo. We are anxious that this concession should be given only to accounts that request it and have a good reason for doing so. We ask that you limit prox. terms to as small a number of accounts as you reasonably can.

On small packages sold through dealers at the prices shown on the white lead-in-oil cards you may continue your present terms permitting 2% cash discount.

FEDERAL TRADE COMMISSION
Docket No. 5253 Respondent's Exhibit No. 159-E

(REFERRING TO SCHEDULE "A" - 2 - - - TWENTY TON LOTS)

The differentials, which will apply to 20-ton lots, will be as follows in par territory:-

$1.50 for Litharge and Special Negative Battery Oxide
$1.75 for Special Positive Battery Oxide
$2.50 for Red Lead up to and including 98%.

There will be an advance of 1/4¢ a pound for shipments to Florida, Georgia, Alabama, Mississippi, Louisiana, Arkansas, Texas, Oklahoma, New Mexico, Colorado, Wyoming and Montana. (Schedules for states served by Pacific Coast not yet determined.)

(3) Period. Contracts complying with all the requirements of this schedule may be made on a differential basis for deliveries up to December 31, 1934. Any which are now in effect and which expire before that date should be renewed on the new basis and run to December 31st only. Please note particularly the clauses under (5) Price and (8) Shipment.

(5) Price. The buyer is given the option of three methods of determining the price of pig lead applying -

(1) is to cover spot sales and is intended to prevent the practice of booking at the old price after an advance in metal. We appreciate the objections which will be raised because of a customer's inability to obtain a definite price until the close of the market. It will be necessary to explain that the A S & R Co.'s price governing their sales of metal is the closing for the day regardless of what time it is changed. An oxide buyer booking an order with us in the morning will receive the benefit of any reduction which may take place in the afternoon. Differential sales are made on such a small margin it is only fair that we should have an opportunity to buy pig lead against them. With all sellers conforming to this practice

There will be an advance of 1/4¢ a pound for shipments to Florida, Georgia, Alabama, Mississippi, Louisiana, Arkansas, Texas, Oklahoma, New Mexico, Colorado, Wyoming and Montana. (Schedules for states served by Pacific Coast not yet determined.)

(3) **Period.** Contracts complying with all the requirements of this schedule may be made on a differential basis for deliveries up to December 31, 1934. Any which are now in effect and which expire before that date should be renewed on the new basis and run to December 31st only. Please note particularly the clauses under (5) Price and (8) Shipment.

(5) **Price.** The buyer is given the option of three methods of determining the price of pig lead applying -

(1) is to cover spot sales and is intended to prevent the practice of booking at the old price after an advance in metal. We appreciate the objections which will be raised because of a customer's inability to obtain a definite price until the close of the market. It will be necessary to explain that the A S & R Co.'s price governing their sales of metal is the closing for the day regardless of what time it is changed. An oxide buyer booking an order with us in the morning will receive the benefit of any reduction which may take place in the afternoon. Differential sales are made on such a small margin it is only fair that we should have an opportunity to buy pig lead against them With all sellers conforming to this practice we believe it will not be very long before the buyers will become accustomed to it.

(2) covers agreements on which the lead price used is that of some future date such as the date of shipment.

(3) is for average price contracts and is similar to those we have made in the past except that seller must specify before the 1st of the month how much oxide he will take at the average. This shall be considered a firm order. If delivery of any part of the quantity booked is postponed beyond the end of the month, there shall be no adjustment of the price. Additional quantities required during the month cannot be accepted on average basis.

(8) **Shipment.** (b) Taken literally this would mean that a buyer could specify by June 30th a tonnage to be priced on July average for shipment between July 1st and August 31st. There would be no objection to this but in actual practice most average price deliveries probably will be made within 30 days

There are a few very large customers who occasionally wish to cover their requirements for a considerable period by having us buy lead for them In such cases the pig lead shall be billed on the date of purchase -- terms net 30 days

FEDERAL TRADE COMMISSION
Docket No. 5253 Respondent's Exhibit No. 152-F

Sheet 2.

(REFERRING TO SCHEDULE "A" - 2 - - - TWENTY TON LOTS) - Continued.

Other carload buyers wishing to protect themselves on a definite quantity for shipment beyond 60 days may do so with the understanding that

(a) Total quantity unshipped after 60 days will be billed on net 30 day terms.

or (b) After 60 days from date of order interest will be added to the selling price at the rate of 1/2% per month up to date of shipment.

FEDERAL TRADE COMMISSION
Docket No. 5253 Respondent's Exhibit No. 159G.

"J"

SCHEDULE "A" - 1.

ARTICLE I. CONDITIONS FOR SALE OF LEAD OXIDES IN LOTS OF LESS THAN TWENTY TONS.

A. "Sale" or "Order" as used herein includes any transaction whereby a member of the industry makes a quotation on, or becomes obligated to sell and deliver material.

Whatever terminology may be used, the intent and meaning thereof shall conform to the following requirements of sale.

(1) Material - Dry Oxides of Lead, or mixtures consisting principally thereof, each grade of material to be specifically designated.

(2) Quantity - Any amount as agreed between buyer and seller.

(3) Packages - As agreed between buyer and seller. Special packages required by buyer shall be charged for according to cost.

(4) Price - (a) Seller's card or quoted price in effect on date order is received with allowance as follows:

(1) Not more than 1/2¢ per pound for minimum shipment of 5 tons for one buyer at one time to one destination.

(b) Emergency shipments of smaller quantities may be made at the 5-ton price only to a customer for whom the Seller has a 5-ton order on hand for the same material for immediate shipment, or five tons en route to the same destination.

(c) No protection against decline in Seller's price may be given.

(3) Packages - As agreed between buyer and seller. Special packages required by buyer shall be charged for according to cost.

(4) Price - (a) Seller's card or quoted price in effect on date order is received with allowance as follows:

(1) Not more than 1/2¢ per pound for minimum shipment of 5 tons for one buyer at one time to one destination.

(b) Emergency shipments of smaller quantities may be made at the 5-ton price only to a customer for whom the Seller has a 5-ton order on hand for the same material for immediate shipment, or five tons en route to the same destination.

(c) No protection against decline in Seller's price may be given.

Arrange with Mr. Creagh on this markings

(d) Red Lead containing 97 per cent or 98 per cent Pb_3O_4 shall be so marked on the package and shall be sold at not less than 1/4¢ and 1/2¢ per pound, respectively, over Seller's price for grades of lower Pb_3O_4 content.

(5) Delivery - F.O.B. cars Seller's shipping point, or by truck F.O.B. Buyer's premises.

(6) Transportation Allowance - (a) Since transportation is included in the Seller's price, the actual freight paid by Buyer shall be allowed as deduction. No cartage allowance shall be made to Buyer for use of his own truck.

(b) If shipment is made by Buyer's boat, Seller may allow actual amount he would have paid for like transportation at minimum published tariffs in effect on date of shipment.

(7) Shipment - Shall be made at least within thirty (30) days from date order is received.

(8) Terms - Net thirty days, less 1 per cent for cash in ten days from date of shipment.

(9) Taxes - Any tax or other charge imposed by Federal Law upon the production and/or sale and/or shipment of lead oxides shall be added to the price to be paid by the Buyer on any transaction to which such charge is applicable.

FEDERAL TRADE COMMISSION
Docket No. 5253 Respondent's Exhibit No. 159-H

"J"

SCHEDULE "A" - 2.

ARTICLE II. CONDITIONS FOR SALE OF LEAD OXIDES IN LOTS OF AT LEAST TWENTY TONS.

A. "Sale" or "Order" as used herein refers to any transaction whereby a Seller quotes on or becomes obligated to deliver material.

Whatever terminology may be used, the intent and meaning thereof shall conform to the following requirements of sale.

(1) Material - Dry oxides of lead, or mixtures consisting principally thereof, each grade of material to be specifically designated.

(2) Quantity - As agreed between Buyer and Seller, provided that each order or release shall be an amount not less than 20 tons to one destination and for account of not more than one Buyer.

(3) Period - As specified.

(4) Packages - As agreed between buyer and seller. Special packages required by Buyer shall be charged for according to cost.

(5) Price - (a) Shall be determined by adding a differential, as agreed upon by Buyer and Seller, to the price of common lead at New York, the lead price applying to each order to be specified by the Buyer at the time order is placed as:

(1) The American Smelting & Refining Company's quotation at the close of the market on the day the order is received by Seller
or
(2) The American Smelting & Refining Company's

and for account of not more than one Buyer.

(3) Period - As specified.

(4) Packages - As agreed between buyer and seller. Special packages required by Buyer shall be charged for according to cost.

(5) Price - (a) Shall be determined by adding a differential, as agreed upon by Buyer and Seller, to the price of common lead at New York, the lead price applying to each order to be specified by the Buyer at the time order is placed as:

(1) The American Smelting & Refining Company's quotation at the close of the market on the day the order is received by Seller
or

(2) The American Smelting & Refining Company's quotation at the close of the market on a future date definitely agreed upon by Buyer and Seller when order is accepted
or
(3) The average quotation, as reported in one of the publications known as the "American Metal Market" and the "Engineering & Mining Journal", for a future period definitely agreed upon by Buyer and Seller when the order is accepted. If the lead price is determined by the method herein outlined, Seller must require Buyer to specify before the beginning of the governing period the exact quantity of material to be priced in this manner. Deferred shipments shall be billed on the basis originally applicable thereto. Additional quantities required during the governing period shall be considered as new orders and shall be priced in accordance with (1) or (2) above.

(b) Emergency shipments of smaller quantities may be made on the 20-ton price basis only to a customer for whom the Seller has a 20-ton order on hand for the same material for immediate shipment, or 20 tons en route, to the same destination.

(c) No protection against decline in Seller's price may be given.

SCHEDULE "A" - 3.

ARTICLE II. CONDITIONS FOR SALE OF LEAD OXIDES IN LOTS OF AT LEAST TWENTY TONS.

(d) Red Lead containing 97 per cent or 98 per cent Pb_3O_4 shall be so marked on the package and shall be sold at not less than 1/4¢ and 1/2¢ per pound, respectively, over Seller's price for grades of lower Pb_3O_4 content.

(6) Delivery

(a) F.O.B. cars Seller's shipping point
or
(b) By truck complete within three days, F.O.B. Buyer's premises.

(7) Transportation Allowance - (a) Since transportation is included in the Seller's price, the actual freight paid by Buyer shall be allowed as a deduction. No cartage allowance shall be made to Buyer for use of his own truck.

(b) If shipment is made by Buyer's boat, Seller may allow actual amount he would have paid for like transportation at minimum published tariffs in effect on date of shipment.

(8) Shipment - Shall be made at least within sixty (60) days from

(a) The date on which the price of pig lead governs the sale,
or
(b) The beginning of the period during which the average price of pig lead governs the sale.

(9) Terms - Net 30 days.

(10) Taxes - Any tax or other charge imposed by Federal Law upon the production and/or sale and/or shipment of lead oxides shall be added to the price to be paid by the Buyer on any transaction to which such charge is applicable.

"J"

SCHEDULE "A" - 4.

ARTICLE III. CONDITIONS FOR SALE OF BASIC LEAD CARBONATE (DRY WHITE LEAD)

A. "Sale" or "Order" as used herein includes any transaction whereby a member of the industry makes a quotation on or becomes obligated to sell and deliver material.

Whatever terminology may be used, the intent and meaning thereof shall conform to the following requirements of sale.

(1) Quantity - Any amount as agreed between buyer and seller.

(2) Period - As desired, to be specified.

(3) Packages - As agreed between buyer and seller.

(4) Price - (a) Spot Sales - Seller's card or quoted price in effect on date order is received.

(b) Contract Sales - 1. Seller's price on date contract is made with protection against advance or decline on the undelivered portion to the end of the current calendar quarter.

2. On contracts extending beyond the current calendar quarter, the price applying to subsequent deliveries shall be seller's price in effect on the first day of the calendar quarter in which they are made, with protection against advance or decline on the undelivered portion to the end of each quarter.

(c) The price for minimum 20 ton lots for one buyer to one destination, shipped by rail in one carload, or delivered by truck within a period of three days, shall be ~~not more~~ than 1/4¢ per pound less than that charged for smaller quantities.

of smaller quantities

(4) Price - (a) Spot Sales - Seller's card or quoted price in effect on date order is received.

(b) Contract Sales - 1. Seller's price on date contract is made with protection against advance or decline on the undelivered portion to the end of the current calendar quarter.

2. On contracts extending beyond the current calendar quarter, the price applying to subsequent deliveries shall be seller's price in effect on the first day of the calendar quarter in which they are made, with protection against advance or decline on the undelivered portion to the end of each quarter.

(c) The price for minimum 20 ton lots for one buyer to one destination, shipped by rail in one carload, or delivered by truck within a period of three days, shall be ~~not more~~ than 1/4¢ per pound less than that charged for smaller quantities.

of smaller quantities

(d) Emergency shipments/may be made at the 20 ton price only to those customers for whom the Seller has a 20 ton order on hand for the same material for immediate shipment, or a carload (20 tons) enroute, to the same destination.

(5) Delivery - F.O.B. cars Seller's shipping point, or by truck F.O.B. Buyer's premises.

(6) Transportation Allowance - Since transportation is included in the Seller's price, the actual freight paid by Buyer shall be allowed as deduction. No cartage allowance shall be made to Buyer for use of his own truck.

(7) Shipment - (a) Spot Sales - Within thirty days from date order is received.

(b) Contract Sales - Within the period covered by the contract.

(8) Terms - Net thirty days, less 1 per cent for cash in ten days from date of shipment.

(9) Taxes - Any tax or other charge imposed by Federal Law upon the production and/or sale and/or shipment of white lead shall be added to the price to be paid by the Buyer on any transaction to which such charge is applicable.

NATIONAL LEAD SHUNS NRA PRICE FIXING; SEES ANTI-TRUST LAW

[Chicago Tribune Press Service.]

New York, July 25.—In the belief that the anti-trust laws will eventually be restored in this country, the National Lead company has joined no NRA association that is endeavoring to fix prices, according to Edward J. Cornish, president of the company.

In issuing the company's earnings report for the first half of this year Cornish disclosed that the company had not participated in the drafting of any trade code which provided for price fixing. When asked to comment on the reasons for this policy, he said:

"We feel that price fixing permits inefficient competitors to enter an industry. For this reason, we are glad that none of the NRA associations in which the National Lead company holds memberships provides for price fixing.

"The suspension of the anti-trust laws which was effected by the National Industrial Recovery act is only temporary, in my opinion. When the anti-trust laws return many companies may again have to learn to operate on an efficient, economical basis."

Turning to the plight of the farmer, Cornish said that as a boy on a Nebraska farm, he had seen several agricultural crises, and that natural correctives had always restored equilibrium.

"During the last few years," he declared, "farmers would have been better off if they had gone to their mortgage companies and arranged to lease their lands instead of invoking federal aid."

FROM E. L. Baum, for Comptroller

IN REPLY TO

FEDERAL TRADE ... 171
5253
OF Nat'l Lead
Baum
DATE 6/18/47 WITNESS
REPORTER, INC.
BY TW

The information requested in your General Letter of March 26th is as follows:

1941 Sales of Heavy & Soft Paste White Lead

	Total Pounds Sold	Total Freight and Cartage	Average Freight Per Cwt.
Par	19,652,155	42,643.49	.2170
Plus 3/8	221,433	1,831.80	.8273

1941 Sales of Oxides

Par	55,568,061	82,202.36	.1479
Plus 3/8	None	None	None

A calculation was also made using the same quantities and destinations but based on carload shipments and rates and the result follows:

	Total Pounds Sold	Total Freight and Cartage	Average Freight Per Cwt.
Par	19,652,155	43,028.41	.2190
Plus 3/8	221,433	1,446.88	.6534

The freight rate based on a single carload shipment to each point of destination in the "Plus 3/8" Zone during 1941 would average .7646 per cwt.

Present: Messrs. Beale, Beschorman, Brodrick, Carter, Cornish, Dorsey, Field, Gregg, Rockwell, Sidford, Taylor, Thompson and Wettstein.

Absent: Messrs. Carpenter and McCarty.

The minutes of the regular monthly meeting and of the Annual Meeting held April 21, 1927, were read and duly approved.

On separate motions the following resolutions were each unanimously adopted, the roll being called where the expenditure of money was involved.

Resolved, that the following actions of the Executive Committee be and they hereby are approved.

Approving expenditure of	
$28,060.00	by Metallurgical and Chemical Corporation for permanent installation of Newnam hearth and purchase and installation of "Dracco" dust collector at its Matawan Plant.
$ 3,126.25	by John T. Lewis & Bros. Co. for the purchase of an electric industrial tiering truck for the Oxide Department at its Philadelphia Plant.

Appropriating	
$ 656.90	for purchase and installation of a new apron coal conveyor at St. Louis Lead & Oil Works, St. Louis Branch.
$ 482.06	in addition to amount previously appropriated for the purpose, to cover cost of installation of motor drive for two mechanical furnaces in Oxide Department, St. Louis Lead & Oil Works, St. Louis Branch.
$ 600.00	to cover cost of repainting steel sash in several buildings of Atlantic Works, Atlantic Branch.

Co., the execution of the agreement presented by John G. Campion, Wm. E. Page and Chas. T. Carnahan, of the County of Lake and State of Colorado, by which the said St. Louis Smelting & Refining Co. agree to pay a Royalty for the use and advantages to be gained by said Company in consideration of the said parties driving, or procuring to be driven, a tunnel from a point at or near Malta, in the County of Lake and State of Colorado, to a point in the vicinity of the intersection of Harrison Avenue and Second Street, in the City of Leadville, in said County and State, which shall not be less than five hundred (500) feet beneath the surface of said Avenue, where it passes under same, for the purpose of exploring, developing and draining the adjacent territory.

42 Resolved, That the Executive Committee are hereby requested to report at the next meeting of the Board of Directors on the advisability of discontinuing the Manufacture of White Lead at The J. H. Morley Lead Works and of grinding lead in oil at the Cornell Lead Works.

A number of papers were read by Col. Thompson referring to Manufacturing Costs, the same that [illegible]

The minutes of the regular meeting held on February 18. 1892, were read by the Secretary and duly approved.

43 Mr. Rockwell, Chairman of the Special Committee appointed by the Executive Committee to perfect a plan for making certain changes in conducting the sales of this Company, presented the following report of his Committee, which was ordered to be placed on file and transcribed in the minutes of this meeting:

" W. P. Thompson President

The Committee appointed to recommend some changes in our plan of selling our products, submit the following:

Division of Territory. We have divided the territory into sections or districts, each tributary to one of our factory points and arranged with a view to its geographical relation to and, as far as possible, its trade relations with the factory point. Following are the boundary lines for the several districts.

Sales Managers. We would appoint one selling management at each factory point, who should have immediate charge of its details of the trade in his district, representing Comp influence, to benefit the people of the City and State in which he lived.

Distinguished for his kindness and courtesy towards all with whom he came in contact, it was the further privilege of his associates and friends to see and admire those sterling qualities of heart and mind which found their highest expression in his daily life.

Those who seek for a monument commemorating the virtues of this Christian gentleman will find it in the hearts of his family, his associates and his friends, where his memory is lovingly enshrined.

The minutes of meeting held November 16, 1911, were read and duly approved.

On separate motions the following resolutions were each unanimously adopted, the roll being called where the expenditure of money was involved:

Reducing price list on White Lead and Oxides and accepting orders to be taken up to April 1, 1912, subject to usual conditions in case of an advance.

Reducing price list between Branches.

Establishing differentials to be charged for Linseed Oil in new cans.

The resignation of Mr C. F. Wells as Director, to take eff

5972 Resolved, that the President be and he hereby is requested to procure and submit from time to time for the current information of this Board at its monthly meetings monthly reports of important expenditures by and developments in the businesses of its various subsidiary companies.

Resolved, that effective today the minimum differential prices, not subject to discount, on contracts for the sale of oxides in barrels be and they hereby are fixed at 1½¢ per pound for litharge and 2½¢ per pound for red lead above the New York A. S. & R. price of common pig lead ruling at date of receipt of order, except that at St. Louis and Chicago and territories supplied therefrom the St. Louis instead of New York price of common pig lead may be used as a base; and that the differential card prices on the same products, subject to 2% discount for cash, be and they hereby are fixed at 2½¢ for litharge and 3½¢ for red lead above the New York A. S. & R. price of common pig lead ruling on date of receipt of order, provided, however, that changes in said card prices shall not be made except upon a change of ¼¢ per pound up or down in the New York A. S. & R. price of common pig lead as compared with a base price of 6½¢ per pound, that it shall be optional with Branches to issue or not to issue price cards, but that all sales made subject to a 2% discount for cash shall be made at not less than the differential card prices hereby established.

On motion the meeting then adjourned.

W. O. Cole,
Secretary.

5973 RESPONDENT'S EXHIBIT NO. 179.

—17—

First Annual Meeting of Stockholders of National Lead Company, held at No. 1 Exchange Place, Jersey City, N. J., at twelve o'clock noon on Thursday, February 16, 1893.

Meeting was called to order, President Thompson in the chair.

In the absence of Mr. G. W. Flack, Jr., one of the inspectors of election, elected at the previous meeting Mr. J. B. Frothingham was duly elected in his place. The polls were then declared open for one hour, commencing at 12:15

P. M., which was afterwards extended, on motion duly seconded and unanimously adopted, to an hour and a quarter, during which time the polls remained open.

The minutes of the meeting of stockholders held on December 8, 1891, were read by the Secretary and duly approved.

The first Annual Report to the Stockholders of National Lead Company was then read by President Thompson, and on motion, duly seconded and unanimously adopted, it was resolved that the same be accepted, placed on file and made part of this record.

5974 —18—

It is as follows:

National Lead Company,

1 Exchange Place, Jersey City, N. J.

Report presented to the Stockholders of National Lead Company at their first annual meeting, February 16th, 1893, for the fiscal year ending December 31st, 1892.

To the Stockholders of National Lead Company:

On the 7th day of December, 1891, this Company was organized for the purpose of taking over all of the assets of The National Lead Trust.

The National Lead Trust had acquired properties the value of which was as originally assessed $22,356,025.00 upon which they had issued certificates on the basis of four for one of real value, amounting to $89,424,100.00. The net earnings of the Trust up to the first day of January, 1892 (when the properties were assumed by National Lead Company), after payment of the expenses of the Trustees, and the reorganization expenses, and deducting the distributions that had been made to certificate holders, increased the value of the Net Assets to $24,938,001.53 as follows:

Plant Investment	$18,081,472.77
Other Investments	406,821.33
Stock on hand—Manf'd, in process & raw...	5,468,170.88
Cash in Banks..........................	285,920.46
Notes Receivable	339,916.45
Accounts Receivable	1,414,229.48
	$25,996,531.37

Liabilities.

Accounts Payable	$707,165.59	
Mortgages	351,364.25	1,058,529.84
Net Assets		$24,938,001.53

By the terms of the agreement between the shareholders of The National Lead Trust, the capital of National Lead Company was authorized to be $30,000,000 ($15,000,000

5975 —19—

each of Common and Preferred) the shareholders surrendering six shares of The National Lead Trust Certificates for one each of Common and Preferred Stock,

which produced	298,081 shares
In addition there was sold for cash	13 "
Making a total issue of	298,084 shares

Divided and representing values as follows:

149,040 shares Preferred Stock, par value.	$14,904,000
149,054 shares Common Stock, par value.	14,905,400
Total	$29,809,400

The issue of the remaining shares each Common and Preferred to make the total of $30,000,000, and their sale for cash, was authorized, but it being unnecessary to dispose of them, they remain in the treasury.

A revaluation of the Plant Investment was made to adjust values to the authorized issue of $30,000,000 of Stock of National Lead Company, which revaluation increased the Plant Investment by $4,870,098.47, as appears by the initial Balance Sheet of National Lead Company of the date it commenced business, January 1, 1892, as follows:

here insert omission, copied on Page 22

At the close of the fiscal year, or on January 1, 1893, the financial condition of the Company as shown by the following Balance Sheet:

Assets.

Plant Investment		$23,241,920.58 ~~22,951,571.24~~
Other Investments		431,526.40 ~~406,821.33~~
Stock on hand—Manufactured, in process & raw		5,492,999.54 ~~5,468,170.88~~
Treasury Stock—Common	$94,600.00	
Preferred	96,000.00	190,600.00
Cash in Banks		444,140.57 ~~287,220.46~~
Notes Receivable		202,849.18 ~~339,916.45~~
Accounts Receivable		1,287,262.42 ~~1,414,229.48~~
		$31,291,298.69

Liabilities.

Capital Stock—Common	$15,000,000.00	
Preferred	15,000,000.00	
	30,000,000.00	
Surplus, 1892	863,706.36	
Mortgages	153,728.25	
Accounts Payable	273,864.08	
		$31,291,298.69

It will be noted that the Mortgage Account, which at the inception of the business was $351,364.25, has been reduced by payments amounting during the year 1892 to $197,686 and on January 1, 1893, but $153,728.25 of this account remained unpaid.

Authority was given by the Shareholders to the Directors to issue $3,000,000 of Debenture Bonds "for the purpose of providing for the redemption of $ (figures illegible) mortgages on different parts of the real estate $ (figures illegible) to be used to reimburse the Trustees for cash moneys paid for properties acquired since the organization of the Trust, and the balance to be held in the Treasury of the New Jersey Corporation, to be disposed of to acquire additional capital for carrying on the various businesses.

So far it has not been deemed expedient or necessary to issue any portion of these bonds, the better conditions prevailing in the present form of management rendering it unnecessary to use additional amounts of capital. It was also concluded that it would be better to pay off the mortgages gradually.

The Company is to be congratulated on the liquidation of the very large indebtedness of The National Lead Trust during its existence. The Accounts Payable of this Company January 1, 1893 practically represent ores, bullion and supplies of various kinds, in transit.

The volume of business for the year exhibits a gratifying increase over the preceding years. A large amount of money was expended by The National Lead Trustees, and since by the National Lead Company, in perfecting the smelting and refining interests, practically rebuilding all its great furnaces. White lead factories disadvantageously located, or unable, from any cause, to make their goods on an economic basis, have been discontinued, while others have been greatly enlarged so that the capacity for production of all classes of goods manufactured by the Company has been decidedly increased. The progress of improvement in perfecting machinery to produce better goods on a cheaper basis has been continued, and is meeting with most gratifying results.

The entire country has been redistricted and placed in charge of thoroughly competent managers, trade has been

5977 —21—

solicited and cared for by experienced salesmen, the relations between the Company and its customers have been most kindly. Prices have been equitable, both to the Company and its customers, and the progress in all directions has been thoroughly satisfactory.

Having smelters in New Mexico, Colorado and Missouri, factories for manufacture in all the great cities and commercial points, forming a continuous chain through the country from St. Louis and Chicago to New York and Boston, we are advantaged by each locality and can deliver our goods at a minimum of expense for transportation and other charges.

There has been and always will be competition in each class of goods manufactured by this Company. It does not aim to obtain monopoly. By continuous efforts for improvement in quality of goods, economies in manufacture and distribution, earnest zeal in aiding our customers, uniform and fair prices, large stocks of material on hand (constantly improving with age) to meet every emergency of trade, gradual orientation of other branches to fully round up our manufacturing interests, the better understanding by the public of the superiority of our manufacture over that possible by others by reason of the association in this business of the best trained talent in friendly rivalry to secure the very best results, we believe we have passed the period of hazard, and feel assured of maintaining our strong position, and can reasonably expect increased business with commensurate profits.

No longer menaced by hostile legislation, the attention of the officers of the Company can be directed to further economies, and to the commercial expansion of the business on the lines already laid down, which cannot fail, under the improved discipline and energetic direction of the managers of the different branches throughout the country, to produce continuing favorable results.

I am gratified to be able to state to the stockholders

5978 —22—

that all the old certificate holders of The National Lead Trust have converted their certificates into stock of the National Lead Company, excepting 3720 shares, or four-tenths of one per cent.

The large proportion of Cash Assets, as shown by the Balance Sheet, will undoubtedly give great satisfaction to the shareholders, being quite one-fourth of the entire Capital Stock.

Respectfully,
W. P. Thompson,
President.

Omission, to be inserted on Page 19.

Assets.

Plant Investment		$22,951,571.24
Other Investments		406,821.33
Stock on hand—Manf'd, in process and raw.		5,468,170.88

		$31,058,529.84

The following is a statement of the Profit and Loss Account for the year 1892:

Net Earnings		$1,906,986.36
Out of which were paid four quarterly dividends, as follows:		
Preferred Dividend, No. 1	$260,820	
Preferred Dividend, No. 2	260,820	
Preferred Dividend, No. 3	260,820	
Preferred Dividend, No. 4	260,820	
		$1,043,280.00
Leaving a balance to the credit of Profit & Loss Account of		$ 863,706.36

At the close of the fiscal year, or on January 1, 1893, the financial condition of the Company is shown by the following Balance Sheet:

Mr. Geo. A. Frederick, of Baltimore, Md., offered a resolution, which, after amendment, was seconded and unanimously adopted as follows:

Resolved, That for the better information and understanding of the stockholders of National Lead Company at their Annual Meeting, the President be directed to prepare his annual report sufficiently in advance to permit a copy of the same to be mailed, and that such copy be mailed to each stockholder of record at least five days prior to the time for the annual meeting provided for in Article 2 of the By-Laws.

Mr. Frederick also offered a resolution that quarterly statements of the gross and net earnings of the Company be issued but on a vote being taken, this was laid on the table.

At 1:30 P. M. the Polls, having remained open an hour and a quarter, were declared closed and after a count of the votes, the inspectors made the following report, which was ordered to be made part of the minutes of this meeting:

Jersey City, N. J., Feb. 16, 1893.

The undersigned, duly appointed and qualified as Inspectors of Election for the Annual Meeting of Stockholders of National Lead Company for the Election of Directors hereby submit their report.

The polls were opened at 12:15 P. M. and closed at 1:30 P. M.

The total number of votes cast personally and by proxies was 188,555, all of which were cast for

R. P. Rowe, E. F. Beale, Jr., G. O. Carpenter, Jr. and J. H. McKelvy to hold office until the third Thursday in February, 1896.

J. L. McBirney and W. H. Thompson to fill vacancies and to hold office until the third Thursday in February, 1894.

A. T. Goshorn and D. B. Shipman to fill vacancies and to hold office until the third Thursday in February, 1895.

John B. Frothingham,
Isaac F. Goldenhorn.

5980

Mr. Veiller then offered the following resolution which was duly seconded and unanimously adopted:

Resolved, That the thanks of the stockholders be extended to the officers of the Company for their successful efforts in the management of the National Lead Company during the past year.

There being no further business, on motion the meeting then adjourned.

Charles Davison,
Secretary.

Second Annual Meeting of Stockholders of National Lead Co. held at No. 1 Exchange Place, Jersey City, N. J., at twelve o'clock noon on Thursday, February 15, 1894.

The meeting was duly called to order, President Thompson in the chair.

The minutes of the First Annual Meeting of Stockholders held February 16, 1893, were read by the Secretary and duly approved.

The polls were then declared open and to remain open for one hour, from 12:15 P. M. to 1:15 P. M.

The Second Annual Report to the Stockholders of National Lead Company was submitted by the President and was as follows:

National Lead Company

1 Exchange Place, Jersey City, N. J.

Report presented to the stockholders of National Lead Company at their Second Annual Meeting, February 15, 1894 for the fiscal year ending December 30, 1893:

To the Stockholders of National Lead Company:

The last Annual Report presented details of the organization of the Company and its operations for the fiscal year of 1892. The Balance Sheet showing condition of the Company on December 30, 1893, is as follows:

5981 RESPONDENT'S EXHIBIT NO. 180.

Minutes of Fourteenth Annual Meeting of Stockholders of National Lead Company held at No. 1 Exchange Place, Jersey City, N. J., at twelve o'clock noon on Thursday, April 19, 1906.

The meeting was called to order, President Cole in the chair.

The polls were declared open at 12:05 p. m. and closed at 1:23 p. m.

The minutes of the thirteenth annual meeting held April 20, 1905, and of the special meeting held June 26, 1905, of stockholders, were read and duly approved.

The Fourteenth Annual Report to Stockholders of National Lead Company was submitted by the President and was as follows:

National Lead Company.

1 Exchange Place, Jersey City, N. J.

Report presented to the Stockholders at their Fourteenth Annual Meeting, April 19, 1906, for the fiscal year ending December 31, 1905.

To the Stockholders of National Lead Company:

The following Balance Sheet shows the condition of the Company on December 31, 1905:

5982 Inspectors' Oath.

State of New Jersey, } ss.
County of Hudson. }

John B. Frothingham and H. W. Naudain being severally sworn upon their respective oaths, do promise and swear that they will faithfully, honestly and impartially perform the duties of Inspectors of Election, and will to the best of their skill and ability conduct the election to be held this day for directors of the National Lead Company, and a true report make of the same.

John B. Frothingham,
H. W. Naudain.

Subscribed and sworn to this 19th day of April, A. D. 1906, before me

Francis V. Many,
Master in Chancery of New Jersey.

Inspectors' Certificate.

We, the Subscribers, Inspectors of Election, of the National Lead Company, duly appointed and sworn to a faithful discharge of our duties, do report that we did receive the votes of the stockholders by ballot; that 297,689 votes representing 297,689 shares of the capital stock of said Company (being more than a majority of the stock of said Company issued and outstanding) were cast; that the following persons received the number of votes set opposite their respective names, to wit:

For Directors.		
R. R. Colgate	Number of Votes 297,689	Full term 3 years to 3d Thursday in April 1909
A. P. Thompson		
Walter Tufts		
H. M. McChesney		
Daniel Guggenheim		
Murry Guggenheim		2 year to 3d Thursday in April 1908
Edward Brush		1 year to 3d Thursday in April 1907

Polls opened at 12:05.

Polls closed at 1:23.

All of which is respectfully submitted this 19th day of April, A. D. 1906, at Jersey City, N. J.

John B. Frothingham,
H. W. Naudain,
Inspectors.

5983 RESPONDENT'S EXHIBIT NO. 181.

Minutes of Meeting of Executive Committee held January 14, 1932.

Present: Messrs. Beschorman, Carter, Cornish, Rockwell, Bidford, Thompson and McCarty.

The minutes of the meeting held December 10, 1931, were duly approved.

On separate motions the following resolutions were each unanimously adopted.

Resolved, that the proposed expenditure of the sum of $10,500 by The Robertson Lead Manufacturing Company, Ltd., for completing the construction of an eighty foot extension to its Montreal Plant, in conformity with letter of Mr. James A. Taylor, General Manager, dated December 28, 1931, be and it hereby is approved.

Resolved, that the proposed expenditure of the sum of $1,400 (U. S. currency) by The Robertson Lead Manufacturing Company, Ltd., for Lead Mill at its Montreal Plant, in conformity with letter of Mr. James A. Taylor, General Manager, dated December 21, 1931, be and it hereby is approved.

Resolved, that the sum of $3,479.43, in addition to the amount previously appropriated for the purpose by resolution of this Committee adopted January 30, 1930, be and it hereby is appropriated to cover cost of extending pig casting machine building, etc., at Perth Amboy Plant, Atlantic Branch, in conformity with letter of Mr. Martin Newcomer, Production Manager, Atlantic Branch Metal Department, dated January 7, 1932.

Resolved, that the sum of $792.81 be and it hereby is appropriated to cover cost of experimental and development work in devising method and machine for manufacturing Dick combination lead bend and brass ferrule at Perth Amboy Plant, Atlantic Branch, in conformity with letter of Mr. Martin Newcomer, Production Manager, Atlantic Branch Metal Department, dated January 7, 1932.

5984 Resolved, that the action of the President, after consultation with and approval by the members of this Committee, in ordering a reduction of 1¼¢ per pound, effective December 28, 1931, in the published card prices of white lead in oil and red lead in oil, and of dry white lead and oxides in kegs, for delivery after January 1st and up to March 31, 1932, with usual protection to dealers and distributors against loss by reason of any reduction in said prices prior to June 30, 1932, in respect of any balance of stocks shipped during said period remaining unsold at the date of such reduction, and with authority to allow advance dating of invoices up to March 31, 1932, where necessary or advisable; and in ordering a reduction of ¾¢ per pound, effective the same date, in published card prices of dry white lead and basic sulphate in bbls.; and in ordering a reduction of ½¢ per pound effective the same date in the differential over usual pig lead prices for dry red lead and litharge in less than carload lots, and in changing the regular selling terms for said products from net 60 days, 2% 15 days, to net 30 days, 1% 10 days; be and it hereby is, and said changes in prices and terms are, approved, ratified and confirmed.

Resolved, that the action of the officers of the Company in entering into a certain Agreement in its name and behalf with The Virginia Smelting Company dated December 23, 1931, for the acquisition of a controlling interest in the secondary lead business of said Virginia Company at Norfolk, Virginia, to be transferred to a new corporation to be organized in which this Company shall own a 60% stock interest, in consideration of the loan by this Company to said new corporation of the purchase price of the assets to be transferred to it, as specified in said Agreement, and necessary working capital, not to exceed in the aggregate $100,000 at any time outstanding, be and it hereby is and said Agreement is in all respects approved, ratified and confirmed.

Resolved, that the action of the officers of the Company in consenting in its name and behalf, as a stockholder of the Newton Die Casting Corporation, to the sale of the assets of said Die Casting Corporation to Doehler Die Casting Co. for the considerations and upon the terms specified in an Agreement between said two companies dated January 9, 1932, said consideration consisting of 15,000 shares of the Common Stock without par value of said Doehler Company and cash to the amount of the value of the inventories of said Newton Company as specified in said Agreement, and in executing in the name and behalf of this Company a further Agreement with said

Doehler Company dated January 9, 1932, to refrain from competition with said Doehler Company in the die casting business to the limited extent and for the limited period specified in said Agreement, and from disposing prior to May 15, 1932, of any shares of said Common Stock of said Doehler Company to be received by this Company as a creditor or stockholder of said Newton Company, be and it hereby is and said Agreements are in all respects approved, ratified and confirmed.

On motion the meeting then adjourned.

W. O. Cole,
Secretary.

5985 RESPONDENT'S EXHIBIT NO. 182.

Minutes of Meeting of Executive Committee held June 6, 1935.

Present: Messrs. Beschorman, Cornish, Rockwell, Sidford and Thompson.

The minutes of the meeting held May 29, 1935 were duly approved.

On separate motions the following resolutions were each unanimously adopted.

Resolved, that the proposed expenditure of the sum of $617.00 by Titanium Pigment Company, Inc., for the purchase of spare parts for the copperas filters at its Sayreville Plant, in conformity with letter of Mr. C. F. Garesche, Vice President, dated May 29, 1935, be and it hereby is approved.

Resolved, that this Company recommends to its affiliated corporations American Bearing Corporation, American Lead Corporation, Combined Metals Reduction Company, Morris P. Kirk & Son, Inc., and Master Metals, Inc., that they respectively adopt a plan for the provision of death benefits to their respective employees substantially similar to the Death Benefits Plan of this Company now in effect.

Resolved, that the proposed action by National Lead Company S. A., of Argentina, in terminating its participation in the Death Benefits Plan of this Company and in adopting in lieu thereof an independent Death Benefits Plan of its own substantially similar in its provisions to that of this Company, be and it hereby is approved.

Mr. Cornish submitted to the Committee a copy of his letter to Branches dated June 4, 1935, advising that the Executive Committee felt that no change in Company policy had been made necessary or advisable by the recent decisions of the United States Supreme Court declaring unconstitutional certain provisions of the National Industrial Recovery Act, and said letter was unanimously approved.

On motion the meeting then adjourned.

W. O. Cole,
Secretary.

Suggested Formulations For
The Use Of
Eagle Sublimed Blue Lead

and

Basic Silicate Dry White Lead
in
Primers For
Metal Protective Paints

• • • •

6020 Foreword.

The suggested formulations contained in this bulletin have been selected from a large number of extensive tests. Most of them were tested under laboratory supervision. The remainder were given actual service tests. These formulations represent the best of a large number based on exposure of various types. All the details of these tests are available to the prospective manufacturer who may wish to go further,—possibly under different conditions or for special uses.

The type or brand of pigment, or resin used in the vehicles is designated or specified in each formulation.

Descriptive data for the varnishes used follow the suggested formulations. These all have A to C viscosity on the Gardner-Holt scale. It has been found that varnishes with higher viscosities do not perform as well with some of the formulations, so the suggested viscosities should be followed for best results.

All the paints have satisfactory brushing characteristics, although the varnish vehicle paints naturally are not as easy to apply as oil vehicle paints.

The recorded drying times were determined in an air-conditioned laboratory, 20%-40% relative humidity; 75°F-80°F, so they may not be confirmed exactly in practice. However, they are believed to be relative.

Viscosity determinations were made 18 to 24 hours after the paint was ground and again after one week. If there was perceptable change in one week, the paint formulation was modified. If no change occurred, the paints were thinned to the viscosity noted on the formulation sheets.

The opportunity of answering any questions about these formulations or their components will be welcomed.

6021

OUTLINE OF TEST CONDITIONS.

For Several Types of Exposure.

	Atmospheric	Fresh Water	Salt Water Tide Range	Salt Water Continuous

6022 Eagle Sublimed Blue Lead

Eagle Sublimed Blue Lead is a chemical compound-complex produced by subliming Galena (Lead Ore) in specially constructed and operated Scotch Hearth type of furnace.

Physical and Chemical Characteristics

Formula—Composition

Lead Sulphate—$PbSO_4$	45%	Min.
Lead Oxide—PbO	30%	Min.
Lead Sulphide—PbS	12%	Max.
Lead Sulphite—$PbSo_3$	5%	Max.
Zinc Oxide—ZnO	5%	Max.
Carbon and Undetermined Matter	5%	Max.
Specific Gravity	6.80	
Weight—Lbs. per solid gallon	56.64	
Bulking—gallons per pound	.0177	
ASTM Oil Absorption	12.7	
Gardner-Coleman Oil Absorption	23.0	
pH in water slurry	7.65	
Median Radius	.09	Microns
Through a 325-mesh Sieve	99%	Min.

Meets Federal Specification TT-B-486 and ASTM Standard D405-41.

6023 Eagle Basic Silicate Dry White Lead No. 202

Eagle Basic Silicate White Lead No. 202 is a fine white pigment, the first silicate type of lead pigment to be offered for use in paint formulations. It is suggested for use in formulating metal protective paints for ferrous metals. The use of this pigment is not limited to metal protective paints, but at the present time this particular use has been developed to the point where suggested formulations can be made.

Of the white lead pigments, Basic Silicate White Lead has the highest corrosion inhibitive properties. It can be satisfactorily used in formulations for atmospheric exposure, high humidity conditions; and either fresh or salt water exposures.

Physical and Chemical Characteristics

Formula 2 $PbSiO_3.Pb(OH)_2$

Specific Gravity	5.8
Weight—lbs. per solid gallon	48.31
Bulking Value—Gallons per lb.	.0207
ASTM Oil Absorption	20.4
Gardner-Coleman Oil Absorption	29.5
Median Radius (average)	.30 Microns
Through a 325 Mesh Sieve	99% Min.

Hiding Power—equivalent to Basic White Lead Sulphate.

6024 Primer PM-5-21—For Atmospheric Exposure

Formulation		**Total Weight %**	**Pounds Per 100 Gal.**	**Bulking Value**	**Gals.**
Pigment—60.3%					
Sublimed Blue Lead	**60%**	**36.18**	**542.84**	**.0177**	**9.61**
Zinc Chromate*	**20%**	**12.06**	**180.95**	**.0326**	**5.90**
Asbestine	**15%**	**9.05**	**135.79**	**.0421**	**5.72**
Diatomaceous Silica	**5%**	**3.01**	**45.16**	**.0515**	**2.32**
Vehicle—39.7%					
Raw Linseed Oil	**97.07%**	**38.54**	**578.26**	**.1288**	**74.48**
Pb Naphthenate 24%	**1.63%**	**.64**	**9.60**	**.1042**	**1.00**
Co Naphthenate 6%	**.65%**	**.26**	**3.90**	**.1250**	**.49**
Mn Naphthenate 6%	**.65%**	**.26**	**3.90**	**.1234**	**.48**
		100.00	**1500.40**		**100.00**

Weight per Gallon—15.00#
P.V.R.—24.0

Consistency—80 K. U.

Suggested Roller Mill Grind

542#	13 oz.	Sublimed Blue Lead
180#	15 oz.	Zinc Chromate
135#	13 oz.	Asbestine
45#	3 oz.	Diatomaceous Silica
236#		Raw Linseed Oil

Reduce With

342#	4 oz.	Raw Linseed Oil	
9#	10 oz.	Pb Naphthenate	24%
3#	14 oz.	Co. "	6%
3#	14 oz.	Mn "	6%
1500#	6 oz.	or approximately 100 gallons	

Drying Time

Dust-free	6 hours
Re-coat	24 hours

Notes: This paint with an all oil vehicle will give long service but not as long as some paints made with varnish type vehicles. However, an oil vehicle is sometimes preferred. In general straight oil vehicle paints brush easier and wet the surface (spread) better, particularly if the surface is rough, than do varnish vehicle paints.

Dries with high gloss.

*** Federal Specification TT-Z-415, Type I (Low Chloride and Sulphate).**

6025 Primer PM-7-9—For Atmospheric Exposure

Formulation		**Total Weight %**	**Pounds Per 100 Gal.**	**Bulking Value**	**Gals.**
Pigment—55%					
Sublimed Blue Lead	**60%**	**33.00**	**456.42**	**.0177**	**8.08**
Zinc Chromate*	**20%**	**11.00**	**152.14**	**.0326**	**4.96**
Asbestine	**15%**	**8.25**	**114.10**	**.0421**	**4.80**
Diatomaceous Silica	**5%**	**2.75**	**38.03**	**.0515**	**1.96**
Vehicle—45%					
Raw Linseed Oil	**89.6%**	**40.32**	**557.65**	**.1288**	**71.83**
JV-41 Varnish	**8.3%**	**3.74**	**51.73**	**.1342**	**6.94**
Pb Naphthenate 24%	**1.5%**	**.67**	**9.27**	**.1042**	**.96**
Co Naphthenate 6%	**.6%**	**.27**	**3.73**	**.1250**	**.47**
		100.00	**1383.07**		**100.00**

Weight per Gallon—13.83#
P.V.R.—20.8

Consistency—72 K. U.

Suggested Roller Mill Grind

456#	7 oz.	Sublimed Blue Lead
152#	2 oz.	Zinc Chromate
114#	2 oz.	Asbestine
38#		Diatomaceous Silica
244#		Raw Linseed Oil

Reduce With

313#	10 oz.	Raw Linseed Oil
51#	12 oz.	JV-41 Varnish
9#	4 oz.	Pb Naphthenate 24%
3#	12 oz.	Co Naphthenate 6%
1383#	1 oz.	or approximately 100 gallons

Drying Time

Dust-free	8 hours
Re-coat	18 hours

Notes: Tests of this primer on Eagle-Picher test fences are not completed. However, this primer has shown good service in actual use on highway bridges. The added varnish is for quicker setting than is possible in a straight oil vehicle.

Dries with a high gloss.

*** Federal Spec. TT-Z-415, Type I (Low Chloride and Sulphate).**

6026 Primer PM-5-3—For Atmospheric Exposure

Formulation		Total Weight %	Pounds Per 100 Gal.	Bulking Value	Gals.

5#	14 oz.	Pb Naphthenate 24%
2#	6 oz.	Co Naphthenate 6%
1472#	4 oz.	or approximately 100 gallons.

Drying Time

Dust-free	½ hour
Re-coat	1 hour

Notes: This alkyd primer has shown good durability in an atmospheric marine exposure. Where an alkyd vehicle with a high phthalic anhydride content and quick-drying are desired, it should prove very satisfactory.

Dries to a flat finish.

---

* Federal Spec. TT-Z-415, Type I (Low Chloride and Sulphate).

** Medium long oil type pure alkyd—oxidizing type, linseed oil modification, 35% Phthalic Anhydride, solids basis.

6029 Federal Specification TT-P-20

Paint, Blue Lead Base; Basic Sulphate Linseed Oil Ready-Mixed for Atmospheric Exposure

Weight per Gallon—19.98#
P.V.R.—35.44

Consistency—90 K. U.

Suggested Roller Mill Grind

1444#	8 oz.	Sublimed Blue Lead
4#	6 oz.	Aluminum Stearate
125#		Raw Linseed Oil
130#	11 oz.	Z-2 Linseed Oil.

Reduce With

118#		Raw Linseed Oil
165#	11 oz.	Mineral Spirits
7#	13 oz.	Pb Naphthenate 24%
2#	6 oz.	Co Naphthenate 6%
1998#	7 oz.	or approximately 100 gallons

Drying Time

Dust-free	15 hours
Re-coat	18 hours

Notes: The same notes apply to this formulation as to Federal Specifications TT-P-20. It has a short oil content of 3.73 pounds of linseed oil to the gallon. Aluminum stearate helps suspension in the package.

Dries to a lower gloss than paint made with high oil content.

6031 Primer PM-5-14—For Fresh Water Immersion

Formulation		Total Weight %	Pounds Per 100 Gal.	Bulking Value	Gals.
Pigment—60%					
Sublimed Blue Lead	80%	48.0	743.62	.0177	13.16

		100.0	1549.21		100.00

Weight per Gallon—15.49#
P.V.R.—28.9

Consistency—80 K. U.

Suggested Roller Mill Grind

743# 10 oz. Sublimed Blue Lead
185# 14 oz. Silicate White Lead
180# JV-41 Varnish

Reduce With

433# 8 oz. JV-41 Varnish
6# 3 oz. Guaiacol

1549# 3 oz. or approximately 100 gallons.

Drying Time

Dust free	1 hour
Re-coat	2 hours

Notes: The phenolic-tung oil varnish in this paint raises the RMC with the higher cost being justified in good performance. It has shown excellent performance on large test areas.

Dries to a high gloss.

6032 Primer PM-5-19—For Fresh Water Immersion

Formulation		Total Weight %	Pounds Per 100 Gal.	Bulking Value	Gals.
Pigment—58.3%					
Sublimed Blue Lead	60%	34.98	491.40	.0177	8.70
Zinc Chromate*	20%	11.66	163.80	.0326	5.34
Asbestine	15%	8.75	122.92	.0421	5.17
Diatomaceous Silica	5%	2.91	40.88	.0515	2.11
Vehicle—41.7%					
JV-41-L Varnish	99%	41.28	579.90	.1346	78.05
Guaiacol	1%	.42	5.89	.1064	.63
		100.00	1404.79		100.00

Weight per Gallon—14.05#
P.V.R.—34.9

Consistency—78 K. U.

Suggested Roller Mill Grind

491#	6 oz.	Sublimed Blue Lead
163#	13 oz.	Zinc Chromate
122#	15 oz.	Asbestine
40#	14 oz.	Diatomaceous Silica
340#		JV-41-L Varnish

Reduce With

339#	14 oz.	JV-41-L Varnish
5#	14 oz.	Guaiacol
1404#	12 oz.	or approximately 100 gallons.

Drying Time

Dust-free	2 hours
Re-coat	5 hours

Notes: This paint has shown good life on large surfaces. It has kerosene in the varnish which slows the drying somewhat but improves the brushing and leveling. Dries with a low gloss.

---

* Federal Spec. TT-Z-415, Type I (Low Chloride and Sulphate).

6033 Primer PM-5-20—For Fresh Water Immersion

Formulation		Total Weight %	Pounds Per 100 Gal.	Bulking Value	Gals.
Pigment—60%					
Sublimed Blue Lead	60%	36.00	530.05	.0177	9.38
Basic Silicate Dry White Lead—Eagle #202-A	20%	12.00	176.68	.0207	3.66
Asbestine	15%	9.00	132.51	.0421	5.58
Diatomaceous Silica	5%	3.00	44.17	.0515	2.27
Vehicle—40%					
JV-41-L Varnish	99%	39.60	583.06	.1346	78.48
Guaiacol	1%	.40	5.89	.1064	.63
		100.00	1472.36		100.00

Weight per Gallon—14.72#
P.V.R.—34.3
Consistency—79 K. U.

Suggested Roller Mill Grind

530#	1 oz.	Sublimed Blue Lead
176#	11 oz.	Silicate White Lead
132#	8 oz.	Asbestine
44#	3 oz.	Diatomaceous Silica
230#		JV-41-L Varnish

Reduce With

353#	1 oz.	JV-41-L Varnish
5#	14 oz.	Guaiacol
1472#	6 oz.	or approximately 100 gallons.

Drying Time

Dust-free	2 hours
Re-coat	5 hours

Notes: This paint has the same vehicle as PM-5-19, and has shown good performance. A large number of exposures have shown Basic Silicate White Lead to be advantageous for water immersion exposure, so this paint is somewhat superior in performance to PM-5-19.

Dries with a low gloss.

6034 Primer PM-1-20—For Intermittent or Tide Level Salt Water Exposure

Formulation		Total Weight %	Pounds Per 100 Gal.	Bulking Value	Gals.

Eagle Zinc Oxide #417	10.0%	5.86	84.17	.0213	1.79
Asbestine	7.5%	4.39	63.12	.0421	2.66
Diatomaceous Silica	7.5%	4.39	63.12	.0515	3.25
Vehicle—41.42%					
JV-41 Varnish	89.67%	37.14	533.64	.1342	71.62
Mineral Spirits	9.44%	3.91	56.18	.1525	8.57
Guaiacol	.89%	.37	5.30	.1064	.56
		100.00	1436.78		100.00

Weight per Gallon—14.37#
P.V.R.—34.61

Consistency—75 K. U.

Suggested Roller Mill Grind

505#		Sublimed Blue Lead
126#	4 oz.	Silicate White Lead
84#	3 oz.	Zinc Oxide
63#	2 oz.	Asbestine
63#	2 oz.	Diatomaceous Silica
250#	8 oz.	JV-41 Varnish
5#	5 oz.	Guaiacol

Reduce With

283#	2 oz.	JV-41 Varnish
56#	3 oz.	Mineral Spirits
1436#	13 oz.	or approximately 100 gallons.

Drying Time

Dust-free	1 hour
Re-coat	2 hours

Notes: This primer is similar to Primer PM-1-20 except that it has a longer oil length—33 gallons. It has shown good durability and should give greater flexibility where such is desired.

Dries to a low gloss.

6036 Primer PM-1-4—For intermittent or Tide Level Salt Water Exposure

Formulation		Total Weight %	Pounds Per 100 Gal.	Bulking Value	Gals.
Pigment—55.5%					
Sublimed Blue Lead	60.0%	33.30	447.57	.0177	7.92
Zinc Chromate*	20.0%	11.10	149.19	.0326	4.86
Asbestine	15.0%	8.32	111.83	.0421	4.71
Diatomaceous Silica	5.0%	2.78	37.36	.0515	1.93

Guaiacol	.9%	.40	5.38	.1064	.57
		100.00	1344.05		100.00

Weight per Gallon—13.44#
P.V.R.—35.0

Consistency—72 K. U.

Suggested Roller Mill Grind

447#	9 oz.	Sublimed Blue Lead
149#	3 oz.	Zinc Chromate
111#	13 oz.	Asbestine
37#	6 oz.	Diatomaceous Silica
210#		JV-161 Varnish

Reduce With

330#	11 oz.	JV-161 Varnish
52#		Mineral Spirits
5#	6 oz.	Guaiacol
1344#		or approximately 100 gallons.

Drying Time

Dust-free	30 min.
Re-coat	1 hour

Notes: This primer in a 15 gallon oil length vehicle has shown good durability but not as good as Primer PM-1-20. It is included as a primer where Zinc Chromate content is desired. It is one of only a few pigmentations containing Zinc Chromate that performs well in this type of exposure.

Dries to a flat finish.

---

Drying Time

Dust-free	30 minutes
Re-coat	2 hours

Notes: This primer has a 6½ gallon oil length vehicle and has given good service, though it is not as long-lived, as Primer PM-1-2.

Dries to a low gloss.

6039

Top Coats

The choice of a top coat depends upon the conditions to which the paint system will be subjected. The primers are designed as part of a paint system designed for the several types of exposures indicated.

For atmospheric Exposure—normal conditions:

1. Multiple Pigment—Lead, Zinc, Titanium, Inert in Linseed Oil Vehicle.

A. Pigment—68%

Basic Sulphate White Lead	63%
Zinc Oxide	20%
Titanium Dioxide	7%
Magnesium Silicate	10%
	100%

Vehicle—32%

Refined Linseed Oil	85%
Q Body Linseed Oil	9%
Turp. and Driers	6%
	100%

B. Green Paint

Pigment—72%

Basic Sulphate White Lead	66%
Zinc Oxide	10%
Chromium Oxide	14%
Magnesium Silicate	10%
	100%

Vehicle—38%

Raw Linseed Oil	86%
Varnish JV-41	8%
Turp. and Driers	6%
	100%

C. TT-P-40, Class A, LZTI

Type I, White
Type II, Tints
Class B, White Lead Paints

D. Two pounds of Aluminum Paste in one gallon
   1. JV-37
   2. Fed. Spec. Varnish, TT-V-81a, Type II
   3. Aluminum Paste in long oil oxidizing type alkyd 30% glycerol phthalate based on solids.

E. Black Bridge Paint
   1. Oleoresinous Type Vehicle
   2. Fed. Spec. TT-P-61a

6040 F. Multiple pigment, alkyd vehicle of long oil oxidizing type with approximately 30% glycerol phthalate content, based on solids.

Abnormal conditions: For abnormal conditions such as acid or alkaline exposure:

Sublimed Blue Lead	60%	60%
Basic Silicate Dry White Lead	20%	15%
Zinc Oxide		10%
Magnesium Silicate	15%	7.5%
Diatomaceous Silica	5%	7.5%
	100%	100.0%

In 1) a 25-33 gal. tung oil phenolic resin varnish vehicle; or 2) 15 gal. tung oil phenolic vehicle. Pigment approximately 60%; Vehicle approximately 40%.

Note: The addition of 2% Carbon Black and 1% Benzoic Acid ground in linseed oil to stiff paste, based on pigment content, is suggested for better tint retention.

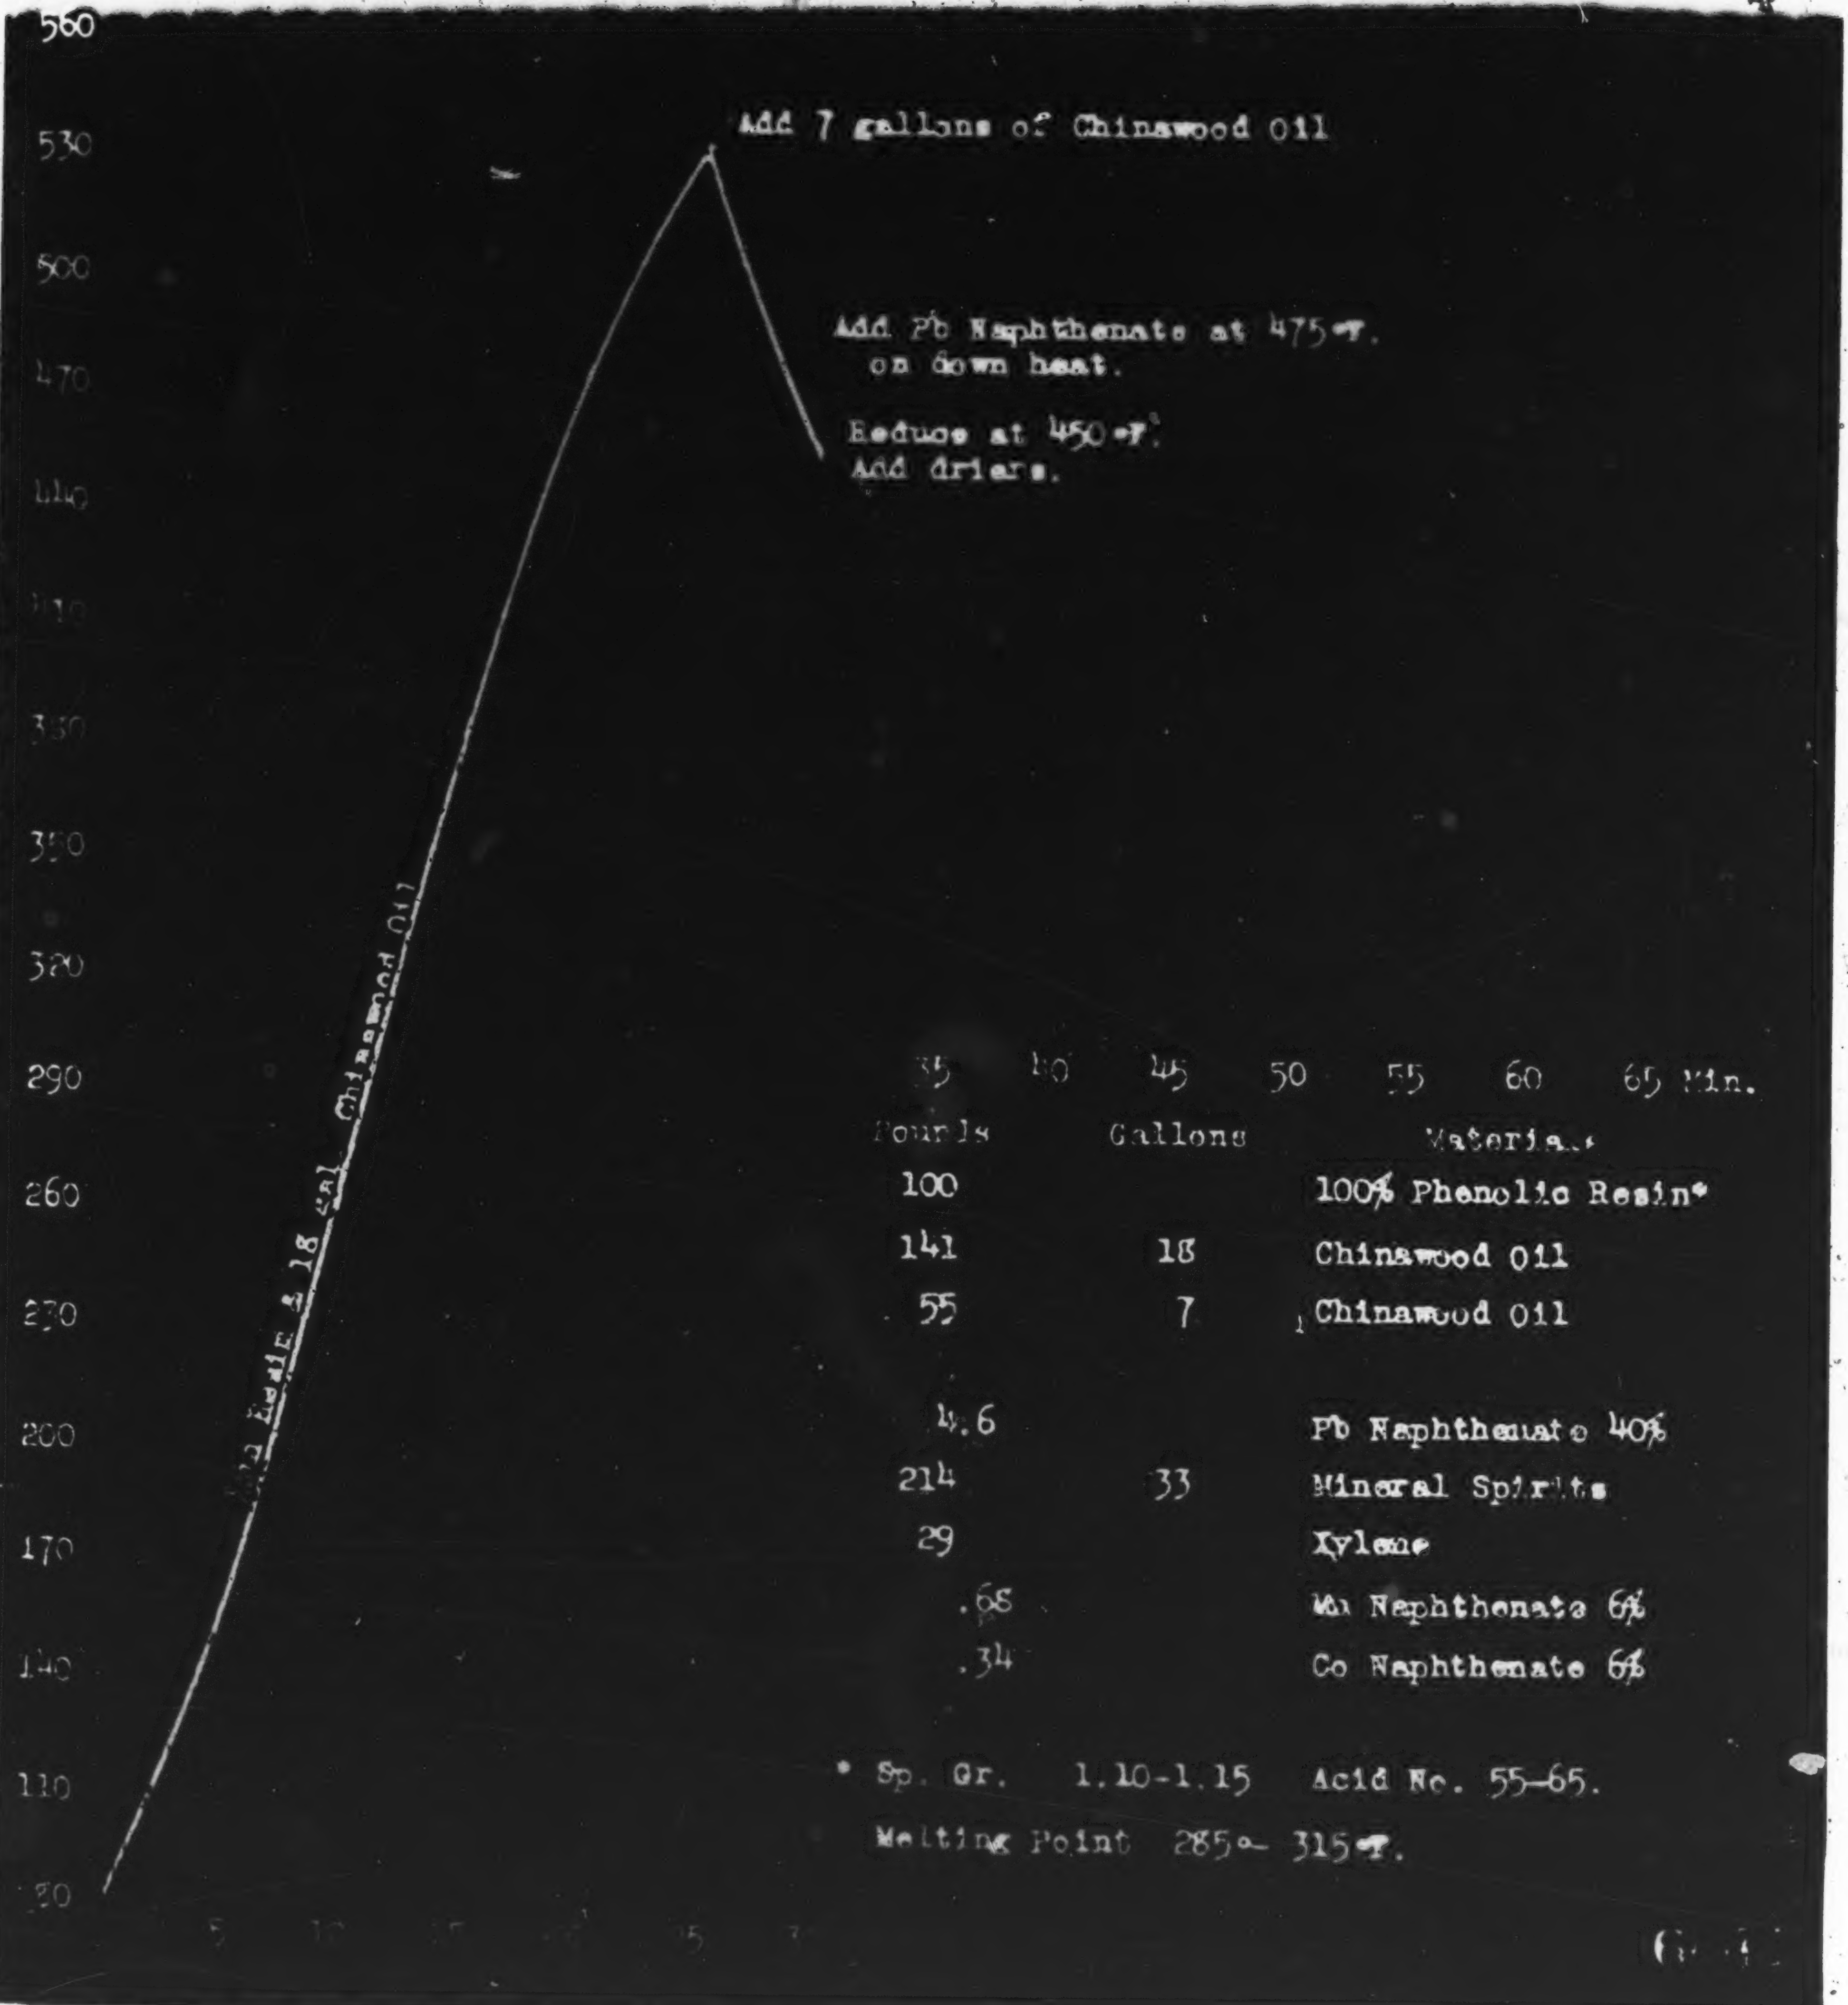
For Fresh Water Exposure:

Topcoat may be the same as the primer or aluminum paint—two pounds of aluminum paste to one gallon varnish—25 gallons 100 parapheny phenyl, phenolic, 60% tung oil, 40% linseed oil.

For Salt Water Exposure:

Intermittent or Tide Range—These primers may be used under boot topping paint. In these tests a top coat of U. S. Maritime Commission 52-MC-6, was found satisfactory (succeeding specification is suggested for use as this specification covers a more durable paint because of lower P.V.R.).

Continuous Exposure—Such exposures usually require protection against marine growth fouling. Therefore, an anti-fouling paint such as is used in these tests is suggested—U. S. Maritime Commission 52-MC-61, Class II, August 28, 1939, or succeeding specification—52-MC-503.



Add 7 gallons of Chinawood Oil

Add Pb Naphthenate at 475 °F. on down heat.

Reduce at 450 °F. Add driers.

Pounds	Gallons	Materials

FOREWORD

AS a guide to those responsible for formulating and specifying paint for structural iron and steel, we have set forth in this booklet the various characteristics of red lead, its function in paint, and formulas for a representative group of general purpose and specification paint primers. It is hoped that this data will assist both the paint manufacturer and the consumer in selecting the best paint for a lasting and durable job.

The services of our technical staff are available at any time to those with paint formulation problems. Information regarding the formulation of red lead pigmented paints may be had by contacting any one of our offices.

CHAPTER I

Properties and Advantages of RED LEAD

THE essential properties and functions of a metal protective primer that will provide maximum protection are: (1) the inclusion of a constituent which inhibits and stifles corrosion by preventing the reactions causing corrosion; (2) the formation of a continuous film to exclude from the metal the environment which can cause corrosion; (3) the maintenance of flexibility in the film so that it can conform with the stresses set up by temperature changes; and (4) the retention of good bonding properties so that adhesion of the paint film will be maintained, not only initially but for a maximum period of time.

Red lead, used either as a single pigment or combined with other paint pigments, possesses properties which enable it to fulfil the requirements of each one of these specifications. It ranks high as an inhibitor pigment and it also imparts additional qualities to a paint which promote adhesion, toughness, and elasticity in the paint film. In fact, red lead's durability and long service under difficult conditions has become a generally accepted standard of performance for metal protective paints the world over.

Red Lead – An Inhibitor Pigment

Authorities agree that, for the priming coat or coats, a paint should be rust inhibitive if it is to give satisfactory performance.

There have been many tests conducted, both in the field and in the laboratory, to show very definitely and conclusively that red lead is an inhibitive pigment and its presence, therefore, imparts important protective qualities to a paint for metal.

Two members of the Bell Telephone Laboratories, H. E. Haring and R. B. Gibney, have conducted a series of laboratory experiments which seem to confirm this theory of passivity and support their expressed belief that the action of red lead in the priming coat is essentially chemical.

Experiments conducted by K. G. Lewis* also show this inhibitive effect of red lead on metal surfaces. Lewis used the scratch-coat method in which he painted metal with red lead and linseed oil, and when the film was dry made a standard scratch through it exposing the bare metal. A drop of sodium chloride solution placed on this scratch and protected against evaporation caused no corrosion, rusting or softening of the paint film in the case of red lead.

The reasons for the creation of a passive state on red leaded metal surfaces is attributed by some to its basic or alkaline nature. This is on the theory that when steel is attacked, the iron goes into solution at the anodic areas, and the rate of solution is inversely proportional to the alkalinity of the medium in immediate contact with the metal.

It is further held by other authorities that corrosion is prevented if a protective layer of oxide is formed in direct contact with the metal surface. This takes place when the ferrous ions formed at the anodic areas are quickly oxidized to the ferric state. Certainly the presence of an active oxidizing agent, such as red lead, will promote the formation of this protective oxide shield and arrest the process of corrosion.

Red lead is doubly fortunate in that it possesses in such degree both of these chemical properties which authorities agree are responsible for preventing metal corrosion. As has been stated by Dr. Ulick R. Evans,** of Cambridge (England) University, "An inhibitive pigment should be included in the lowest (priming) coat of paint so as to keep the metal passive . . . "

Red Lead Soaps — Their Effect on the Paint Film

When red lead is mixed with most of the paint vehicles in common use, some organic compounds of lead are formed. This reaction has been demonstrated by many independent investigators and is now a generally accepted fact.

K. G. Lewis and U. R. Evans, Journal Soc. Chem. Ind. 1934.

U. R. Evans, Metallic Corrosion Passivity and Protection (Edward Arnold & Co.) 1937, p. 594.

The products of this phenomenon are commonly referred to as lead "soaps" and there has been a great deal of experimentation and research relating to both the formation of these metallic soaps and their effect upon the life and character of the paint film.

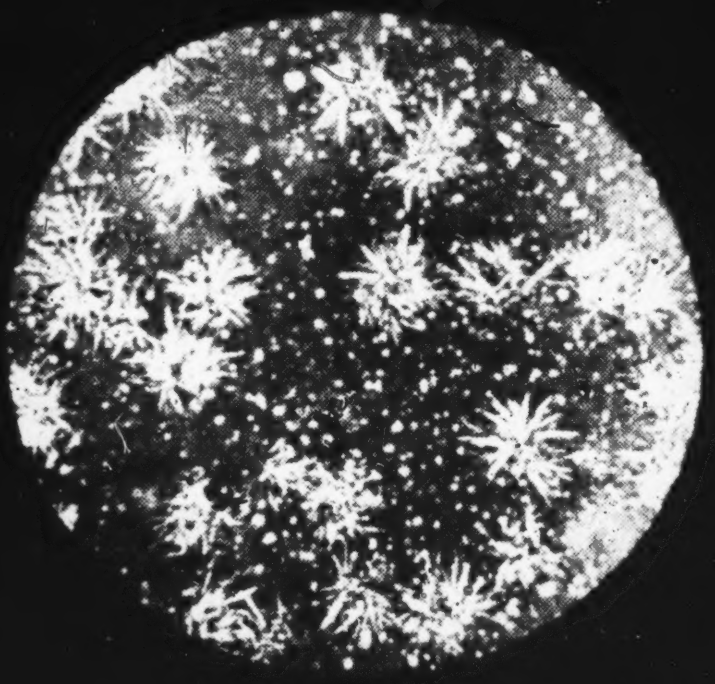

FIGURE 2

Lead soap formations in the early stages of their particle growth.

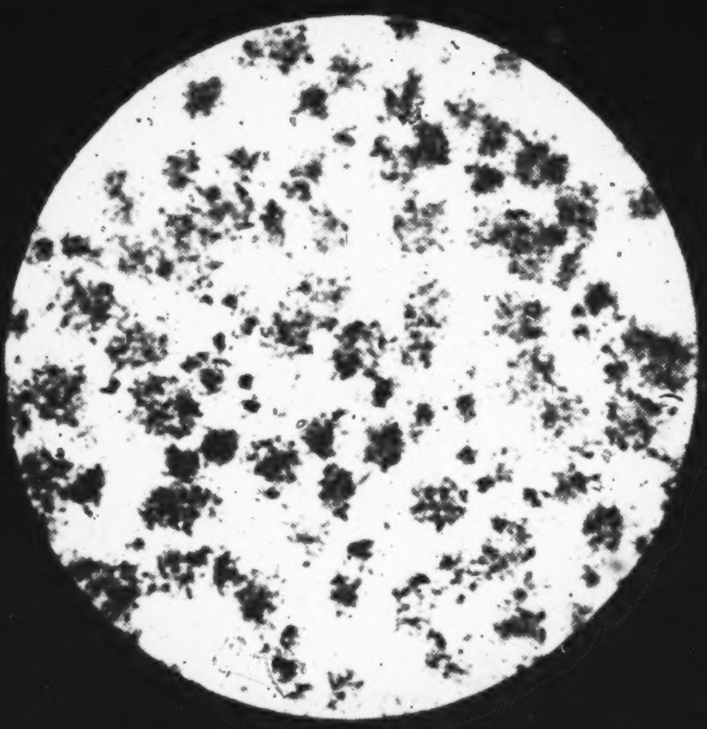

FIGURE 3

This photo, taken under polarized light, more clearly shows the character of lead soaps. Note particularly the fibrous structure.

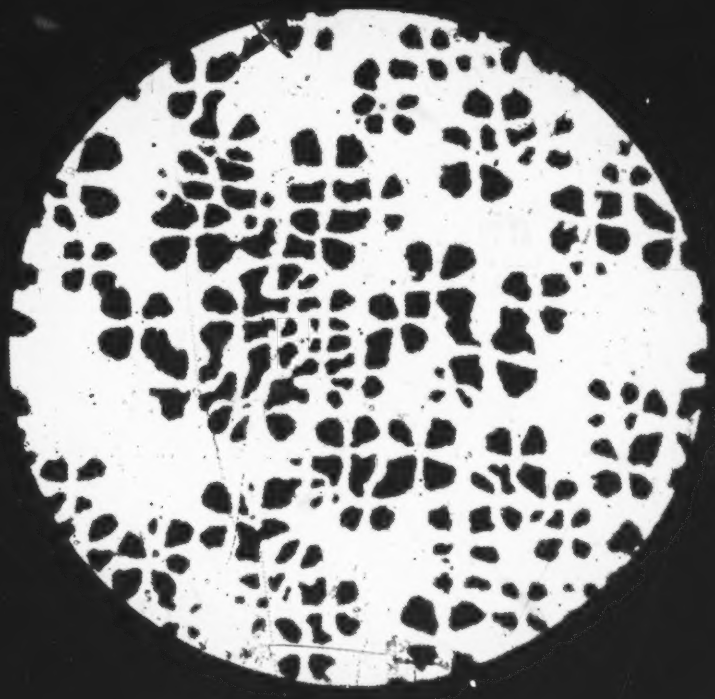

FIGURE 4

An example of a soap produced with another basic pigment. Note the solid, crystalline-like structure of this soap in contrast to the fibrous and rod-like lead soaps.

Not all paint pigments are capable of forming metallic soaps but lead pigments form them readily. The lead soaps are also distinctive in their form and in their effect.

In general, lead soaps form as a series of projections radiating out from a central core. This is shown in the photomicrographs, Figures 2 and 3. There are other metallic soaps that are more solid and crystalline and lack the elasticity and integral strength of the fiber-like spherulites in the lead paints. Such an example is shown in Figure 4.

Furthermore, it has been shown that the development of soap formations continues in the red lead paint film after the surface coating has dried. This continuous growth has even been photographed in a motion picture. Of course, the growth of soap crystals is a slow process and a picture which takes but a few seconds to show on the screen must be made over a period of many weeks.

Lead Soaps Contribute to Impermeability of Paint Film

The formation and presence of lead soap compounds in a paint film is not merely a chemical curiosity. The reaction has a very definite practical effect on the life and performance of the paint.

The composition of the soaps gives a clue to one of the reasons that red lead is an efficient guard against such corrosive factors as air and moisture. Among the products formed with linseed oil are lead linoleate, lead stearate, complex compounds of lead monoxide (litharge) with triglycerides, and basic lead soaps. All of these are highly water-resistant and unquestionably contribute to low moisture permeability. Confirmation of this is contained in a paper* by Manfred Ragg, a German investigator. He characterizes paint films containing red lead "as brick walls, built of comparatively large, impermeable bricks which are bound together with a water-tight mortar." Further evidence is contributed by a moisture permeability test quoted by Burns and Schuh.** The red lead paint film outranked all other pigments tested, fifteen in all, in resistance to moisture passage through the coating.

Add Toughness and Elasticity

Examination of the shape and character of lead soaps shows that they contribute also to the toughness and elasticity of the paint film.

It is very evident from a photomicrograph (See Figure 5) how the particles intertwine and mechanically reinforce the paint film. This type of particle growth is somewhat analogous to fibers in cloth. Individually the cloth fibers have little strength but once they are woven together their mechanical strength is increased many thousand times.

---

*Transactions, The Electrochemical Society, 1933

**Burns & Schuh, Protective Coatings for Metals (Reinhold Publishing Corp.) 1939, p. 323

It is also a characteristic of lead soaps that they allow movement all along the projecting fingers. This is very beneficial to the life of the paint, as once the elastic limit of both the dried oil film and the soap particles is exceeded, the soap particles will give in this manner. This action effectively prevents the ruptures to which a hard, unyielding paint film is subject.

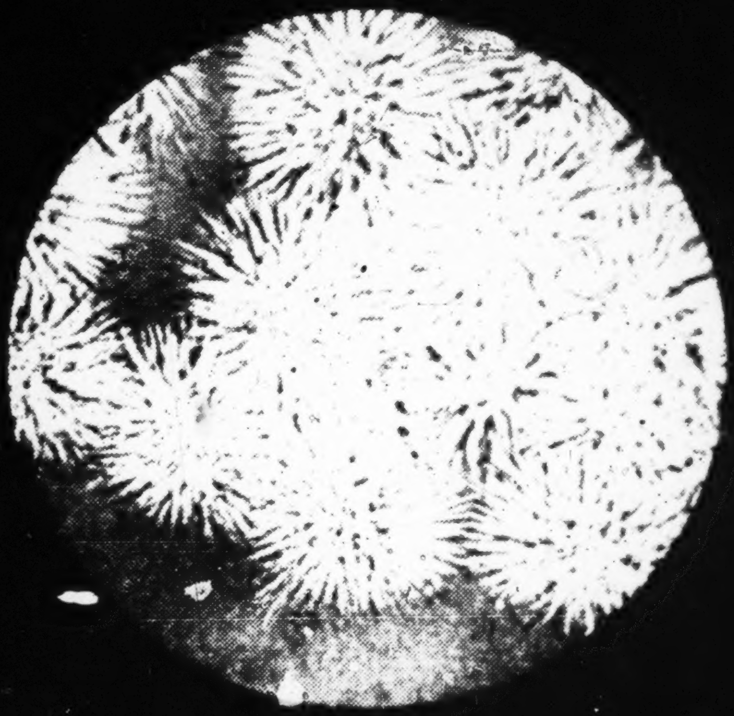

FIGURE 5

This photograph of more fully developed lead soap formations clearly indicates the mechanical reinforcement they give to the paint film.

Adhesion

Those who have carefully studied lead soap formations and their chemical components also believe that they are in great part responsible for the unique adhesiveness of red lead paint.

Of course, the inhibitive action of red lead also contributes to the tight bond between metal and paint. The fact that red lead has the ability to render the metal passive prevents rusting under the paint film which might expand and break the bond between the paint and the metal surface.

Durability of Red Lead

The wide acceptance of red lead as a protective pigment for metal rests on a sure foundation, namely, actual performance in service under all conditions plus numerous tests that have been conducted in all parts of the world.

Among the more important of these tests is the one conducted by a joint committee of The British Iron and Steel Federation and The Iron and Steel Institute

One of the more recent tests of red lead's inhibitiveness is reported by A. H. Stuart.* As a part of his testing, Dr. Stuart wanted to determine whether the red lead itself was responsible for rust inhibition. To do this he immersed a steel rod in a thin paste of red lead and water for one hour. The rod was then removed, thoroughly washed to remove all pigment, and tested along with an untreated rod. The treated rod, although all trace of red lead had been removed, showed decidedly greater resistance to rusting, as measured electrically, than did the untreated rod. Also the protective action, while it steadily diminished, had not entirely disappeared after forty hours. This is shown graphically in Figure 1.

Dr. Stuart's interpretation of this result is that red lead forms a thin film of oxide on the metal surface, thus creating a passive state. His conclusion, after this and other tests, is that red lead definitely maintains a passive state on a metal surface subject to rusting and that therefore "the faith in red lead as a primer rests on sure foundations."

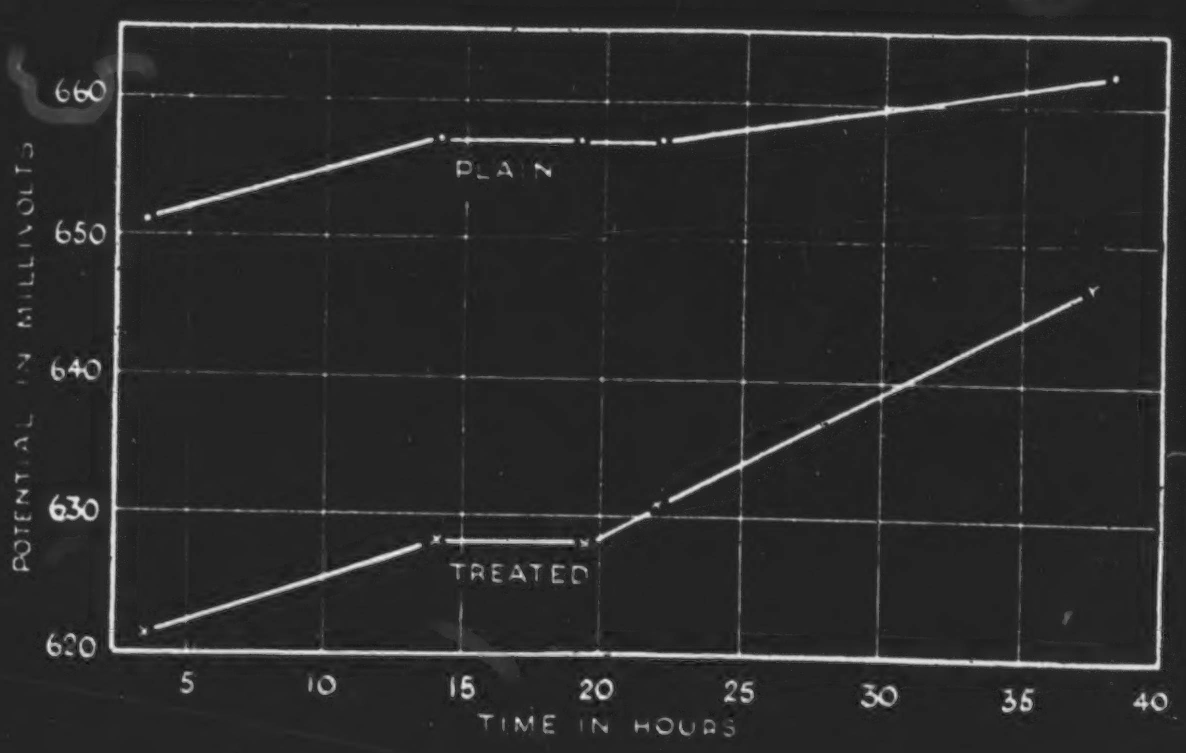

FIGURE 1

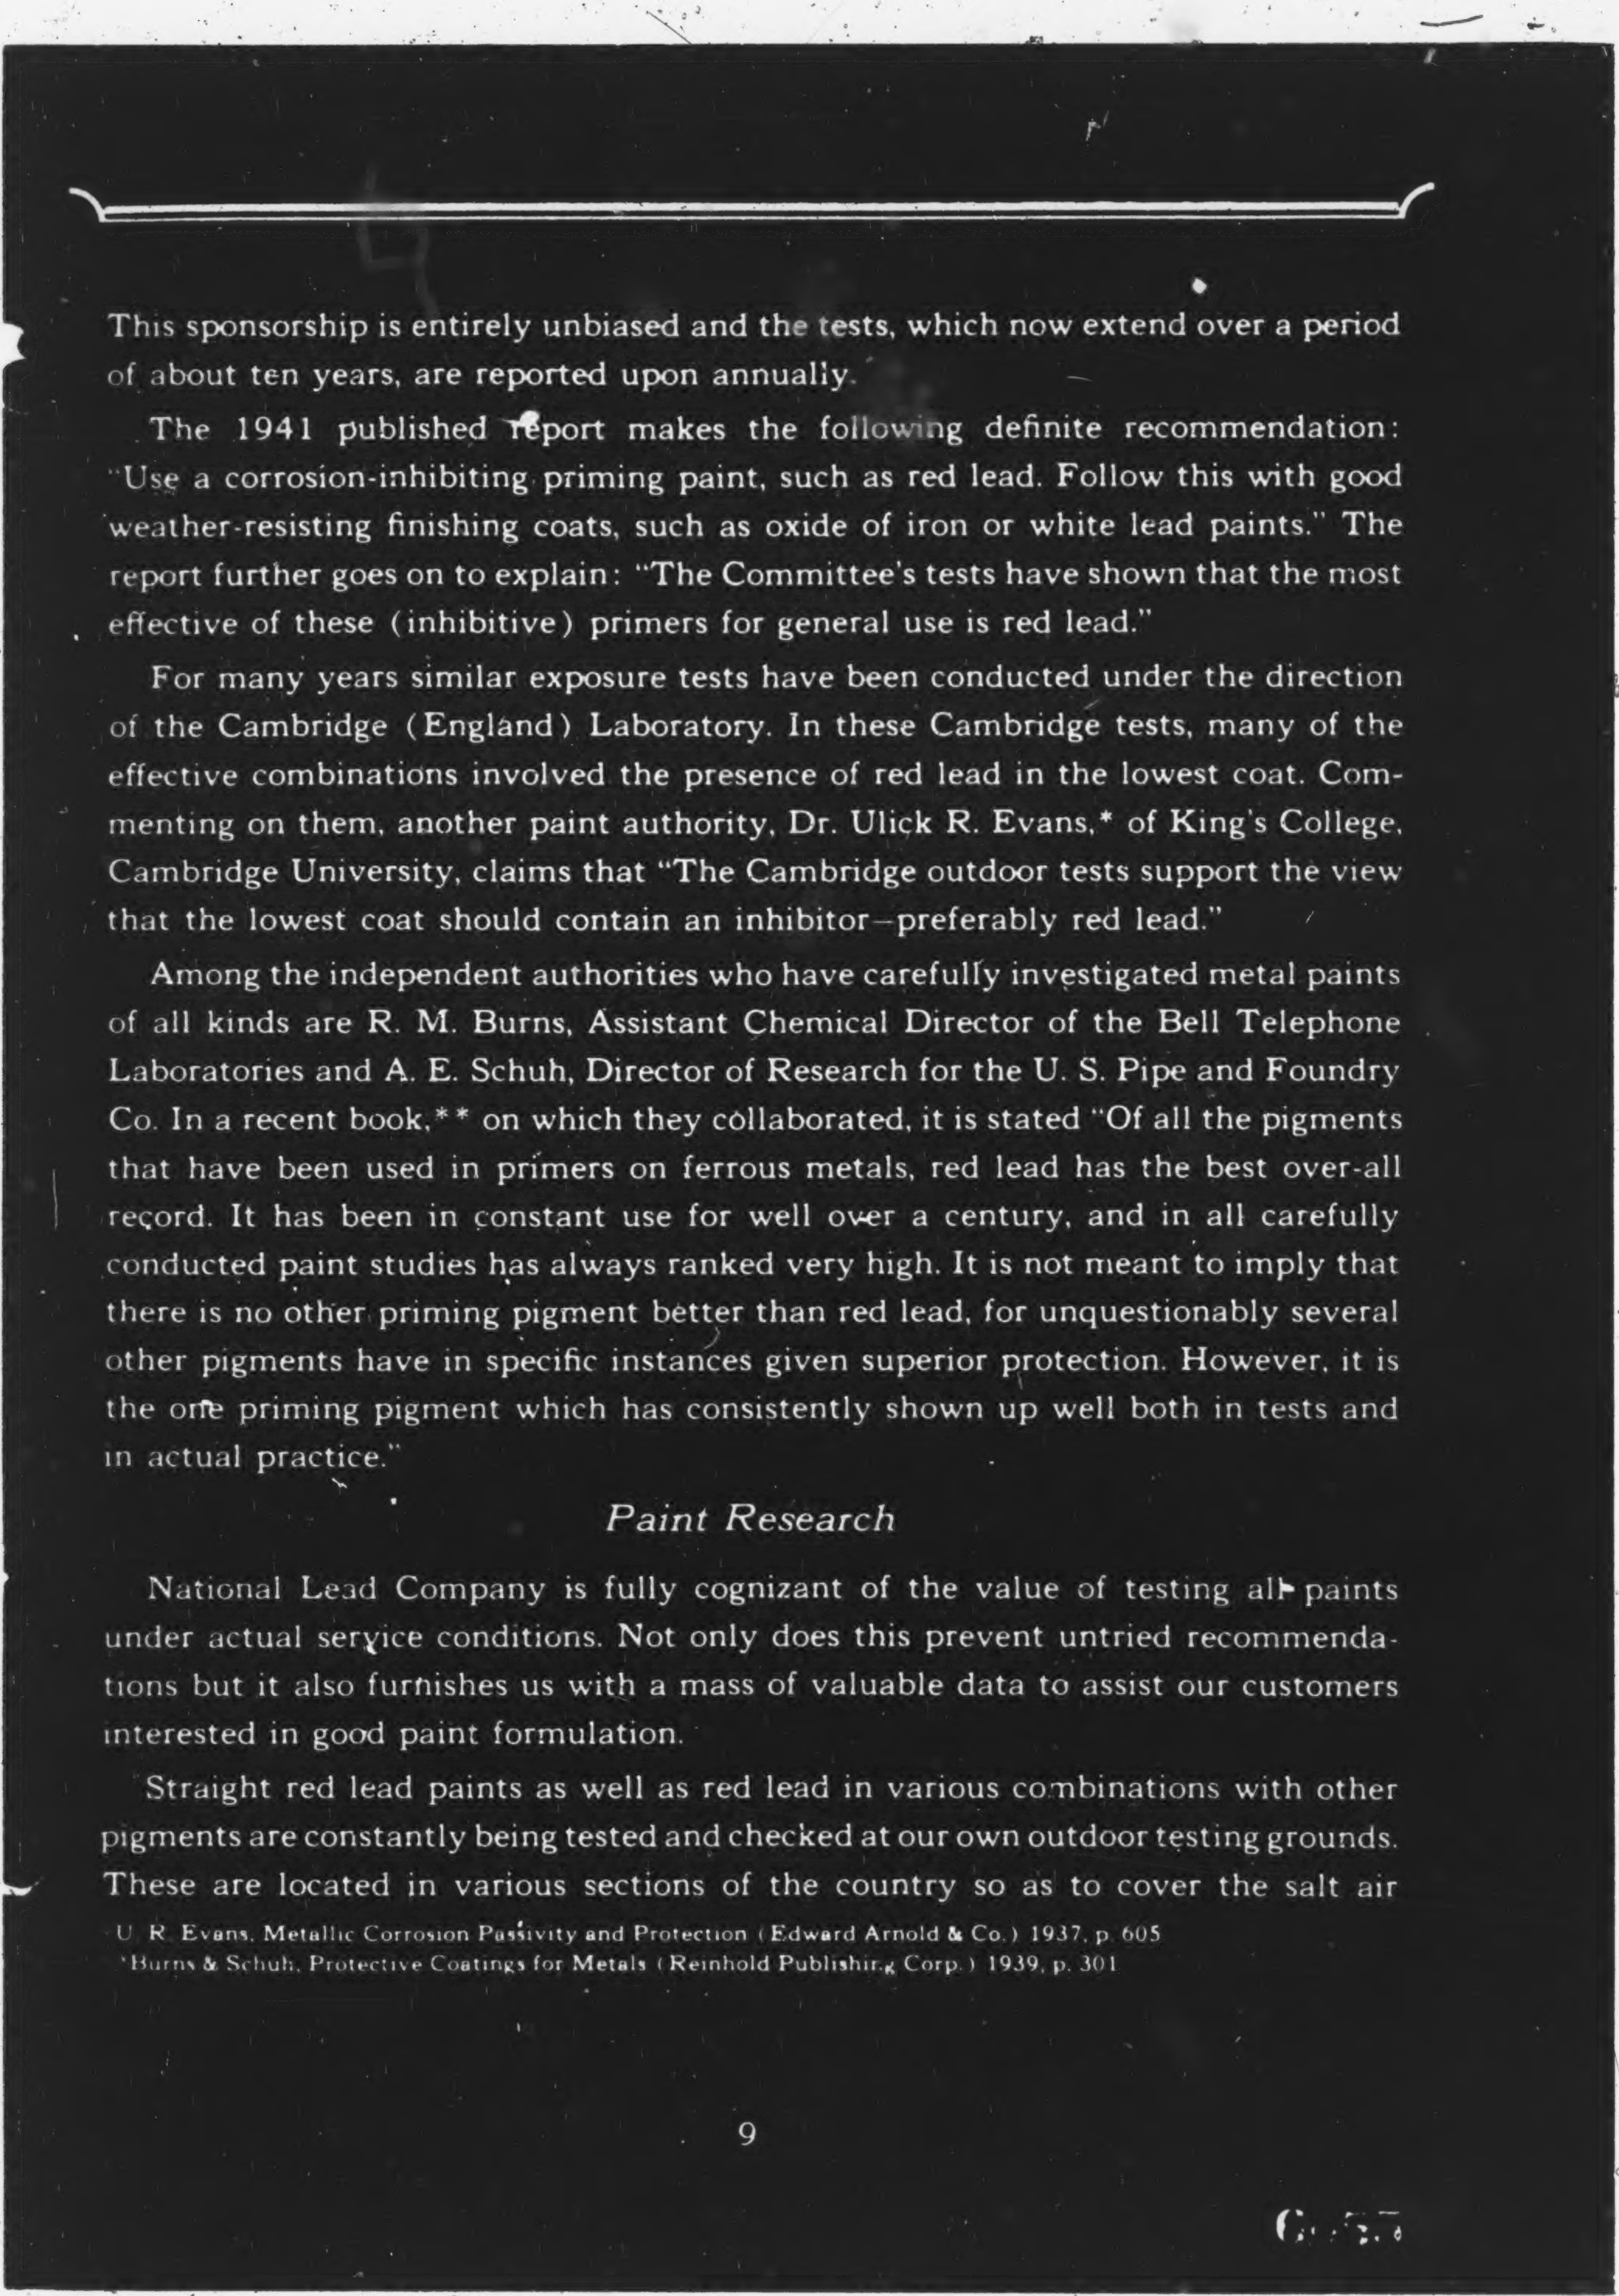
Graph showing results of test by A. H. Stuart. In the electrical potential measurement method which he used, a lower point on the scale indicates a less anodic condition of the metal and therefore greater resistance to rusting. It will be noticed that the treated rod was definitely less anodic than the untreated one. Also, while the protective action slowly diminished it was still present at the end of the test period.

January 1939 issue of Paint Manufacture



This sponsorship is entirely unbiased and the tests, which now extend over a period of about ten years, are reported upon annually.

The 1941 published report makes the following definite recommendation: "Use a corrosion-inhibiting priming paint, such as red lead. Follow this with good weather-resisting finishing coats, such as oxide of iron or white lead paints." The report further goes on to explain: "The Committee's tests have shown that the most effective of these (inhibitive) primers for general use is red lead."

For many years similar exposure tests have been conducted under the direction of the Cambridge (England) Laboratory. In these Cambridge tests, many of the effective combinations involved the presence of red lead in the lowest coat. Commenting on them, another paint authority, Dr. Ulick R. Evans,* of King's College, Cambridge University, claims that "The Cambridge outdoor tests support the view that the lowest coat should contain an inhibitor—preferably red lead."

Among the independent authorities who have carefully investigated metal paints of all kinds are R. M. Burns, Assistant Chemical Director of the Bell Telephone Laboratories and A. E. Schuh, Director of Research for the U. S. Pipe and Foundry Co. In a recent book,** on which they collaborated, it is stated "Of all the pigments that have been used in primers on ferrous metals, red lead has the best over-all record. It has been in constant use for well over a century, and in all carefully conducted paint studies has always ranked very high. It is not meant to imply that there is no other priming pigment better than red lead, for unquestionably several other pigments have in specific instances given superior protection. However, it is the one priming pigment which has consistently shown up well both in tests and in actual practice."

Paint Research

National Lead Company is fully cognizant of the value of testing all paints under actual service conditions. Not only does this prevent untried recommendations but it also furnishes us with a mass of valuable data to assist our customers interested in good paint formulation.

Straight red lead paints as well as red lead in various combinations with other pigments are constantly being tested and checked at our own outdoor testing grounds. These are located in various sections of the country so as to cover the salt air

---

*U. R. Evans, Metallic Corrosion Passivity and Protection (Edward Arnold & Co.) 1937, p. 605

**Burns & Schuh, Protective Coatings for Metals (Reinhold Publishing Corp.) 1939, p. 301

[illegible]

exposure of the coasts, the industrial atmosphere around large cities and the relatively pure air of rural locations. They include also marine tests of various types such as exposure to salt water, tidal waters and river water, both clear and industrially polluted. Climatic differences are likewise taken into account, the test locations ranging from Long Island to Florida, from the east coast to the west.

Information gathered at these various test stations is continually being drawn upon for the benefit of those who seek help in solving some difficult exposure problem or who wish to formulate paints to meet special requirements.

Red Lead with Other Pigments

There have been many tests as well as innumerable practical examples to show that the full value of red lead as a protective against rust is realized in straight red lead paints. However, there is also a growing volume of evidence that the strong inhibitive character of red lead and the ability to form useful lead soap compounds increase the protection and length of life of a multi-pigment paint when red lead is included as one of the important components of the pigment phase.

Chapter III contains several formulations from established specifications—Federal, state and commercial—which call for red lead either as a single pigment or combined in various percentages with other pigments. This is an excellent indication of the general acceptance of red lead for the desirable properties that it provides in metal priming paints.

Vehicle Compatibility

The formulation of certain types of paints involves the use of vehicles other than linseed oil. In this respect, although essentially basic, red lead is compatible with practically all types of vehicles commonly used in metal priming paints. For example, varnishes made with alkyd resins, phenolic resins, and modifications of these, as well as various other resins, chlorinated rubber, and different heat treated drying oils, have been successfully used with red lead. Some of the formulas given in Chapter III include a few of the paint vehicles that are specified.

Of course, the choice of vehicle usually depends upon the type of service or exposure for which the paint is intended. Along this line we have compiled data to assist in the formulation of various vehicles with red lead to accomplish specific results. This information is available upon request.

Respondent's Exhibit No. 189.

Water Soluble Sulphates are less than 0.01 per cent in all types of red lead. (ASTM D 49-37—No. 13)

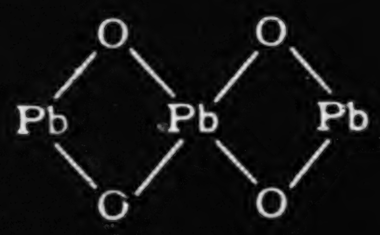
Red Lead
Types & Properties

CHAPTER II

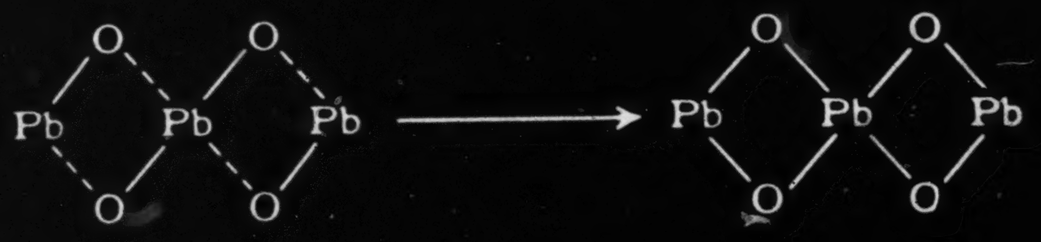
RED LEAD

Composition – Manufacture – Grades

PURE red lead is an oxide of lead, expressed by the chemical formula Pb_3O_4, and is the lead salt of ortho plumbic acid (plumbous ortho plumbate). This is the structural formula:



which is derived from the reaction:



$$PbO + PbO_2 + PbO \longrightarrow Pb_3O_4$$

Processes Involved

While the chemical reactions remain exactly the same as explained above there are two distinct processes generally employed for making red lead. In the more widely used method the metallic lead is heated in a furnace until converted to litharge. In the other process molten metallic lead is "atomized" by forcing it with compressed air into the center of a gas flame. This immediately converts it into litharge as a fume which is collected in filter bags. Of course, in each case a furnace is used to convert the litharge to red lead.

There is no difference in the chemical composition or the specific gravity of the two red leads. Comparative properties of the two types and their various grades are listed in Table I on page 12 of this booklet.

Number of Grades

The usual commercial red lead used by the paint industry is of four variations designated as the 85%, 95%, 97% and 98% grades. This refers to the minimum true red lead (Pb O) content. The remainder is practically all litharge (PbO) since pure commercial red lead contains only a fraction of one per cent of other materials.

It is generally accepted that some litharge content is a desirable factor in red lead paint performance. This is probably due to its basic nature as well as its ability to form relatively insoluble lead soaps.

Red lead with a litharge content of as high as 15% is employed by some because it combines quickly with the vehicle due to the increased reactivity. The film obtained with such a paint also acquires "through" hardness more rapidly than one made with red lead with a higher Pb O content. Because the 85% grade red lead combines with the vehicle faster, the paint should be applied the same day as mixed. In fact, such paints are generally mixed by adding the dry pigment to the vehicle on the job.

The 95%, 97% and 98% red leads make paint with good storage properties and for this reason are used almost exclusively for ready-mixed red lead paints. The 95% is generally used in mixed pigment paints and the higher percentages are preferred for straight red lead paints.

CHAPTER III

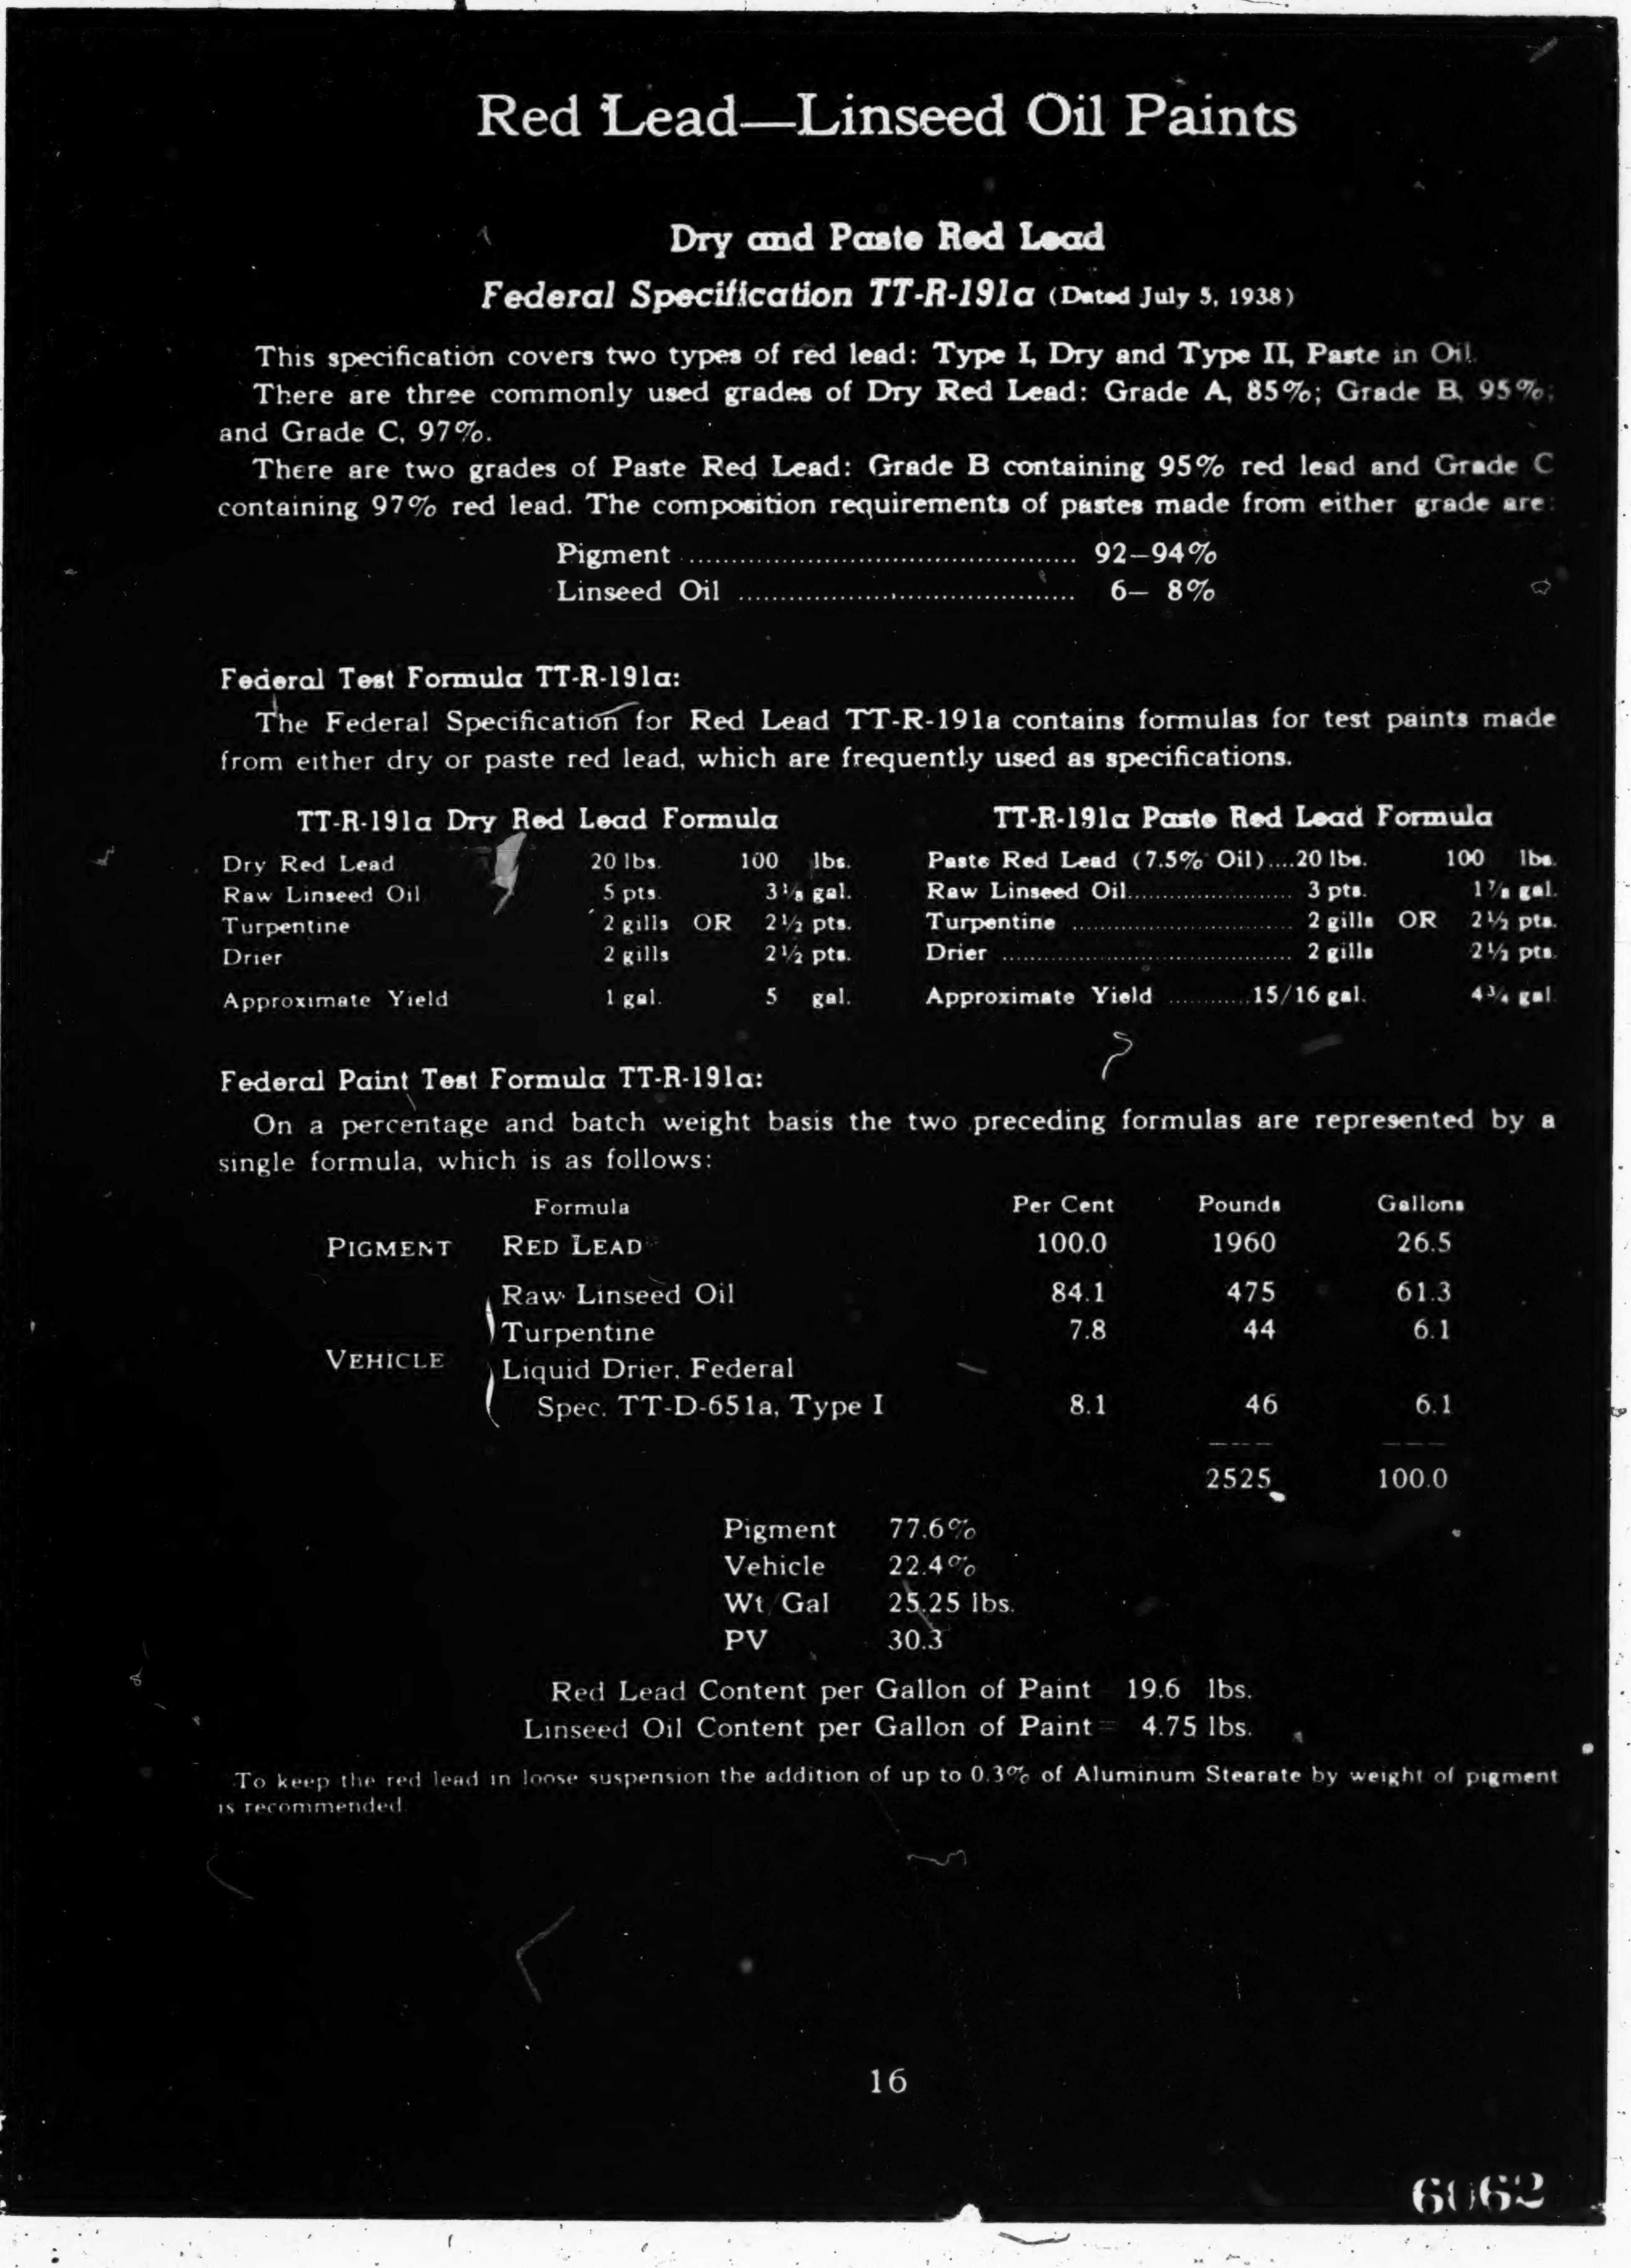
Formulas and Specifications

RED lead is a part of most Federal Specifications for metal priming paints. It is also included in the Highway Department Specifications of all of the forty-eight states as well as in numerous railway and municipal recommendations. A typical selection has been made from these to include with the formulations in this booklet as a helpful reference. Paints produced in our laboratory according to the suggested formulas fully met our standards of quality and performance and also the requirements of the particular specifications indicated.

It is well recognized that the drawing up of a paint specification is dependent upon such factors as cost, drying time, availability of materials, conditions of exposure, pigment and vehicle compatibility and others. In consequence, it is impossible to set down hard and fast rules. This is why we include this chapter only as a suggestion of what has been done and what can be done with red lead as part of the formulation.

We have much data available from long experience with the paint makers' and users' problems. For those with specific requirements we recommend that they utilize the facilities of the National Lead Company Research Laboratories through one of the branch offices listed in this booklet.

Respondent's Exhibit No. 189.



Red Lead—Linseed Oil Paints

Dry and Paste Red Lead

Federal Specification TT-R-191a (Dated July 5, 1938)

This specification covers two types of red lead: Type I, Dry and Type II, Paste in Oil.

There are three commonly used grades of Dry Red Lead: Grade A, 85%; Grade B, 95%; and Grade C, 97%.

There are two grades of Paste Red Lead: Grade B containing 95% red lead and Grade C containing 97% red lead. The composition requirements of pastes made from either grade are:

Pigment	92–94%
Linseed Oil	6– 8%

Federal Test Formula TT-R-191a:

The Federal Specification for Red Lead TT-R-191a contains formulas for test paints made from either dry or paste red lead, which are frequently used as specifications.

TT-R-191a Dry Red Lead Formula

Dry Red Lead	20 lbs.		100 lbs.
Raw Linseed Oil	5 pts.		3⅛ gal.
Turpentine	2 gills	OR	2½ pts.
Drier	2 gills		2½ pts.
Approximate Yield	1 gal.		5 gal.

TT-R-191a Paste Red Lead Formula

Paste Red Lead (7.5% Oil)	20 lbs.		100 lbs.
Raw Linseed Oil	3 pts.		1⅞ gal.
Turpentine	2 gills	OR	2½ pts.
Drier	2 gills		2½ pts.
Approximate Yield	15/16 gal.		4¾ gal.

Federal Paint Test Formula TT-R-191a:

On a percentage and batch weight basis the two preceding formulas are represented by a single formula, which is as follows:

	Formula	Per Cent	Pounds	Gallons
PIGMENT	RED LEAD	100.0	1960	26.5
VEHICLE	Raw Linseed Oil	84.1	475	61.3
	Turpentine	7.8	44	6.1
	Liquid Drier, Federal Spec. TT-D-651a, Type I	8.1	46	6.1
			2525	100.0

Pigment	77.6%
Vehicle	22.4%
Wt Gal	25.25 lbs.
PV	30.3

Red Lead Content per Gallon of Paint 19.6 lbs.

Linseed Oil Content per Gallon of Paint = 4.75 lbs.

To keep the red lead in loose suspension the addition of up to 0.3% of Aluminum Stearate by weight of pigment is recommended.

Red Lead Base: Linseed Oil, Ready-Mixed Paint

Federal Specification TT-P-86 (Dated September 9, 1939)

	Formula	Per Cent	Pounds	Gallons
PIGMENT	RED LEAD, 97% grade*	100.0	1957	26.4
VEHICLE	Raw Linseed Oil	94.3	536	69.1
	Petroleum Spirits and Drier†	5.7	32	4.5
			2525	100.0

Pigment	77.5%
Vehicle	22.5%
Wt. Gal.	25.25 lbs. (25.0 lbs. Specified Minimum)
PV	27.6

Red Lead Content per Gallon of Paint	19.5 lbs.
Linseed Oil Content per Gallon of Paint	5.3 lbs.

TT-P-86 Dry Red Lead Mixing Formula

Dry Red Lead (97% grade)	100	lbs.
Raw Linseed Oil	3½	gals.
Turpentine or Petroleum Spirits	1	pt.
Liquid Drier (TT-D-651a, Type I)	1	pt.
Approximate Yield	4⅛	gals.

TT-P-86 Paste Red Lead Mixing Formula

Paste Red Lead (7.5% Oil)	100	lbs.
Raw Linseed Oil	2½	gals.
Turpentine or Petroleum Spirits	1	pt.
Liquid Drier (TT-D-651a, Type I)	1	pt.
Approximate Yield	4¾	gals.

*To keep the red lead in loose suspension the addition of up to 0.3% of Aluminum Stearate by weight of pigment is recommended.

†Drier: 0.3% Lead, 0.02% Manganese and 0.01% Cobalt based on oil content.

Red Lead Base: Linseed Oil, Ready-Mixed Paint

Federal Specification TT-P-86, Amendment No. 1 (Dated September 1, 1943)

	Formula	Per Cent	Pounds	Gallons
PIGMENT	RED LEAD, 97% grade	99.7	1876.0	25.4
	Aluminum Stearate	0.3	5.6	.6
VEHICLE	Linseed Replacement Oil	100.0	544.0	74.0
			2425.6	100.0

Pigment	77.6%
Vehicle	22.4%
Wt. Gal.	24.25 lbs. (24.0 lbs. Specified Minimum)
PV	36.5

Red Lead Content per Gallon of Paint	18.8 lbs.
Linseed Oil Content per Gallon of Paint	3.6 lbs.
	3.75 lbs. (Maximum)

Per Cent Volatile in Vehicle 35.0

Consistency at 25°C. ± 0.25°, 175 grams (77 K.U.) to 300 grams (95 K.U.)
Stormer Viscosimeter (Paddle Type Rotor)

TT-P-86, Amendment No. 1, Dry Red Lead Mixing Formula:

Dry Red Lead (97% grade)	100	lbs.
Linseed Replacement Oil (TT-O-371)	4	gals.
Approximate Yield	5⅜	gals.

TT-P-86, Amendment No. 1, Paste Red Lead Mixing Formula:

Paste Red Lead (7.5% Oil)	100	lbs.
Linseed Replacement Oil (TT-O-371)	2 to 2⅜	gals.
Turpentine or Petroleum Spirits	2 to 3	pts.
Yield	4½ to 5	gals.

*The specification states that good results have been obtained with a vehicle containing 39% raw or alkali refined linseed oil, 26% pale heat bodied linseed oil (Z2), and 35% thinner and drier. To avoid afterbodying with basic pigments, manufacturers are cautioned to use linseed replacement oil having a low acid value (not over 8 based on total solids) and that the bodied linseed oil used should be one processed at low temperature. The complete extracted vehicle should meet the requirements of Federal Specification TT-O-371, Type I, dated May 1, 1943. Linseed Replacement Oil, except that the requirements for appearance, color and viscosity shall be waived.

Red Lead, Ready-Mixed Paint

American Association of State Highway Officials' Specification M72-42 (Dated 1942)

	Formula	Per Cent	Pounds	Gallons

*Specification states Boiled Linseed Oil may constitute up to 50% of total Oil Content

Red Lead (Dry and Paste in Oil) and Paint Made Therefrom

American Association of State Highway Officials' Specification M71-42 (Dated 1942)

Paint made according to the mixing formulas given previously under Federal Specification TT-R-191a (Test Formulas) will meet the requirements of this specification.

Note: The raw linseed oil called for may be replaced with boiled linseed oil to the extent of 50 per cent of the total oil content.

* * (Caption—5253) * *

MOTION TO DISMISS AMENDED COMPLAINT.

(Received Jan. 8, 1947.)

Comes now the respondent, Anaconda Copper Mining Company, a corporation, by its attorneys, Chadbourne, Wallace, Parke & Whiteside, and moves upon the amended complaint herein and the affidavit of E. O. Sowerwine, vice president of said respondent, verified January 6, 1947, attached hereto, that the Federal Trade Commission enter an order dismissing the amended complaint herein as to this respondent for the following reasons:

1. That it appears from the face of the amended complaint herein that the charges relate to prices, terms of sale, offers to sell and sale of lead pigments in commerce. That the evidence in this proceeding does not show that Anaconda Copper Mining Company was ever engaged in the manufacture or sale of lead pigments. That the annexed affidavit of E. O. Sowerwine shows that respondent has never engaged in the business of the man-
374 ufacture or sale of lead pigments; that International Smelting and Refining Company, a wholly owned subsidiary of Anaconda Copper Mining Company, at the time of the issuance of the amended complaint herein was engaged in the manufacture and sale of the lead pigments, dry white lead and white lead-in-oil; that International Smelting and Refining Company is now completely and permanently out of the business of the manufacture and sale of lead pigments; that there is no reason to believe that it will ever re-enter said business; that Anaconda Copper Mining Company does not ever intend to engage in the business of the manufacture or sale of lead pigments; and that there is no reason to believe the respondent will ever enter into or engage in said business.

2. In view of these facts, there would, therefore, seem to be no significance to the present proceeding, and
375 since it affirmatively appears that there is now no sufficient public interest to sustain the amended com-

plaint herein as to this respondent, it is respectfully submitted that the amended complaint be dismissed as to this respondent.

January 6, 1947.

* * (Caption—5253) * *

MOTION TO DISMISS AMENDED COMPLAINT.

(Received Jan. 8, 1947.)

Comes now the respondent, International Smelting and Refining Company, a corporation, by its attorneys, Chadbourne, Wallace, Parke & Whiteside, and moves upon the amended complaint herein and the affidavit of Frederick Laist, vice president of said corporation, verified January 6, 1947, attached hereto, that the Federal Trade Commission enter an order dismissing the amended complaint herein as to this respondent for the following reasons:

1. That it appears from the face of the amended complaint that the charges therein contained relate to prices,
terms of sale, offers to sell, and sale of lead pigments in
commerce. That Commission's Exhibits 836 A, B, K and
L in this proceeding show that respondent had permanently gone out of the business of the manufacture and
sale of lead pigments. That the annexed affidavit of
Frederick Laist, vice president of International Smelt-
379 ing and Refining Company, shows that respondent
has permanently discontinued the manufacture and
sale of lead pigments; that respondent has sold its only plant where lead pigments were manufactured and the property it is erected on; that respondent has sold all the machinery and other equipment necessary to the production of lead pigments which it owned; that respondent has shipped all lead pigments, which were on hand when production was stopped, to customers; that, with the exception of a few individuals, all qualified technical and sales personnel have either remained with the purchaser of said plant or secured employment elsewhere than with respondent; that respondent is, in fact, permanently out of the business of the manufacture and sale of lead pigments; that respondent has no intention of ever re-entering said business; and that there is no reason to believe that respondent will ever re-enter said business.

2. In view of these facts and since any order aris-
380 ing out of this proceeding will relate to future opera-

tions of this respondent in the manufacture and sale of lead pigments and since said respondent has permanently discontinued such business and since there would, therefore, seem to be no purpose in continuing the respondent as a defendant and placing upon it the burden and expense of further defending this action and since it further affirmatively appears that there is now no sufficient public interest to sustain the amended complaint herein as to this respondent, it is rspectfully moved that the amended complaint be dismissed as to this respondent.

January 6, 1947.

AFFIDAVIT IN SUPPORT OF MOTION TO DISMISS AMENDED COMPLAINT.

State of New York, }
County of New York. } ss:

Comes now Frederick Laist, vice president of International Smelting and Refining Company, a corporation, and, being duly sworn, deposes and says as follows:

That International Smelting and Refining Company was through its Pigment Division at East Chicago, Indiana, engaged prior to August 1, 1946, in the manufacture and sale of dry white lead and white lead-in-oil, these being the only lead pigments manufactured or sold by said Company; that in May, 1946, it was decided to suspend operations and permanently discontinue the manufacture

and sale of said lead pigments; that the reasons for
382 this action were that these operations had become uneconomical due to an ever decreasing tonnage of lead bullion available to respondent and increased labor costs; that International Smelting and Refining Company has now in fact permanently discontinued the business of the manufacture and sale of said lead pigments; that this was accomplished by stopping the production and manufacture of said lead pigments in July 1946 and declining to accept orders from the trade after August 1, 1946, by shipping all such materials on hand to customers by the end of that month, and by selling the plant and property where these materials were manufactured and all physical assets and equipment used in the manufacture of said lead pigments; that, with the exception of a few individuals, all qualified technical and sales personnel connected with the manufacture and sale of said lead pigments have either been retained by the purchaser of said plant or secured employment elsewhere than with the International Smelting and Refining Company; that, as evidenced by the attached exhibits A, B and C, it is common knowledge
383 among the trade that International Smelting and Refining Company is permanently out of the business of the manufacture and sale of lead pigments; that International Smelting and Refining Company has no intention to ever re-enter said business; that in view of all the facts and circumstances, there is no reason to believe that International Smelting and Refining Company will ever again engage in the manufacture and sale of lead pigments.

Frederick Laist.

"Exhibit A."

The following is a copy of an announcement distributed to the Trade:

Letterhead of

**International Smelting and Refining Company,
East Chicago, Indiana.**

Pigment Division.

June 1st, 1946.

To the Trade:

Our operations at East Chicago have been seriously affected by the trouble with which every concern has to contend. We refer principally to shortages of labor and supplies, higher prices for both of these, quotas which reduce volume and automatically increase production costs and restrictions on prices for finished products.

Because of these conditions operations at East Chicago have been unsatisfactory for some time. Since it appears unlikely that there will be sufficient relief reasonably soon it has been decided that operations will be discontinued permanently.

We expect to fulfill any second quarter obligations to our regular customers that we may have. All available tonnage will be distributed equitably and the regular grades will be furnished to the extent that this is possible.

We appreciate the consideration the trade has shown us during the many years we have been in business. We regret this action is necessary but feel no other course is open to us.

International Smelting and Refining Company.

385 "Exhibit B."

The following is an extract from the Paint, Oil & Chemical Review of June 13, 1946:

International Refining Bows to Post War Difficulties.

Operations of the pigments division, International Smelting & Refining Co., a subsidiary of Anaconda Copper Company, will be permanently discontinued, according to company announcement. The plant in East Chicago, Ind., manufactures white lead, zinc oxide and other pigments. The company will fulfill second quarter obligations to regular customers. All available tonnage will be distributed equitably and regular grades furnished to the extent possible. The plant operations have been seriously affected by shortages of raw materials and labor, higher prices for both; quotas which reduce the output volume and automatically increase production costs; and price restrictions on finished products. Since it appears that sufficient relief will not be forthcoming soon it has been decided that operations be permanently discontinued, an official of the firm stated.

386A "Exhibit C."

The following is a copy of an announcement distributed to the trade.

Letterhead of

International Smelting and Refining Company,
East Chicago, Indiana.

Pigment Division.

June 20, 1946.

To the Trade:

It has been decided to permanently suspend operations at the East Chicago Plant of the International Smelting and Refining Company and discontinue the business.

We appreciate the consideration the trade has shown us during the many years we have been in business. We regret this action is necessary but feel no other course is open to us.

* * (Caption—5253) * *

STATEMENT AND BRIEF IN SUPPORT OF MOTION TO DISMISS AMENDED COMPLAINT.

Statement.

Respondent National Lead Company makes this motion to dismiss the amended complaint at the close of the Commission's case upon the ground that, as a matter of law, there has been a failure of proof with respect to both counts of the amended complaint.[1]

The respondents are as follows: (1) National Lead Company; (2) Eagle-Picher Company and its subsidiary, Eagle-Picher Sales Company; (3) The Glidden Company; (4) The Sherwin-Williams Company; (5) Anaconda Copper Mining Company, and (6) International Smelting and Refining Company.

Count I of the amended complaint, in effect, charges respondents with a monopoly to fix prices of lead pigments in interstate commerce in violation of Section 5 of the Federal Trade Commission Act and Count II charges respondents upon essentially similar allegations with a violation of Section 2 (a) of the Clayton Act as amended by the Robinson-Patman Act. We submit that the essential charge in the amended complaint is that of monopoly to fix prices and indeed, at the time the Commission rested its case, Trial Counsel for the Commission stated that it was his feeling "that this case is essentially a price-
398 fixing and monopoly case and that that is the essential charge" (Tr. 2068). It is to this charge, therefore, that this brief primarily will be directed, although, of course, we maintain and we shall show that there has been no proof under Count II showing any violation of the Robinson-Patman Act.

The Commission is wholly familiar with the recent line of cases dealing with manufacturers who were members of a trade association and who were charged with violating both the Federal Trade Commission Act and the Clayton Act. Those cases are: *Dietzgen Co.* v. *Federal Trade Commission,* 142 F. (2d) 321; *U. S. Malsters Ass'n* v. *Federal Trade Commission,* 152 F. (2d) 161; *Milk and Ice Cream Can Institute* v. *Federal Trade Commission,* 152 F. (2d) 478; *Fort Howard Paper Co.* v. *Federal Trade Commission,* 156 F. (2d) 899; and the recent *Cement* decision, *Aetna Portland Cement Co.* v. *Federal Trade Commission,* 157 F. (2d) 533; all decided by the Circuit Court of Appeals for the Seventh Circuit.

---

[1] Respondents Anaconda Copper Mining Company and International Smelting & Refining Company have heretofore on January 8, 1947 moved to dismiss the amended complaint upon separate grounds. The other respondents are making separate motions to dismiss.

There is a marked difference between the situations which obtained in the cases just cited and that disclosed by the Commission's case in this proceeding.

The Commission's own proof in the instant case shows:

(1) There was no exchange of price information between respondents either through Lead Industries Association or otherwise at any time, even during N. R. A. days.

(2) There was no agreement to fix prices nor any "planned common course of action" which resulted in the adoption of uniform prices at any time, even during N. R. A. days.

(3) There was no agreement or concerted action to curtail production at any time, even during N. R. A. days.

(4) The Lead Industries Association was not used as a medium for the exchange of freight factors, freight rates, individual production data, items of past, present or future individual transactions, prices or any other individual sales, freight or production factors. Hence this case does not involve practices similar to those condemned by the Commission and the Courts in the cases cited (excepting the *Cement* case, of course).

389 (5) The Lead Industries Association was composed not only of these respondents but of lead mining companies, lead smelters and refiners, and other companies with interests diverse from those of these respondents.

(6) In this case the present record indicates that any similarity or identity of card or list prices of respondents was the result of the price leadership of the National Lead Company. That price leadership under the circumstances here disclosed does not constitute any violation of law (*U. S.* v. *U. S. Steel Corporation,* 251 U. S. 417; *U. S.* v. *International Harvester Co.,* 274 U. S. 693; *U. S.* v. *Stand-*

ard Oil of N. J., 47 F. [2d] 288; and *cf.*, *U. S.* v. *Socony-Vacuum Oil Co.*, 210 U. S. 150, 198-199).[1]

Although probably it will be disputed by Trial Counsel for the Commission, we respectfully submit that the sole question for the Commission, insofar as Count I of the amended complaint is concerned, is: Does the existence of substantial similarity in card or list prices within an industry which has a demonstrated price leader, without more, constitute "reliable, probative, and substantial evidence" of a conspiracy or combination to monopolize and fix prices in that industry?

The Trial Examiner has stated that this proceeding is being conducted under the Administrative Procedure Act (Tr. 1903). Section 7 (c) of that Act provides that the proponent of a rule or order shall have the burden of proof and that no rule or order shall be issued except upon consideration of the whole record and except as supported by and in accordance with the "reliable, probative, and substantial evidence." Our position is not only that Trial Counsel for the Commission in the proof submitted by him has wholly failed to sustain the burden of proof but also that, viewed as a whole, the record contains no reliable, probative and substantial evidence, proving any of the charges of the amended complaint.

400 We therefore earnestly urge that the Commission, in the interest of respondents and of the public at large, dismiss both counts of the amended complaint. In the alternative, we urge that the Commission dismiss Count I and all of Count II, except insofar as the Commission may feel that there is some proof under Count II, establishing a *prima facie* case (which we deny) with respect to quantity, trade (i. e., "functional") or regional discounts resulting from the pricing methods used by some or all of the respondents.

---

[1] **References in this brief involving an assumption that National Lead Company is the price leader are for the purposes of this motion only and are not to be construed as admissions. When in this brief we refer to the fact that others "follow" National's card or list prices, the word "follow" or its like is used in the sense of voluntarily and without compulsion, pressure or influence on the part of National. References in this brief to card or list prices are to the prices paid by purchasers from the manufacturer or its agents or dealers or distributors.**

The Pleadings.

The original complaint was served and filed in November, 1944, and dealt solely with a product known as white lead manufactured by the respondents, among others.

The amended complaint was not served and filed in November, 1944, and dealt solely with a product known as white lead manufactured by the respondents, among others.

The amended complaint was not served and filed until April, 1946, almost seventeen months after the filing of the original complaint. The amended complaint broadened the issues so as to cover "lead pigments", defined in the amended complaint as including white lead, blue lead, red lead, litharge, orange mineral and grinders' lead paste.

Count I of the amended complaint in effect sets forth two charges: (1) that National Lead Company has monopolized or attempted to monopolize the interstate sale of lead pigments and (2) that all of the respondents have combined, conspired and cooperated to hinder, lessen and eliminate price competition in the sale of lead pigments, and in so doing have employed certain unfair, oppressive and discriminatory acts, methods and practices.

The allegations with respect to the first aspect of the monopoly charge are set forth in Paragraph Seven A of Count I, wherein it is alleged that beginning with 1891, when it was formed, National Lead Company began upon a program of aggrandizement which resulted in the acquisition of properties of various concerns manufacturing lead pigments, linseed oil and kindred products; that National Lead Company also secured control over a substantial part of the capital stock of respondent, Eagle-Picher Lead Company; and that National, through its relationship with American Smelting & Refining Company "and others",
exerts a "monopolistic influence" upon the determina-
401 tion and quotation of ~~the~~ market prices on pig lead
which is used in the manufacture of lead pigments
(see subdivision [8] of Paragraph Seven A of Count I, which frankly is as confusing to us as was the proof offered in support thereof before the Trial Examiner).

The essential charge in Count I of the amended complaint is set forth in subdivision B of Paragraph Seven. This is the part of the amended complaint which charges the respondents with a combination and conspiracy to fix prices. Subdivisions (1) through (7) of this portion of the amended complaint allege that respondents conspired and agreed among themselves with respect to the following acts and practices:

(1) That respondents agreed to adopt and did adopt and maintain a system of delivered price quotations which prevented reflection of any differences in the costs of delivery as between purchasers of lead pigments;

(2) That respondents agreed to adopt and did adopt and maintain a plan whereby the United States was divided into so-called zones, in each of which prices to all purchasers of a class were "matched", except that by prearrangement and understanding the offers made in some instances by respondents, Glidden, Sherwin-Williams and International, were below the "matched offers" of respondents, National and Eagle-Picher;

(3) That the respondents agreed to seek and secure and did secure the cooperation of Lead Industries Association and its officers, employees and agents in fixing and adopting non-competitive terms and conditions of sale;

(4) That respondents exchanged directly and through the office of Lead Industries Association price factors and information concerning price factors which were used by the respondents in calculating and determining their offers to sell lead pigments;

(5) That respondents agreed to adopt and did adopt and maintain so-called consignment or agency agreements under the leadership of National Lead Company for the purpose of preventing dealers from selling
402 white lead (as distinguished from all lead pigments) and from selling lead products at prices lower than the offers made by respondents;

(6) That respondents agreed to fix and did fix prices, terms and conditions of sale of lead pigments;

(7) That respondent National Lead Company entered into certain contracts with E. I. du Pont de Nemours Company, Inc. for the purpose of promoting maintenance of levels of price fixed by National and other producers and sellers of white lead (again as distinguished from all lead pigments).

Paragraphs Eight and Nine of Count I deal with the alleged unfair acts and pricing methods indulged in by the respondents in furtherance of the combination and conspiracy alleged in Paragraph Seven. A detailed analysis of these paragraphs is hardly necessary and they may be summarized as alleging that respondents employed certain zones, which differed as to the various lead pigments, in which there was a base zone with an established differential above the base price for the other zones (Paragraph Eight); that respondents required their dealers to resell products at fixed prices and terms; that there were fixed differentials for various sized kegs of lead pigment running from 12½ pounds to 100 pounds; that each respondent from time to time entered into so-called quarterly contracts with large industrial consumers; and that respondents issued cards or price lists setting forth the terms of sale to various classes of customers and for various types of pigments, so that any given prospective purchaser of lead pigment in any given quantity, at any given destination, would pay the same price to any respondent except that Anaconda, Sherwin-Williams and Glidden at times offered to sell at a small differential below the prices of National and Eagle-Picher (Paragraph Nine).

Paragraphs Ten, Eleven and Twelve of the amended complaint contain the usual conclusions that, as a result of the unfair and oppressive discrimination of prices by respondents, there was a substantial lessening of competition among respondents, all to the prejudice of the public and of purchasers of lead pigments.

Count II of the amended complaint deals with the alleged violation of Section 2 (a) of the Clayton Act as amended
403 by the Robinson-Patman Act. There are two main features under this count: first, it is claimed that where the same price is charged to all purchasers within a zone, regardless of the location of the purchaser, there is discrimination in price within the meaning of the Robinson-Patman Act by reason of the fact that those purchasers located near the producing mills are deprived of their natural advantage freightwise (the so-called "mill net" theory) (Paragraphs Eight and Nine); second, it is stated that when sales are made to customers located at or near the borders of adjoining or contiguous zones the prices charged to purchasers in the zone having a lower differential are discriminatory insofar as purchasers in the higher zone are concerned (Paragraph Ten). Paragraph Eleven does also contain the omnibus allegation that the quantity, trade (i. e., "functional") and regional discounts quoted

by respondents are discriminatory, but, as we have said, we believe that the main questions concerned in Count II deal with the so-called mill net theory as it applies to a uniform delivered price throughout any one particular zone and the use of the zone system insofar as purchasers located at or near the borders of adjoining or contiguous zones are concerned.

The respondents' answers are in effect a general denial of the material allegations of the amended complaint. There are also certain affirmative allegations in some of the answers and certain affirmative defenses which are not material on this motion.

Proceedings.

As we have stated, the original complaint was served and filed in November, 1944. Thereafter answers were filed by the respective respondents. Hearings were had in January, February and May, 1945, in New York, Cincinnati, Cleveland and Washington. These hearings were devoted primarily to identification of documents. No further hearings were held until June, 1946, but meanwhile, in April, 1946, the amended complaint was served, broadening the scope of the proceeding to include all lead pigments as defined in the amended complaint, whereas the original complaint was concerned only with white lead.

Hearings were had under the amended complaint in Washington on June 17, 18, 19 and 20, 1946; in New
404 York on June 24, 25, 26 and 27; in Cleveland on July 24 and 25; in St. Louis on July 29 and 30; in Washington on October 2, 3 and 4; in Chicago on November 13 and 14; in Kansas City on November 18; in St. Louis on November 19; in Nashville, Tennessee, on November 21; in Birmingham, Alabama, on November 22; and finally on January 7 and 8, 1947, in Washington, at which time Trial Counsel for the Commission rested. It was at these hearings in 1946 that most of the documentary evidence theretofore marked for identification was introduced in evidence and oral testimony given. The record now comprises more than 2,000 pages of transcript and approximately 3,500 pages of documentary exhibits.

We shall refer from time to time to evidence, documentary and parol, received over timely objection on the part of the respondents. Such references are not to be construed as a waiver by respondents of any timely objections heretofore made and respondents reserve all their rights with respect thereto. Moreover, any statement concerning the testimony and exhibits shall not be construed as an admission of the accuracy thereof, nor shall any statement in this brief be construed as an admission of fact upon the part of any respondent. We are here, for the purposes of this motion only, taking all of the evidence introduced by Trial Counsel for the Commission at its face value.

The Facts.

A. The Products Involved:

The amended complaint served in April, 1946, defines the term "lead pigments" to include white lead, blue lead, red lead, litharge, orange mineral and grinders' lead paste, in both dry form or in oil in the form of a paste after being mixed with linseed or other oils. While Paragraph Five of the amended complaint deals with the use of lead pigments in the manufacture of paint, the proof has shown that the lead pigments (as defined in the amended complaint) involved in this proceeding not only are used in the manufacture of certain types of paint but, as oxides (red lead and litharge), so-called, form one of the principal material items in the manufacture of storage batteries.

White lead is sold as dry white lead and as white lead in oil. Dry white lead is used in the manufacture of paint
405 by paint grinders and white lead in oil is mixed with other ingredients to form outside house paints.

Red lead, an oxide, is used in red lead paint and in the manufacture of storage batteries.

Litharge, so far as this proceeding is concerned, is used primarily in the manufacture of storage batteries.

The other lead pigments referred to in the amended complaint, namely, blue lead, orange mineral, and grinders' lead paste, are insignificant items and therefore will not be discussed since almost the entire body of the evidence, both parol and documentary, deals with white lead, red lead and litharge.

B. The Respondents:

National Lead Company is the largest producer of white lead and lead oxides. During the period involved in this proceeding (frequently denominated by Trial Counsel for the Commission as the "normal period" from 1936 to 1941) National Lead produced approximately 60% of the white lead in oil, from 30% to 35% of the dry white lead, and 50% of the oxides, red lead and litharge (Tr. 1647, 1665, 1666; Com. Ex. 664). The combined total percentage for white lead in oil and dry white lead was 58.8% in 1938 and 53% in 1941 (Com. Ex. 669). National's white lead plants are located at Perth Amboy, New Jersey, Philadelphia, Chicago, St. Louis, and Oakland, California (Tr. 1071-1072). Its oxides, red lead and litharge, are produced at nine plants located in Brooklyn, Philadelphia, Charleston, West Virginia, St. Louis, Chicago, Dallas, Atlanta, Los Angeles, and San Francisco (Tr. 1625).

While formerly National secured the bulk of its corroding pig lead from the American Smelting & Refining Co., it has purchased the raw material from a number of companies, including the St. Joseph Lead Co., U. S. Smelting & Refining Co., American Smelting & Refining Co., Anaconda Sales Company, and three or four others (Tr. 1068). The largest single source of supply at the present time is the St. Joseph Lead Co. (Tr. 1069).

Eagle Picher Company for the period from 1930 to the
present time produced from 15 to 20% of the white lead
406 in oil and approximately 10% of the dry white lead
(Tr. 1560, 1561). Its combined total for dry white lead and white lead in oil was 14.3% in 1938 and 12.5% in 1941 (Com. Ex. 669). This respondent produced white lead at its plant in Cincinnati and its oxides, read lead and litharge, in Joplin, Missouri, and Newark, New Jersey (Tr. 1552, 1564). The bulk of its corroding lead is purchased from the U. S. Smelting & Refining Co., East Chicago, Indiana, although Eagle-Picher produces some lead itself in the Tri-State area of Missouri, Kansas and Oklahoma (Tr. 1561-1562).

The Glidden Company has two divisions, one, the Metals Refining Co., acquired by Glidden in 1928 or 1929, which produces oxides, red lead and litharge, at Hammond, Indiana, and the other, Euston Lead Co., acquired about 1923, which produces white lead at its plant in Scranton, Pennsylvania (Tr. 1230, 1231, 1233). In 1943 Glidden produced between 6 and 7% of the red lead in oil and a smaller percentage of dry red lead and litharge. It also produced 8% or 9% of white lead in oil and approximately 16% to 18% of dry white lead (Tr. 1307, 1308).

The Sherwin-Williams Company produces white lead and oxides (red lead and litharge) only at its plant in Chicago (Tr. 1313). It obtains its pig lead requirements from practically all suppliers (Tr. 1313). In 1944, Sherwin-Williams produced about 5% of the white lead in oil used in this country and approximately the same percentage for many years prior thereto. For many years its dry white lead and litharge sales represented less than 1% respectively of the total sales in this country, while its dry red lead and red lead in oil sales were approximately nil (Tr. 1331-1332). Sherwin-Williams obviously is not an important factor in the sale of dry lead pigments. It does not compete in the sale of oxides to battery manufacturers (Tr. 1648).

Anaconda Copper Mining Company has never engaged in the business of the manufacture or sale of lead pigments. Neither International Smelting & Refining Co., the subsidiary of Anaconda Copper Mining Co., nor its predecessor, the Anaconda Lead Products Co., ever produced oxides. Anaconda Lead Products Co. began the production of dry
white lead at its plant in East Chicago, Indiana, in
407 1919 and the production of white lead in oil at the same
plant in 1931. In 1936 the International Smelting & Refining Co. acquired the property and assets of Anaconda Lead Products Co. The principal source of supply of pig lead was lead bullion smelted by the International Smelting & Refining Co. in Utah and refined in East Chicago, Indiana. A small amount was also secured through the treatment of secondary lead purchased on the open market (Com. Ex. 836-A-N). For the period from 1937 to 1943 International's percentage of the white lead in oil business varied from approximately 3% to 4% and its percentage of dry white lead for the same period varied between approximately 10% and 19% (Com. Exs. 741, 836-J). International's combined percentage for dry white lead and white lead in oil was 6.6% in 1938 and 8.8% in 1941 (Com. Ex. 669).[1]

---

[1] This same exhibit shows the following combined percentages for other companies in the period 1937-1941 (some of whom are not respondents): W. P. Fuller, approximated 3% during this period; MacGregor, an increase from 1.6% in 1938 to 3.2% in 1941; "other companies" (stated to include Glidden and Sherwin-Williams) 17.1% in 1938, 18.3% in 1939, 21.4% in 1940, and 19.3% in 1941.

C. The Pricing Methods of the Respondents:

Since the essential charge in Count I is a price fixing monopoly, it will be necessary to consider the pricing methods used by the various respondents. In this connection it will be well to bear in mind that there were not only differences which existed among the respondents themselves but also that the three main products involved, namely, white lead in oil, dry white lead, and oxides, were sold on different bases, although all were sold on a uniform delivered price basis throughout particular territories.

White lead, whether dry or in oil, is essentially a standardized product. Although sometimes one customer, for example, a potter or ceramic manufacturer, will want a slightly different grade than that used by the paint manufacturer, and certain paint manufacturers might want a product of a particular particle size, the Federal specifications for white lead do not permit of substantial physical or chemical difference (Tr. 1073, 1074).

White lead in oil is sold on a basis which differs
408 from that used in the sale of dry white lead. This is the result of practices ancient in the industry and of subsequent historical growth. White lead in oil had been sold to dealers or distributors, until the adoption by National Lead Company and Eagle-Picher Company of the so-called "agency" contracts which will be discussed hereafter (infra, pp. 22-24). National Lead Company, at least as far back as 1920, had a system of differential points, that is, cities or towns located throughout the United States which took a stated differential over the base price. (See Com. Ex. 659-C-P, setting forth the old differential points for the Atlantic, Boston, Buffalo, Chicago, Cincinnati, Cleveland, Pittsburgh, Philadelphia and St. Louis Branches of the National Lead Company.) Naturally, the other producers, in order to compete with National, could sell for no more than the price quoted by National Lead at these differential points. During the NRA days there was some discussion about the points as to which a particular differential might be applicable and although there was some discussion about adopting a zoning method for purposes of the Code, no agreement was reached among the white lead producers (which included the respondents in this proceeding) (Com. Exs. 501-A-D, 505-A-B). Nevertheless, sometime between November, 1933, and June, 1934, National Lead Company adopted the so-called "zone method"

(Tr. 1154), which was merely a simplification of the historical differential and equalization point method employed by National Lead at least as far back as 1920. This will be discussed more fully hereafter (infra, pp. 24-27). With the adoption of this method National Lead thereupon sold, either directly or through its agents, white lead in oil on the basis of this zone method, which roughly divided the country into a par and six differential zones (see Com. Ex. 580). Eagle-Picher sold its white lead in oil during the same period on the basis of substantially similar zones, although there were differences, particularly in the Far West (see Com. Exs. 585, 589-A-B). Sherwin-Williams, however, continued to sell through its shipping points which method had been followed by the company since prior to 1924 (Tr. 869-870, 1316-1317); Glidden sold on the basis of differential territories, without using any zone map (Com. Ex. 593; Tr. 1254, 1289, 1293), and apparently
409 it was not until 1937 that International Smelting & Refining Co. used a zone map in the sale of white lead in oil (Com. Exs. 591, 592, 836-E).[1]

Dry white lead in barrels or bags (constituting the most significant method by which dry white lead is sold) was sold by National Lead Company on the basis of two zones, a par zone, a par zone which extended through all the eastern and southern States and a 25¢ per 100 pounds differential zone comprising the western States beginning with the eastern boundaries of New Mexico, Colorado, Wyoming and Montana (Answer of Respondent National to Amended Complaint, Par. 7). As in the case of white lead in oil the other producers could sell at no higher price than National Lead Company if they were to be competitive.

There were also different zones adopted by National Lead Company for red lead and litharge. When these products were sold in less than carload lots there was a par zone comprising all of the northeastern, middle west, and some of the southern States with 25¢ per 100 pounds being added for customers in Alabama, Florida, Georgia, Louisiana, Mississippi, Texas, California, and territories west of the Cascade Mountains in Oregon and Washington, 50¢ for customers in Colorado, Montana, New Mexico and Wyoming, and 75¢ for customers in Arizona, Idaho, Nevada,

---

[1] All of the lead pigments in kegs of 100 pounds or less were also sold on this same zone basis but obviously these smaller keg products did not constitute a significant factor in the industry as a whole.

Utah, and the territory east of the Cascade Mountains in Oregon and Washington. Red lead and litharge in carload lots were sold on the basis of a par zone and a 25¢ per 100 pounds differential zone which included the States of Alabama, Arizona, Colorado, Florida, Georgia, Idaho, Louisiana, Mississippi, Montana, Nevada, New Mexico, Texas, Utah, Wyoming, and the territory east of the Cascade Mountains in Oregon and Washington (Answer of Respondent National to Amended Complaint, Par. 7).[2] Again, if they were to be competitive, the other producers could not sell at prices in the various territories higher than the prevailing prices at which National Lead Company was selling any particular product.

Although undoubtedly there is some similarity in all 410 oxides used in the storage battery business, nevertheless, the testimony was clear from the purchasers called as witnesses by the Trial Counsel for the Commission, that some of these purchasers felt that there were great differences in the quality of storage battery oxides offered by the various producing respondents and in the services they obtained from the various respondents (Tr. 1736, 1738, 1741, 1817-1819, 1852, 1854).

D. Price Leadership of National and Similarity of Prices:

As we have stated, when analyzed, the record is barren of any evidence showing exchange of price information or price factors either directly between the respondents or through the agency of Lead Industries Association. Similarly, there is no evidence showing any agreement or concerted action with respect to fixing prices. The present record before the Commission indicates, however, that the price leader in the field of lead pigments was National Lead Company.

During the so-called "normal period", 1936 to 1941, the record shows National produced slightly more than 60% of the white lead in oil, from 30%-35% of the dry white lead, and approximately 50% of the oxides, red lead and litharge. National Lead Company has five plants producing white lead and nine plants producing oxides. None of the other producing respondents had as large a production as National Lead, although the percentage of business done by some, notably Eagle-Picher and Glidden, was substantial, and none had more than two plants producing either oxides or white lead. Thus, Eagle-Picher had its white lead plant in Cincinnati and its two oxide plants in Joplin, Missouri, and Newark, New Jersey. Glidden had its oxide mill in Hammond, Indiana (Metals Refining Co.) and its white lead plant in Scranton, Pennsylvania (Euston Lead Co.). Sherwin-Williams, although a minor factor in the sale of lead pigments, produced both white lead and oxides only in Chicago, and International Smelting & Refining Co., which did not produce oxides, had its white lead plant in East Chicago, Indiana. It will be recalled that National Lead produced both white lead and oxides in Chicago.

---

[2] Sometime during 1941, Arkansas and Oklahoma, which had theretofore been in the 25¢ zone, both as to carload and less than carload lots, were placed by National in the par zone (Tr. 1633-1634).

That National's card or list price changes were followed (without agreement or compulsion) by other companies is clearly shown when comparison is made between Commission's Exhibit 655-A-C, card or list price changes for National for white lead in oil reflecting among other factors
changes in the New York pig lead price, and Com-
411 mission's Exhibit 658, similar list price changes of
Eagle-Picher for white lead in oil from 1936 to October 1, 1939. A comparison of these two exhibits shows the following difference in dates of list price changes:

Price	Date of National's	Date of Eagle-Picher's	
$13.00	3/ 1/37	9/14/37	
12.50	10/19/37	10/20/37	
11.75	1/10/38	1/11/38	
11.25	3/10/38	3/11/38	
11.75	9/26/38	10/ 1/38	
12.25	2/27/39	3/ 1/39	
12.75	9/26/39	10/ 1/39	
13.25	4/26/41	5/ 1/41	(Comm.'s Ex. 660-H).

Similar results are shown by a comparison of National's card or list price changes for white lead in oil with those of the other producing respondents (Com's. Exs. 663-K, 662-A-Z-26, 661-A-Z-194, 738-A-M). Obviously, a competitor would be able to secure from the trade list price changes announced by National and be in a position to follow those card or list prices as of the effective date.

There is no proof whatsoever of any agreement on the part of the other producers to "follow" National's card or list prices and no proof of any compulsion practiced by

National upon those companies. Obviously, therefore, National's card or list prices were "followed" by the other producers as a matter of individual economic choice.

As for oxides, they have been sold by National for many years on the basis, generally, of $1.50 per 100 pounds over the New York pig lead price for litharge and $2.50 per 100 pounds over the New York pig lead price for red lead (Tr. 1635, 1636). Changes in oxide prices, so far as National was concerned, were made from time to time when the market for pig lead advanced or declined as much as 5¢ per 100 pounds but no change in card prices was made until pig lead prices had changed 25¢ per 100 pounds (Tr. 1637-1638). Here again, with National doing approximately 50% of the oxide business and having nine plants producing that material, the other producing respondents could not sell at any price higher than National's if they wished to obtain any of the oxide business.

412 Commission's Exhibit 655-A-C, referred to above, clearly indicates, we submit, the absence of any price fixing monopoly. The typical monopoly price is one which is fairly rigid and maintained at a high level without regard to costs, the law of supply and demand, or competitive conditions within and without the industry. Commission's Exhibit 655-A-C shows clearly that neither of these conditions existed in the prices at which National offered white lead in oil. For example, as of January 2, 1931, National quoted a card or list price for white lead in oil at $13.25 per hundred pounds while the average pig lead price for the preceding six months was approximately $5.25 (Com. Ex. 655-A). Yet in 1937, as of October 19 of that year, National quoted a card or list price for white lead in oil of $12.50 per hundred pounds compared with an average pig lead market price for the preceding six months of approximately $6.15 (Com. Ex. 655-C). The lower card price in 1937, as against the higher pig lead price, reflects the downward trend in the demand for white lead in oil which began in 1936 (Com. Ex. 851-A). By contrast, compare the rigid prices established by the Big Three Tobacco Companies in *American Tobacco Co.* v. *United States,* 90 Law Ed. 1095. There (at p. 1108) the Supreme Court pointed out as significant the fact that in 1931, when the tobacco leaf was selling at its lowest price during a period of twenty-five years, the so-called Big Three raised simultaneously the list price of cigarettes

from $6.40 to $6.85 per thousand. Again, in *United States Maltsters Ass'n* v. *F. T. C.*, 152 F. (2d) 161 the Court, after referring to the fact that barley represented from 80 to 85% of the cost of manufacturing the malt, stated (p. 163): "While the cost of such barley has varied considerably, the price at which the members [of the Maltsters Association] sold their malt remained the same."

Briefly summarized, therefore, all of the vast amount of documentary evidence introduced by trial counsel for the Commission as to prices shows merely the existence of substantial identity of card or list prices among the producing respondents with a demonstrated price leader, National Lead Company.

E. Lead Industries Association:

Lead Industries Association was organized as an unincorporated association in November, 1928 (Tr. 996-
413 997). During the period involved in this proceeding its membership included more than fifty companies, among whom were these respondents (Com. Ex. 498-A-K), It included not only mining companies but smelters, refiners and other companies, as well as manufacturers of lead pigments, some of whom are respondents in this proceeding (Tr. 997).

According to the testimony of Mr. Wormser, Executive Secretary of the Association, the white lead group of manufacturers was not active in Lead Industries Association until the days of NRA. This group became inactive after the decision of the Supreme Court in the *Schechter* case and did not again become active until the advertising promotional campaign of 1937 or 1938 which was designed to stimulate the use of white lead (Tr. 997-998).

From the time the Association was formed, the manufacturers of lead pigments filed monthly reports showing volume of sales and production and stock on hand, but prices were never reported to the Association (Tr. 1083, 1330; Com. Ex. 836-J). The Association in return compiled only an overall statistical survey of the industry which it circulated to the members (Tr. 1330, 1331; Com. Exs. 670, 836-J). The report from the Association to the members did not in any case show individual shipments, production or stock on hand, and it merely gave an overall total combined figure for each respective category. It did not issue any publication to the trade setting forth purported current market quotations on lead pigments (Tr. 1039) and it did not furnish information or quotations on lead pigments to any trade publication (Tr. 1040).

It is clear, therefore, that the Lead Industries Association was never used either by these respondents or by the other members as a medium to exchange price factors or individual production factors, as a means of curtailing production, or in any other manner as a means of "tampering with the price structure".

F. NRA Days and the Code:

The Circuit Court of Appeals for the Seventh Circuit, in *Aetna Portland Cement Co.* v. *Federal Trade Commission, supra,* held that activity of the members of an industry during the NRA Code days could not be used as the basis of a charge of monopoly either during that period or at any other time (157 F. [2d] at 549). The only
414 evidence in this case showing any sort of concerted action is concerned with the activities of these respondents and others during the Code days. Certainly those activities alone are not competent to prove any of the charges of the amended complaint.

1. Committee Meetings.

The Lead Pigments Division of the Lead Industries Association, which had been charged with the duty of writing and submitting an appropriate code, met on various occasions from July, 1933, to January, 1934. There were two committees of the Lead Pigments Division, one, the so-called Dry Products Committee, and the other, the White Lead in Oil Committee (see Com. Exs. 501-A-D, 800-A-C).

Apparently the main work of the Dry Products Committee was concerned with drawing a supplementary code dealing with conditions of sale for oxides in carload and less than carload lots (see, e. g., Com. Exs. 504-A-B, 801-A-B).

The White Lead in Oil Committee not only discussed such terms and conditions of sale for dry white lead (Com. Exs. 803, 804) but also discussed many other problems. Among the problems was the use of the so-called "agency plan" which had been used in the first part of 1933 by National and Eagle-Picher in their eastern territories. Apparently each of these two companies had been able thereby to eliminate the practice among certain dealers of selling white lead in oil below cost and as a loss leader (see infra, pp. 22-24). At the same meeting at which the agency plan was discussed the question of freight differentials was also discussed and it was suggested that a zone basis might be worked out (Com. Ex. 501-A-D). No agreement could be secured on the agency method since it appeared that companies other than National and Eagle-Picher were not enthusiastic about adopting this method (Com. Exs. 506-D-F, 712-A-E). Moreover, no agreement was made in regard to zones and the minutes of the White Lead in Oil Committee meeting of October 28, 1933 (Com. Ex. 505-A) stated specifically that freight and zoning problems were discussed "without any understanding or agreement being made". The record shows no further discussions of these two subjects in the period of the Code days or at any other time.

415 Both Committees of the Lead Pigments Division, however, did agree upon a form of the Code (Com. Ex. 809) and on a schedule of standard conditions for the sale of oxides and dry white lead (Com. Exs. 804, 805-A-C).

Deputy Administrator Janssen of the National Recovery Administration suggested a rather drastic price filing section for the Code (Com. Ex. 518-A-B) which the Lead Pigments Division rejected and in place thereof adopted (Com. Ex. 803) Section 2 of Article VII of the Code which provided that each member of the Lead Industries Association engaged in the manufacture and sale of lead pigments should file a list of prices under which his products would be sold and a memorandum of any of his conditions of sale at variance with those set forth in Schedule A (the so-called Supplementary Code dealing with standard conditions of sale for Oxides and Dry White Lead) (Com. Ex. 809). Any changes in prices or conditions of sale were required to be reported to the Secretary within twenty-four hours, and information supplied the Secretary was to be reissued to the reporting members. However, even this rather mild provision for filing price lists and conditions of sale was not followed. The members of the Lead Pigments Division were not in favor of such action and, therefore, an exemption from the provisions of this section was obtained in June, 1934 and a further extension was requested in September of that year (Com. Ex. 507-A-M).

So far as the record indicates, no price lists or memoranda of sales conditions were ever filed under that section of the Code.

Some of the members of the Lead Pigments Division had consulted counsel upon the question as to whether or not they could follow the standard terms of sale set forth in Schedule A of the Code before the Code went into effect, and while, as one member expressed it, counsel did not give a "go ahead signal", it was felt by most of the members that in view of the fact that the standard terms of sale in Schedule A of the Code "left the question of price strictly a matter between buyer and seller", the members could follow standard conditions of sale without violating any law (Com. Exs. 517-A, 523).

We submit that this is indicative of the ever-present thought in the minds of the members of the Lead Pigments
416 Division (even in the Code days, when limitations on price competition and production were openly advocated by the N. R. A.) not to do anything which might contravene either the letter or the spirit of any statute prohibiting restraints upon trade.

Moreover, in the minutes of the Dry Products Committee meeting of October 27, 1933, where the standard conditions of sale for oxides and dry white lead were discussed and drafted, it was agreed "in deference to existing statutes, that no reference to prices should appear in the outlines [i. e., conditions of sale set forth in Schedule A of the Code] except for the specification that 'prices were to be agreed upon between buyer and seller'" (Com. Ex. 504-B). An examination of Schedule A of the Code (Com. Ex. 809) reveals that the standard conditions of sale for both oxides and dry white lead contain no price fixing conditions. Article I, dealing with the sale of oxides in lots of less than 20 tons (less than carload lots) provides merely that the price shall be the seller's card or quoted price in effect on the date the order is received with an allowance of "not more than" ½¢ per pound for minimum shipments of 5 tons, and that red lead containing 97% and 98% PB_3O_4 should be sold at "not less than" ¼¢ and ½¢ respectively over the seller's price for grades of lower PB_3O_4 content. Article II, dealing with conditions for the sale of oxides in carload lots, provided that the price should be determined "by adding a differential, as agreed upon by Buyer and Seller" to the price of common lead at New

York. Article III, which deals with dry white lead, provided that the price thereof should be the seller's card or quoted price in effect on the date the order was received.

The Code itself (Com. Ex. 809) therefore did not provide for any fixing of prices. Of course, we concede that if the members of the Lead Pigments Division had filed price lists or their respective variations from the Code terms of sale, as required by Section 2 of Article VII of the Code, this might possibly have had some indirect effect upon prices, but, as we have seen, the members of the industry specifically requested and received an exemption from the requirements of this Section and there is no proof that price lists or terms of sale were ever filed. True,
417 after the termination of the Code, National and Eagle-Picher in general followed the terms of sale with respect to oxides and dry white lead which had theretofore been incorporated in Schedule A of the Code (Tr. 1607-1617, 1650-1654, 1657-1659), but there is not a scintilla of evidence or any proof from which any inference might be drawn that this was done collusively, or in accordance with any "planned common course of action" or by agreement, conspiracy or otherwise than voluntarily.

2. Agency Contracts.

For many years the white lead in oil business had suffered from the actions of certain dealers who sold white lead in oil to the retail trade at a price below cost to the dealers themselves, thereby demoralizing the industry (Com. Exs. 506-D, 706-F). Leaders of the industry had been well aware of this situation, which, as one of them said, "threatened to engulf it [the industry] completely" (Com. Ex. 712-A).

In January, 1933 National and Eagle-Picher experimented with agency arrangements in their eastern territories and during that summer exchanged information as to their success in eradicating the evil of selling white lead in oil below cost (Com. Ex. 712-A). Apparently the dealers of National were well satisfied with the agency arrangement and National so informed Eagle-Picher (Com. Exs. 684, 686). During the course of the Code negotiations, agency as a feature of the Code was discussed (Com. Ex. 501-A-D), but many of the manufacturers of white lead in oil objected thereto; in fact, Sherwin-Williams and Glidden were "radically opposed" to the idea because of its consignment feature. (Com. Ex. 506-E). Nevertheless, National and Eagle-Picher, which had experimented each with the agency methods of selling with success in eradicating the evils, each extended its method on a nationwide basis[1] in November, 1933, and in October National notified Eagle-Picher that it so intended to extend its agency method (Com. Ex. 599).

The agency method of selling was to appoint a reliable dealer as a manufacturer's agent to sell white lead in oil (Com. Ex. 595), title to which was to remain in the
418 manufacturer (see, e. g., Com. Ex. 613-A-C). The
agency, however, was not exclusive and the agent was free to handle the goods of other manufacturers (Com. Ex. 506-E). The agent agreed to sell the manufacturer's white lead in oil at a stated price and he was to be compensated therefor by the difference between a stated amount and the price at which he sold the product to the purchasers in the retail market (Com. Ex. 613-A-C). Sales were periodically reported by the agent, who was thereafter billed for the goods sold by him upon the basis of the commission differential just mentioned (Tr. 638; Com. Ex. 752-A-Z-144).

The agency contract was based upon that used by the General Electric Company in its sale of Mazda lamps (Com. Ex. 506-D), which had received court approval in *United States v. General Electric Co.*, 272 U. S. 476. As stated by an official of Eagle-Picher, it was felt that this method was the only "legal means" by which the extremely dangerous situation, threatening the very existence of the industry, could be cured (Com. Ex. 706-F).

There is no question but that National and Eagle-Picher informed each other as to their practice and experience in establishing the agency method. There is, however, no proof of any compulsion exerted by either company upon the other, nor is there any proof or even suggestion that, during the course of this interchange of information as to the agency method, there was any agreement or "planned common course of action" either to adopt the agency plan or to fix basic prices at which white lead in oil would be sold to the public under the agency plan.

Some time in 1939 (Com. Ex. 649-A-C) Glidden also began to sell through distributors under a distributor agreement whereby title to the white lead in oil remained in the manufacturer until sold by the distributor to the particular purchaser (Com. Ex. 650-A-C), but there was no proof that Glidden ever sold any substantial percentage by this method. Sherwin-Williams remained opposed to the idea, for it never adopted any agency method. This is hardly strange, since Sherwin-Williams sold to the public mainly through its own retail stores located at various cities throughout the country (Com. Ex. 652-A-L; Tr. 869-870).

---

[1] Except that National never used the agency method on the Pacific Coast (Tr. 1091).

International Smelting & Refining Company did not
419 adopt the agency method but did sell white lead in oil
on consignment beginning in November, 1932 (Com.
Ex. 836-E).[1]

3. Zones.

National Lead Company sometime between the fall of 1933 and June, 1934, adopted a zone method of selling white lead in oil (which also applied to other keg products of 100 pounds or less, insignificant factors in this proceeding) (Tr. 1154; Answer of Respondent National to Amended Complaint, Par. 7). This was an outgrowth of selling on the basis of equalization and differential points which, as the record shows, was the practice at least as far back as 1920. Commission's Exhibit 659-C-P shows that under the system of differential and equalization points certain cities in various territories took a differential price over the base price and freight charges for shipments to points other than those named as differential or equalization points were "equalized" with those particular cities. At a meeting of the White Lead in Oil Committee during the Code days in August, 1933 (Com. Ex. 501-A-D), there was some discussion among the members of the white lead in oil group as to just what cities or points took on the differential over par or base price. Apparently there was no uniform practice among the manu-

---

[1] In addition, National Lead Company also sold white lead in oil under its Dutch Boy label under Fair Trade Agreements (Com. Ex. 619-A-C) where such was permitted by State law (Com. Ex. 576-A-E) pursuant to the provisions of the Miller-Tydings amendment to the Sherman Act (15 U. S. C. A. Sec. 1). However, we fail to see how this is of any relevance in this proceeding.

The record indicates that National discontinued the agency method in January, 1944, and Glidden its distributor method in July, 1942 (Com. Exs. 624-A-B, 651).

facturers and it was then suggested that a zone method might be worked out. In September, 1933, Mr. Maston of Eagle-Picher Company wrote to Wormser, Executive Secretary of Lead Industries Association, enclosing a proposed map together with the differential and equalization points list used by Eagle-Picher (Com. Ex. 513-A-E). He stated that he was forwarding this map and the list to Anaconda, Sherwin-Williams, Euston Lead and Wetherill. It was also stated that National Lead Company was fully informed of the details and was gathering further data on this important matter. The other companies were to
420 submit their suggestions at the next group meeting.

However, at the next meeting in October, 1933, although freight and zoning problems were discussed, no understanding or agreement could be reached (Com. Ex. 505-A-B). The suggested zone map and the differentials appearing thereon which Maston forwarded to the various companies (Com. Ex. 513-E) were not the map and differentials ultimately adopted by National Lead Company (Compare Com. Ex. 580).

The record does not indicate when a zone method was adopted by either National Lead Company or Eagle-Picher Company, and the only testimony upon this point is that zones were adopted by each company sometime between the fall of 1933 and June, 1934 (Tr. 1551, 1579-1581). The zone methods adopted by National Lead and Eagle-Picher differed with respect to the states in the Rocky Mountain and Pacific Coast Areas (Compare Com. Ex. 580 with Com. Exs. 585, 589-A-B). The zone map used by National Lead was simply a simplication of the differential and equalization point method which National Lead had used as far back as 1920 (Com. Ex. 659-C-P). Obviously, under the old system, there was some attempt to approximate an average of freight rates applicable between established shipping points and the particular differential or equalization points. The zones adopted by National Lead for its white lead in oil business represent in substance a graphic presentation of the old differential and equalization points system, and in almost every instance it will be found that under the zone differential method the differential quoted for any particular point was the same or less than the differential quoted under the old system of differential and equalization points (Com. Ex. 808-H).

There is a wealth of documentary evidence in the record

dealing with freight rates but we believe the most accurate summary thereof will be found in the Commission's Exhibit 751-A-F. While no attempt will be made here to present a detailed chart, we submit that, if the Commission picked out any particular shipping point and any point of destination, it will see that in almost every instance the differential on the zone map of ⅛¢, ¼¢, ½¢, ⅜¢ per pound, or whatever the differential may be, is less than the difference between the average freight in the par zone and the freight to the differential zone. It is therefore apparent that National Lead in adopting its zone method
421 made an honest attempt to have the zone differentials not exceed the increase in the average freight charge per pound in those areas.

So far as dry while lead is concerned, National Lead had only two zones, a par zone, which extended to the far western states, which in turn comprised the 25¢ zone (*supra,* p. 14). It does not appear in the record whether this was the result of the adoption of any zone map as such, nor does it appear when this method of selling dry white lead was first used by National Lead.

Oxides were sold by National Lead on the basis of two zoning methods, one which applied to less than carload lots and another to carload lots (*supra,* p. 14). Again, it does not appear when this method was first used by National Lead or when it was first used by any of the other producing respondents.

The reasons for the use by National Lead of different zones for different products are not difficult to ascertain. White lead in oil was sold through agents or dealers located in many cities throughout the United States. Dry white lead, however, for the most part, was shipped directly from the plant or warehouse to the customer (Tr. 698). An examination of the tabular resumé of National's invoice data (Com. Ex. 752-A-Z-144) reveals that, in most instances, dry white lead was shipped in large quantities. Moreover, freight rates on dry white lead, in most instances, were from 25% to 30% lower than those for white lead in oil (Com. Ex. 751-B). Taking these factors into consideration, therefore, National Lead sold dry white lead on the basis of a larger base or par zone. The same considerations applied to the zone basis used by National Lead for the sale of oxides in carload lots, while the sale of oxides in less than carload lots on the basis of four zones would reflect a portion of the increased costs of transportation for the shipment of such quantities (the established rates for less than carload lots frequently being as much as 40 or 50% more than the carload rate [Com. Ex. 751-A]).

There is no showing that at any time there was any agreement among any of the respondents to adopt any particular zone map or the zone method used by National Lead. Eagle-Picher used a similar zone map with respect
to white lead in oil so far as the territories east of the
423 Rocky Mountains was concerned (Com. Ex. 585).

While Eagle-Picher quoted a similar differential for the far western states on dry white lead, it made no sales in that area (Tr. 1576), and, apparently, so far as oxides are concerned, Eagle-Pitcher employs a system which differs from that of National Lead (see paragraph 13 of answer of Eagle-Picher to amended complaint). Glidden does not use zone maps but sells all of its lead pigments on the basis of such differential territories as are dictated by competitive considerations (Com. Ex. 593; Tr. 1254, 1289, 1293), although, as alleged in its answer to the amended complaint (Paragraph Eighth) its sales of certain of the lead pigments in certain territories are negligible or non-existent. Sherwin-Williams used no zones whatever for white lead in oil but had "shipping points" which carried a differential over its base price according to the location of the particular shipping point. For example, it had five shipping points in Texas (Com. Ex. 778-A). It maintains warehouses in twenty-five cities (Com. Ex. 775-A-B) and since 1933 from seven to twenty such shipping points in the northeastern states alone (Com. Ex. 662-W-2-26). It was the general custom and established policy of Sherwin-Williams for the purchaser to pay the freight from the nearest shipping point (Tr. 1529). International Smelting & Refining Company, so far as white lead in oil is concerned, apparently did not use any zone map until 1937 (Com. Ex. 836-E). International's zone method for dry white lead was first used in October, 1935, when two zones were set up, a par zone, and the Pacific Coast which carried a differential of ¼¢ per pound (Com. Ex. 836-I).

There is thus no proof of any agreement or "planned common course of action" among the respondents with respect to the adoption of zones or differential territories.

422 In the above discussion we have not referred to
Commission's Exhibit 519-A-B. Commission's Ex-

hibit 519-A is a letter, dated February 2, 1934, from Mr. Wormser, Secretary of Lead Industries Association, to Mr. Maston, Vice President of Eagle-Picher Company, in which Mr. Wormser expressed his thanks to Mr. Maston for mailing him a copy of the zone map for the "White Lead-In-Oil Industry". Commission's Exhibit 519-B is a letter dated January 31, 1934, from Mr. Maston to Mr. Wormser, which reads as follows:

> "I am enclosing Zone Map for the White Lead in Oil industry. I believe you will find it self explanatory.
>
> When new points are set up or any suggested change in the differential made they can in the future be passed through your office.
>
> From this map we will eventually build up an official freight arrangement for this division of the lead industry."

The evidence does not show what the zone map enclosed by Mr. Maston was, or whether it corresponded to any zone map ultimately adopted by any respondent. We repeat that the record does not show what map Mr. Maston referred to in his letter of January 31, 1934 (Com. Ex. 519-B) nor has any such map been identified or received in evidence. The letter was written during NRA days and for all that the record shows it would seem to represent a further effort by Mr. Maston to induce the Lead Pigments Division to adopt or include in the proposed Code (still under consideration in January, 1934) a zone map for white lead-in-oil producers; an effort similar to that evidenced by his letter to Mr. Wormser of September 14, 1933 (Com. Ex. 513-B). We say this pointing out again that the maps adopted by National Lead Company and Eagle Picher differed; that International Smelting & Refining Company did not use any zone map until 1937; that Sherwin-Williams and Glidden never used maps. The record shows, as we have said, that Sherwin-Williams did not sell white lead in oil on a zone basis but rather used "shipping points" carrying differentials over its base price. Furthermore, there is no evidence that "When new points are set up or any suggested change in the differential made they" were "passed through" Mr. Wormser's office.

G. Documents Apparently Relied on by Trial Counsel for the Commission:

We have heretofore stated that there is no evidence, documentary or otherwise, showing any exchange of price information among the respondents. From the remarks of counsel for the Commission at various times during the hearings, however, we believe that he will attempt to rely upon the documents discussed below to support his 424 contention that information as to prices or price factors was exchanged between the respondents. An examination of these documents will reveal, we submit, that they in no wise support that contention. In any case, it is certain that they are not "reliable, probative and substantial" evidence to support that conclusion.

(1) So-called "Specimen" Letter from Pacific Coast Branch of National Lead Company dated January 26, 1937 (Commission's Ex. 581 A-E).

This exhibit, a series of letters and schedules constituting "Notice to the Trade", related to price changes as to certain of National's products which were to become effective on the date of the so-called specimen letter, January 26, 1937. The notices were addressed to the San Francisco, Oakland and San Jose trade by National Lead Company's Pacific Coast Branch. They related only to prices in the territory of the Pacific Coast Branch. Copies of these papers were located by any attorney examiner for the Federal Trade Commission in the files of Eagle-Picher (Tr. 299). There is no testimony as to how they arrived in the files of Eagle-Picher. Moreover, we fail to see its significance in any event, since the letter, dated January 26, purports to announce an advance in prices for the Pacific Coast Branch territory for white lead, white lead in oil, red lead, both dry and in oil, and litharge in 100 pound kegs or smaller packages effective as of the date of the letter itself. The fact is that Eagle-Picher had already changed its prices as of January 1, 1937 (Com. Ex. 658). Hence nothing could be more far-fetched than to claim that these papers establish an agreement or "planned common course of action" to fix prices between National and Eagle-Picher.

(2) Telegram from Pacific Coast Branch of National Lead to Eagle-Picher dated March 12, 1941 (Commission's Ex. 701).

This was a telegram from Scott, of the Pacific Coast Branch of National Lead Company, to Hayt, of the Eagle-Picher Company, stating that "effective immediately" the "Manila" (presumably Philippine Islands) prices of white lead in oil and dry red lead in 25 pound kegs had been increased ½¢ and that the price was "now" 10½¢ 425 (presumably per pound). Again, there is no showing as to why this telegram was sent but in any event we fail to see how some isolated instance relating to an increase in certain prices in Manila could possibly be relevant to any issue involved in this proceeding.

(3) Letter dated December 14, 1933 from National Lead Company to Sherwin-Williams Co. of Canada, Ltd. (not a respondent) (Commission's Ex. 525).

This was a letter from the main office of National Lead Company addressed to the Canadian company above named enclosing a price card "mailed to the trade today" announcing a change in the price of dry white lead and basic sulphate in amounts of less than 20 tons. There is no proof to show any connection between Sherwin-Williams Co. of Canada, Ltd. and The Sherwin-Williams Company which is a respondent in this proceeding.[1] For all that appears, the Canadian company was merely another customer and a member of the general "trade" to all of the members of which apparently a price card had been mailed. Obviously, therefore, this exhibit is wholly irrelevant and immaterial.

(4) Letter from Hayt, Eagle-Picher, to Reque, National Lead Company, dated July 26, 1940 (Commission's Ex. 710) and reply thereto dated July 30, 1940 (Commission's Ex. 708).

The letter from Hayt of Eagle-Picher of July 26, 1940, addressed to Reque of National Lead in Chicago, refers to a telephone conversation between the two parties and states that the new white lead paint which Eagle-Picher was trying out was still very much on a "experimental basis", particularly from the marketing angle. Among other things, the letter sets forth the list price at which Eagle-Picher will attempt to market the product. The reply from Reque of National Lead to Hayt merely expresses appreciation for the letter and Reque's wishes to Hayt for the best of luck. The subject of the letter, of course, is a new ready-mixed *paint* and not the raw 426 material ingredients thereof, one of which would be white lead. The correspondence therefore has nothing to do with any of the products involved in this proceeding. We fail to see how these letters are in any way relevant or material.

---

[1] At the hearing where this exhibit was introduced, counsel for respondent Sherwin-Williams stated that that company, on December 14, 1933, did not own the controlling interest or any substantial portion of the stock of the Sherwin-Williams Company of Canada (Tr. 602).

(5) Letter from Dice, Eagle-Picher, to Wormser, Lead Industries Association, dated November 16, 1937 (Commission's Ex. 696) and reply thereto dated November 19, 1937 (Commission's Ex. 697).

In the letter from Dice to Wormser the writer thanks Wormser for taking him to lunch with Messrs. Wilson and Martino (of National Lead Company). The writer expresses the fear that the conversation might not have been very interesting to Wormser "because the trend which it took involved National Lead and Eagle policies more than industry problems." In his reply Wormser states that he was glad that Dice was able to meet Messrs. Wilson and Martino, and that he was extremely interested in the conversation that took place "for I felt that if we had more of them in our industry quite a few of our problems would disappear." Just what was the topic of conversation is not revealed, but we have never heard anyone claim that to discuss mutual problems or policies with a competitor constituted a violation of any known law. Moreover, in 1937 or 1938, an advertising promotional campaign to stimulate trade in white lead was under way (Tr. 998) and for all that appears, the conversation might have been concerned with this activity. These exhibits, therefore, are not worthy of any further comment other than to state that they are obviously wholly irrelevant and immaterial.

(6) Oil, Paint and Drug Reporter.

Trial counsel for the Commission apparently attempted to show from the testimony of the President of the corporation which publishes the trade paper known as the Oil, Paint and Drug Reporter that somehow or other this

publication was used as a medium to exchange price information among the respondents and thereby to further the alleged conspiracy to fix prices. The attempt was wholly ineffectual and actually turned out to be a "boomerang", to employ the vernacular. Certain pages from the Oil, Paint and Drug Reporter for certain days in
427 May, June and August, 1934, were introduced into evidence (Com. Ex. 808 A-N) and certain of these pages carry current market quotations on various lead pigments. Mr. Auchincloss, President of the corporation which publishes this trade magazine, stated that various reporters for his magazine would attempt to obtain current price quotations from producers of various commercial articles, including lead pigments; that the price quotations were the result of a purely reportorial operation and if a reporter obtained a price change from one supplier he would then check with the others without revealing the name of the first supplier who might be quoting the price change (Tr. 1112, 1116, 1134-1138). In selecting the basic material which was later edited and reproduced in the trade paper, representatives of the Oil, Paint and Drug Reporter obtained information from various sources. This information was later sifted, correlated, edited, and eventually published, so that the final published item might not be the actual information obtained by the reporter from any particular one of the sources he interviewed (Tr. 1137).

H. Testimony of Purchasers:

Trial Counsel for the Commission called various purchasers of dry white lead and oxides who gave testimony which will be summarized below. This testimony apparently was introduced to support the charge in Count II of the amended complaint as to alleged violations of the Robinson-Patman Act, but we respectfully submit that none of the testimony from these witnesses added anything to the case.

(1) Purchasers of White Lead.

At the hearings in St. Louis on July 29 and 30, 1946, certain local paint manufacturers were called to the stand by Trial Counsel for the Commission. All of the manufacturers involved purchased dry white lead and therefore all were in the par territory, since it will be recalled that dry white lead (except as to keg products of 100 pounds

or less) is sold on the basis of a par zone which extends throughout all the east, middle west and south, and as far west as the line formed by the eastern boundaries of New Mexico, Colorado, Wyoming and Montana. From the testimony of these manufacturers it appeared that the white
428 lead content of house paints might vary from three
to eight pounds per gallon of paint (Tr. 1367, 1381, 1392, 1397); that some of them did business as far south as Texas and Louisiana (Tr. 1339, 1367, 1368, 1398, 1423); that the raw material cost per gallon of paint might be in the neighborhood of $1.50 per gallon and that the list price thereof would be $2.65 per gallon (Tr. 1346); one of the paint manufacturers sold on a uniform delivered price for any area (Tr. 1346, 1348); a second absorbed a portion of the freight for sales to Texas (Tr. 1401); another added a certain amount to the price for delivery in distant areas such as Texas (Tr. 1368-1369), and one claimed an f. o. b. price St. Louis, the customer paying the freight (Tr. 1423), although on cross-examination this witness had difficulty in explaining his ability to compete with the others who sold at a uniform price both in St. Louis and at distant points (Tr. 1445-1447). The four witnesses called at the hearings in St. Louis were asked whether or not a saving of five or ten cents a gallon on material costs would affect them from a competitive standpoint and their answers may be summarized as ranging between "Yes", to "Perhaps", to "No" (Tr. 1359, 1360, 1378, 1402, 1425, 1426). (Obviously, since all of these purchasers bought their dry white lead in the par zone, and did business only in that zone, the testimony would seem to be relevant only from the standpoint of the so-called "mill net" theory hereafter discussed).

(2) Purchasers of Oxides.

Various storage battery manufacturers were called to the stand at the hearings in November, 1946, held in Chicago, Kansas City, St. Louis, Nashville and Birmingham (Tr. 1672-2018). In addition, certain testimony from a battery manufacturer in Dallas, Texas, was introduced at the hearings in January, 1947, in Washington, by way of stipulation (Tr. 2022-2024).

These witnesses testified that in a standard 15-plate storage battery there would be approximately 23 pounds of lead products of which approximately 10 or 11 pounds

represented lead pigments and the balance antimonial lead (which is not involved in this proceeding) (Tr. 1677, 1680, 1717). All testified that the storage battery business was highly competitive and some testified that a saving of
429 5¢ or 10¢ per battery in material costs would be of
advantage to them from the competitive standpoint, particularly in the lower priced 13-plate battery field where the independent manufacturers were subjected to indirect cheap competition of the mail order houses such as Sears, Roebuck and Montgomery, Ward (Tr. 1732-1733, 1879-1880, 1909, 2015). Others, however, stated that such a difference in material costs would have no effect from a competitive standpoint (Tr. 1798, 1866-1867, 1868, 1869, 1898).

All of the witnesses were located in the par zone for oxides except those in Birmingham, Alabama, and the one in Dallas, Texas, who were located in the 25¢ zone. Again, apparently, the testimony was aimed in support of the "mill net" theory and possibly also at the zone system, although the differential per standard 15-plate battery of ¼¢ per pound would be only 2½¢ and would hardly appear to be important from a competitive standpoint.

Some of the witnesses testified that in their opinion there were differences in oxides from the standpoint of performance, and three of them specifically mentioned National Lead Company, which company in the opinion of these witnesses offered storage battery oxides which were definitely superior in performance to those produced by other manufacturers (Tr. 1736, 1737-1738, 1740, 1741, 1817, 1818-1819, 1854-1855). Some of the witnesses further stated that, in addition to purchasing oxides from one or more of the producing respondents in this action, purchases had also been made from the Hammond Lead Company of Hammond, Indiana, which is not a respondent in this proceeding (Tr. 1676, 1702, 1760, 1881, 1915, 2022).

I. Testimony Relating to National Lead Company:

Various documents and other testimony were introduced apparently in an attempt to prove the subordinate charge in Count I of the amended complaint to the effect that National Lead Company, beginning in 1891, the date of its incorporation, had attempted to monopolize the lead pigments industry.
